

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

### REVIEW OF NEW BOOKS.

*The Annual Biography and Obituary*, 1837, Vol. XXI. 8vo. pp. 474. Longman and Co.

As has been the case in all former years, and as will, no doubt, be the case in all years to come, almost every profession and employment has contributed its melancholy quota to the formation of the volume of *The Annual Biography and Obituary* under our notice. Religion—Bishop Van Mildert, Bishop Ryder, and Dr. Burton; Law—Lord Stowell, and Baron Smith; Medicine—Dr. Pearson; Literature—Mr. Godwin, Mr. Otley, Major Price, Sir Charles Wilkins, Mr. Colman, Mr. Wiffen, Mr. Mayne, and Mr. Walker; Science—Mr. Pond, Captain Horsburgh, and Dr. Henry; Arms—The Duke of Gordon, Lord De Saumarez, Sir William Inglis, Sir Christopher Cole, Sir Thomas Pakenham, and Sir John Gore; the Arts—Dr. Whitfield, Mr. Bannister, and Madame Malibran; Agriculture—Sir John Sinclair; Commerce—Mr. Rothschild, &c. &c. It would be exceedingly painful to contemplate this enumeration of what the country has lost, during the last twelvemonth, in piety, genius, learning, talents, valour, and industry, were it not for the consolation derived from the consideration of what it still possesses.

In a volume published under such peculiar circumstances, a large portion of original matter is hardly to be expected; but it is a strong recommendation of the work, that while, in its compilation, recourse is freely had to every available means of information, the sources from which that information has been obtained (the *Literary Gazette* among them), are particularised with scrupulous care. For instance, in the memoir of that eminent civilian and judge, Lord Stowell, which is the largest, and one of the most interesting in the volume, due acknowledgment is made to the *Law Magazine*, from which by much the larger portion of it has been derived. We subjoin two of the concluding paragraphs of that memoir.

"The varied life of Lord Stowell may be divided into three epochs, each of them marked by characters of peculiar excellence, and fraught with tokens of distinction. The first eighteen years were spent in classical pursuits at Oxford, in training the intellect of the aristocracy, in making philosophy teach by examples from the historian's chair. During the next fifteen years we trace through all the literary circles of London the 'Dr. Scott of the Commons,' the friend of Reynolds, and Burke, and Malone, the favourite of the Turk's Head Club, the oracle of the Consistory Court, delivering discourses on the regulation of the domestic forum, which Addison would have loved for their elegance, and Johnson for their morality. In the next thirty years we behold him in the admiralty chair, forming a system of national law from the ill-fashioned labours of his predecessors, erecting a temple of jurisprudence, and laying its foundations not on fleeting policy or on occasional interests, but in universal and immutable justice. His name has vanished from the peerage: he has left no son to transmit his honours. He had outlived his generation, and the candidates for noisy notoriety had concealed the retiring veteran from

the stage. He has sunk into the grave, not unwept, indeed, nor unhonoured, nor unsung, but with a less vivid expression of regret than if he had not exceeded the common span of human life. This is the natural penalty which extreme old age must be content to pay, and it would be idle to complain of it. But he has left a name which the proudest transmitter of hereditary rank might envy. The name of Scott, the title of Lord Stowell, can never be forgotten. 'Quidquid amavimus—quidquid mirati sumus, manet mansurumque est in animis.' The honours he has won will be co-existent with the language, and require not for their preservation the blazoning of the Herald's Office. The piety of kinsmen will mark his head-stone: in the chapel of University College there is a vacant place near the statue of Sir William Jones which the gratitude of his friends may be expected to occupy with his name. But beyond the testimonies to departed worth of pious relations and affectionate friends, there is a national tribute due from his own country, which, for the sake of rising talent, and of those who shall come after, we hope to see cheerfully bestowed. National wealth is never more profitably invested than in recompensing national virtue, and they are little appreciators of human sympathies who undervalue the honours of the tomb. In his cathedral church, where a splendid cenotaph has been erected to the memory of Cuthbert, Lord Collingwood, the like memorial should not be wanting to his merit who raised the character of our country for justice to the same height to which his schoolfellow had exalted it by his valour; nor will that country escape the imputation of ingratitude to her most distinguished jurist, should St. Paul's be defrauded of his monument."

The following anecdote of Lord Stowell is, we believe, new; at least, we do not remember having met with it before:—

"Lord Stowell's love of 'seeing sights,' was on one occasion productive of a whimsical incident. A few years ago, an animal called a bonassus was exhibited somewhere in the Strand. On Lord Stowell's paying it a second visit, the keeper very courteously told his lordship that he could not think of taking money from him again, and that he was welcome to come, gratuitously, as often as he pleased. Within a day or two after this, however, there appeared, under the bills of the exhibition, in conspicuous characters, 'Under the Patronage of the Right Hon. Lord Stowell: an announcement, of which the noble and learned lord's friends availed themselves, by passing many a joke upon him; all which he took with the greatest good humour.'"

We will also select for quotation the brief Memoir of that well-known Oriental scholar Major David Price, which is entirely original, and written "by one of Major Price's old friends and companions in arms;"—we presume, Major Moor.

"The subject of this memoir embarked as a cadet for the Bombay establishment of 1780, in the Essex, when very young, but with the advantages of education at an English university; it is believed, however, that, although

he obtained a scholarship, he did not take a degree. He was a native of Wales. His father was of that meritorious class of rural ministers who labour through life on a small cure; little known beyond the limit of a narrow circle, but therein much revered and beloved. He is, however, respectfully recollected as a scholar of considerable literary and classical attainments. He was for many years engaged in preparing for holy orders young men of the principality, who, in his day, were not usually sent to a university. He was presented by the then Bishop of St. David's, in addition to the living of Aberystwith, to another benefice in Cardiganshire. This, it is understood, was in consideration of an able translation and publication of a volume of sermons. He grounded and forwarded his son's classical education at an early age. The death of his father reduced the means of meeting the expenses of education at Cambridge, and Mr. Price was removed thence and repaired to London; with what views and prospects we know not. It would appear, that, unprotected in this seductive metropolis, he fell into difficulties and distresses, from which he was relieved by the interposition of a friend, who obtained for him the appointment of a cadet in the army of India. On the voyage thither, the Essex bore a very distinguished part in the smart skirmish between the squadrons of Admiral Suffrein and Commodore Johnson, in Porto Praya Bay, off the island of St. Iago. Johnson committed the gross mistake of anchoring his fighting ships close in with the shore, and the merchantmen outside, so that the brunt of the action fell on the East India Company's ships. The increased facilities of watering gained by this dangerous position were, no doubt, the motive for risking it; but had the vigour of Suffrein's attack at all corresponded with that of his subsequent operations in the Indian seas, the result must have been deeply injurious to the reputation of the British navy. In the further prosecution of her voyage to India, the Essex was dismasted in a hurricane; but, after a variety of contingencies, some of them of a perilous nature, she reached Madras. Immediately on his arrival in India, Mr. Price, as an acting ensign, was thrown into active service on the Coromandel coast, under General Sir Hector Munro; and at Trincomalee, with the naval force of Admiral Sir Edward Hughes. Ensign Price arrived at Bombay in April, 1782, and proceeded with the ill-fated army under General Mathews; but escaped its destiny by an appointment to the 2d battalion of Bombay sepoy, commanded by Captain Daniel Carpenter. That very active and excellent officer, in a variety of detached operations of considerable duration, not less, we believe, than of eighteen months, and altogether unsupported either by reinforcements of men or by supplies of money, effectually secured, with only his own battalion, the northern district of Sadasheughur (or Carwar), against all the attempts of Tippoo to repossess it, until the peace of 1783. In all these energetic operations of a handful of men, left to their own resources in the country of an active and powerful enemy, which, although on a small scale,

laid a good foundation for a military education, Ensign Price was ever among the most forward, and won, in a high degree, the professional and friendly esteem of his able and discriminating commander. At the commencement of the next war with Tippoo, Lieutenant Price commanded a grenadier company in Captain Little's battalion; and with it joined the Mahratta army, under the Brahman General Purseram Bhow, intended to co-operate with the grand army of Lord Cornwallis in the reduction of Tippoo's country and capital. The Mahrattas, with Little's Bombay brigade, were delayed six months by the fortress of Darwar, on the Sultan's northern frontier. At the early assaults on the enemy's camp and town Lieutenant Price was very forward, and was more than once honourably mentioned in public orders. At an unsuccessful attack of the fort on the 7th of February, 1791, he was severely wounded in the arm and ankle, rendering necessary the amputation of his leg. On the surrender of the fort he proceeded to Poona, where he remained attached to the military escort of Sir Charles Malet, our political minister at that court, until the peace of Seringapatam. His brother officers of Little's detachment appointed Lieutenant Price their prize agent. He was then removed to a staff situation at Surat. It was in this city that he made his celebrated collection of Persian and other historical works. He had there leisure to pursue his researches, assisted by most of the standard historians of Persia and Arabia, which terminated in the publication of that great repository of Mahomedan history, of which further mention will presently be made. In 1795, being a captain by brevet, he was appointed judge-advocate to the Bombay army. This office he held until his departure from India. In 1797-8 he was with the detachment in active operation in Malabar, under Colonel Dow, as his military secretary and interpreter; during which Captain Price twice narrowly escaped being cut off by the enterprise and energy of our Nair enemies, then proverbial for their independence and high military spirit, in that turbulent portion of Tippoo's, now our territory. When the Bombay army took the field in 1799, with its commander-in-chief, General James Stuart, to co-operate with the armies of the other presidencies, under Lord Harris, in the reduction of Seringapatam, Captain Price accompanied General Stuart as Persian translator and judge-advocate. He was present at the memorable repulse of Tippoo's vigorous attack on the Bombay army, before its junction; and afterwards, at the operations of the siege and capture of the Sultan's capital. The Bombay army appointed Captain Price their prize-agent for that important booty, seldom, if ever, surpassed, as to amount, by any conquest of a British army. After arranging the slain sovereign's magnificent assemblage of jewellery, his fine library, and other matters connected with that confidential appointment, Captain Price returned to Bombay, and prosecuted with eagerness and industry his compilation and translations from his valuable collection of Oriental manuscripts. In June 1804, he attained a majority; and in February 1805, after a continued service in India of twenty-four years, he sailed from Bombay, arrived in England in September following; and in October 1807, he finally retired from the service. Major Price repaired to Brecon, in South Wales, and married most happily soon after his arrival in England. He became a magistrate of that borough, and of the county of Brecknock, and there completed

and printed the result of the laborious research of half an industrious life, in four quarto volumes,—a grand magazine of Mahomedan historical events; of which, in a brief notice of the loss of distinguished members, the following passages occur in the Annual Report of the Proceedings of the Royal Asiatic Society of Great Britain and Ireland for 1836:—‘He completed and published, in the years 1811, 1812, and 1821, the result of his labours, under the title of a ‘Chronological Retrospect; or, Memoir of the Principal Events of Mahomedan History, from the Death of the Arabian Legislator to the Accession of the Emperor Akbar.’ ‘Coming out,’ it continues, ‘under the disadvantages of a distant and rural press, and in single volumes, with intervals of several years, this work has been hitherto much less known and appreciated than the ability with which it is composed, and the originality of the sources which supplied its materials, entitle it to be. It was followed, in 1824, by another work in quarto, entitled ‘An Essay towards the History of Arabia antecedent to the Birth of Mahomed.’ To these passages in the ‘Report’ it may be added, that the last-mentioned is also a valuable piece of history, which has not obtained its deserved notice and circulation. The ‘Report’ thus proceeds:—‘The Oriental Translation Committee also numbered Major Price among the distinguished scholars whose translations it has given to the public. His translation of the ‘Autobiography of the Emperor Jehangir,’ and of the ‘Last Days of Krishna,’ were published by that Committee; and in June 1830, its gold medal was presented to him, as a mark of the Committee’s estimation of his talents and labours. Subsequently the Committee published his translation of ‘An Account of the Siege and Reduction of Chaitúr, from the Akber Nameh of Abál Fazl.’ To the ‘Transactions of the Royal Asiatic Society’ Major Price contributed an ‘Extract from the Muallijáti Dara Shekóhi.’ The MS. of the valuable work from which this translation was made, and which is supposed to be the only one in Europe, with the exception of a copy of it taken about thirty years ago for the library of the king of France, is included in Major Price’s munificent bequest to the Society of his collection of Oriental manuscripts.’ The collection here and before mentioned, extended to nearly ninety volumes, and is, we understand, highly appreciated by the learned and useful society to which it was so appropriately bequeathed. Major Price died on the 16th of December, 1835, aged 73. It was intimated to his widow by the Society, and his friends of Brecon and its neighbourhood, that a public monument would be erected to his memory. And it may further serve to shew the general estimation in which he was there held, that the usual Christmas festivities (dinner, ball, &c.) of the town where he had passed more than a quarter of a century of his useful life, were omitted or postponed on the melancholy occasion of his then recent death. We are informed that an autobiography of the subject of this memoir is extant of his military services in India, and that it will probably be published. The public may expect a work of no common interest. It will tend to explain how ‘fertile in resources’ many of the East India Company’s officers have shewn themselves under various trying contingencies; how, when subalterns and captains, doing the duties, and incurring the responsibilities of officers of much higher grades, they have been profitably tutored in that severe and trying professional school. In conclusion, it may be recorded that few stood higher in the esteem of his brother

soldiers of the Bombay army, and of those who knew him in domestic and social life, than Major Price. He was generous, high-minded, of uncompromising integrity, an exemplary husband, a steady friend.”

The extracts from Mr. Otley’s letters, during that gentleman’s residence in Italy in early life, are curious and interesting, and place his character in a very amiable light; but our limits will not allow us to insert any of them; and we have only, once more, to repeat our warmest praise and admiration of the editor for his pure and most correct English style, his clearness, and generous impartiality. In these respects, he will long be a model to biographical writers.

*Zulneida, a Tale of Sicily.* By the Author of ‘The White Cottage.’ 3 vols. 12mo. London, 1837. Macrone.

THERE is a good deal of picturesque incident in these pages, and the narrative keeps up its interest and its mystery to the last. The following scene, in which a fair Saracen avenges herself of her recreant lover, is a fair specimen of the general style. Zulneida, the heroine, obtains admission to the patient, who is suffering with fever, under pretence of bringing a remedy.

“Zulneida made no reply, but followed the monk to the end of the gallery, where, on the right hand, was Count Luna’s apartment. The door of it was opened, and she entered a large and lofty room, comfortably furnished. On the walls were some paintings of saints and martyrs; and, in a niche near the bed, was an image of the Madonna, with two lights burning before it. The count lay in a state of great debility, and occasionally uneasy from attacks of pain. Zulneida took the lamp from the monk who had shewn her in, and made a sign that he, and Luna’s attendant, should leave her alone with the invalid. When they were gone, she advanced towards the bed, and held the lamp nearer the face of her faithless lover, that she might enjoy a sight of his pale and deathlike countenance. She then placed the light on a table near the bed, and sat down beside him. Luna had been looking at her attentively, but was too languid, or too much disinclined to speak, till Zulneida had seated herself. At length he said:—‘I have suffered much from my disease; and the medicine given me has done no good. Canst thou cure me, penitent? I have confidence in that habit; and I expect thou wilt give me something, immediately, to relieve my pains. If thou hast not made a vow of silence, I would fain hear some words of consolation from thy lips. Tell me in how short a time I shall be able to resume my attendance at court?’ Zulneida, in replying, spoke in a low tone, that she might more easily disguise her voice. ‘Art thou impatient to get back to the world and its vanities? Is thy work of repentance already finished, that thou art ready to begin thy sins again? They tell me thou art married to a rare beauty;—dost thou fear thy wife’s love will cool, if thou art too long absent? There are cavaliers, doubtless, who would gladly teach her to forget thee. But I have here a drink which will calm this jealousy, and free thee from all pain. Its taste is not unpleasant; but not one drop must be left behind. Dost thou suffer much? Thou hast, surely, pain about thy heart.’ ‘I think I have; in truth, I feel pain and weariness throughout my whole body. I will take thy medicine, and leave none of it. Pour it from thy flask into that small silver cup, and give it me.’ ‘Thy countess, Margarita said Zulneida, as she slowly poured out the

liquor, 'must grieve that her lord is confined, and so vexed by sickness. Is she not fearful lest thy malady be fatal, and she be left on earth without thee? She loves thee, surely; but women's hearts have wandered when their rightful lords have lain long sick; so it will be well to cure thee speedily. Put out thy hand,—it trembles! art thou so weak? Thy skin is hot; this drink will cool thee: art thou athirst for it?' 'I am, good penitent. I thirst greatly; so, give me the liquor, and let me drink health in it. Thou shalt be well rewarded for curing me. Margarita will thank and bless thee. Why dost thou cruelly hold back the cup?' 'That your excellency's hand may become a little steadier: I fear lest you spill the liquor. Let me assist you to raise yourself. So! With this left arm I can support you. Do you feel that I support you well?' 'I do; thou art kind, and skilful. Margarita's arm could not support me better.' 'That, indeed, is praise! But you are thirsty: now, then, drink; with my right hand I will assist and steady yours. Drink slowly, but drink all. It will procure thee rest.' Luna grasped the cup with both his hands, and Zulneida assisted him to carry it steadily to his lips. He drank off the contents, as if eager to finish the draught; and, when the cup was empty, he resigned it to Zulneida. 'There, penitent; I thank thee. I have drank all;—now lay me down again. I have taken thy remedy, confiding in thy skill and honour; thou mightest have given me poison.' 'I might. But have you any enemy, whose hate is so deadly that he would seek your life, disguised in such a holy garb as this? Have you, Count Luna, so deeply injured any one?' 'A man of my rank, good penitent, will never want enemies, and I have a bitter one in Perollo. He would fain take my life by lance or sword, but I think he would not, in this disguise, attempt to poison me.' 'Lives there any being who could be so treacherous? Bethink you well: though Perollo would not offer you a deadly drink, you may have seen some woman for your enemy!—yes! some woman, whose eye would brighten as you drank the poison from the cup she offered;—whose heart would answer with a pleasurable beat to every movement of your throat while swallowing it:—is this not possible?' 'I know no Christian woman whom I have wronged, to fear such treachery; none that would risk her soul's damnation for the sake of destroying me. There is an infidel, Zulneida, Don Cabrera's daughter. True, I have done her injury, by robbing her of myself. She does not fear the cross, but prays to the impostor, Mahomet, and reads that guide to hell, the Koran.' 'Surely your excellency does not think the Saracen Zulneida would give you poison! It is said that your lips have sworn to her a thousand pretty oaths of love and constancy: could she offer them, in return, a drink to rob you of your life?' Count Luna fixed his eye upon the penitent, and did not immediately reply. Zulneida's voice had been less disguised, and he thought he recognised it. 'She may hate me,' he at length said, 'for, I tell thee, I did withhold from her myself; an object on which I think she had fixed some affection. But when Perollo intended to attack my life, she prevented him, and refused to send him against me as her champion: therefore I would have taken the cup from her, and have trusted for my safety to her heart.' 'She trusted to thine, and found it false,' cried Zulneida, throwing back the hood which concealed her countenance. Her beautiful hair hung in

disorder about her face. Count Luna met her gleaming eye, and her smile made him chill with terror. 'Her heart! wouldst thou trust Zulneida's heart? poor Christian fool! cousin of a king! Thou liest low for having trifled with that heart, and flung it back to her as if it were too poor a gift for one so brave and highly born. Thou didst believe I had affection for thee?' Zulneida paused for a reply, but Luna spoke not. 'Thou canst not answer! it matters not; preserve thy voice to give farewells to Margarita. Thou didst praise my beauty once, and used all art to gain my love. Hadst thou been constant, perchance I might have loved thee somewhat out of gratitude. Thou didst leave me, and for Margarita's fortune. Because I would not be a vile apostate, I was unworthy thy alliance, and thou didst scoff at my religion. Was I, a Saracen, to bear thy insults? Thou didst not give my love time to ripen into womanly devotion, else it might have lasted hitherto, and forbade the growth of darker passions. The slight affection I once bore thee withered, and seemed, in its decay, to make the soil more rank, and fitter for the hatred which supplied its place. Ay, Luna! I have hated thee. Mahomet, whom thou hast reviled, he filled for thee that cup by my hand. Thou hast drunk, and swallowed poison!' At this confirmation of fears which had been awakened when he knew it was Zulneida, the count trembled violently; his lips quivered; but, unable to utter a word, he clasped his emaciated hands together, and looked imploringly to Zulneida, that she should pity and help him. She smiled. 'Thou hast the poison, Luna, and it is too late to help thee. Thou hast drained the cup, and now I leave thee to the leech. Make haste, and bid thy wife farewell,—it is I who make her a widow. Kiss thy child—kiss it frequently—if thou hast strength, and at each kiss think that I make it fatherless. Then call in the priests, and give them money, that they may sing for thy soul's repose. Get shrived without delay, for to-morrow night thou wilt be dead; so fare thee well!'

The monk Eugenio, and his sister Costanza, are drawn in a high and poetical spirit—and our author is well acquainted with the history and manners of Sicily, where his scenes are laid.

*The Americans, in their Moral, Social, and Political Relations.* By Francis J. Grund. 2 vols. 8vo. Longman and Co. Lond. 1836. THIS is a work of much matter, the result of a long residence in the country, and a careful observation of its moral and social habits. Mr. Grund has applied German intelligence to the investigation of America; and, whether the reader agrees with or differs from him in his arguments and conclusions, it must be admitted that he has applied his mind vigorously to his subject, and stated his grounds with perfect fairness; thus, enabling us to reason for ourselves when we differ from him.

We feel that it would be altogether out of our way to enter into a minute criticism of his performance—it would require twenty times as much room as we can allot to it. At least, in the first instance, we shall very concisely introduce the author to the public. Some of his views, we think, are short-sighted; there is a long vista beyond which he either does not see, or with which he does not choose to trouble himself,—the latter the most likely in so able a man. There is also a copious sprinkling of foreign idioms throughout these volumes, and they are swelled with dissertation—con-

nected, it is true, with his inquiry—upon the fine arts, and other rather general than peculiarly American questions. Such are his few faults; for we consider him to be well entitled to his opinions, even when we dissent from them. We shall now proceed to quote a few passages on various points of interest. The following is very complimentary to the mother country and its big baby.

'Another remarkable trait of English travellers in the United States consists in their proneness to find the same faults with Americans, which the people on the continent of Europe are apt to find with themselves. Thus, it has been remarked, that Americans are much given to extolling the excellence of their own institutions, whether civil or political, and to undervalue those of foreign countries. This is precisely the complaint about the English, by their continental neighbours, the French and the Germans. If we were to investigate the matter, we should find the cause to be perfectly analogous in both countries: a certain satisfaction that they are themselves belonging to that glorious community whose achievements, in the field and at home, have astonished the world. Some apology may, indeed, be offered for this patriotic weakness, when we reflect on the actual superiority of British institutions, and especially on the immense influence they have had on the civilisation and happiness of the human race. But all the causes of British pride are equally operating on Americans. They are of the same origin; all the glory attached to the British name is that of their ancestors; and they have themselves had an honourable share in its acquisition. Their fathers were the bold settlers who first transplanted British laws and British genius to a new world, to perpetuate them to the end of time.'

Mr. Grund adds, that the Americans have improved upon their old mamma; and his whole work shews the how and where. One would imagine he had married an American wife, from the subjoined.

'The forms of American ladies are generally distinguished by great symmetry and fineness of proportion; but their frames and constitutions seem to be less vigorous than those of the ladies of almost any country in Europe. Their complexions, which, to the south, incline towards the Spanish, are, to the north, remarkably fair and blooming; and, while young, by far the greater portion of them are decidedly handsome. A marked expression of intelligence, and a certain indescribable air of languor, probably the result of the climate, lend to their countenances a peculiar charm, to which it would be difficult to find a parallel in Europe. An American lady, in her teens, is, perhaps, the most sylph-like creature on earth. Her limbs are exquisitely wrought, her motions light and graceful, and her whole carriage at once easy and dignified. But these beauties, it is painful to say, are doomed to an early decay. At the period of twenty-four, a certain want of fulness in her proportions is already perceptible; and, once passed the age of thirty, the whole fabric goes seemingly into decay. As the principal cause of this sudden decline, some allege the climate; but I ascribe it more willingly to the great assiduity with which American ladies discharge their duties as mothers. No sooner are they married than they begin to lead a life of comparative seclusion; and, once mothers, they are actually buried to the world. At the period of ushering their children into society, they appear, indeed, once more, as respectable matrons; but they

are then only the silent witnesses of the triumphs of their daughters. An American mother is the nurse, tutor, friend, and counsellor of her children. Nearly the whole business of education devolves upon her; and the task is, in many instances, beyond her physical ability. Thus, it is customary with many ladies in New England not only to hear their children recite the lessons assigned to them at school; but actually to expound them, and to assist them in the solution of arithmetical and algebraic problems. There are married ladies who apply themselves seriously to the study of mathematics and the classics, for no other purpose than forwarding the education of their children; and I have known young men who have entered college with no other instruction, in any of the preparatory departments, than what they received from their mothers. But this continued application to the most arduous duties, the increasing care and anxiety for the progress and welfare of their children, and the consequent unreasonable confinement to the house and the nursery, undermine constitutions, already by nature sufficiently delicate; and it is thus, by the sacrifice of health and beauty, that American ladies pay to their offspring the sacred tribute of maternal affection. No human being can ever requite the tender cares of a mother; but it appears to me that the Americans have, in this respect, obligations immeasurably greater than those of the inhabitants of any other country."

The next goes further than we were prepared for.

"In point of fashionable accomplishment, American ladies are, perhaps, inferior to those of Europe; but the elements of an English, and even classical education, are in no country more widely diffused. In addition to Latin and Greek, a young miss of respectable parents is expected to become versed in the elements of chemistry, mineralogy, botany, natural philosophy, algebra, geometry, and astronomy, to which the more gifted add even Hebrew, and the higher branches of mathematics. In the pursuit of these studies they are generally allowed to spend quite as much time, and even more, than the young men at college; and it cannot, therefore, be surprising if the balance of general information should, in the United States, incline in favour of the women. There are few scientific topics of conversation on which an American lady would not be ready to join; and there are certainly less of English reading which are not perfectly familiar to the wives and daughters of respectable tradesmen.\* Music and drawing are, in America, less cultivated than they are in France or Germany; but there is quite as much parlour-amusement as in England, and certainly no lack of the graceful accomplishment of dancing."

Dancing, and speaking Greek and Hebrew to one's partners, would puzzle our dandies confoundedly; even Latin would be dose for most of them, whatever it may be in the United States.

In church concerns, Mr. Grund is a great advocate for the voluntary system:

"A hierarchy, from its superior organisation and discipline, may have its political advantages under peculiar forms of government; but I cannot see any spiritual benefit accruing from it to the people. Every member of a hierarchy is necessarily more interested in the continuance of the establishment, than in the discharge of his duties toward the people. He is paid by the establishment, of which he is

either a functionary or a pensioner, and is as much concerned in its welfare as a British mariner in the safety and endurance of Greenwich Hospital, or a clerk in the solvency of his employers. In America, every clergyman may be said to do business on his own account, and under his own firm. He alone is responsible for any deficiency in the discharge of his office, as he is alone entitled to all the credit due to his exertions. He always acts as principal; and is, therefore, more anxious, and will make greater efforts to obtain popularity, than one who serves for wages. The actual stock in any one of those firms is, of course, less than the immense capital of the Church of England; but the aggregate amount of business transacted by them jointly may, nevertheless, be greater in the United States. The subordinate member of a hierarchy does not act on his own responsibility; he merely discharges the obligations enjoined by his superiors. It is to them he must look for advancement, as a soldier looks for promotion to his commanding officers; and a fault of discipline is more severely reprimanded than an actual injustice towards a different order. Like the soldier, he has frequently an interest different from that of the people; and, like him, he is ready to turn his weapons against them whenever the establishment itself is in danger. A church establishment resembles always, more or less, a standing army. It is strong, enduring, and disciplined, but a severe tax upon the people, and nearly as dangerous an instrument for their subjugation."

We think every reader will detect the short-sightedness of which we spoke in perusing this quotation, which literally leaves every great bearing of the question in the distant clouds. But our author is willing to go considerable lengths in his admiration of America; and, not to touch on the slavery in the Southern states this week, we shall for the present conclude with his defence of Lynch law.

"There exists but one practice in the United States, which seems to be at variance with what I have thus far advanced; and yet, upon further consideration, I am almost inclined to consider it as a part of the common law of the country. I would refer to the 'Lynch law,' of which the most brilliant accounts are furnished in the British papers. The Lynch law of America, it must be remembered, is not a child of democracy; it is of a much more ancient and illustrious origin, and occurs already in the early history of the colonies. It was begot in those happy times in which religious customs took the place of the law; and in which the ingenuity of the settlers resorted to the simplest means of obtaining the most summary justice. It is, in fact, of a patriarchal nature, having for its motto the wisdom of Solomon: 'Do not spare the rod.' The pilgrim fathers, who settled the New England states, were a highly religious people, with whom the authority of the elders of the church was of more avail than any positive law of Great Britain; which, from its distance, and the manner in which it had been abused into an instrument of oppression, had considerably lost of its force. Their little community was more governed by mutual agreement and consent, than by any written code, except that to which their ministers pointed as leading the way to salvation. The Bible furnished them with precedents of the cheap, easy, and salutary correction of flogging; and there was no reason why their legislators should have attempted to improve upon the wisdom of Moses. The custom being once in-

troduced, and found expedient, was gradually increased in severity as the rigid morals of the Puritans began to relax; until, towards the American Revolution, when abuses had reached their climax, the original method of 'tarring and feathering' was substituted for the more lenient punishment of the rod. The commencement being made with the excisemen in Boston, was soon imitated in the other provinces; and being at first employed in a patriotic cause, created an universal prejudice in its favour. It became a national custom, which, as far as I remember, was only used in cases more or less directly affecting the people. Thus, whenever an individual gave a national insult, or did or practised any thing which threatened the peace and happiness of the people, they resorted to it as a domestic remedy; but, I am quite certain, not with the intention of opposing the regular law. They only resorted to it *ad interim*, till the regular physician could be called in; and, in most cases, effected a radical cure, without paying for the attendance of the doctor. In this manner the Lynch law was executed on gamblers, disorderly persons, and, latterly, also, on a certain species of itinerant ministers, who, a little too anxious for the emancipation of the Negroes in the Southern States, had betaken themselves to preaching the doctrine of revenge, instead of that of the atonement, and thereby forced the good people to apply the doctrine to those who evinced the most zeal for its propagation. But, as I have said before, the Lynch law is not, properly speaking, an opposition to the established laws of the country; or is, at least, not contemplated as such by its adherents, but rather as a supplement to them,—a species of common law which is as old as the country, and which, whatever may be the notion of 'the learned in the law,' has nevertheless been productive of some of the happiest results. I am aware there are different versions of the origin of 'Lynch,' but the above will be found to contain the essence and philosophy of all."

(To be continued.)

*L'Egypte et la Turquie, de 1829 à 1836.* Par MM. Ed. de Cadalvène et J. de Breuvry. Avec Cartes et Planches. 8vo. 4 vols. Paris, 1836. Bertrand; London, Barthes and Co. THERE were never published in France so many valuable accounts of voyages and travels into distant regions as are now, and for two or three years have been, issuing from the Parisian press. We need only appeal, for a proof of our assertion, to the numerous interesting articles in the catalogue of new books published by Arthur Bertrand, the principal publisher of such works. Many of these voyages have been undertaken and pursued either by the orders or under the immediate auspices of M. Guizot, the enlightened minister of public instruction, and others have been prosecuted under circumstances highly advantageous to the researches of those employed in them.

No country is at present more a subject of interest than Egypt, not only for the remains of remote antiquity with which it is covered, but also for more recent associations,—for the events which are but lately past, for its present position, and also for the consequences of those events and that position which are still to be looked forward to. We have very lately introduced to our readers an interesting narrative of the events to which we allude, by one of the authors of the work which is now the subject of our observations. The present work on Egypt and Turkey is the personal narrative of a residence and travels in those regions during an

\* This sentence is a sample of the occasional imperfection of style.—Ed. L. G.

extremely interesting period; and contains a mass of valuable and original observations on the country, people, manners, statistics, government, &c., of the Ottoman dominions in Asia and Africa, gathered during the last eight years. MM. de Cadalvène and de Breuvery have divided their work into four handsome octavo volumes, published one at a time, and each accompanied by an atlas of maps and plates in large folio. The first two volumes (all that is yet published) are restricted to Egypt and Nubia, the third will include Syria and Palestine, and the fourth will be devoted to Asia Minor and Constantinople.

The antiquities of Egypt and the aspect of the country have been so often described by different writers, that we will not repeat the accounts of our new French authorities; and, indeed, these are not the most prominent subjects on which they have treated. It would require far too much space in our columns—space on which we have so many other calls—to attempt a complete and connected view of the mass of information on the condition of the people; on the state of trade and manufactures; on the faults and virtues of the government and governors; on their effect upon the interior condition of the viceroyalty, &c., of Egypt, which is presented to us in the first volume. We must follow our ordinary plan of giving a few unconnected extracts, which will illustrate, more or less, the condition of Egypt under its present master.

And first, here is the portrait of Méhémed Ali's prime minister:

"Among the men attached to the fortune of Méhémed-Ali, few have rendered him so useful and important services as Boghos-Bey. Boghos-Yougouf, an Armenian, born at Smyrna, in his youth tried unsuccessfully various kinds of commerce. He arrived in Egypt at the time of the French invasion, and joined the pacha in the quality of interpreter; in which difficult post he distinguished himself by his talents and assiduity. The suppleness of his character did not save him from falling into disgrace with his master, who had, we are assured, given order that he should be thrown into the Nile. The interference of M. de Rosetti, consul-general of Tuscany, who then enjoyed great influence with the pacha, saved the life of Boghos, who soon resumed his functions of interpreter; and his credit has since that period never ceased to increase. None knew better than Boghos the art of prolonging business when interest required that it should not be terminated. Skilful in giving offence to nobody, in not contradicting, in not yielding, yet without ever refusing; his manners are always affable, his reception gracious, his politeness refined. Possessing more natural mind than acquired knowledge, more skilfulness in business than large administrative views, more finesse than real talent; but indefatigable in labour, endowed with a sound judgment, and entirely devoted to the viceroy, to whom he owes his fortune, it cannot be denied that, in many circumstances, he has given him important aid. Boghos-Yougouf-Bey is at present the first minister of Méhémed, over whose mind he exercises a very great ascendancy: we will add, that it is to be regretted that the fear of alienating the mind of his master, by opposing his favourite ideas, has more than once hindered him from giving more energetic and more conscientious counsels."

Nearly all the great men of Eastern history have risen from obscurity. Now, for a picture of the viceroy himself:—

"A sentinel was placed at the door of one of

the rooms which occupied the four corners of the great hall; Méhémed-Ali was there. When we entered, he was striding across the room, and talking with his minister, Boghos-Bey, who was standing before him in the most respectful attitude. He immediately made us a sign to be seated, and he himself placed himself on the angle of his divan. Three enormous candles of wax, in silver candlesticks, nearly three feet high, spread a dull light over the room, whose white-washed walls were ornamented only by a few rude paintings, and two frames, containing the drawings of the first two ships built in Egypt. The rest of the furniture consisted of a divan of scarlet, with a great round-table, surmounted by a chandelier. Méhémed-Ali is an old man, of small stature; his quick and piercing eyes, and the white beard which covers his breast, redeem, in some measure, the expression, which is rather common, of his physiognomy, habitually gay and open. By a remarkable singularity, the pacha, whilst imposing upon his troops the new costume adopted throughout the empire, has scarcely made any modification in his own. In the evening, he wears generally the long dress of the mamlouks, and his head is always covered by the folds of a large white turban, arranged in the Albanian fashion. Endowed with much natural intelligence, joining the most prepossessing manners to a great enthusiasm for the European innovations, the pacha possesses, in the highest degree, the art of captivating his hearers, and of imposing his manner of seeing things on those who are about him. We need not be surprised, therefore, at the reputation which has been given to him in Europe by the persons who have had an opportunity of approaching him. We were impatient to begin a conversation in which we expected that the regenerator of Egypt was going to reveal himself to us; but it turned almost entirely on questions of commerce, and we could not help feeling a kind of disappointment in finding only the speculator and merchant, where we thought we should have found the conqueror and legislator.

"Alexander the Great is the favourite hero of the viceroy. Having learnt that there existed a summary of the historians of this conqueror, he ordered the work to be procured from France. We were present when it was brought to him: arabesques in gold added to the elegance of this handsome volume, on which Thouvenin seemed to have exhausted the resources of his art. 'In how short a time can you give me this book translated?' was the question he put to one of his interpreters. 'In six months.' 'It is too long,' answered the pacha, with vivacity; and seizing immediately the yataghan of one of his khawass, he quickly parted the rich volume into three. 'In this manner three of you can work upon it; I must have the translation in two months. And I also,' said Méhémed-Ali to us, 'I intend that the events of my life shall be related to men. Every day I dictate to my *kiaïb* (secretary) a portion of my history; and it is wonderful how one fact brings up another, and how a crowd of circumstances, which I had forgotten, are brought back to my memory. Admire,' added he, after a moment's silence, 'how He who knows all things, is impenetrable in his designs. They tell me that Alexander and Ptolemy were Macedonians; and I, too, am of Macedonia. Our country, then, was destined thrice to give masters to Egypt; but my power extends much further than theirs in this country, and I hope, with the assistance of Heaven, to discover one day if, as your Cham-

pollion believes, the Pharaohs reached the sources of this Nile blessed by God.' Our conversation lasted more than an hour; the physiognomy of the pacha was animated, and we experienced an inexpressible charm in hearing this extraordinary man abandoning himself to his natural talkativeness and curiosity, and mixing more than once traits of ingenious ignorance with the observations of a subtle and penetrating mind. After we had been served with coffee in *zarfs*, ornamented with diamonds, the viceroy arose, and we took our leave of him, announcing to him, at the same time, our departure for Nubia. 'Go,' said he, 'visit without fear every part of my dominions; every where you will find aid and protection.'"

Our authors give us very numerous instances of the terrible and oppressive tyranny under which the Egyptians groan, of the fearful manner in which they are bruised, and the country depopulated by the iron sceptre of their viceroy, whose government presents so much outward splendour. The following is the process of conscription in Egypt during the pacha's wars: it must not be forgotten, in extenuation, that the "grand" Napoleon, the idol of the French revolutionists, did much the same thing for France:—

"When a levy is ordered, the governors divide the number of conscripts to be furnished among the villages; and then, in execution of the measure, they send, as secretly as possible, the irregular Albanians attached to their service, to carry off the number of men required. So soon as the presence of these agents is announced on any point, the cultivators take flight, and the soldiers pursue them across the cultivated fields, which are trodden under foot by the horses, and ruined in every direction. At last, after one or two hunts, the Albanians obtain the number of prisoners fixed by the authority; but, in spite of the exact orders which are given, and after even severe punishment, the greater part of the unfortunates who are caught, are always children, old men, or men unfit for service, who, less nimble in flight, must necessarily be first caught. All the men whom the irregulars have captured are carried, in chains, to the nearest town, and there imprisoned until the physician has examined them. The visit being ended, those who are judged unfit for service are sent home; but they are no sooner gone than there comes the question of replacing them: there is a new hunt, they are recaptured and taken again to the town to undergo a new visit, and, consequently, a new discharge; and this ceremony is repeated often more than twenty times before the number is completed. During this time the crops are ravaged, the fields are left uncultivated, and often, when people return to their labour, harvest or seed time is past, and the produce of a whole year is lost. By this it may be judged what an enormous sum a soldier costs the pacha before even he has entered the ranks. In vain the fellahs refuse, under pretext of former discharges, to follow the recruiting party. The cudgel and, at need, the sabre are ready to force them along; and we must confess, that it is very difficult to find a remedy for this serious inconvenience. The principle was adopted of giving certificates of discharge; but, independent of the errors which arose, as the greater part of the agents could not read, the fellahs who, by age or infirmity, were sure of being discharged again, gave their certificates to their relations or friends, and there were no more conscripts to be found."

The following is a specimen of the mode of

administering justice in Egypt, as witnessed by our travellers at Kelioub.

"The mémour received us in the most friendly manner. Whilst he was giving us information concerning the province intrusted to his administration, there were brought before him four men who had just been arrested on suspicion of murder. These unfortunate men were immediately sent to the kiahia (secretary-general) to be interrogated; the latter returned in about a quarter of an hour, and declared that, by the confusion of their answers, he had no doubt they were the murderers of the effendi, who had been slain some days before. 'Very well, inquire at Cairo, by the telegraph, what I must do with them.' The answer soon arrived. 'Since their guilt is acknowledged (said the chief of the council) they must be executed.' It happened to be market-day; moreover, we were on the road to Cairo, and the mémour was very glad that we should be able to give a good account of the manner in which justice was administered in his province. The order was given to hang them the same day. The delays of our reis did not allow us to depart before night, so we were present at the execution. The four sufferers were taken out of the warehouse, where they had been shut up for want of a prison, and were conducted to a small square near the house of the mémour. The merchants who were assembled there remained squatted beside their stalls, and saw pass, with the utmost indifference, these unfortunate people led by six soldiers and a sergeant. Every one quietly followed his business; and had it not been for the cries of the women and children, who followed to the place of execution a father, a husband, their only support, one would have supposed that nothing had occurred but what was in the habitual routine of every day. Four stakes had been planted at the four corners of the square. The soldiers asked for ropes of the neighbours; but it was a luxury which nobody possessed. So, the sergeant went and brought some string, which the soldiers began to plait. Some of the lookers-on obligingly lent their aid to this operation, which the sufferers regarded quietly, without attempting to run away: which they might easily have done, for their hands were only weakly tied behind their backs, and nobody paid attention to them. The fatal moment was arrived; the youngest was chosen to be hung first. 'Fool! that is not the way to do it,' (said one of the soldiers to his comrade, who began by passing the rope about the neck of his patient), it will be better to begin, by fastening it to the top of the stake.' Thereupon, he caused a ladder to be brought by one of the spectators, and proceeded in his work with the culprit, who, raised in the arms of another soldier, without the least resistance, expires quickly, after having cried out, that he is not guilty. Three of the victims were now dead. There remained the last, an old man with a white beard, who was surrounded by his wife and children, and who, as the only answer to their sobs and cries, repeated, at intervals, that he was innocent. 'Ali!' said the serjeant to one of his soldiers, 'if thou went to the mémour, to ask pardon for this poor old man, perhaps he would grant it—go!' And the soldier, shouldering coolly his musket, goes slowly to the governor to fulfil his mission. During the mean time, the old man conversed peacefully with his family. After a few minutes, the soldier returned; at sight of him, a gleam of hope and joy shone on the faces of the women: but the cries and sobs were soon redoubled: the mémour had refused his pardon.

'It is a pity,' said the serjeant, 'this old man has the air of an excellent fellow; but his *edjel* (last hour) is come.' With these words he began himself to put the rope round the neck of his victim, who, after having embraced, with admirable resignation, his wife and children, contented himself with exclaiming, 'God is great!'

If we judge by the numerous facts which are presented to us in this book, it would seem that the government of Egypt has been undermining its own power by the gradual exhaustion and destruction of its resources. The taxes are so exorbitant and so cruelly levied, that their result must be the throwing out of cultivation the land, and the reduction of the population to beggary.

Under the government of Méhémed-Ali there has been a great destruction of ancient monuments for the sake of their materials, even where excellent quarries are close at hand. Such progress has utilitarianism made in Egypt.

"We may search in vain at Achmouneyn (*Hermopolis Magna*) any vestiges of the monuments which had adorned the superb city, on whose ruins was built the town which is now itself in ruins. What time and fanaticism had respected has been destroyed by ignorance and cupidity, and the magnificent remains of Hermopolis Magna have been used to build a manufactory of saltpetre. The late Mr. Salt, the English consul, having learnt that they were going to destroy the remains of the city of Hermes, pleaded their cause with the viceroy, who, in consideration for the representative of Britain, promised to send immediate orders to hinder their destruction. But, vain hope! every thing was levelled; and there now remains nothing of the admirable portico which was looked upon as the most beautiful model of Egyptian architecture. It is with difficulty we distinguish, in the midst of the heaps of rubbish which mark the site of the ancient city, any of the bases of those columns now razed to the ground, about which lie, here and there, the remains of rich work, in the Grecian style, which have, by chance, escaped the devouring gulf of the lime-kiln. If the brutal despotism of the mamlouks forbade to science the knowledge of the monuments which time had spared, he respected them, at least, and preserved them to posterity. But who could tell the number of those which have disappeared, for ever, during the few years of the reign of Méhémed-Ali?"

At Samour, not far from Maufalout, our travellers found an immense grotto of mummies, little known even to the inhabitants of the country, and which has never yet been marked on a map. It appears, at some remote period, to have taken fire, either by accident or design, and, by tradition, is said to have burnt for many years.

We now leave our travellers for the present, with the end of their first volume, at Assouan (Syene), ready to pursue their further route up the Nile.

*Adventures in the Moon and other Worlds.* 12mo. Pp. 447. London, 1836. Longman and Co.

THIS is a curious book, full of " quaint fancies, and witty devices." One ingenious allegory succeeds the other, and we leave off surprised at the fertility of our author's inventions, and the variety of shapes taken by his sarcasm. One of the most amusing of these, is a philosopher who is taken at his word, and becomes all mind, his voice being all

that remains, by which means he communicates to his wife his wonderful change:—

"Cleopatra, being now left alone with the voice, which she was henceforth to regard as Aristus, remained silent, and plainly shewed by her dejected countenance that she did not consider this sound as equivalent to a husband; while Aristus, in suggesting arguments to console her, felt himself very insignificant, and was conscious that he greatly wanted personal advantages. The remainder of the day having passed in melancholy conversation, and the hour of rest being arrived, he said, 'We must now part, for the immortal soul does not lie in bed: your body insists upon sleep, but I, being intellect, am no longer liable to any such infirmity. While you and your body are asleep, I shall be engaged in meditation, and you see, therefore, how many valuable hours I have rescued.' Cleopatra retired alone, not a little indignant that this meditation should have supplanted her in her husband's affections, while he left the house and glided forth to pass the night in contemplation, as he said. The moon was bright, and the night calm and beautiful. He sat down on the sea-shore, and betook himself to the consideration of several philosophical subjects, being very desirous of arriving at some happy thought, which might justify him to his friend. He had been persuaded that as soon as he was reduced to pure intellect, he should be put in possession of extraordinary powers; and that whenever he applied himself to thinking, some great revelation would be made to him. He now, therefore, sat waiting for these new thoughts; but though he revolved one subject after another, on which he desired to gain information, to his great disappointment, his meditations did not seem to him more profound than when he had been detained in a body. After some hours, he was weary of these studies, by which he was surprised, having always imagined that the soul was not liable to fatigue, and having always laid to the charge of his body all the weariness that he had felt. Finding, however, that he was not the indefatigable intellect which he had expected to be, he returned home without having acquired any information except that it was a fine night. On arriving at home, he entered his wife's chamber, and sat down by her bed. She was asleep, and appeared very beautiful to him, and he could not refrain from stooping to kiss her, forgetting how incapable of such an enterprise he was become. On reaching her face, he endeavoured to press what he considered his lips against hers, and finding that no intercourse ensued, was reminded of the deception. Being distressed that all endearments were unattainable, he continued to gaze upon her, acknowledging to himself that she was a beautiful woman, and beginning to doubt whether he had done right. But he suddenly checked himself with the consideration that he was now a pure soul, and as such, could not possibly be affected by female beauty. Aristus had several young children, and the next morning Cleopatra endeavoured to explain to them the change that had taken place in their father. This, however, she was unable to make them comprehend; they were never to see him again, they were told, yet he was still with them, and by what means he had been put out of sight, was a mystery beyond their understanding. That figure which they had been used to consider as their father having vanished, they wondered how any remainder of him could be left, and were much perplexed by hearing that he had been divided into two. In vain their

mother tried to explain to them that the body might be gone, and the mind remain at home; this was a distinction that they could not reach. Aristus remained silent while his wife thus endeavoured to explain him to the children; but finding himself too abstruse for their understanding, in order to make his condition more intelligible, he spoke to them. They were at first terrified by this mysterious voice, and could hardly be prevented from running away; but hearing it solemnly assure them that it was their father, and had no design of hurting them, they took courage, and were then greatly amused to find how their father had hid himself,—they laughed violently whenever he spoke, and seemed to be delighted with the novelty. It was not long before Aristus found that the order and obedience of the family were likely to be much disturbed by his concealment. His wife, being of a gentle temper, had left to him all the duty of command, and never claimed much authority to herself; but now his influence was much lessened by his new singularity, and the household was soon in great want of control. He endeavoured to admonish and instruct his children as before, but the same obedience did not ensue. They had been accustomed to follow, without hesitation, the advice which came from a peremptory countenance; but now the advice which came out of the air made very little impression upon them. His positive commands were broken, and the lessons he enjoined were not learned. Their mother attempted to persuade them of the duty they owed to the voice which was going about the house, and which she affirmed was still their father; but her expostulations could procure no obedience to the venerable sound, and it was disobeyed every hour. In this revolt, Aristus, having nothing but a voice to govern with, made trial of all its tones, but still without success. Sometimes he remonstrated gravely, and at other times was provoked into very loud invectives. When the voice grew choleric the children were amused: they practised tricks to incense it, and laughed immoderately whenever the air began to exclaim. On one occasion, Aristus being exasperated beyond forbearance against his eldest boy, and forgetting how incapable of revenge he was become, attempted to inflict on him a severe blow; but the offender sitting quite insensible of the admonition which had been aimed at him, Aristus was obliged to confess that the mind, notwithstanding all its great endowments, cannot chastise a child without the aid of an arm."

The whole is very humorously carried out; and at last, thoroughly convinced of his folly, the philosopher is not a little thankful to return even into that encumbrance, a body. We commend the pleasant, and yet thoughtful, volume to our readers.

*An Essay on the Welsh Saints, or the Primitive Christians usually considered to have been the Founders of Churches in Wales.* By the Rev. Rice Rees, M.A., &c. 8vo. pp. 358. London, 1837. Longman and Co.; Llandovery, Rees; Cardiff, Bird.

THE author was the successful candidate for the "National Eisteddfodd" premium, offered for the best essay on the subject, which he has now extended and enlarged into this octavo volume. The inquiry is a curious one, and he has bestowed great pains upon it. Perhaps, it would be difficult to throw more light, were it desired, or very desirable, upon the era which ensued from the end of the Roman power in Britain to the close of the seventh century; an era which Mr. Rees, however, tells us, has

never been sufficiently investigated. As it is, at this late hour, he has himself consulted such old writers as Nennius, Walter de Mapes, the doubtful Gildas, Geoffrey of Monmouth, Bede, where he sheds a glimmering on the subject, and others; but his chief statements appear to be drawn from bardic and legendary sources. Thus, if we have not true history, we have, at least, the limbs and fragments of romance: necessarily somewhat drier than usual, but, in all probability, very little less fictitious. For the author says:—

"So numerous are the Welsh saints, that their history is, in a manner, the ecclesiastical history of their time; but it must be confessed, that nothing further is known of many of them than their genealogy and their churches;" and he adds, further explaining his purpose, "The question of the celebration of Easter, and other points, on which the Primitive Christians of Britain differed from the Romanists, have been ably discussed in other publications; the object of this treatise is, if possible, to add to the stock of information from materials which have been but partially investigated." The latter we leave to him and Mr. Moore, and proceed to take a brief notice of some of Mr. Rees' antiquarian pages.

Llan was originally the Welsh for a church or a chapel; but, in process of time, *Capel* became the distinguishing denomination of the last. The names of many Welsh places are compounded of these. It would break our Saxon jaws, if not our hearts, to utter them; and, indeed, we find a number of the saints themselves so christened, that we never could have worshipped them by name: such, for instance, as Glywys Ccrliniw, Gwrddelw, Gwrfyw, Gwrthwl, Rhwrydrys, Cynfelyn Drwagl, and the like; whom one might honour, but upon whom, in the hour of need, it would be impossible to call. The Welsh pedigrees in the Essay are still more unpronounceable; and we must, therefore, simply say, that there they are invincible to the united efforts of throat, palate, tongue, teeth, and lips.

But we must afford an example or two of the work, and so leave it to the public. The principal proposition to be solved is thus laid down:—

"As formal dedication in honour of saints was not the original custom of the Welsh, the question which remains is, the era of those chapels which have been built in honour of natives of Wales; that they are ancient may be shewn from the fact, that the great majority of them are parochial, and few of them are subject to churches dedicated to the apostles, and other saints, whose homage was introduced at a later period. When the Welsh began to honour saints after the catholic method, they would naturally direct their attention to those who deserved that respect among their own countrymen. But it appears to have been under certain limitations; and, compared with the apostles, and other celebrated names, the holy men of Wales could only rank as saints of an inferior class. To regard the founders in the character of tutelar saints of their respective churches was an obvious mode of proceeding; but in the establishment of new foundations, preference would be given to saints of more extensive reputation; and the only edifices erected in honour of Welshmen would be chapels in places where they had lived, or subject to churches connected with their history. In other countries, where the Romish church has prevailed, many persons who never were canonised have been allowed the honours of sanctity in their imme-

diate neighbourhood, and in this local character the saints of Wales must be considered. Accordingly, many of the chapels called after Welshmen are found to be dedicated to the saint of the mother church, to his relatives, or to persons whom tradition has connected with the place; and the prevalence of known cases of the last kind is sufficiently great to justify a similar inference being drawn where the tradition has been entirely forgotten. Chapels of this description must generally have been erected while the memory of their saints was comparatively recent, and may, therefore, be deemed coeval with churches of the second foundation. The perishable nature of tradition, and the occupation of several parts of Wales by foreigners, will sufficiently explain why no material increase was afterwards made to their number. That the Roman Catholics—or, at least, the various conquerors of Wales, all of whom professed that religion—hardly considered the primitive founders in the light of saints, will further appear from the circumstance, that in many instances they gave their churches a new dedication."

Mr. Rees fully sifts these points, as well as others too numerous for us to detail; and we conclude with the biographies of two saints, as samples of the most worthy of these ecclesiastical heroes.

"Elffin, the only son of Gwyddno whose name is preserved, was a saint of the College of Iltyd. A story, which, however, is confessedly a fable, relates that Gwyddno had a fishing wear on the sands between the Dovey and Aberystwyth, the annual profits of which were considerable. But Elffin was the most unlucky of men, and nothing prospered in his hands; inasmuch that his father was grieved at his ill successes, and feared that he was born in an evil hour. Wishing, however, to give the fortunes of his son a further trial, he agreed to allow him the profits of the wear for one whole year. On the morrow Elffin visited the wear, and found nothing except a leathern bag fastened to one of the poles. He was immediately upbraided for his ill luck by his companions, for he had ruined the good fortune of the wear, which before was wont to produce the value of a hundred pounds on May eve. 'Nay,' replied Elffin, 'there may yet be here an equivalent for the value of a hundred pounds.' The bag was opened, and the face of a child appearing from within, 'What a noble forehead!' exclaimed the opener. 'Taliesin be his name,' rejoined Elffin; and, commiserating the hard fate of the infant exposed to the mercies of the sea, he took it in his arms, and, mounting his steed, conveyed to his wife, by whom it was nursed tenderly and affectionately: from that time forward his wealth increased every day. Such is the story of the discovery of the chief bard of Wales, committed by his mother to the chances of the tide, and saved in the manner described. In return for his kindness of his benefactor, adds the tale, he composed, while a child, his poem, entitled the 'Consolations of Elffin,' rousing him from the contemplation of his disappointments, and cheering him with the prospect of blessings which still awaited him; and afterwards, when Elffin was imprisoned in the castle of Dyganwy by Maelgwn Gwynedd, Taliesin, through the influence of his song, procured his release."

"Bedwini, another bishop mentioned in the Welsh accounts, is said to have been the primate of Cornwall in the time of Arthur, and to have resided at a place called Celliwig. Stinan, or Justinian, according to his life by John of Teignmouth, was born of noble parentage in

Lesser Brittany; and, having spent his youth in the study of learning, he received the order of priesthood, and was, by a divine oracle, commanded to leave his country. After wandering for a while, he came to the coast of Wales, and landed in a certain island called 'Lemeney,' where he led a religious life in company with Honorius, the son of king Thefricius. Cressy says:—'The author of his life relates at large the envy and malice with which the Enemy of mankind impugned the devout and mortified life of this Holy man, seeking to interrupt it by severall and frequent illusions, and by suggesting scandalous lyes concerning him. But, in conclusion, when he saw himself every way vanquished by the Holy man, and that neither by violent assaults nor malicious suggestions he could withdraw him from the service of God: he attempted other arts and guilefull machinations: For he infused the poison of his malice into the hearts of three of the Holy mans servants: Inasmuch as they having been reproved by him for their idleness and mispending the time, they were inflamed with fury against him, insomuch as rushing upon him, they threw him to the ground, and most cruelly cutt off his head. But in the place where the sacred head fell to the ground, a fountain of pure water presently flowd, by drinking of which in following times many were miraculously restored to health. But miracles greater than these immediately succeeded his death. For the body of the Blessed Martyr presently rose, and taking the head between the two arms, went down to the sea shore, and walking thence on the sea, pass'd over to the port call'd by his name: and being arrived in the place where a Church is now built to his Memory, it fell down, and was there buried by Saint David with spiritual Hymns and Canticles.' Cressy next proceeds to explain, that the island Lemeney 'hath in English obtain'd a new name, being call'd Ramsey;' and that 'it lyes opposite, and in sight of, Menevia, the Episcopall seat of St. David.' The church, mentioned in this most outrageous legend, is evidently the chapel of Sinan in the parish of St. David's, Pembrokeshire, as the church of Llaustinan, in the same county, is too far distant to answer the description."

## MISCELLANEOUS.

*Glenlonely; a Novel.* 3 vols. (London, Longman and Co.)—This work is worthy of its affected and far-fetched title. The story is commonplace and wire-drawn, while the prolix digressions seem to have been "at a feast of the languages, and to have stolen the scraps."

*Lavater's Cabinet Cyclopaedia, No. LXXXIX. History, Vol. II. of the Reformation,* by the Rev. H. Stebbing, A.M. (London, Longman and Co.)—One of the most interesting, as well as important periods in the history of modern Europe, is here placed before us from about the year 1530 to 1570, and includes the progress of the Reformation in Germany, France, England, &c. It is done with Mr. Stebbing's usual talent and intelligence.

*Visible History: England from the time of the Ancient Britons to the Death of George IV.* by Ch. Williams, Author of "Visible Geography," &c. &c. Pp. 402. (London, Westley and Davis.)—It is a good notion to assist the mind of youth by correct pictorial representations of persons, objects, costumes, &c. &c. pertaining to the various periods of history which they are reading; and, in general, Mr. Williams has attended very fairly to this requisite. We should, however, like to know his authority for the musketeer weapons in the time of George II.; in our opinion, they would be more appropriate to the era of the Commonwealth.

*Aerial Sights and Sounds,* by the Same. Pp. 336. (Same publishers.)—Another nice work, but, perhaps, for a younger class of readers. It treats of many entertaining and instructive subjects.

*Childe Harold,* by Lord Byron. 18mo. pp. 328. (London, Murray.)—A new, and a gem of an edition of our famous and popular bard. We should like to see either continent, the old world or the new, try to rival it at double its price. *Childe Harold*, with valuable notes and an excellent appendix, a portrait of Byron, and a superb vignette of the Lake of Geneva (Stanfield and E. Finden), in this beautiful size, but yet clearly printed, is a tempta-

tion which even the possessors of former editions will hardly be able to resist.

*The Walk; or, the Pleasures of Literary Associations,* by W. Robson, Master of Clifford Lodge Academy. Pp. 84. (London, Smallfield and Son.) This is a charming, modest little book, which will furnish the youthful lover of literature with many themes for recreation and reflection.

*Digest of the Homoeopathic Principles,* by E. Williams, M.B. Pp. 42. (London, Renshaw.)

"Send for the Doctor and make him worse" is the old song; and homoeopathy is the *modus operandi*. A *Slight Sketch of Joan d'Arc*. Pp. 56. (London, Churton.) A neat little sketch of this very extraordinary character.

*The Muffled Drum, a Juvenile Drama,* by Mrs. L. Miles. Pp. 23. (London, Ackermann.) A thing we should hardly have thought worth printing.

*Winslow's Pocket Guide to the College of Surgeons.* (London, Cox.) A very small but useful surgical guide, and well worthy the purse, and then the pocket of the student.

*The Scientific Reader,* by T. Linnington. Pp. 248. (London, Souter.) A very nice school-book; the selections for reading and elocution judiciously made from modern writers.

## ARTS AND SCIENCES.

## ASTRONOMY.

*Extract of a Letter from Sir J. Herschel to Sir W. Hamilton, Astronomer Royal of Ireland.*

*Feldhausen, Cape of Good Hope, June 13, 1836.*

By your last, which only reached me yesterday (though dated on the 16th of March), I learn that the meeting of the British Association will take place early in August. Had it been in September, it might have been practicable for me to have drawn up (not without difficulty) somewhat of a detailed report of my proceedings here. As it is, however, nothing short of a miracle could enable me to do so in time for your meeting. The fact is, since our arrival here, I have been so entirely occupied with the mechanical processes of observation, and the actual cutting and carrying of my harvest, that I have not had any time to tresh it out for consumption; or, to drop figure, I have got a monstrous collection of rough observations, but hardly a figure reduced. So much as this, however, I may say, that I have swept over all, or nearly all, that part of the heavens which is invisible, or hardly visible, in England, except just in the immediate vicinity of the pole (a most barren region), and (favoured by a season of almost uninterrupted clear sky, and a definition and tranquillity of the stars, under great apertures and magnifying powers, which I want language to express) have amassed a large collection of nebulae and double stars of all classes, orders, and degrees. Of some of the most remarkable objects which have occurred to me, I have sent a brief list to Schumacher, who may probably have inserted them in his astronomical journal; I can here only find time or room for a few general remarks. The general aspect of the southern circumpolar region, including in that expression 66° or 70° of S. P. D., is in a high degree rich and magnificent, owing to the superior brilliancy and larger development of the milky way; which, from the constellation of Orion to that of Antinous, is in a blaze of light, strangely interrupted, however, with vacant and almost starless patches, especially in Scorpio, near  $\alpha$  Centauri and the Cross; while, to the north, it fades away, pale and dim, and is, in comparison, hardly traceable. I think it is impossible to view this splendid zone, with the astonishingly rich and evenly distributed fringe of stars, of the third and fourth magnitudes, which form a broad skirt to its southern border, like a vast curtain,—without an impression, amounting to a conviction, that the milky way is not a mere stratum, but an annulus; or, at least, that our system is placed within one of the poorer and almost vacant parts of its general mass, and that eccentrically, so as to be much nearer to the parts about the Cross, than to that diametrically opposed to it.

The two Magellanic clouds, Nubecula Major and Minor, are very extraordinary objects. The greater is a congeries of stars, clusters of irregular form, globular clusters and nebulae, of various magnitude and degrees of condensation; among which is interspersed a large portion of irresolvable nebulae, which may be, and probably is, star-dust, but which the powers of the twenty-foot telescope shew only as a general illumination of the field of view, forming a bright ground on which the other objects are scattered. Some of the objects in it are of very singular and incomprehensible forms; the chief one especially (30 Doradus), which consists of a number of loops, united in a kind of unclear centre or knot, like a bunch of ribands disposed in what is called a true-lover's knot. There is no part of the heavens where so many nebulae and clusters are crowded into so small a space as this 'cloud.' The 'Nubecula Junior' is a much less striking object. It abounds more in irresolvable nebulous light, but the nebulae and clusters in it are fewer and fainter, though immediately joining to it is one of the richest and most magnificent globular clusters in the hemisphere (47 Toucani). It is somewhat singular, that this nubecula is placed a full hour too late in right ascension in all maps and catalogues, probably owing to a misprint, or other similar cause of error, in the authorities employed to construct them. The great nebulae in Orion and  $\alpha$  Argi are, however, by far the most surprising objects this hemisphere presents. The former appears to much greater advantage than in our latitudes, and presents many appendages, branches, and convolutions, which are not discernible in its low situation in Europe. The latter is an object *sui generis*, and which, without a figure, it would be useless to attempt a description of. I should mention that I have spared, and shall continue to spare, no pains to procure correct drawings of these and other the southern nebulae. I cannot trace in  $\alpha$  Argi, as seen in the twenty-feet, any resemblance to the figures published of it; though in the seven-feet equatorial (furnished with a five-inch achromatic object-glass) some leading features of those figures may be recognised. It is of immense extent, and crowded with stars, to which the nebulae form a brilliant back-ground. The planetary nebulae of the southern circumpolar sky are numerous (for the class of objects) and highly characteristic. I have discovered no less than five, quite as sharply terminated in their discs as planets, and of uniform light. Indeed, the first on which I fell was so perfectly planetary in its appearance, that it was not until several observations of it at the Royal Observatory, by Mr. Maclean, had annihilated all supposition of its motion, that I could relinquish the exciting idea that I had really found a new member of our own system, revolving in an orbit more inclined than Pallas. You may form some idea of this climate, as regards clearness of sky, from what was told me by our provisional governor, Colonel Bell,—viz. that out of forty-two successive days, he had only three times been disappointed in finding Venus, with the naked eye, in broad sunshine (at 9 A.M.). I read with ease, a few nights ago, the most involved parts of a lady's closely crossed letter by the light of an eclipsed moon, then near the zenith—(certainly the eclipse was not a great one). The finest double stars (not hitherto described) which I have as yet detected, are  $\gamma$  Lupi,  $\pi$  Lupi,  $\gamma$  Centauri,  $\beta$  Hydra, and  $\epsilon$  Chameleontis. The three first mentioned are of extreme closeness, ranking in that respect with the closest stars in the northern hemisphere. The admirable tranquillity of the air

for several months past, so different from the chaotic state of things all previous accounts had led me to expect, has given fair play to my reflectors; and by diminishing the discs of stars under high powers, nearly to points, has enabled me in almost every case either to detect the duplicity of stars examined, or (what is not less difficult) to prove a decisive negative. In the polishing of my mirrors I have been particularly successful: in fact, they gave me no trouble whatever; and having three of the great specula to replace one another, on the slightest dimness appearing on any one of them, I have no hesitation in consigning it at once to the polisher, whence, after losing about 1-200,000th of an inch of its surface, it comes forth like a snake that has thrown its skin, brilliant and ready for a fresh attack. No prior experience had led me to anticipate any thing half so favourable: I have not met with a single failure. I have looked well out, by Runcker's Ephemeris, for Halley's comet, with fresh-polished mirrors, but without success.

## GEOLOGICAL SOCIETY.

WEDNESDAY, January 4, Mr. Lyell, president, in the chair. — The first paper which was read contained some remarks on the elevation of the coast of Chili, by Mr. Caldcleugh, F.G.S. Previously to the author's return to South America in 1835, he was induced to suspend his opinion relative to the accounts which had been published of the effects of the great earthquake of 1822. Since his return, however, he has investigated the evidences of alteration of level on the Chilean coast; and he is now convinced that there are indisputable proofs of a relative change of land and sea, produced, not only by that earthquake, but by other similar phenomena. In detailing the results of his inquiries, Mr. Caldcleugh gives all the historical and documentary evidence which he has been able to consult; and he shews, by quotations from the works of the Abate Molina, Frezier, Ulloa, and Feuillée, that many rocks, during the last 120 years, have been raised either from a depth which did not require their being laid down in charts, or from a well-known depth below the level of the sea to a height of many feet above it. Thus the Belem rock, in the Bay of Concepcion, which in the chart of Ulloa is not laid down, has now only two fathoms upon it at low water. In the Bay of Valparaiso in a rock which, the same author says, "should be looked out for with care," not being then visible, but which has now always a ripple upon it; and other rocks near the Cruz de Feyes, which in 1821 were covered at all times of the tide, are now four feet above the level of high-water mark. In the port of Coquimbo, Feuillée, writing in 1770, guards mariners against some rocks on the west side of the southern entrance, which were then à fleur d'eau; but three of these rocks, called the Pelicans, are now about twelve feet above low-water mark. In the same port is a rock called the Tortoise, which in the time of Frezier and Feuillée was from five to six feet out of the water, though it is now about nine feet above the level of high tide. Mr. Caldcleugh gives, also, full accounts of the change of soundings, and the increase of land produced by the accumulation of debris brought down by the streams; separating the facts which they present from those connected with earthquakes. In addition to the proofs given by Mrs. Calcott, and an anonymous author in a paper in the *Journal of Science*, of the effects of the earthquake of 1822, Mr. Caldcleugh states, that in 1821, some timber, lying on one side of a street or causeway

which wound round an old fort, was secured by ropes to prevent its removal at high water, but that the spot is now seven feet above the action of the tide; and persons who escaped on board vessels remarked, that the sentries before an old fort on the summit of the hill over the ruins of the town, who were previously visible from the feet upwards, had, after the earthquake, half the body concealed by the fore part of the cliff. Mr. Caldcleugh also gives an account of the effects produced by the great earthquake of the 20th February, 1835, chiefly from the observations of Capt. Fitzroy; full details of which have been already laid before our readers. — The president then announced that he had received from the Foreign Office a translation of an article which had appeared in the South American journal, *El Arancano*, and written by Don Mariano Rivero; but, as none except original papers were read at the Society's meetings, he could only state, that Don Mariano Rivero dissents entirely from the opinion that earthquakes have produced changes of level in the Bay of Valparaiso. The communication was accompanied by a letter from Colonel Walpole to Lord Palmerston, the following extract from which was read by the secretary: — "I have seen the ground; I have heard, from persons long resident on the very spot alluded to, both previous to the earthquake of 1822, and still residing there — accurate observers of events — statements in direct corroboration of M. Rivero, and whom he could not have consulted: and it is difficult to conceive why those whose opinions he considers as inconsiderately put forth, should have drawn their conclusions from the mere appearance of a piece of ground not more than 200 yards of the whole circumference of a bay of considerable extent; unless it is from that very general failing, which permits individuals attached to a particular theory to draw their inferences in favour of that theory, without caring to investigate very accurately the premises from which they are deduced." — A short notice, on the proofs of recent elevations on the coast of Chili, by Mr. Charles Darwin, M.A. F.G.S., was afterwards read. The observations were made by the author during the surveying voyage of H. M. S. Beagle, commanded by Captain Fitzroy; and the part of the coast more particularly described, extends from sixty miles south of Valparaiso to eighty north of it. Throughout the whole of this line extensive beds of shells were found, elevated at various heights, from the level of the present sea-beach to 250 feet above it. A few were found at much greater elevations, but their origin was subject to doubt. At Valparaiso the position of these shells was examined with particular care by the author, together with Mr. Alison. The circumstances which led to the belief that they had been accumulated in their present position when the sea occupied a different level, were the following: — their great numbers, forming extensive and horizontal beds, whereas the heaps of shells which, in Tierra del Fuégo, are known to have been collected by the inhabitants, always retain a conical figure; their position at the extremities of inaccessible headlands, where there appears no possible inducement for the inhabitants to bring the shells for the purpose of eating; the large proportional number of extremely small shells; their brittle and decayed condition; and lastly, the state of decomposition, bearing an evident relation to the comparative height of the various situations at which the shells were lying. Mr. Darwin alluded to a case near Calao, on the coast of Peru, where, from the

nature of the climate, rain never falls, and where a most perfect gradation of change might be traced from the entire shells, only a little above the beach, to a mere layer of calcareous powder, without an indication of organic structure, which coated the ground at a greater elevation. The most unequivocal proof of a recent rise is drawn from *balanida*, found adhering to the rock, above the reach of the highest tides. Mr. Alison, upon removing the dung of birds from the summit of a projecting point at Valparaiso, found the attached shells at the height of fourteen feet above high-water-mark. Mr. Darwin also observed *balanida* similarly situated at the Rapel, sixty miles south of Valparaiso, and at Quintero, a few miles to the north of it. The present position of an ancient sea-wall, which was built in 1680 at Valparaiso, cannot be otherwise explained than by a change of level. The appearance of the granitic rocks, both to the north and south of the bay, also bear testimony to the same fact, of an elevation to the amount of about fourteen feet. The position of the church of San Augustin was ascertained with care, and it was found to stand nineteen feet six inches above high-water mark; hence, allowing for its probable position when built in 1614, the greatest amount of possible change cannot have exceeded fifteen feet in the long period of 220 years. Mr. Darwin considers it certain that the land was elevated during the earthquake of 1820. The rise of the land, even in the Bay of Valparaiso, was not equal; for a part of a fort which was not formerly visible from a certain spot, subsequently to the earthquake fell within the line of vision. There is good reason to believe that part of the most recent rise of the land, attested by the *balanida* and position of the sea-wall, has been due to changes acting previously to 1822, as well as to that earthquake itself, and likewise to an elevation produced by insensible degrees since that period. Mr. Darwin believes that the island of Chiloe is at present rising in a manner very similar to the coast of Norway. But it is a curious question, whether these changes take place by very small quantities during each trifling earthquake, or independently of such moments of disturbance? The opposite or eastern shores of South America (where earthquakes are never experienced) from the Rio Plata to the Strait of Magellan, have been elevated within the same recent period as the coast of the Pacific. It is impossible to doubt that these changes of level belong to one class of events. The earthquakes, the volcanic eruptions, and the sudden elevations of the ground, which all follow the coast-line of the Pacific, ought, perhaps, to be considered as irregularities in the order of some more widely extended phenomenon. To the northward of Valparaiso, extensive beds of shells were found, which the common people of the country attributed to the deluge. The author gives a very brief notice respecting the marine origin of the terraces at Coquimbo, described by Captain Basil Hall, and discussed by Mr. Lyell. The proofs rest on the occurrence of recent shells imbedded in a friable calcareous rock, and elevated 250 feet above the sea. This calcareous stratum passes into a shelly mass, chiefly composed of fragments of *balani*, &c.; and this again overlies a sandstone, abounding with silicified bones of gigantic sharks, mingled with extinct species of oysters and *perna*, of a great size. The intermediate bed contains some shells, in common with the upper, in which all are recent, and with the lowest, in which the greater number are extinct. The phenomena of the parallel terraces, and of the elevated

shells, occur, in a strongly marked manner, in the valleys of Guasco and Copiapó. The latter is situated 350 miles to the north of Valparaiso; and at an equal distance to the south of it, at Concepción and Imperial, there is an abundance of elevated shells. In conclusion, Mr. Darwin thinks that it is impossible for an observer to travel along the coast of Chili, and not to discover innumerable proofs of elevations of the land within the period of recent shells.

#### ZOOLOGICAL SOCIETY.

Mr. VIGORS in the chair.—Balance in favour of the Society carried to the January account, 1259l. 1s. 6d. About a dozen individuals were elected fellows. During December, 3715 persons visited the gardens and museum. Several valuable donations were announced; amongst them were, eighty-seven bird-skins, reptiles in spirits, and a curious collection of insects, procured by the Euphrates expedition, under Col. Chesney, and presented by the commissioners for the affairs of India. The stock on hand, at December 31, was 298 mammalia; 702 birds; 24 reptiles; in all, 1024. Satisfactory arrangements have been made for warming the museum, by means of heated air; so that visitors need not be afraid of taking cold when examining the objects,—now arranged with the greatest care and attention. A wax model of the intended gold medal, six of which it is intended shall be awarded annually by the Society, was exhibited. It is a beautiful and appropriate design, by Thomas Landseer, having on the obverse the rhinoceros, giraffe, &c.; the reverse is composed of birds.

#### ENTOMOLOGICAL SOCIETY.

JANUARY 2d, 1837. The Rev. F. W. Hope in the chair.—The memoirs read at this meeting were, Observations upon the nest of the trap-door spider (*Ctenisa nidulans*) of the West Indies, by Mr. Sells, by whom several very interesting particulars, hitherto unnoticed, in the construction of the nest and its door, were described. Continuation of Mr. Waterhouse's descriptions of the insects brought home by Mr. Darwin, containing the characters of sixteen Australian species of the genus *haltica*. On capriciation, as practised upon the figs of the Levant, and descriptions of the insects employed in the process; together with observations upon the *Agaon paradoxum* of Dolman, by J. O. Westwood. Mr. Raddon exhibited numerous insects, extracted by him from raw turpentine, and explained the process which he had adopted for that purpose; also, various insects extracted from gum copal, by means of the application of a solvent not hitherto adopted. A discussion ensued between this gentleman and the president, as to the nature and distinctions of the gum copal and gum animé, and the insects inclosed in each; the latter stating, that from the state of the varnish trade, it was highly desirable to continue these researches, in order to discover an available solvent, which had been hitherto a great desideratum with the varnish manufacturers. He also exhibited drawings of two species of lepidopterous insects, which feed upon the turnip, as well as several other interesting insects. The secretary exhibited a series of typical specimens of Belgian *Braconida*, received from Professor Westmael, of Brussels. A discussion ensued, wherein the president, Messrs. Mac Leary, Waterhouse, Struckard, and others, took part. The third part of the Society's Transactions was placed upon the table. The anniversary meeting of the So-

ciety was announced to take place on Monday fortnight.

#### BOTANICAL SOCIETY.

JANUARY 5th. Mr. J. E. Gray in the chair.—The minutes of the last meeting were read and confirmed. Donations of plants announced from Dr. Macreight, and Mr. G. E. Dennes. A great many members were elected, and others proposed. A paper was then read by the curator, Mr. D. Cooper, (author of the "Flora Metropolitana, or Botanical Rambles within thirty miles of London"), on the plants found about Battersea Fields; by which it appears, there are found about that place 406 out of the 1500 plants found in Britain. After some discussion upon this paper, the secretary read a paper from Mr. Thomas Hancock, on the plants found by him about Bristol last year; and, when some discussion upon this paper had taken place between the president, Dr. McIntyre, and Dr. Macreight, the meeting adjourned to the 19th, when the conclusion of Dr. McIntyre's paper upon the plants found about Warley Common, Essex, will be read; and also a paper by Mr. Freeman, on describing and arranging British plants.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

CAMBRIDGE.—Prize Subject.—1. The Marquess Camden, Chancellor's, third gold medal for the encouragement of English Poetry, "The conflagration of Rome in the reign of Nero."

2. The Representatives in Parliament.—Two prizes, of fifteen guineas each, for the encouragement of Latin Prose Composition; and two other prizes, of fifteen guineas each.

The subjects are—1. For the Bachelors, "Quænam beneficia Academia, qualls nostra est constitutio ac forma, ad rempublicam afferat?" 2. For the Undergraduates, "Utrumque tempus consulas, tum antiquius, ut cognoscas, quid optimum fuerit; tum recentius, ut notes, quid fuerit aptissimum."

III. Sir William Browne's three gold medals.—1. The best Greek Ode in imitation of Sappho; 2. The best Latin Ode in imitation of Horace; 3. The best Greek Epigram after the model of the Anthologia, and the best Latin Epigram after the model of Martial.

The subjects are—1. For the Greek Ode, "Ingenium cui sit, cui mens divinitus atque os Magnæ sonaturum, de nominis huius honorem;" 2. For the Latin Ode, "Newtonus;" 3. For the Greek Epigram, "Nil fuit unquam Sic impar sibi;"

4. For the Latin Epigram, "Proximum sum egomet mihi." The Greek Ode may be accompanied by a literal Latin Prose Version.

IV. The Porson Prize is the interest of 400l. stock, to be annually employed in the purchase of one or more Greek books, to be given to such resident Undergraduate as shall make the best translation of a proposed passage in Shakespeare, Ben Jonson, Massinger, or Beaumont and Fletcher, into Greek Verse.

The subject for the present year is—Shakespeare, *King Lear*, Act iii. Scene 2, the speech of *King Lear*, omitting the intervening passages by which its continuity is broken; beginning

"Blow, winds, and crack your cheeks! rage! blow!" And ending "I am a man More sinned against than sinning."

N.B. The metre to be "Tragicum iambicum trimetrum catalecticum." These exercises are to be accompanied and accompanied by a literal Latin prose version, and are to be sent in on or before April 30, 1837.

The premium for the Hulian dissertation was on Monday last adjudged to John Murray, B.A. of Trinity College. Subject, "How far our Saviour's Miracles were typical of the nature of the Christian Dispensation."

Scotian Prize Poem.—The subject of the poem for the present year is, "St. Paul at Ephesus."—*Cambridge Chronicle*.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9.

Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts (Illustration on the Metallurgical History of Iron, by the Secretary), 8 P.M.; Belgrave Literary, &c. (Mr. J. Hemming on Chemistry), and three ensuing Tuesdays: Architectural Society (Essay by E. H. Browne); Meteorological, 8 P.M. (Progression of the Storm Periods, and Periodical Curves, described by the wind).

Wednesday.—Society of Arts, 7½ P.M.; Graphic, 8 P.M.; Literary Fund Committee, 3 P.M.; Club, 5½ P.M.; Me-

dico-Botanical, 8 P.M.; Southwark Literary, &c. (Mr. Serle on the Language of the Drama).

Thursday.—Royal Society, 8½; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.

Friday.—Royal Astronomical, 8 P.M.

#### FINE ARTS.

##### NEW PUBLICATIONS.

*Thomas Moore, Esq.* Painted by George F. Mulvany, R. H. A.; engraved by George Raphael Ward.

WE can imagine few subjects so difficult to treat as our Anacreontic and excellent friend. We have the more pleasure, therefore, in saying, that this is decidedly the best and most pleasing resemblance we have seen of him, whether with reference to the general expression, or to the fine finish of the individual features. The former practice of Mr. Ward (whose admirable miniature copies of portraits of distinguished characters, by Sir Thomas Lawrence, are well known) has given him great precision and beauty of marking, in the department of art which he has recently taken up—mezzotinto engraving.

*Looking Out.* Painted by H. P. Parker; engraved by W. O. Geller. Ackermann and Co.

WE have been "looking out" for some time for a print from the startling picture under that name, described by us in one of our notices of the Gallery of the British Artists, in Suffolk Street. We are now gratified by the appearance, not only of a print, but of such a print as does at once great justice to Mr. Parker, and great credit to Mr. Geller. It is of a large size; and reproduces, with singular fidelity and force, the fine, determined character of the original.

*Ryall's Portraits of Eminent Conservative Statesmen.* No. III. Fraser; and Moon.

THIS is so beautiful a publication, that we almost regret its being confined to one class of our public men; thereby excluding some fine subjects for the pencil, and limiting the extent of its circulation. The portraits in the present No. are, "The Right Hon. Sir Robert Peel, Bart., M. P." engraved by H. T. Ryall, from a picture by Sir Thomas Lawrence; "The Right Hon. Sir Henry Hardinge, M. P." engraved by F. Hall, from a picture by J. Eddis; and "The Right Hon. Frederick Shaw, M. P." engraved by T. Scriven, from a drawing by F. Cruickshank. The first and the last are our favourites; but they are all admirable.

#### DRAMA.

*Drury Lane.*—As we prophesied last week, Drury has come down in its prices; it was quite unable to bear the opposition. We are glad of this, and think that, at the present rational prices, and with a rational rivalry between the patents, the drama may begin to hold up its head again.

*St. James's.*—Mr. Braham produced two more new pieces on Thursday,—*The Wager*, and *Love is Blind*. We must defer our notice till our next, only observing, that the former is rather extravagant, and the latter, with Miss Allison as the heroine, very loudly applauded.

*Adelphi.*—*Jim Crow* has given place to one of Buckstone's beautiful dramas of the *Victorine* school. The present is an adaptation from the French, and is called *The Duchess of Vaubanière*. Mrs. Yates's acting, as the *Duchess*, is of a very high order, and equal to any of her former splendid efforts: she quite carries you

\* Wednesday, 12th, in the card, and, therefore, we are uncertain whether it stands for that day or Thursday. There is a mistake in all this year's dates.

away with her. It is one of the Adelphi pieces, and will be as great a favourite with domestic drama lovers as *The Wreck Ashore*, *Victoria*, &c.

*The Queen's* makes strenuous efforts, and goes on prosperously. Miss A. C. Gray manages most spiritedly, and deserves to succeed. We have *Eye-on*, the *Musical Bore*, and other novelties, and altogether, the entertainments afford an excellent evening's amusement. We recommend all our friends to see them.

*Olympic*.—Mr. Hill, with his very clever *Yankee Pedlar*, has starred it most successfully here during the week. His peculiar humour is better seen and felt on the smaller stage.

*Opera Buffa*.—Miss F. Wyndham, the young lady who came out the other night, and whom we noticed far too lightly for her merits, is a pupil of Signor Crevelli, to whom, after all the popular singers he has introduced to the public, she does, indeed, much honour. It is long since we have heard so fine a *contralto* as she possesses; and the beautiful training of her voice displays it to every advantage. It is long since so great an acquisition to the Italian opera has been made from the English school.

*The Duchess de la Vallière*. A play in five acts. By the Author of "Eugene Aram," "Rienzi," &c. London, 1836. Saunders and Otley.

WELL, for once, we will make a book review, and a dramatic critique, one article. We entirely disagree with Mr. Bulwer in the wonder which his Preface expresses, that the dramatic capabilities of Madame de la Vallière's story should have been neglected. To us it appears a subject essentially undramatic. What is the history of the ill-fated favourite? First, a romantic, ideal, and timid love; next, that remorse which is the work of years, and whose ravages are as secret as they are fatal. These colours are too subtle and too faint for the strong lights required on the theatre; they belong to the sentiments rather than to the passions. Mr. Bulwer has done much with his subject, yet the most effective portions of his drama were those which prove the truth of our assertion; they were those the most indebted to his own invention, and the least based on the historic narrative. The plot is too well known for detail; and there is little variation from the original, excepting the necessary condensing, and the re-introduction of La Vallière's lover as a monk. Of the first point we must say, that, however needful, the rapidity of the change gave something both unnatural and revolting to the king's inconstancy. It destroyed the interest which belonged to him—that interest which is his gentle mistress's best palliation. But it is impossible to place Louis on the stage such as he actually was in his court. The poetry of royalty is gone by for ever. We have no sympathy with the enthusiasm which his personal qualities excited; his vices have descended to us, but they have long since left their glitter behind. Louis, on the English stage of to-day, can never be other than the selfish voluptuary; our sense of justice is disgusted by seeing him the object of a sincere and disinterested love. We dwell on this the more especially, as we hold that Mr. Bulwer has but made the first step in a long list of dramatic triumphs. What was the character that riveted the audience the other night—that left them breathless with the strong excitement?—that of Bragelone, the prophet monk, who denounced the vices of his hour in the awful presence of the future. Now, this character is essentially of to-day; it did not, it could not, have existed in its own narrow and profligate age. It belongs to our ætæm

sense of morality, grown out of our enlarged sense of political freedom. It is by such inventions that Mr. Bulwer will assert his own genius, and carry his audience along with him: a dramatic appeal must be made to existing feelings and actual principles. Who, better than Mr. Bulwer, understands the present, or carries it forward with more exalted views? In the closet we would not lose a line of *The Duchess de la Vallière*, but on the stage it is too long.\* Doubtless, after the first night, it will be curtailed. The interest ends with the separation of the king and the duchess; the mummery—for such it seems—afterwards, weakens the close. There is nothing in the chorus and ceremonies with which we sympathise. The great point of a play carried, it should not "drag its slow length along" through unmeaning pageantry. Mr. Bulwer's great strength lies, as might have been expected, in his delineation of character. The fourth act was the triumph of author and of actor. Macready's conception was as splendid as his execution. He began by a fine, bold portrait, of the plain, but high-minded soldier, with a quiet simplicity that made his after-bursts of eloquent passion doubly imposing. The scene when he urges upon Louise—not repentance, for she repents before—but that religious retirement in which alone repentance could be of aught avail, was one of the most touching, and yet most solemn, things, that we ever saw on the stage. The description of her mother's death—the recalling the tender remembrances of childhood around the path of penitence, was a beautiful ideal of the minister of religion, and of forgiveness. In the next scene, another display of power, belonging to a wholly different order, was evinced. Nothing could be nobler than his denunciation of the monarch's vices. True as terrible, it embodied the moral and sublime. But every new character in which we see Macready adds to an estimate that, till then, we had deemed of the highest. There is the fine feeling of the poet, the delicate perception of the artist, refined and made effective by the consummate judgment of the scholar. It is cold work, writing of remembered enthusiasm; but it is Macready's highest triumph, that reflection always confirms the praise offered in the excitement of the moment. In a completely different line was the *Lausun* of Farren. *Lausun* is the representative of his epoch. He is clever, thanks to nature; but every thing else about him is art. The dearest feelings and interests of life are only a succession of intrigues, the objects of which are of the smallest kind. Now, the constant pursuit of small objects must dwarf the mind confined to them; the narrow mind makes the callous heart; we learn to deny what we cease to revere, and the virtues to which we no longer aspire become matters of doubt; we cannot give others more credit than we do to ourselves; genius cannot exist in such cold and cutting atmosphere—it needs the warm and open air of belief; talent only remains, and talent is confined to shrewdness and sarcasm. Wit, bitter and worldly, that laughs at others because it first laughs at itself, is the sole resource of a man like *Lausun*. Profligate, reckless, and selfish, his sneers against the true, the sensitive, and the generous, are all that redeem him in his own eyes. He is witty in his own defence; ridicule is at once his resource and excuse. Mr. Vandenhoff did all he could for the king, and Webster was capital in the coxcomb marquess. Of Miss Faucit's per-

\* It lasted four hours, and has since been cut down more than an hour.—*Ed. L. G.*

sonification of the *Duchess de la Vallière* we can speak very cordially; our young actress improves every day. Her performance was sweet, touching, and gentle; nothing was exaggerated, and her last scene was full of natural pathos. As to her rival, *Madame de Montespan*, nothing could be worse than Miss Pelham's outrageous viragoism: surely, some substitute might be procured; she made the scenes in which she appeared absolutely ridiculous.

We have alluded to passages full of thought and of purity in this drama, and we now proceed to make a selection.

#### Early love.

I have watched thee  
Bud into virgin May, and in thy youth  
Have seemed to hoard my own—I think of thee,  
And I am youthful still! The passionate prayer—  
The wild idolatry—the purple light  
Bathing the cold earth from a Hebe's urn:—  
Yes, all the soul's divine excess which youth  
Claims as its own, came back when first I loved thee  
And yet so well I love, that if thy heart  
Recall from mine,—if but one single wish,  
A shade more timid than the fear which ever  
Blends trembling twilight with the starry hope  
Of maiden dreams—would start thee from our union,  
Speak, and my suit is tongueless!

#### Again,—

As gallants love. "I loved thee not, Louise,  
Breathing through earth the lovely and the holy,  
And clothing Poetry in human beauty!  
When in this gloomy world they spoke of sin,  
I thought of thee, and smiled—for thou wert sinless!  
And when they told of some diviner act  
That made our nature noble, my heart whispered—  
'So would have done Louise!'—'Twas thus I loved thee!

#### Artificial society.

"Art has grown my nature,  
And if I see green fields, or ill-dressed people,  
I cry, 'how artificial!' With me, 'Nature'  
Is 'Paris and Versailles.' The word, 'a man,'  
Means something noble, that one sees at court.  
Woman's the thing Heaven made for wearing trinkets  
And talking scandal.

#### A footstep.

"Hark! I hear her:  
That silver footfall!—still it hath to me  
Its own peculiar and most spiritual music,  
Trembling along the pulses of the air,  
And dying on the heart that makes its echo!

#### Bragelone's address to the king—

"The world proclaims you 'Great!'  
A million warriors bled to buy your laurels;  
A million peasants starved to build Versailles:  
Your people famish; but your court is splendid!  
Priests from their pulpits bless your glorious reign;  
Poets have sung thee greater than Augustus,  
And painters placed you on immortal canvases,  
Linn'd as the Jove whose thunders awe the world:  
But to the humble minister of God,  
You are the king who has betrayed his trust—  
Beggared a nation but to blot a court,  
Seen in men's lives the pastime to ambition,  
Looked but on virtue as the toy for vice;  
And, for the first time, from a subject's lips,  
Now learns the name he leaves to Time and God!

Awake!—awake!  
Great though thou art, awake thee from the dream  
That earth was made for kings—marking for slaughter—  
Woman for lust—the people for the palace!  
Dark warnings have gone forth; along the air  
Lingers the crash of the first Charles's throne!  
Behold the young, the fair, the haughty king,  
The kneeling courtiers, and the flattering priests:  
Lo! where the palace rose, behold the scaffold—  
The crowd—the axe—the headman—and the victim!  
Lord of the silver lilies, canst thou tell  
If the same fate await not thy descendant?  
If some meek son of thine Imperial line  
May make no brother to yon headless spectre!  
And when the sage who saddens o'er the end,  
Tracks back the causes, tremble, lest he find  
The seeds thy wars, thy pomp, and thy profusion,  
Sowed in a heartless court and breadless people,  
Grew to the tree from which men shaped the scaffold,—  
And the long glare of thy funeral glories  
Light unborn monarchs to a ghastly grave!  
Beware, proud king! The Present cries aloud,  
A prophet to the Future!"

#### Home.

"Once more, ere yet I take farewell of earth,  
I see mine old, familiar, maiden home!  
All how unchanged!—the same the hour, the scene,  
The very season of the year!—the stillness  
Of the smooth wave—the stillness of the trees,  
Where the winds sleep like dreams! and, oh! the calm  
Of the blue heavens around yon holy spire,

Pointing, like gospel truths, through calm and storm,  
To man's great home."

### Life.

"A never-heard philosopher is Life.  
Our happiest hours are sleep's; and sleep proclaims,  
Did we but listen to its warning voice,  
That rest is earth's elixir. Why, then, pine  
That, ere our years grow feverish with their toil,  
Too weary-worn to find the rest they sigh for,  
We learn betimes the moral of repose.  
I will lie down, and sleep away this world.  
The pause of care, the slumber of tired passion,  
Why, why defer till night is well nigh spent?  
When the brief sun that gilds the landscape sets;  
When o'er the music on the leaves of life  
Chill silence falls, and every fluttering hope  
That voiced the world with song has gone to roost,—  
Then let thy soul, from the poor labourer, learn  
Sleep's sweetest taken soonest."

We close with a new and lovely image.

"See, I wear thy colours still! Though Hope  
Wanes from the plate, the dial still remains,  
And takes no light from the stars."

Both for the closet and the stage, we must express our conviction that this drama is too political, and touches too much on religion and religious opinions.

We have nothing left more but to offer our congratulations, and to ask one question. Why is not "Cromwell" brought on the stage? There, indeed, were a subject that would come home to an English audience.

*Amsterdam, Dec. 20, 1836.*—Since several months we have here a new German Opera Company. As it is supposed that they intend going to London next spring, for the purpose of giving representations there, the amateurs of your metropolis will probably be glad to obtain some previous information about them. The director is a Mr. W. Ehlers, a person more than middle-aged now, but who was formerly an ornament to the principal German theatres, as tenor and dramatic player, and whose extensive experience and profound knowledge in his department are now universally appreciated. His manifest activity, science, and probity, gained unlimited confidence for him here. Among the members of the company are found to excel particularly, Mr. Nieser, as first tenor, whose delivery and acting would be difficult to surpass; Mr. Köhler, as second tenor; Messrs. Bercht, Mager, and Nagel, as baritones; and Messrs. Kölner and Weber, as bass-singers. Among the ladies, Mrs. Wieser, as bravura-singer; Miss Micolino, who is favoured by nature with a most exquisite alto-voice, and the Misses Betz, Herman, Graf, Holmer, and Mrs. Schmiedecke, as sopranos, have each of them gained great applause by their peculiar styles. The choirs are numerous, and, under the management of their director, Mr. Schmiedecke, they are sure to satisfy the most scrupulous judges. Hitherto, this company has performed the following operas: "The White Lady of the Castle," (Dame Blanche), "The Barber of Seville," "John of Paris," "Zampa," "Tancredi," "The Freyschütz," "Romeo and Juliet," "The Swiss Family," and "Titus," by Mozart: all which operas have been represented to crowded houses, and received the loudest applause, surpassing every expectation. It is further ascertained, that the most celebrated operas, both old and modern, will be given successively; and as the most excellent singers of Germany will be heard in them, our public has the pleasing prospect of enjoying an agreeable winter, in a musical point of view.—T.B.\*

\* This letter has been handed to us by a friend, and we insert it simply to afford our readers some information respecting the musical visitors who are mentioned in it; having ourselves no knowledge of them, nor any wish to do that job which is known by the name of puffing.

### VARIETIES.

*The Weather Prophets.*—Referring to our last (p. 842), and taking the experience of the present week (up to Friday), it will appear that both Mr. Murphy and Lieut. Morrison have, at least, begun the year wrong. Instead of the "tendence to drought," and "frost to set in about the 5th," of Mr. Murphy, we have had a decided tendency to moisture, and as thorough a thaw as ever was seen on the 5th!! With regard to the "aspects" of Lieut. Morrison, there was no rain on the 3d, and, instead of "cold increasing with wind, and sleet or snow about the 7th," Thursday and Friday have been two of the mildest and sunniest days of any January for ages!! We must give them another trial. Lieut. Morrison predicts for next week "a change milder. The weather improves, though rainy about the 10th and 11th." Mr. Murphy has upon record the greatest cold on the night of the 13th or following morning. *Encore, nous verrons!*

*Literary Curiosity.*—The copy of the *Bijou* presented by Mr. Schloss, the publisher, to the queen, is literally a little gem. It is bound in blue vellum, with the regal initials worked on the cover. The book is placed in a golden case superbly wrought, with the royal arms in enamel; and last comes a purple velvet cover. The verses, painted in golden letters, are on a sheet, placed in a white silk portfolio. We have seen nothing more elegant nor in better taste.

*Fine Arts.*—The lovers of art are much indebted to the spirited exertions of Mr. George Beaucherc, as they preserved, during the late fire at St. Peter's church, Hilton's noble painting of the "Crucifixion." It was presented by the Marquess of Westminster, and cost eleven hundred pounds. Mr. Beaucherc is known to have a great love and fine taste for the arts; but, certainly, he never proved it so effectually before.

*Ornithology.*—Thousands of seagulls, in flocks, passed over London, on Monday morning, keeping chiefly the direction of the Thames. We suppose they came to see how the new Ornithological Society was getting on! Very well, we understand.

*An American Declaration, not of Independence.*—Should any of our readers be at a loss how to make love, we recommend the following style, as being of the newest pattern. "Will you undervalue yourself so much, as to overvalue me so much as to keep company with me?" The propitious answer to this is: "No undervaluation at all, sir."

*The Snow-storm.*—Though we have got clear of snow about London, parts of Surrey, Kent, and Sussex, are still in an almost impassable state. Some of the accidents to surveyors on the Brighton Railroad have been ludicrous—clever engineers in ditches; and the beds of rivers certainly found levels for which they were not prepared.

*Bentley's Miscellany.*—We generally notice new contemporaries in the periodical field: in the present instance we received a copy of the work too late to enable us to speak of its general merits. It seems to be various; and the names of some of the contributors give assurance of originality, wit, and humour. We shall see, however, before next Saturday; and in the meantime, mentioning Father Prout's happy introduction, in two stanzas, to St. Januarius, and his other learned versions of common pieces, we have just time to copy a neat *jeu d'esprit* of Lover's, with the cut illustrating it.

"Who are you?—Who are you?  
Little boy that's running after  
Ev'ry one up and down,  
Mingling sighing with your laughter!"  
"I am Cupid, lady belle,  
I am Cupid, and no other."  
"Little boy, then pr'y thee tell  
How is Venus? How's your mother?"  
"Little boy, little boy,  
I desire you tell me true:  
Cupid, oh! you're alter'd so,  
No wonder I cry, Who are you?"

### II.

"Who are you?—Who are you?  
Little boy, where is your bow?  
You had a bow, my little boy."  
"So had you, ma'am, long ago."  
"Little boy, where is your torch?"  
"Madam, I have given it up:

Torches are no use at all;  
Hearts will never now flare up."

"Naughty boy, naughty boy,  
Such words as these I never knew:  
Cupid, oh! you're alter'd so,  
No wonder I say, Who are you?"

### LITERARY NOVELTIES.

Among forthcoming novelties, we rejoice to see announced from the able pen of Sir A. Brooke Faulkner, *Letters to Lord Brougham*, containing details of a recent visit to Italy, &c.

### LIST OF NEW BOOKS.

*The Americans*, in their Moral, Social, and Political Relations, by Francis J. Grund, 2 vols. 8vo. 24s.—*An Essay on the Welsh Saints*, by the Rev. R. Rees, M.A. 8vo. 10s. 6d.—*The Scientific Reader*, by R. T. Linnington, 12mo. 3s.—*The Duchesse de la Vallière, a Play*, by E. L. Bulwer, 8vo. 5s. 6d.—*The Stories of Aunt Alice*, by Louisa F. Dibdin, 18mo. 2s.—*Plumbe on the Skin*, 4th edit. 8vo. 1l. 1s.—*The Dublin University Calendar*, 1837, 12mo. 5s.—*My Travels*, fcap. 8vo. 6s. 6d.—*Philosophy and Religion*, by W. B. Galloway, A.M. 8vo. 16s.—*The Principles and Practice of Levelling*, by F. W. Simms, 8vo. 6s.—*D. Jardine on the Use of Torture in the Criminal Law of England*, 8vo. 3s. 6d.—*Pensive Musings on the Pleasures of Melancholy*, a Poem, by W. J. A. Abington, 12mo. 6s.—*Marriage and Registration Acts*, by W. Eagle, 12mo. 3s. 6d.—*Home, its Joys and its Sorrows*, 2d edit. 18mo. 3s. 6d.—*An Autumn Dream, Thoughts in Verse*, by J. Sheppard, 12mo. 7s.—*The Tithes' Commutation Act*, by S. R. Bosanquet, 12mo. 6s. 6d.—*Camus on the Teeth of Wheels*, 2d edit. 8vo. with Plates, 10s. 6d.—*Introduction to the Literature of Europe in the 15th, 16th, and 17th Centuries*, by H. Hallam, Vol. I. 8vo. 15s.

### METEOROLOGICAL JOURNAL, 1836.

December.	Thermometer.	Barometer.
Thursday.. 29	From 22 to 32	29.41 to 29.95
Friday.... 30	.... 23 .. 32	29.47 .. 30.14
Saturday.. 31	.... 20 .. 33	30.16 .. 30.30
January, 1837.		
Sunday.... 1	.... 25 .. 34	30.39 .. 30.37
Monday... 2	.... 6 .. 33	30.29 .. 30.28
Tuesday.. 3	.... 28 .. 40	30.22 .. 30.20
Wednesday 4	.... 24 .. 36	30.20 .. 30.24

Prevailing wind till the morning of the 2d, N. and N.W.; since, W. and S.W. Generally cloudy, till the 1st instant: since, generally clear, except on the 4th. A little snow fell on the 29th, 30th, and 31st ultimo.

The sudden and great fall of the thermometer on the morning of the 2d has not been equalled since February, 1830. The rise on the same day was even more rapid. The thaw has continued, with the exception of the night of the 3d; and the quantity of snow is gradually diminishing.

Edmonton.

CHARLES HENRY ADAMS.

## ADVERTISEMENT,

Connected with Literature and the Arts.

## KING'S COLLEGE, LONDON.

Senior Department. The Classes in Theology, the Classics, Mathematics, English Literature, and History, under the superintendence of the Principal and Professors, the Rev. T. G. Hall, R. W. Browne, and T. Dale, will be Re-opened on Tuesday, the 24th of January next.

The Classes for Private Instruction in Hebrew, the Oriental, and other Foreign Languages, will also be resumed.  
Junior Department.—The Classes in the School will be re-opened on Tuesday, the 24th of January, at Nine o'Clock, a. m. H. J. KOSE, B. D., Principal.  
Dec. 29, 1837.

## BRUCE CASTLE SCHOOL, TOTTENHAM.

**BRUCE CASTLE** is rather more than five miles from London, and is about a quarter of a mile west of the high road to Hertford. It stands in a park containing nearly twenty acres of land; and the surrounding country is open and suburban. A description of Bruce Castle will be found in the "Battles of England and Wales," and in Lyson's "Environment of London."

In addition to the Conductors, there are five resident Masters, one of whom is a native of France. With their assistance the Conductors carry on a regular course of instruction in the studies necessary for enabling a young man, immediately on leaving school, to enter one of the Universities, to engage in commerce or agriculture, or to adopt the military or naval profession.

Much general knowledge is communicated, by means of a Course of Private Reading, in which the Pupils are induced to engage. Lectures, too, are occasionally delivered, on various branches of Natural Philosophy.

In their plans of government and instruction, the Conductors have addressed themselves, as far as possible, to the reasoning powers and good feelings of their Pupils. The grounds of every regulation, and all forms employed in the studies of the Pupils, are fully explained; and at all times the Pupils are encouraged to apply for information respecting every thing which is not perfectly clear to their minds.

Acting on the principle referred to, and others connected with it, the Conductors have succeeded in procuring the acquisition of knowledge, to a certain degree, with unlimited means, and under perfect arrangements, it would be entirely—namely, a source of continued pleasure to the scholar.

In developing the same principles, also, they have been enabled to dispense, to a great extent, with artificial restraints and punishments, and to associate the Boys themselves in the business of school government. With rare exceptions, they have found, that, by treating a Boy as a reasonable being, possessed of good natural feeling, it is quite practicable to induce upright conduct, a gentlemanly demeanour, a desire to oblige, and an anxiety to avoid the infliction of pain, either moral or physical.

To the early formation of habits of industry, punctuality, and obedience, the cultivation of a love of knowledge, the elevation of the moral feelings, and the general development of the mental and physical powers, the Conductors direct their most strenuous efforts; to procure, by long experience, that, beside the direct benefits thereby conferred upon their Pupils, by such means alone can they lay a sure foundation for solid acquisition.

A full exposition of the views of the Conductors will be found in a work, entitled, *Public Education* (Baldwin & Co., London, 1837). Information respecting the details of the plans in use is given in a small pamphlet, lately published, entitled, "Sketch of the System of Education in practice at Bruce Castle, Tottenham," (Baldwin and Co., London).

Information respecting the terms, and other matters of detail, may be obtained, by application at Bruce Castle.

## ILLUSTRATIONS OF COAST SCENERY.

This day is published, price 2s. 6d., the Fourth Part of **FINDEN'S PORTS AND HARBOURS OF GREAT BRITAIN**, with Views of the most remarkable Headlands, Bays, and Fishing Stations, on the Coast, from Paintings by J. H. Harding, G. Bulmer, E. Cooke, Grewick, and other Eminent Artists.

The Work is published in Monthly Parts, each containing Five Large Plates, engraved in the first style of art by W. and K. Finden, from Drawings made on the spot expressly for this Work. Contents of Part IV.  
1. Sunderland Light House. 2. Robin Hood's Bay. 3. Whitby. 4. Scarborough. 5. Sunderland from the West.  
A few plain proofs in royal oct., &c.; India proofs, 5s. Charles Tilt, Fleet Street.

## NEW WORKS ON THE ART OF DRAWING.

Just published, neatly bound in cloth, price 16s.

**COOPER'S DRAWING-BOOK OF ANIMALS AND RUSTIC FIGURES.** A Series of easy Progressive Studies, drawn from Nature, by T. S. COOPER. The Work may be had in Eight Numbers, price 2s. each, containing Four Sheets of Studies.

In Two Series, neatly bound in cloth, price 12s. each, **Tilt's New Progressive Drawing-Book of the Human Figure**, in a Series of Studies, by Thomas Fairland.

First Series, Elementary—Fragments of Figures, &c.  
Second Series, advanced—Whole-length Figures, Groups, &c.  
The Work may also be had in Twelve numbers, price 2s. each.

## LA HOUGUE BIE DE HAMBLE, a

Tradition of Jersey.

A Historical Tale, with copious Genealogical and Antiquarian Notes, developing many minute and interesting particulars relative to the Norman Conquest: selected from the "Roman de Rou," and other Metrical Romances, and from various rare manuscripts and ancient documents.

By JAMES BULKLEY, Esq.

Whittaker and Co. Ave Maria Lane.

# AN INTRODUCTION to the LITERATURE of EUROPE, in the XVth, XVth, and XVIth CENTURIES.

By HENRY HALLAM.  
John Murray, Albemarle Street.

## THE LIFE of OLIVER GOLDSMITH,

from a variety of original Sources, and comprising numerous unpublished Letters, &c. &c.  
Author of "The Life of Burke."  
John Murray, Albemarle Street.

The Fifty-ninth Edition, published for the first time at Five and Sixpence, bds.

## A NEW SYSTEM of DOMESTIC COOKERY, founded upon principles of Economy and Practical Knowledge, and adapted to the use of Private Families.

By A LADY.

"This is really one of the most practically useful books of any which we have seen on the subject. The lady who has written it has not studied how to form expensive articles for luxurious tables, but to combine elegance with economy; she has given her directions in a plain sensible manner, that everybody can understand; and these are not confined merely to cookery, but are extended to a variety of objects in use in families, by which means the utility of the book is very much increased indeed."  
—*British Critic*.

"We have heard, from unquestionable authority, that of Mrs. Russell's 'Domestic Cookery' Book, 155,000 copies have already been sold." — *Quarterly Review*.

"\* This information from the *Quarterly Review* refers to the extent of the sale nearly three years ago; since that time the demand for it has increased, so that the total number of copies sold, at present, exceeds one hundred and sixty-five thousand.

In consequence of the daily augmenting sale of the work, the publisher has been enabled to reduce the price from Seven and Sixpence to Five and Sixpence.

John Murray, Albemarle Street.

4th edition, 4 vols. 18mo. 94s.

## PRINCIPLES of GEOLOGY; being an Inquiry how far the former Changes of the Earth's Surface are referable to Causes now in operation.

By CHARLES LYELL, Esq. F.R.S.  
John Murray, Albemarle Street.

Crabbe's Poetical Works, in Eight Volumes, similar to Scott's and Byron's.

In 8 vols. fcap 8vo. 5s. each,

## THE POETICAL WORKS of the Rev. GEORGE CRABBE, with his Letters and Journals, and his Life.

Sir Walter Scott says of Crabbe's poems, "I have a set for my cabinet at Abbotsford as well as in my own; the clearness and accuracy of his painting, whether natural or moral, renders, I have often remarked, his poetry generally delightful to those whose youth might make them insensible to the other beauties with which it abounds."  
— *Sir Walter Scott*.

John Murray, Albemarle Street.

In 1 vols. uniform with the Works of Scott and Crabbe, price 5s. each,

## THE COMPLETE WORKS of LORD BYRON; comprising his Poetry, Letters, and Journals, and his Life.

By THOMAS MOORE, Esq.

J. G. Lockhart,  
John Murray, Albemarle Street.

## NARRATIVE of an EXPEDITION across the ANDES, and down the Amazon, from Lima to Para.

By Lieutenant SMYTH, R.N.  
John Murray, Albemarle Street.

9 vols. post 8vo. 21s.

## PORTUGAL, GALLICIA, and the BANQUE PROVINCES of SPAIN, described from Notes of a Journey in those Countries.

By RICHARD NOBLEMAN.  
"In whatever light it may be considered, this is a work of superior ability, interest, and value, rising far above the ordinary strain and style of similar publications. These volumes exhibit the capacity of a vigorous, and the refinement of an accomplished mind—qualities known to belong to the noble author, the Earl of Carnarvon, whose career and productions, as Lord Porchester have filled no small space in public favour."  
—*United Service Journal*.

John Murray, Albemarle Street.

## TWO ESSAYS on the "CLOUDS" of ARISTOPHANES.

By J. W. NUVERN.

Translated by R. W. HAMILTON, F.R.S.

Lately published, by the same Author,  
Essay on the "WARR" of Aristophanes.  
John Murray, Albemarle Street.

THE POCKET BYRON.

## MAGNIFICENT NEW ANNUAL. In Imperial 4to. price 42s.; India Proof, 62s.

## FINDEN'S TABLEAUX;

a Series of Picturesque Scenes of National Character, Beauty, and Costume.

Edited by Mrs. S. C. HALL.  
With Poetical Contributions by  
The Countess of Blessington Miss London  
Leigh Hunt Allan Cunningham  
Charles Swain Laman Blanchard.

The Engravings from Drawings by  
T. Wines, A.R.A. W. Ferring F. P. Stephanoff  
F. Corboux H. Corbould J. Brown  
F. Stone H. Seyfarth &c. &c.

The Plates in this work are double the size of those in the largest of the Annuals, and have been carefully engraved by the first artists, under the direction of William and Edward Finden. As it is splendidly bound in morocco, richly and appropriately embellished after a design by Corbould, it forms decidedly the most magnificent and attractive annual ever published.

"An Annual of the same class to which the 'Flowers of Loveliness' and 'Gems of Beauty' belong; and it is superior to both in its plan and execution." — *Spectator*.

"Every one of the engravings is worth the notice of the collector, and the whole forms a charming portfolio; the binding is so rich and tasteful as to merit a distinct notice." — *Athenaeum*.

"This addition to the list of Annuals is a pearl richer than all its tribe." — *Court Journal*.

"The cheapest among all the Annuals, since every one of the plates is capable and worthy of being used as a separate object of ornamental art. The artists and the engravers have vied with each other in their efforts to make this work what, in fact, it rivals themselves allow it to be—namely, the most richly illustrated production of the present day." — *Court Magazine*.

Charles Tilt, Fleet Street.

St. James's Square, Jan.  
No. VIII.—LI. of

## THE LONDON and WESTMINSTER REVIEW.

Contents.

9. Lamentations
10. Colonel Napier's Reply to the "Quarterly Review."

John Macrone, St. James's Square.

SECOND EDITION.

In 1 large 8vo. vol. price 31s. 6d.,

## THE ROMANCE of NATURE; or the FLOWER SEASONS ILLUSTRATED.

By LOUISA ANNE TWAMLEY.

"\* This splendid Work contains Twenty-Seven Plates of Flowers, carefully engraved, and most beautifully coloured after Nature. It is richly and appropriately bound in green morocco, extra gilt, and forms one of the handsomest, as well as most interesting, ornaments for the drawing-room table ever produced."

"This is a book of singular beauty and taste. Exquisite coloured drawings of favourite flowers are accompanied by graceful quotations from the various authors who have felt their 'sweetest inspiration,' and some charming original poems. Whether for tasteful decoration, originality, or grace, we have seen no superior to this most beautiful volume." — *Literary Gazette*.

Charles Tilt, Fleet Street.

DR. ARTHUR MOWER'S NEW WORK.

In 3 vols. post 8vo.

**PINNOCK'S ARITHMETICAL TABLES OF MONEY, WEIGHTS, and MEASURES**, with Questions for Examination, Notes, &c.

In 8vo. a new edition, price 2s. bound,  
**An INTRODUCTION to BOOK-KEEPING**; comprising Inland and Foreign Trade, arranged by Single Entry, Italian Method of Double Entry, and the present Practice of the Counting House, with a comparison of these three methods. To which are subjoined, Queries and Answers on Merchants' Accounts, &c.; with engraved Forms. By C. Morrison.

#### Historical and Geographical Works, for Schools and Private Instruction.

In 12mo. with Portraits of the Emperors, from Rabens, engraved on steel by W. Maddox, and several illustrative Woodcuts from Montfaucon, and three Maps, price 2s. 6d. bound and lettered,  
**PINNOCK'S improved edition of Dr. GOLDSMITH'S HISTORY OF ROME.** The 12th edition, augmented and revised, by W. C. Taylor, M.A.

In 12mo. with several new Engravings, price 6s.  
**PINNOCK'S improved edition of Dr. GOLDSMITH'S HISTORY OF ENGLAND.** The 22d edition, continued to the present time, and thoroughly revised, by W. C. Taylor, M.A.

In 12mo. with numerous engravings, price 5s. 6d.  
**PINNOCK'S improved Edition of Dr. GOLDSMITH'S HISTORY OF GREECE.** The 9th edition, corrected and enlarged. By W. C. Taylor, M.A.

In 1 vol. 12mo. price 6s. 6d. cloth,  
**The HISTORY of the OVERTHROW of the ROMAN EMPIRE, and the Formation of the principal European States.** From the original sources, Oriental and European, and comprising the latest elucidations of the Continental and English antiquarians and scholars. By W. C. Taylor, LL.D. M.A., &c., and F.R.S.

\*This work connects Ancient and Modern History, and forms, with the Histories of Greece and Rome, a complete course of Ancient History, and an introduction to those of England and the other European States.

In 12mo. with a map, price 4s. 6d.  
**The HISTORICAL MISCELLANY.** By W. C. Taylor, M.A.

"This is an instructive volume, intended as a Supplement to Pinnock's Histories. The first half of the volume is occupied with the primordial and classical periods, in which the Author has particularly directed his attention to those branches of history on which school-books are frequently deficient. Among these may be instanced, the Histories of the Persians and Carthaginians, the rivals of Greece and Rome. In the modern division, especial attention is paid to the French system and the Crusades, and afterwards to the English Empire in India."—*Gentleman's Magazine.*

In 12mo. with a map, price 4s. 6d.  
**MANUAL OF UNIVERSAL HISTORY and CHRONOLOGY.** By H. H. Wilson, M.A. Professor of Sanscrit, Oxford.

In 12mo. price 6s.  
**HISTORY OF FRANCE and NORMANDY,** on the plan of Pinnock's Histories. By W. C. Taylor.  
 "We congratulate Mr. Taylor on his success; no child who has learned his letters can misunderstand the tenor of his history, and yet in vain do we look for a single sentence that can be called tame or vulgar."—*Monthly Review.*

In 12mo. a new edition, with 60 Views and 12 Maps, price 6s. 6d.  
**ROBERTS'S ELEMENTS OF MODERN GEOGRAPHY and GENERAL HISTORY,** on an entirely new plan.

This work differs from others on the same subject, by the greater variety and copiousness of its historical details. It combines a view of the present condition of nations with the causes that have produced this arrangement; and thus not only diversifies and illustrates the mere geographical information, but firmly imprints it on the memory by the powerful influence of association.

In 12mo. the 3d edition, price 4s. 6d.  
**A COMPANION to the GLOBES.** Containing the various Problems that may be performed, accompanied by Examples. By T. Linnington.  
 Also, **A COMPLETE KEY to the Volume.** Price 2s.

In 12mo. a new edition, revised and improved, with Nine Maps, price 5s.

**EPITOME of CLASSICAL GEOGRAPHY,** with Historical Notices of the most Ancient Nations, &c. By W. C. Taylor, M.A.

#### WHITTAKER'S SERIES of FRENCH CLASSIC AUTHORS.

Printed by Whittingham, in royal 24mo. with Frontispieces and Vignettes.  
 "Beautifully printed and prettily ornamented, the present graceful little tomes only require a morocco or russet dress to deserve a place in every rosewood bookcase. The Engravings are very beautiful."—*Literary Gazette.*

**PAUL et VIRGINIE.** Par St. Pierre. 2s. 6d.  
**ELISABETH; ou, les Exilés en Sibirie.** Par Madame Cottin. 2s. 6d.

**HISTOIRE de CHARLES XII.** Par Voltaire. 4s. 6d.  
**LES AVENTURES de TELEMAQUE.** Par Fénelon. 3s.

**ATALA.** Par Chateaubriand. LA CHAUMIERE INDIENNE. Par St. Pierre. 3s.

**NUMA POMPILIUS, Second Roi de Rome.** Par Florian. 4s. 6d.

Mrs. Hannah More  
Mr. Nicholls

Countess of Alibury  
Rev. Mr. Birch  
The Post Gray  
W. Roscoe, Esq. &c.

"These letters of Horace Walpole are master-pieces in their way. That in which they shine unrivalled is, their accurate reflection of the passing scenes of each day, pointed by remarks equally witty and sarcastic. A new Democritus seems to have assumed the pen, to sneer at the grave follies of the human species."—*Quarterly Review*.

NEW NOVEL BY THE AUTHOR OF "VIVIAN GREY,"

In 3 vols. post 8vo.

**HENRIETTA TEMPLE;**

A LOVE STORY.

BY THE AUTHOR OF "VIVIAN GREY."

**THE DUCHESS DE LA VALLIERE AND  
MADAME DE MAINTENON.**

2 vols. post 8vo. price 18s.

"The appearance of the English translation of this celebrated production is favourably timed, and may prepare many readers here for a more perfect and ample understanding of the various sources of interest that cannot fail to be developed in Mr. Bulwer's drama."—*Court Journal*.

The First Number for 1837, with a Portrait of the Authoress of "Flirtation," of

**COLBURN'S NEW MONTHLY MAGAZINE,  
AND HUMOURIST.**Edited by **THEODORE HOOK, Esq.**

WHO HAS COMMENCED THE NUMBER WITH

**THE GURNEY PAPERS.**

Among other humorous and witty Contributions from the most distinguished Writers of the day, will also be found—

The Grand Kentucky Balloon. By one of the Authors  
of "The Rejected Addresses."  
The Manager's Room of the Theatre Royal, Little Ped-  
lington. By the Author of "Paul Fry."  
Achates Digby. By Alfred Crowquill.

The Day of the Disasters of Carlington Blundell, Esq.  
By Leigh Hunt, Esq.  
The Late George Colman—his Wit and Genius.  
The New Jim Crow; a Nigger's Reasons. Songs, by  
J. B. Buckstone, Esq.

The Wine Cellar. By Douglas Jerrold, Esq.  
A Tale of the Voyage of Hendrick Hudson. By N. P.  
Willis, Esq.  
Besides Poems by the Hon. Mrs. Norton, Miss Landon,  
&c. &c.

Persons desirous of commencing this popular Periodical with the New Year, are invited to send their Orders immediately to their  
respective Booksellers.

N.B. With the exception of one Article, promised to another Magazine, Mr. Hook will for the future confine his periodical writing to the  
New Monthly.

*The following will appear in a few days:—***MR. BURKE'S NEW PEERAGE AND BARONETAGE, FOR 1837.**

This new and beautiful edition is printed in a single volume, on a new plan (the arms incorporated with the text), and comprises a quantity of matter equal to no less than thirty ordinary volumes. It contains all the new creations, and also many new and important particulars, from the communications made to the author by almost every noble family in the kingdom, and includes all the collateral branches of the various families; thus rendering it altogether the MOST COMPLETE, THE MOST CONVENIENT, AND AT THE SAME TIME THE CHEAPEST WORK OF THE KIND EVER PRESENTED TO THE PUBLIC.

**FLITTINGS OF FANCY.**By **ROBERT SULLIVAN, Esq.** 2 vols. post 8vo.

Principal Contents.—Teresina—The Lover's Quarrel—Wild Water Pond—The Pic Nic—Chate-  
lar—Lady Betty's Pocket-Book—Insurance and Assurance—Beside the Adieu—The Moorish  
Barque—My Vagabond Days—Parthian Darts—The Story of Arnaut—Willful Breezes—The Pro-  
teges—The Spirit's Vigil—The Fox Hunt—The Sisters—Faithful and Forsaken.

### REVIEW OF NEW BOOKS.

*Introduction to the Literature of Europe in the Fifteenth, Sixteenth, and Seventeenth Centuries.* By Henry Hallam, F.R.A.S. Vol. I. 8vo. Pp. 659. London, 1837. Murray.

THE name of Hallam is ever welcome to us in the field of history; and particularly when he comes before us with a subject which, in England at least, possesses so much novelty as the present. We know no one so capable of writing such a manual of the history of the literature of the fifteenth and two following centuries as Mr. Hallam; for, though it be a subject which requires extensive reading and deep research, it requires still more that elegant taste and accurate judgment which he, by no means deficient in the first-mentioned qualifications, possesses in a very superior degree. It is, in fact, one of those books which will outlive the present day; and which, as they make their appearance, unfortunately, not too frequently, afford us pleasant and encouraging contrasts to the nauseous abundance of trash through which we in our vocation are compelled to wade. We are sure that Mr. Hallam's book will be a favourite; and we trust that it will have no little influence in bringing about that favourable change in the literature of the day to which we look forward with so much confidence, and which is so devoutly to be prayed for.

It was a just observation of the philosophic Bacon, that the history of literature and science is an important part of general history. The literature of a people varies with their political condition, and each exerts a mutual influence over the other. The decline of the Roman empire was accompanied by a proportionate decline in national taste, and the pure writers of the earlier ages were laid aside for their barbarous successors. The only literature of the uncultivated hordes who issued from the centre and the north of Europe was the songs which celebrated the achievements of their mythic heroes, and sometimes, perhaps, their own exploits: yet, amongst these different nations, some appear to have possessed more literary taste and inclination than others; and, while the Lombards and Franks remained long in deep ignorance and in political disorder, the Saxons and other tribes seemed to be possessed of a principle which was always striving towards order and civilisation.

It so happens, and to our shame be it said, that almost every people of Europe has paid more serious attention to their early national literature than we have done; and, consequently, that the literature of our forefathers, at least quite as interesting as that of any other people of the middle ages, is comparatively very little known. This circumstance may be remarked in Mr. Hallam's book; and in the introductory chapters there is very much that is inaccurate and defective. For instance, he has fixed upon the tenth century as the era of greatest barbarism in England, as a period totally ignorant and unproductive in literature. And yet our libraries contain abundance of manuscripts, both in the Latin and the Saxon tongues; and in the latter both prose and poetry; and that poetry of three kinds, religious, historical,

and romantic: which shews that, amongst our forefathers of the tenth and of the earlier part of the eleventh century, there must have been a very general love of books, as well among the laity as the clergy, and that that period ought to hold an elevated position in our literary annals. After the entrance of the Normans, the Saxon language went almost out of use in writing; and from that time to near the middle of the thirteenth century, when it first came again into general use, it had been but a language of conversation, and had thus undergone a change analogous to that which the Latin had experienced in the transformation which produced the different Neo-Latin tongues; so that, on its revival, it had become almost another language.

In the twelfth century, the different nations of Europe began to be permanently settled within their several boundaries, and they all made rapid and successful strides towards distinguishing themselves by their literary productions. Many of the Norman clergy resident in our island became elegant Latin scholars; and the Anglo-Latin poets of the twelfth century are worthy to be placed beside the Latin writers of a later and better age. This, too, is the period at which the works in the vernacular dialects of Germany and France begin to be numerous; and we must not forget that the earliest manuscripts and works in any of the Neo-Latin tongues which are extant are in Anglo-Norman, and are found in England, and that their subjects are often English stories and legends. *Appropos* to this, we cannot imagine how Mr. Hallam came to apply the term Anglo-Norman to any state of the English language: it is a misapplication which in modern times could only have been found in such writers as Ellis or Ritson.

Italy was by no means distinguished among the nations of the middle ages by the cultivation of literature; it began by imitating the Provençals.

"Italy came last of those countries where Latin had been spoken, to the possession of an independent language and literature. No industry has hitherto retrieved so much as a few lines of real Italian, till near the end of the twelfth century; and there is not much before the middle of the next. Several poets, however, whose versification is not wholly rude, appeared soon afterwards. The divine comedy of Dante seems to have been commenced before his exile from Florence in 1304. The Italian language was much used in prose during the times of Dante and Petrarch, though very little before. Dante and Petrarch are, as it were, the morning stars of our modern literature."

The thirteenth century was the most prolific in German, French, Provençal, and even in Anglo-Norman poets. With the end of this century the Anglo-Norman language gave way before the reviving use of the English; and the fourteenth century was as highly distinguished in what we term middle English poetry as its predecessor had been in Anglo-Norman. The fifteenth century was in England by no means equally remarkable. It was, however, the fourteenth century that began,

and the fifteenth century which saw developed, in Italy, that ardent admiration of the monuments of the better ages of Greece and Rome which afterwards caused so great a change in the character of modern literature.

The middle of the fifteenth century will ever be famous in the annals of literature as the period at which was invented the *art of printing*. It is a good old proverb which tells us, that "Necessity is the mother of Invention;" and the rapidity with which this art was spread over Europe, after its first discovery, would seem to favour the idea, that the discovery itself was in some measure a consequence of the increasing love for literary pursuits. The sketch of the early history of printing, given by Mr. Hallam, is extremely clear and interesting. The invention of this art has lately been the subject of much discussion in Germany, and many important facts connected with it have been cleared up. Dr. Wetter, of Maintz, who has lately published an important work on the subject, has shewn that, contrary to the common opinion, that Gutenberg himself printed long with wooden blocks; and that, instead of the invention of movable types having been a result of long study, it arose out of a sudden fancy—that of sawing in pieces one of his block-books, boring holes through the letters, and stringing them in lines by means of threads.

We will pass over the early history of printing to extract that of bookselling, as being a very fair specimen of the pleasant and attractive manner in which Mr. Hallam lays his information before his readers, and as having, on the whole, more of novelty for ours.

"We shall conclude this portion of literary history with a few illustrations of what a German writer calls, 'The exterior being of books;' for which I do not find an equivalent in English idiom. The trade of bookselling seems to have been established at Paris, and at Bologna, in the twelfth century: the lawyers and universities called it into life. It is very improbable that it existed in what we properly call the dark ages. Peter of Blois mentions a book which he had bought of a public dealer (*a quodam publico mangone librorum*). But we do not find, I believe, many distinct accounts of them till the next age. These dealers were denominated, 'stationarii;' perhaps, from the open stalls at which they carried on their business; though *statio* is a general word for a shop, in low Latin. They appear, by the old statutes of the University of Paris, and by those of Bologna, to have sold books upon commission; and are sometimes, though not uniformly, distinguished from the *librarii*,—a word which, having originally been confined to the copyists of books, was afterwards applied to those who traded in them. They sold parchment, and other materials of writing (which, with us—though, as far as I know, no where else—have retained the name of stationery), and, naturally, exercised the kindred occupations of binding and decorating. They probably employed transcribers: we find, at least, that there was a profession of copyists in the universities, and in large cities; and, by means of these, before the invention of printing, the

necessary books of grammar, law, and theology, were multiplied to a great extent, for the use of students; but with much incorrectness, and far more expense than afterwards. That invention put a sudden stop to their honest occupation. But, whatever hatred they might feel towards the new art, it was in vain to oppose its reception: no party could be raised, in the public, against so manifest and unalloyed a benefit; and the copyists, grown, by habit, fond of books, frequently employed themselves in the somewhat kindred labour of pressmen.

"The first printers were always booksellers, and sold their own impressions. These occupations were not divided till the early part of the sixteenth century. But the risks of sale, at a time when learning was by no means general, combined with the great cost of production (paper and other materials being very dear), rendered this a hazardous trade. We have a curious petition of Sweynheim and Pannartz, to Sixtus IV., in 1472, wherein they complain of their poverty, brought on by printing so many works, which they had not been able to sell. They state the number of impressions of each edition. Of the classical authors, they had, generally, printed 275; of Virgil, and the philosophical works of Cicero, twice that number. In theological publications, the usual number of copies had also been 550. The whole number of copies printed was 12,475. It is possible that experience made other printers more discreet in their estimation of the public demand. Notwithstanding the casualties of three centuries, it seems, from the great scarcity of these early editions which has long existed, that the original circulation must have been much below the number of copies printed; as, indeed, the complaint of Sweynheim and Pannartz shews. The price of books was diminished by four-fifths after the invention of printing. Chevillier gives some instances of a fall in this proportion. But, not content with such a reduction, the University of Paris proceeded to establish a tariff, according to which every edition was to be sold, and seems to have set the prices very low. This was by virtue of the prerogatives they exerted, as we shall soon find, over the book trade of the capital. The priced catalogues of Colinaeus and Robert Stephens are extant, relating, of course, to a later period than the present (the fourteenth century); but we shall not return to the subject. The Greek Testament of Colinaeus was sold for twelve sous; the Latin for six. The folio Latin Bible, printed by Stephens, in 1532, might be had for one hundred sous; a copy of the Pandects for forty sous; a Virgil for two sous and six deniers; a Greek Grammar, of Ctenardus, for two sous; Demosthenes and Æschines (I know not what edition) for five sous. It would, of course, be necessary, before we can make any use of these prices, to compare them with that of corn."

Nearly the latter half of Mr. Hallam's first volume is taken up with the first half of the fifteenth century; with which period the volume ends. The first part of this period was, in Italy—the age of Aldus. The second decade of the half century introduces to us, Leo X., our own More, Erasmus, Luther, and Ariosto. The next twenty years embraced, throughout a great part of Europe, a period of change, of reformation, and of improvement, both in knowledge and opinions. In Italy, it supplied the best modern writers of Latin verse who have ever written: among them were Sannazarius, Vida, and Fracastorius. In France, this epoch produced Rabelais. In mathematics, it gave

us Cardan; and in the study of natural history, Agricola.

Before we leave this book, and for the sake of giving a further specimen of its style, we shall extract the concluding remarks on the fifteenth century:—

"In taking leave of the fifteenth century, to which we have been used to attach many associations of reverence, and during which the desire of knowledge was, in one part of Europe, more enthusiastic and universal than, perhaps, it has since ever been, it is natural to ask ourselves, What harvest had already rewarded their zeal and labour? what monuments of genius and erudition still receive the homage of mankind? No very triumphant answer can be given to this interrogation. Of the books then written, how few are read! Of the men then famous, how few are familiar in our recollection! Let us consider what Italy, itself, produced, of any effective tendency to enlarge the boundaries of knowledge, or to delight the taste and fancy. The Treatise of Valla on Latin Grammar; the Miscellaneous Observations of Politian on Ancient Authors; the Commentaries of Landino, and some other editors; the Platonic Theology of Ficinus; the Latin Poetry of Politian and Pontanus; the light Italian Poetry of the same Politian, and Lorenzo de Medici; the Epic Romances of Pulci and Boiardo: of these, Pulci alone, in an original shape, is still read in Italy, and by some lovers of that literature in other countries; and the Latin poets, by a smaller number. If we look on the other side of the Alps, the catalogue is much shorter, or, rather, does not contain a single book, except Philip de Comines, that enters into the usual studies of a literary man. Froissart hardly belongs to the fifteenth century, his history terminating about 1400. The first undated edition, with a continuation, by some one, to 1498, was printed between that time and 1509, when the second appeared.

"If we come to inquire what acquisitions had been made between the years 1400 and 1500, we shall find that, in Italy, the Latin language was now written by some with elegance, and by most with tolerable exactness and fluency: while, out of Italy, there had been, perhaps, a corresponding improvement, relatively to the point from which they started; the flagrant barbarisms of the fourteenth century having yielded, before the close of the next, to a more respectable, though not an elegant or exact, kind of style. Many Italians had now some acquaintance with Greek, which, in 1400, had been hardly the case with any one; and the knowledge of it was, of late, beginning to make a little progress in disjunctive Europe. The French and English languages were become what we call more polished; though the difference in the former seems not to be very considerable. In mathematical science, and in natural history, the ancient writers had been more brought to light, and a certain progress had been made by diligent, if not very instructive, philosophers. We cannot say that metaphysical or moral philosophy stood higher than it had done in the time of the schoolmen. The history of Greece and Rome, and the antiquities of the latter, were, of course, more distinctly known, after so many years of attentive study bestowed on their principal authors; yet, the acquaintance of the learned with those subjects was, by no means, exact or critical enough to save them from gross errors, or from becoming the dupes of any forgery. A proof of this was furnished by the impostures of Amius of Viterbo; who, having

published large fragments of Megasthenes, Berossus, Manetho, and a great many more lost historians, as having been discovered by himself, obtained full credence at the time, which was not generally withheld for too long a period afterwards, though the forgeries were palpable to those who had made themselves masters of general history.

"We should, therefore, if we mean to judge accurately, not overvalue the fifteenth century, as one in which the human mind advanced with giant strides in the kingdom of knowledge. General historians of literature are apt to speak rather hyperbolically in respect of men who rose above their contemporaries; language frequently just, in relation to the vigorous intellects and ardent industry of such men, but tending to produce an exaggerated estimate of their absolute qualities. But the question is, at present, not so much of men as of the average or general proficiency of nations. The catalogues of printed books, in the common bibliographical collections, afford, not quite a gauge of the learning of any particular period, but a reasonable presumption, which it requires contrary evidence to rebut. If these present us very few and imperfect editions of books necessary to the progress of knowledge—if the works most in request appear to have been trifling and ignorant productions, it seems as reasonable to draw an inference one way, from these scanty and discreditable lists, as, on the other hand, we hail the progressive state of any branch of knowledge, from the redoubled labours of the press, and the multiplication of useful editions."

In conclusion, we wish it to be understood, that our slight censures apply entirely to that part of Mr. Hallam's book which treats of the earlier ages of literary history; where he has not made so much use as we could have wished of the late works on this subject, published both at home and abroad. They do not apply to the period which is his peculiar subject; and we can confidently recommend the "Introduction to the Literature of Europe," as a book that will support the reputation which its author has gained by his preceding works. It is, to the general reader, a most interesting book, and, to the scholar, an extremely useful manual; and, to both, it is infinitely valuable for that which, of all other things, we look for from Mr. Hallam, namely—opinions and inferences. We understand that it is to be completed in three volumes.

*Curiosities of Medical Experience.* By Dr. Millengen, 2 vols. 8vo. London, 1837. Bentley.

In a desultory work of the character which these two volumes possess, it is not, we trust, absolutely necessary to have read them through and through, in order to present the world with a fair criticism; for, if it does so, we must confess to an imperfection in this notice: and, therefore, it must go, *quantum valeat*. People are amused and benefited by dipping into the sea—they can tell whether it be salt or pleasant, or very cold or disagreeable; and why may not one do the same in the ocean of type? We have dipped; we like our bath; and we will say so, and why. There is a vast quantity of very amusing matter here; a fund of anecdote—the result of a great deal of reading; and, of consequence, much to interest and instruct, as well as to entertain us. Many of the points and statements, it is true, smack of antiquity; but this was in the nature of things. No man would write a jest-book, now, without helping himself from Joe. We will endeavour

to avoid him in our cento of selections. The first chapter is on obesity; and our author has cut it fat:—

"There is no doubt that food materially influences this condition of mankind, although we frequently see enormous eaters who are miserably lean, and fat persons whose diet is most scanty. During the late war, a ravenous French prisoner was known to eat four pounds of raw cow-udder, ten pounds of raw beef, and two pounds of candles, per diem, diluting his meals with five quarts of porter; yet this carnivorous brute was a perfect skeleton."

"Various expedients, in addition to a better diet, have been resorted to, to restore lean persons to a better case; but amongst the most singular that we have on record is that of flagellation. Galen says, that horse-dealers having been observed to fatten horses, for sale, by flogging them: an analogous method might be useful with spare persons who wish to become stouter. He also mentions slave-dealers, who employed similar means. Suetonius informs us that Musa, the favourite physician of Augustus, used to fustigate him, not only to cure him of a sciatia, but to keep him plump. Meibomius pretends that nurses whip little children to fatten them, that they may appear healthy and chubby to their mothers. No doubt but flagellation determines a greater influx of blood to the surface, and may thus tend to increase the circulation, and give tone to parts which would otherwise be languid. With this intention, *urticatio*, or whipping with nettles, has been frequently used, in medical practice, with great advantage. Xenophon thawed his frozen soldiers by flagellation."

We pass by the discussion on *dwarfs*, as being too small to dwell upon; and on *gigantic races* as too large for our columns. *Unlawful cures* are more in our way.

"Nothing could be more absurd than the notions regarding some of these supposed cures: a ring made of the hinge of a coffin had the power of relieving cramps; which were also mitigated by having a rusty old sword hung up by the bedside. Nails driven in an oak-tree prevented the toothach. A halter that had served in hanging a criminal was an infallible remedy for a headach, when tied round the head; this affection was equally cured by the moss growing on a human skull, dried and pulverised, and taken as a cephalic snuff. A dead man's hand could dispel tumours of the glands, by stroking the parts nine times; but the hand of a man who had been cut down from the gallows was the most efficacious. To cure warts, one had nothing to do but to steal a piece of beef from the butcher, with which the warts were to be rubbed, then interring it in any filth; and, as it rotted, the warts would wither and fall. The chips of a gallows on which several persons had been hanged, when worn in a bag round the neck, would cure the ague. A stone with a hole in it, suspended at the head of the bed, would effectually stop the night-mare; hence it was called a hag-stone, as it prevents the troublesome witches from sitting upon the sleeper's stomach. The same amulet, tied to the key of a stable-door, deterred witches from riding horses over the country."

Our next quotation may readily be seen through.

"*Spectacles*.—The origin of these valuable instruments is uncertain: that the ancients were acquainted with the laws of refraction is beyond all doubt, since they made use of glass globes filled with water to produce combustion; and in Seneca we find the following very curious passage:—*Litteræ, quamvis minutæ et ob-*

*scuræ, per vitream pilam aquâ plenam majores clarioresque cernuntur;* yet thirteen centuries elapsed ere spectacles were known. It is supposed that they were first invented by Salvino, or Salvino Armati; but he kept his discovery secret, until Alessandro de Spina, a monk in Pisa, brought them into use in 1313. Salvino was considered their inventor, from the epitaph on his tomb in the cathedral church in Florence: '*Qui glaci Salvino d'Armato, degl' Armati di Firenze, inventor delli occhiali, &c. 1317.*' Another circumstance seems to add weight to this presumption: Luigi Sigoli, a contemporary artist, in a painting of the Circumcision, represents the high-priest Simeon with a pair of spectacles, which, from his advanced age, it was supposed he might have needed on the occasion."

On the influence of the imagination, the following is striking:

"The most melancholy record of the miseries of hypochondriacism is to be found in the diary of Dr. Walderstein, of Göttingen. He was a man much deformed in person, and his mind seemed as distorted as his body. Although of deep learning and research, and convinced of the absurdity of his impressions, yet he was unable to resist their baneful influence. '*My misfortune,*' says the doctor, '*is, that I never exist in this world, but rather in possible combinations created by my imagination to my conscience. They occupy a large portion of my time, and my reason has not the power to banish them. My malady, in fact, is the faculty of extracting poison from every circumstance in life; so much so, that I often felt the most wretched being because I had not been able to sneeze three times together. One night when I was in bed I felt a sudden fear of fire, and gradually became as much oppressed by imaginary heat as though my room were in flames. While in this situation, a fire-bell in the neighbourhood sounded, and added to my intense sufferings. I do not blush at what might be called my superstition, any more than I should blush in acknowledging that my senses inform me that the earth does not move. My error forms the body of my judgment, and I thank God that he has given it a soul capable of correcting it. When I have been perfectly free from pain, as is not unfrequently the case when I am in bed, my sense of this happiness has brought tears of gratitude in my eyes. I once dreamt,' adds Walderstein, '*that I was condemned to be burnt alive. I was very calm, and reasoned coolly during the execution of my sentence. 'Now,' I said to myself, 'I am burning, but not yet burnt; and by-and-by I shall be reduced to a cinder.'* This was all I thought, and I did nothing but think. When, upon waking, I reflected upon my dream, I was by no means pleased with it, for I was afraid I should become all thought and no feeling.' It is strange that this fear of thought, assuming a corporeal form in deep affliction, had occurred to our poet Rowe, when he exclaims, in the '*Fair Penitent*, '*Turn not to thought my brain.*' '*What is very distressing,*' continues the unfortunate narrator, '*is, that when I am ill I can think nothing, feel nothing, without bringing it home to myself. It seems to me that the whole world is a mere machine, expressly formed to make me feel my sufferings in every possible manner.*' What a fearful avowal from a reflecting and intelligent man! Does it not illustrate Rousseau's definition of reason—the knowledge of our folly?"*

Now for physical powers: the "*Homophagous* and *Polyphagous*; appellations given to certain individuals of a depraved appetite, that

enables them to devour raw meat, and various other substances, which, most unquestionably, would destroy any person not gifted or cursed with such an omnivorous digestion. Various are the ancient stories related of such voracious wretches. Ovid describes one Erichthon, who, as a punishment for cutting down the groves of Ceres (very possibly to obtain fuel to cook his food), was sentenced to perpetual hunger, and terminated his gluttonous career by eating up his own limbs. The Thasian Theaganes thought nothing of an ox for his dinner; and the famed Crotonian athlete, Milo, knocked down bullocks with his fist for his daily meals, which usually consisted of twenty *minæ* of meat, and the same ration of bread. Vopiscus relates that a man was brought before the Emperor Maximilian, who devoured a whole calf, and was proceeding to eat up a sheep, had he not been prevented. To this day, in India, some voracious mountebanks devour a live sheep as an exhibition. Dr. Boehmen, of Wittenberg, witnessed the performance of one of these polyphagous individuals, who commenced his repast by eating a raw sheep, a sucking-pig, and, by way of dessert, swallowed sixty pounds of prunes, stones and all. On another festive occasion, he ate two bushels of cherries, with several earthen vases, and chips of a furnace. This meal was followed up by sundry pieces of glass and pebbles, a shepherd's bagpipe, rats, various birds with their feathers, and an incredible number of caterpillars. To conclude his dinner, he swallowed a pewter inkstand, with its pens, a penknife, and a sand-box. During this deglutition he seemed to relish his food, but was generally under the influence of potations of brandy. His form was athletic, and he could carry four heavy men on his shoulders for a league. He lived to the age of seventy-nine, but died in a most emaciated state, and, as might be imagined, toothless. Helwig knew an old man who was in the habit of eating eighty pounds of different articles of food daily. Real Colomb mentions an omnivorous glutton, who, in the absence of any salutary aliment, satisfied his cravings with any other substance; and was once known, when hungry, to eat the contents of a sack of charcoal, and then to swallow the bag to facilitate their digestion. One of the attendants on the menagerie of the Botanical Garden in Paris, who bore the euphonous name of Bijou, used to devour all the offals of the Theatre of Comparative Anatomy, and ate a dead lion in one day. He was active, and lived to the age of sixty. A cannibal once desolated the Vivalais, by dragging human victims to his den, where he devoured them. On the opening of the corpse of a convict in the galleys of Brest, there were found in his stomach about six hundred pieces of wood, pewter, and iron. All these accounts might appear most exaggerated, perhaps fabulous, had not many physicians in Paris known the celebrated Tarrare. The history of this monster is as curious as his habits were disgusting. He commenced his career in life in the capacity of clown to an itinerant quack, and used to attract the notice of the populace by his singular powers of deglutition, swallowing, with the utmost ease, corks, pebbles, and basketsful of apples. However, these experiments were frequently followed by severe pain and accidents, which once obliged him to seek assistance in the Hôtel Dieu of Paris. His sufferings did not deter him from similar experiments; and he once tried to exhibit his wonderful faculties by swallowing the watch, chain, and seals, of Mr. Giraud, then house-surgeon of the establishment. In this repast

he was foiled, having been told that he would be ripped up to recover the property. In the revolutionary war Tarrare joined the army, but was soon exhausted on the spare diet to which the troops were obliged to submit. In the hospital of Sultzén, although put upon four full rations, he was obliged to wander about the establishment to feed upon any substance he could find, however revolting, to subdue his voracious hunger. These singular powers induced several physicians to ascertain how far these omnivorous inclinations could carry him in his unnatural cravings. In presence of Dr. Lorentz he devoured a live cat, commencing by tearing open its stomach, and sucking the animal's blood with delight. What was more singular, after this horrible feat, like other carnivorous brutes, he rejected the fur and skin. Snakes were to him a delicious meal, and he swallowed them alive and whole, after grinding their heads between his teeth. One of the surgeons, Mr. Courville, gave him a wooden lancet-case to swallow, in which had been folded a written paper. This case was rejected undigested, and the paper being found intact, it became a question whether he might not be employed to convey secret correspondence; but, having been taken up at the Prussian outposts as a spy, being disguised as a peasant, without a knowledge of the language, he received a severe bastinado, which effectually cured him of an appetite for secret service; and, on his return, he had recourse to the safer means of obtaining food in kitchens, slaughter-houses, and dunghills. At last, a child of fourteen months old having disappeared under suspicious circumstances, he was driven out of the hospital, and lost sight of for four years, when he applied for admission into the hospital of Versailles, in a state of complete exhaustion, labouring under a virulent diarrhoea, which terminated his hateful existence in his twenty-sixth year. He was of the middle size, pale, thin, and weak; his countenance was by no means ferocious, but, on the contrary, displayed much timidity; his fair hair was remarkably fine and soft; his mouth was very large, and one could scarcely say that he had any lips; all his teeth were sound, but their enamel was speckled; his skin was always hot, in a state of perspiration, and exhaling a constant offensive vapour. When fasting, the integuments of his abdomen were so flaccid that he could nearly wrap them round him. After his meals, the exhalation from his surface was increased, his eyes and cheeks became turgid with blood, and, dropping into a state of drowsiness, he used to seek some obscure corner where he might quietly lie down and digest. After his death, all the abdominal viscera were found in a state of ulceration. Instances are recorded where a similar facility to swallow fluids had been observed. At Strasburg was exhibited the stomach of a hussar who could drink sixty quarts of wine in an hour. Pliny mentions a Milanese, named Norvellus Torquatus, who, in presence of Tiberius, drank three *congi* of wine. Seneca and Tacitus knew a man of the name of Piso who could drink incessantly for two days and two nights; and Rhodiginus mentions a capacious monster called the Funnel, down whose throat an *amphora* of liquor could be poured without interruption."

With this long extract we must, for the present, conclude.

*The Magnolia, for 1836 and 1837.* Edited by H. W. Herbert. 2 vols. 8vo. New York, Monson Bancroft.

THESE very handsome Annuals come from

across the Atlantic, and are named after the flower which gives such splendour to an American annual. A hill covered with the magnolia in full bloom has, at a distance, the appearance of being on fire. It is a good omen for American literature, and gives goodly promise of a glorious harvest. In the pages now before us the prose is superior to the poetry. The latter is not more harmonious than graceful; but the former has the better part, originality. "Cavendish the Rover" is a story as spirited as it is picturesque. "Amy Cranstoun," and "The Young Devotee," are equally good in different style; while that of "Daniel Prime" is as thrilling as it is characteristic. "Marie Grenne" is a lively sketch from French history, into which the supernatural is introduced with great effect. But, commend us to "Dick Moon," the very beautiful of a Yankee pedler—from his school days till a director in the Guatemala gold mines—he is perfect. We can only show how he sustained his character with a planter in Virginia, whose hospitality he shares for a night. Dick finds that there is on the part of his host rather more than a slight prejudice against his calling.

"Not many words had been interchanged, before the planter indicated still more intelligibly his half-dissatisfied humour, by asking abruptly, 'Well, brother Jonathan, I reckon you've brought along a power of notions to please the Virginians, eh! What have you?' 'Pretty much every thing, I guess; tin-ware, pins and pepper, drums, needles and shuttle-cocks, fiddles, dolls, warming-pans, mouse-traps, and other sweet-meats.' 'Together with a heap of wooden nutmegs, I reckon; how do they sell?' 'Why, sax-a-fax sell pretty lively yet, but white oak don't go very well of late.' The planter was by no means insensible to the ludicrous; and the promptness of the pedler's replies, the peculiar cast of gravity with which they were uttered, and their oddity withal, soon dissipated the prejudices which had chilled his welcome, and placed Dick Moon at once upon a different footing for the evening. Major Dinwiddie discovered that he was entertaining a very clever fellow, albeit a pedler; and, after sipping a cheerful julep together, the Virginian sunk the aristocrat, and conversed as freely of his tobacco crop, his negroes, his horses, and his hounds, as though talking with one of the Droomgooles or Merriwethers of his own country. He made many inquiries of the pedler respecting matters and things in Yankee land, and, in the course of the evening, was very inquisitive on the subject of the 'Yankee tricks' of which he had heard so much. The pedler, on his part, sustained the conversation very creditably, for himself, his country, and his calling. In regard to the peculiar 'tricks,' for the practice of which his countrymen were enjoying such unenviable notoriety at the south, he disclaimed, and truly, any practical knowledge of them himself, while engaged in his itinerating commercial intercourse with the plantation states, nor did he acknowledge them to be exclusively characteristic of the Yankees. There were tricks in all trades and occupations, and tricky men in all countries. The adroitness with which they were practised, would, of course, depend upon the shrewdness of the artist—not upon his parentage, or the place of his birth; and he was greatly mistaken, if Virginian horse-jockeys could not be found equalling any wooden-clock vender that ever came from Connecticut. But the planter was incredulous. He had heard so much of the tricks of the

Yankee pedlers, that he could not divest himself of the idea that the study of the art was a part of their profession. Hence, he supposed them to be a sort of roving brotherhood, bound by a mystic tie like the freemasons, with the art of working tricks by a process known only to their own hopeful fraternity; and so curious was he to behold a legitimate Yankee trick, that he begged of his guest to work one for his own special gratification. Our hero had no desire to gain notoriety in that way, and he repeatedly begged to be excused, modestly alleging his inability to perform any such exploit, either of dexterity or of wit. Importunity, however, at length prevailed over resolution; and as the family separated for the night, Dick promised to shew the major a trick before he took his departure in the morning. An ebony damsel, lustrous from very blackness, lighted Dick to his chamber, and pointed him to a high bed, into which, when he threw himself, he sunk as into a sea of down, so light and lively were the feathers. The sheets were sweet and clean, and over all was spread a superb Marseilles counterpane, beautifully wrought in delicate figures, as if the needle-work of some fairy fingers, and rivaling the driven snow in whiteness. The pedler awoke with the lark from a glorious slumber, and was dressed before a single inmate of the mansion was on the move. Having completed his toilet, in regard to which he was always somewhat more attentive than is usual with his profession, he took the counterpane from the bed, folded it carefully as though just taken from a bale of merchandise, attached a commercial mark to the fringe, and carried it out in the gray of the morning, before any of the family had risen, and placed it in his cart. The wants of his faithful horse were next consulted, and, after measuring to him an ample supply of provender, he regained his apartment, yet unperceived, and in due season presented himself below with the family. In the country, where time is employed according to the design of the Creator,—where the night is taken for repose, as the day was ordained for labour, and where it is thought no mark of disrespect to rise before the sun,—breakfast is truly a morning meal. Accordingly, it was found smoking upon the table, as the pedler descended into the parlour, where, in a moment afterward, he was joined by the hospitable major and his lady. Of course the morning repeat, inviting and bountiful to an excess, according to southern custom, was not to be declined, and Dick gave practical testimony that he was not afflicted by the dyspepsia. In due season, and without unnecessary delay, the pedler's horse was in harness, and he was just preparing to ascend his box to depart, when, as though suddenly recollecting himself, he called to the lady, and informed her that he had in his box one article, and only one, which he was exceedingly desirous she should possess. It was a splendid Marseilles counterpane, wrought exactly after a pattern which had been drawn for the Duchess of Berri, and in consideration of the kindness with which he had been entertained, she must have it. He thereupon brought it forth from his cart, and opened it to the admiration of the whole family. It was so fine, so beautiful, so much handsomer than any thing of the kind they had ever seen, that the vote was unanimous that it must be purchased. And then, it was so cheap—only forty dollars! 'My dear,' said Mrs. Dinwiddie to the major, 'how lucky! It is just the thing that I was wanting for the blue chamber, against Mr. Calhoun comes along on his way to congress.' And so the counter-

pane was purchased. The pedler pocketed the money, bade them good morning, and mounted his cart. 'But, stay a moment, Mr. Moon,' called the major, as the pedler began to raise his whip for a flourish; 'Where is the Yankee trick you promised to shew me before your departure?' 'Never mind,' replied Dick, 'you will find it out soon enough!' and with a crack of his whip, he drove off at a rapid gait—more after the pattern of Jehu than he had ever driven."

Years afterwards, Dick meets his entertainer at an inn, where he has been turned out seized with the cholera and left to die. The pedler nurses him through it, and leaves him the following letter:

"Regions of Inhumanity, Nov. 25, 1832.

"Dear Sir,—As I calculate you are now safe to do, I have concluded to start this afternoon, and get quit of this peaky place as soon as possible; especially as I am obliged to be in Orleans next week, before the brig Snap-dragon sails for Vera Cruz. You have had a pretty tight squeeze on't, or I'm mistaken. Your face was about as thin as a hatchet when old Hardscrabble turned you out of doors; and if it hadn't been for the Yankee pedler, I think you'd have twisted yourself into a corkscrew in an hour more. I make no merit of what I have done, and I only hope that hereafter you'll believe that all Yankees are not so unfeeling that they cannot weep except when they are cutting up onions; and as I have scorned to receive your money, I guess you may also admit that it's not every pedler who is so greedy for gain, as to skin flints and shad-scales to get it. The niggers have all done what they could for you, and if you can give them a few notions, without letting the old alligator in the house know it, I calculate it won't come amiss. Enclosed I leave you a dose or two of mercury, and Doctor Reese's receipt, which, if you have a relapse, you can swallow for yourself—not the receipt, I don't mean, but the calomel. But mind you don't eat any more grapes, or drink any juleps, until the cholera's gone. Enclosed I also send you a forty-dollar note of 'Squire Biddle's bank, which, for your use, I guess is pretty considerably better than specie, being the amount which you paid me fifteen years ago for Mrs. Dinwiddie's counterpane. If you'll look close, I guess you'll find the bill is an old acquaintance. It's the same I took on you, whether or no. Howsomever you have forgotten me, though I expect you don't forget to remember the 'Yankee trick.' I had tho'ts of putting in the interest; but as it was a trick of your own axing, I conclude you may lose that much, for knowing more than you did before. But I must be stirring.—Your obedient,

"RICHARD MOON.

"To Maj. Dinwiddie, of Virginia.

"P.S. I hope you'll not forget to remember to present my best compliments to Mrs. Dinwiddie, and tell her, she must not lay that matter up agin me; I expect I saw your son on parade at West Point, in September—his mother all over. His eyes are as bright as a button, and he walks as trim and straight as a coffin-stalk."

For the sake of variety, we add other two characteristic illustrations.

*Conversation between a Landlord and a Traveller.*—"Stran-ger," said the traveller to the publican, 'can I get to stay with you to-night?' 'Well, I reckon,' was the affirmative reply, in the Red River dialect. Whereupon, the horse-man dismounted, and the proper directions were given to the sable ostler. 'Cæsar, hang

the stranger's horse finent the spring, and when he gets cool, wash him and rub him down, and give him a smart chance of roughness. Hack, now, and draw a bee-line quick: and here, Jube, tote in the stranger's plunder. Come, patter along.' While these arrangements were making, some little conversation ensued between the publican and guest. 'From the up-country, I reckon?' inquired the former. 'From Old Virginia.' 'Smart sprinkle of niggers there yet? though a power of them has been brought to Orleans, and up to Bayou-Sarah, within a few years past. This sugar-making does the business for a heap of 'em every year. The cholera cuts them off this fall most banduciously. Mr. L'Amoreaux, at the last plantation back, which you passed, has had a touch, and is powerful weak yet.' The traveller, who was rather less sociable than the publican, and who was, in fact, making an overland journey homeward from New Orleans, whither he had been to dispose of forty or fifty of his slaves, uttered some indifferent reply, and was turning to enter the house, when he discovered the cart of a New England pedler, standing under a shed a short distance from the door. 'This universal Yankee nation!' he exclaimed, 'you find them every where. I reckon they would go to Tophet to sell a pistareen's worth of mammoth pumpkin seeds, if they could clear fourpence by it. I say, landlord, I think you should keep a quick eye upon the sharpers who ride upon carts like that. No honest man is safe against their tricks, and for a keen shave I reckon old Brimstone himself could'n't beat them. Indeed, I believe he's in partnership with most of 'em. 'Never mind me for that,' replied the landlord. 'I never seed a Yankee yet, from Mike Fink the boat-man—and he was a rip-roarer, you know,—down to the slickest pedler that ever found his way to Baton Rouge, who was up to Bill Mackintosh, and that's my name, stranger, to your service.' 'So I should think: but what sort of a man has carted himself hither upon that box?' 'I don't mind that I ever seed him afore; but he is a likely looking chap, and his horse swings a fine tail. He's gone over the hill to find an old neighbor of his, by the name of Dudley, who toted himself into these parts about fifteen years ago, and has made himself richer without any niggers, than any of the rest of us who have fifty on 'em. I don't reckon that Dudley will now let on that he ever know'd the pedler.' 'Well, I advise you to keep a look out for him, that's all. These Yankee tricks—' 'Oh, never fear: should he play any of his tricks upon Bill Mackintosh—you see that are rifle?—he'd soon find himself obaquastulated, and a streak of daylight shining through him.'"

There is great variety in the embellishments; but the execution is very far behind our own highly finished school of art.

*The German Tourist.* Edited by Prof. O. L. B. Wolff, and Dr. H. Doering; translated by H. E. Lloyd, Esq. 8vo. pp. 200. London, 1837, Nutt: Berlin, Asher.

THIS is a very prettily illustrated volume, having no fewer than seventeen fine engravings, from drawings by Mr. A. G. Vickers, which exhibit architectural and characteristic features of the German cities very well described in the text. These are Lübeck, Ham-burgh, Berlin, Marienburg, Dantzic, and Königsberg; and, from the writer's native and intimate knowledge of them, he has been enabled to produce far better accounts than we have been accustomed to receive from travellers.

Still it is a work that offers us little for extract; and we shall simply select a few passages of the greatest novelty, as examples of Mr. Lloyd's usual fidelity in translating from the German.

At Lübeck, we are informed, "There is no want of peculiar pictures, remarkable only for their subjects, such as the taste of our ancestors, who took delight in strange and odd allegories, used to exhibit even in their churches. Thus, for instance, the monument of Kerkering and his family is very droll. The good man has had himself represented, with his family, as a flock of lambs, led by a shepherd;—whether looking or bleating at our Saviour on the cross we will not decide. Some wags affirm, that, instead of the grave and well-meant Latin verses, which now adorn it, the following facetious inscription, in Low German, was originally affixed to it:—

'Here burgomaster Kerkering lies,  
Who limp'd with such an awkward gait;  
O God, let him to Heav'n arise,  
And make his crooked sheep-shanks straight:  
Thou kindly dost receive the lamb,  
So don't reject this poor old man.'

A most remarkable production of this kind, though by no means of equal value as a work of art, with a similar representation by Holbein at Beale, though formerly falsely ascribed to him, is the well-known 'Dance of Death,' consisting of a number of paintings on panel, which are in a side chapel below the small organ, and in which Death invites men of all ranks and ages, from the pope to the infant in the cradle, to dance; and, at length, forms with them a long chain,—the ancient city and environs of Lübeck appearing in the background. Formerly, each panel had some Low German rhymes, which, as the people became more enlightened, were unfortunately expunged, in the eighteenth century, to make room for some fine verses in High German, from the able pen of Nathaniel Schlott. Among the former, the words put into the mouth of the infant were distinguished by their touching simplicity:—

'O Dood, wa schall ick dat verstaan  
Ick schall dansen und kann nicks gahn.'  
O Death! what means this strange command?  
Thou'dst have me dance—I cannot stand.'

At Königsberg we are told of a ceremony, which we could have wished had been described more in detail. The author says—

"Under the government of George Frederick, in 1583, the strange ceremony of the procession of the Great Königsberg Sausage took place, which is said to have measured 596 ells in length, and to have weighed 434 lbs."

This was a German sausage! ye modern Eppings, polonies, saveloys, black-puddings and white, hide your diminished heads!

We conclude with three extracts; the first two shewing the horrors of war, and the cruelties exercised by the French during the late campaigns; and the last, something of their even-handed issue.

Lübeck.—"The battles of Jena and Auerstadt had been fought. General Blücher, who had followed the retreat with the Prince of Hohenloe, on the left flank, was separated from him, threw himself, with his corps, into the territory of Mecklenburg, and, being pursued by Bernadotte, Soult, and Murat, found himself more and more closely pressed. He, therefore, passed the Trave, and, with 25,000 men, entered Lübeck, in spite of all the remonstrances of the free imperial city, which would have most willingly maintained its neutrality. The French followed him closely, and, on the 6th of November, 1806, a sanguinary conflict took

place between the two armies, which was but too soon continued within the walls. After an heroic resistance, Blücher was obliged to leave the city. The victors, perfectly ignorant of the real circumstances, considered Lübeck as an hostile city, and turned all their fury upon the unfortunate inhabitants. A dreadful scene of pillage ensued, which was not fully checked till after the lapse of three days. The citizens were ill treated by the French in every possible manner: Blücher capitulated at Ratekau, on the 7th of November, and the unhappy city had now to receive and maintain the whole hostile army of 75,000 men. The humanity of Bernadotte succeeded in putting an end to these horrors, and, by enforcing a strict discipline, at least to check the progress of such awful devastation. But Lübeck was wholly unable to recover itself; from that time it was depressed under intolerable burdens. Enormous contributions exhausted its treasury, its commerce was annihilated, and, with that, its principal resources dried up, and even the hope of better times vanished, when, on the 10th of December, 1810, it was incorporated with the French empire, and its constitution abolished by an act of violence, after it had existed 600 years. \* \* \*

"On the Sunday after this catastrophe, the free corps of the French colonel, Ameil, loaded with the pillage of friends and foes in Mecklenburg, &c., and, with the spoils of the unhappy Lübeck, arrived at a village near Hamburg, where they held a kind of fair for the sale of their plunder. We ourselves saw soldiers, eager to lighten their burden, sell quantities of silver coin (a handkerchief full) for a Louis-d'or; silver table-spoons for a shilling. Horses, many of them very good, but, of course, dreadfully jaded, were sold from half-a-crown to thirty shillings each. A friend of ours bought a horse, which proved to be a very fine one, for four shillings, English. It was reported, that a splendid diamond necklace was sold for two Louis-d'or. A noble-minded Frenchman, M. Charles Villiers, then residing at Lübeck, gave an animated and affecting account of the enormities committed by his countrymen, in a letter to Madame Fanny Beauharnois, aunt to the Empress Josephine."

At Hamburg, under Davoust and Vandamme (1813), "a contribution of forty-eight millions of francs imposed upon it, its bank plundered, and, lastly, when the allied troops approached to its relief, it was declared in a state of siege. From this moment the French laid aside all moderation, burnt and devastated the environs with such precipitation, that the poor inhabitants could save little or none of their property, and 40,000 persons, who were too poor to furnish themselves with a sufficient stock of provisions, were expelled from the city, exposed to the dreadful inclemency of a most severe winter, to famine and the ravages of an epidemic nervous fever. \* \* \*

The French proceeded with the greatest cruelty. Thus Davoust caused a number of unfortunate citizens to be taken from their beds on the night of Christmas Eve, 1813, to be shut up in St. Peter's church, and, at day-break, to be driven by his blood-hounds, like a flock of sheep, out of the gates. The neighbouring town of Altona received the fugitives with kindness, and, though itself in great distress, did its utmost to relieve them. It may be interesting to compare with this another historical event. Just a hundred years before, the Swedish general, Stenbock, reduced Altona to ashes; and, during the dreadful conflagration, the senate of Hamburg closed the gates of the city, to keep off the crowd of fugitives; gave a

banquet to the ferocious conqueror, and accompanied him to the ramparts, to view, in all its horrors, the spectacle of the burning town."

We now conclude with a trait of the *finale* after the retreat from Russia.

"Count de Segur, in his history of the expedition, and the disastrous retreat, says:—'We were soon obliged to carry our humiliation to Königsberg. The grand army, which for twenty years had shewn itself successively triumphant in all the capitals of Europe, now, for the first time, reappeared, mutilated, disarmed and fugitive, in one of those cities which had been most humiliated by its glory. Its population crowded on our passage, to count our wounds, and to estimate, by the extent of our disasters, that of the hopes which they might venture to entertain. We were compelled to feast their greedy looks with our miseries; and, while dragging our misfortunes into the midst of their odious joy, to march under the insupportable weight of hated calamity.' \* \* \*

At Königsberg, the winter, already severe, became extremely rigorous: in one night, says Count Segur, 'the thermometer fell twenty degrees: this sudden change was fatal to us.' In this great distress of the French army, one of the first steps was, in their old style, to demand from the magistrates large supplies, especially of clothing, of which they were in extreme need; but to this requisition they received an answer, which was doubly bitter, from its undeniable truth. The magistrates regretted that they were unable to comply with this demand, because the large stock of English woollen, and other manufactures, had been burnt, in compliance with the emperor's orders. Count Segur, of course, does not relate this anecdote; but, speaking of the fatal effects of the cold, he says, 'Eblé, the pride of the army, fell a sacrifice,' without any further observation; but we recollect that his fate, and the manner of it, was greatly regretted in Germany, where he was highly esteemed, in consequence of his conduct, on a particular occasion, of which the following account was given: Being stationed in a small town or village in Germany, his kindness to the people, and the good discipline of his soldiers, had gained their affections, when an individual, who was never discovered, either by accident or design, shot a French soldier. This circumstance coming to the ears of Napoleon, he resolved to make an example, by way of striking terror, and sent orders to General Eblé to burn the town within twenty-four hours after the receipt of the despatch. The general, sensible that the inhabitants were wholly innocent, assembled his men, and acquainted them with the emperor's commands, which, he observed, must be obeyed; but, added he, 'you know that the inhabitants have always treated us with the greatest hospitality, and you will be unwilling to do them injury. Now, though the town must be burnt, I mean to give notice to the inhabitants, that they may remove all their effects, in which, I have no doubt, you will readily assist them.' The soldiers cheerfully assented; and, accordingly, proceeded with the inhabitants, to remove, not only every article of furniture, but even, it was said, the doors and windows of their houses; after which they set fire to the place, though with no great efforts to make it spread. The inhabitants, in their gratitude, subsequently expressed a wish to make a considerable present to the general, which he positively declined. However, as they still urged him, he at length said, 'that he would accept a medal commemorating the circumstance, to carry home to his wife, as the only trophy of

his campaign.' It was reported at Hamburg, by French officers returning from the expedition, that this excellent man had been missing three or four days, when he was found nearly expiring in a forest, where, unable to move, he had subsisted on the dry leaves which he could reach in the narrow circle round him. To relieve the mind of the reader from the melancholy impression of the above anecdote, we will relate one or two others, which Königsberg recalls to our recollection. When the French fugitives entered Königsberg, many of them made a most ludicrous and motley appearance, having, in their retreat, accommodated themselves with garments of every description and colour. One of the most conspicuous instances was a French general, who arrived, riding on a little pony, wearing a lady's pink silk cloak, with hat and feathers to correspond. Another general, who, on the retreat, found himself alone, riding through a forest at night, scarcely knowing in what direction he was proceeding, was not a little pleased at perceiving a light, which seemed to issue from a cottage. He accordingly rode up to it, and hearing, as he approached, loud voices within, dismounted, and went cautiously forward, uncertain whether the inmates were friends or foes. Happily, he heard them talking French, and, on entering, was still more gratified at recognising some men of one of his own regiments. His first question was, whether they had any thing to eat? to which they replied, they had a piece of meat at the fire. This was, indeed, good news; and some hot steaks being served up, the general, as well as his men, did them ample justice. The former, however, remarked, that it would not be prudent to stop longer; and that, as they were now strengthened by a good meal, it would be best to set out immediately, and desired them to bring him his horse. Your horse, general, said they, why you have just been eating a piece of him. How do you think we should have got meat, if you had not so luckily brought us a supply? We intend, now, to carry off as much as we can of the choicest parts, to subsist on by the way."

Having thus illustrated this illustrated volume as well as we can, we again recommend it to the general reader.

*Grammaire Turke; précédée d'un Discours Préliminaire sur la Langue et la Littérature des Nations Orientales; avec un Vocabulaire volumineux, des Dialogues, un Recueil d'Extraits en Prose et en Vers, et enrichie de plusieurs Planches Lithographiques, Extraits de MSS. anciens et modernes.* Par Arthur Lumley Davids, Membre de la Société Asiatique de Paris, &c. &c. et traduite de l'Anglais par Mad. Sarah Davids, Mère de l'Auteur. 4to. Londres, 1836.

ALTHOUGH we devoted two articles to the review in 1832 of the original English edition of this singularly interesting work, and have given more than one additional notice of its highly gifted author, yet we must require the reader's attention to the volume before us, both from the circumstances of the juncture at which it appears, as connecting philology with political relations, and from the rarity, if not absolute novelty, of the undertaking. On this last head we shall simply observe, that the fair translator must share with the immortal author of "Vathek," the praise of writing a foreign language with accuracy and elegance; and that this pious labour of maternal affection, to enlarge the monument of her parted child's genius and fame, fully justifies the maxim which the best of us are proud to recall, that

the glories of the son are, in the first instance, due to the mother. That the sovereigns of Turkey and France have successively testified their opinion of the work by their magnificent presents, is a compliment that must be divided by the parent and the child.

From the specimen before us we shall hope, indeed, to meet Mrs. Davids again in the same field. In the progress of his researches into a subject unfortunately so little known and studied hitherto, Mr. Davids must have left behind him some, and probably not a few, of those giant vestiges that still preserve the mouldings of antiquity, and serve to guide the footsteps of future travellers in the path. Rumour speaks, though darkly, of at least one immense undertaking which the writer's untimely fate left incomplete: let us trust there is enough scholarship, even of this unfrequented tract, in England, if not to perfect, at least to present the *Torreo* to public view.

The nature of the work before us necessarily brings it into comparison with the Turkish grammar of Amadée Jaubert. Nothing of the kind existed previously in English, for Vaughan's so-called Grammar of the Turkish, about a century since, contains little of grammar or of Turkish. Of continental writers, Meninski, who included three languages in one labour, is necessarily obscure; Holderman's is a compilation, and the two or three others are as complex and confused as ingenuity could make them.

The art of grammar is of necessity simple — to present the student with the leading features, the *skeleton*, so to say, of the language. This fixed in the mind, to cover it, if we may carry on the simile, with the *muscular* portion, of words and phrases. The vitality of syntax next requires attention; and, subsequent to this, the nicer investigations which, like the nervous, vascular, and other systems, though subject to laws, are often themselves unperceived, or else confounded in those knots and ganglions that bear, we know not how, their impressions to the stomach or the brain. But, in the generality of grammars, the primary form is either so imperfectly given, or so broken up and separated, as to defy a succinct and general view of the subject; and, as in algebra, the student understands nothing till master of the whole.

The rival works we are considering, both merit the praise of clearness; and there can be no better proof that both writers understood their subject. But, concise as it is, and as a Turkish grammar out of Germany must be, the work of M. Jaubert differs from Mr. Davids'. The former is more profound, the latter more practical: the first is for the philosopher, the second for the student. We reason and think with Jaubert, but we learn with Davids. The luminous comprehension of the one fits it for the philologists of France; the diversified conciseness of the other renders it invaluable to England and to Europe at this crisis. The body of both is excellent, but such are the characteristic differences; and it reflects the highest honour on the generous and learned Frenchman that he has praised the rival volume, and has avowedly adopted Mr. Davids' idea of a vocabulary. In this portion, however, M. Jaubert has omitted the corresponding sounds of the Turkish, which are given by Davids in the English and French editions.

It is curious, indeed, to compare the original and translation with each other on this head. The French better represents some, the English language, other sounds of oriental tongues. The system of vocalisation, therefore, partially dif-

fers: and a comparison of the two would afford the surest means of obtaining the correct pronunciation of the Turkish. We must notice, also, that Mr. Davids' work is evidently, from the slightest inspection, compiled originally for his own use, as he proceeded in the study of Turkish, and afterwards corrected and enlarged from his matured experience. Such, we ourselves have ever found the most efficient means of progressing; for, while it omits superfluities, it brings all that is requisite before us at the time we most require it: it is experience supplying, not subtlety theorising. Though following the general outline of Sir W. Jones's grammar, Mr. Davids' spirit was too earnest, and his attainments too sound, to be misled by the brilliant superficialities of that author, whose flowery work is rather a *gulistān*, than "a ladder to learning," of the language it would teach.

The early fate of this accomplished scholar prevented him, doubtless, from a severer scrutiny into the grounds of some few opinions, which we incline to question. To confine the designation of *Tatar* to the Mongols would not only restrict a widely circulated epithet, but raise an obstacle to the view of history. The origin of the word is, in all probability, we had almost said unquestionably, not a proper name of prince, place, or river, as variously assigned to it, but a verb: arising, perhaps, from a substantive, if the general theory of this is correct, but a different substantive from that, the proper name referred to; though, as was usual in the case of approximating sounds with ancient natives, confounded with it. But the subject opens a field of boundless inquiry, into which we cannot enter. With errors so few, so trifling in themselves, and so generally received amongst the learned, it is scarcely possible to find another work of research in existence; and the loss of him who first in England directed attention to a point of such archaeological, philological, historical, and political interest, must be deeply deplored by every mind that contemplates the slow progress of research and the toils of learning, or, from the neglected and mouldering pages of earliest record, would yet seek to snatch the feeble traces not all obliterated by forgetfulness and time.

From the valuable and amusing preliminary discourses our former reviews have extracted, we should almost fear, too largely, but that the fund is inexhaustible, lost as the source of amusement and information, and as the ground of thought. The most cursory, and the most profound reader will there find amassed a treasure that elsewhere he might search for as collected in vain. A careful collation of the Chinese historians is a desideratum for our knowledge of antiquity. How long must we wait for the earliest and most interesting portion in the land of Staunton, Morrison, and Davis?

This French translation is beautifully got up, better and cheaper than the original English.

*Buokland's Bridgewater Treatise.*  
(Geology: concluded.)

THE following note which the professor gives us in the 22d page is important; and so curious, that we cannot refrain from presenting our readers with it:—

"I have much satisfaction in subjoining the following note by my friend, the regius professor of Hebrew in Oxford, as it enables me to advance the very important sanction of Hebrew criticism, in support of the interpretations by which we may reconcile the apparent difficulties arising from geological phenomena, with

the literal interpretation of the first chapter of Genesis.—'Two opposite errors have, I think, been committed by critics, with regard to the meaning of the word *bara*, created; the one, by those who asserted that it must in itself signify, 'created out of nothing;' the other, by those who endeavoured, by aid of etymology, to shew that it must in itself signify, 'formation out of existing matter.' In fact, neither is the case; nor am I aware of any language in which there is a word signifying necessarily 'created out of nothing;' as, of course, on the other hand, no word, when used of the agency of God, would in itself imply the previous existence of matter. Thus, the English word create, by which *bara* is translated, expresses that the thing created received its existence from God, without in itself conveying whether (God called that thing into existence out of nothing, or no; for our very addition of the words 'out of nothing,' shews that the word creation has not, in itself, that force: nor, indeed, when we speak of ourselves as creatures of God's hand, do we at all mean that we were physically formed out of nothing. In like manner, whether *bara* should be paraphrased by 'created out of nothing' (as far as we can comprehend these words), or, 'gave a new and distinct state of existence to a substance already existing, must depend upon the context, the circumstances, or what God has elsewhere revealed, not upon the mere force of the word. This is plain, from its use in Gen. i. 27, of the creation of man, who, as we are instructed, chap. ii. 7, was formed out of previously existing matter, the 'dust of the ground.' The word *bara* is, indeed, so far stronger than *asah*, made, in that *bara* can only be used with reference to God, whereas *asah* may be applied to man. The difference is exactly that which exists in English between the words by which they are rendered, created and made. But this seems to me to belong rather to our mode of conception than to the subject itself; for making, when spoken of with reference to God, is equivalent to creating. The words, accordingly, *bara*, created; *asah*, made; *yatsar*, formed; are used repeatedly by Isaiah, and are also employed by Amos, as equivalent to each other. *Bara* and *asah* express alike a formation of something new (*de novo*), something whose existence in this new state originated in, and depends entirely upon, the will of its creator or maker. Thus God speaks of Himself as the Creator, *bores*, of the Jewish people, e.g. Isaiah, xliii. 1, 15; and a new event is spoken of under the same term as 'a creation,' Numb. xvi. 30, English version, 'If the Lord made a new thing;' in the margin, Heb. 'create a creature.' Again, the Psalmist uses the same word, Ps. civ. 30, when describing the renovation of the face of the earth through the successive generations of living creatures, 'Thou sendest forth thy spirit, they are created; and thou renewest the face of the earth.' The question is popularly treated by Beusobre, 'Hist. de Manichisme,' tom. ii. lib. 5, c. 4; or, in a better spirit, by Petavius, Dogm. Theol. tom. iiii. De Officio sex Dierum,' lib. 1, c. 1, § 8. After having continually re-read and studied this account, I can come to no other result than that the words created and made are synonymous (although the former is to us the stronger of the two), and that, because they are so constantly interchanged; as, Gen. i. 21, 'God created great whales;' ver. 25, 'God made the beasts of the earth;' ver. 26, 'Let us make man;' ver. 27, 'So God created man.' At the same time, it is very probable that *bara*, created, as being the stronger word, was

selected to describe the first production of the heaven and the earth. The point, however, upon which the interpretation of the first chapter of Genesis appears to me really to turn is, whether the two first verses are merely a summary statement of what is related in detail in the rest of the chapter, and a sort of introduction to it; or whether they contain an account of an act of creation. And this last seems to me to be their true interpretation; first, because there is no other account of the creation of the earth; secondly, the second verse describes the condition of the earth when so created, and thus prepares for the work of the six days; but if they speak of any creation, it appears to me that this creation 'in the beginning' was previous to the six days, because, as you will observe, the creation of each day is preceded by the declaration that God said, or willed, that such things should be ('and God said'), and therefore the very form of the narrative seems to imply that the creation of the first day began when these words are first used, i. e. with the creation of light in ver. 3. The time, then, of the creation in ver. 1, appears to me not to be defined: we are told only what alone we are concerned with, that all things were made by God. Nor is this any new opinion. Many of the fathers (they are quoted by Petavius, *l. c. c. 11. §i. - viii.*) supposed the two first verses of Genesis to contain an account of a distinct and prior act of creation; some, as Augustine, Theoret, and others, that of the creation of matter; others, that of the elements; others, again (and they the most numerous), imagine that, not these visible heavens, but what they think to be called elsewhere the 'highest heavens,' the 'heaven of heavens,' are here spoken of, our visible heavens being related to have been created on the second day. Petavius himself regards the light as the only act of creation of the first day (*c. vii. 'De Opere primæ Diei, i. e. Lucæ'*), considering the two first verses as a summary of the account of creation which was about to follow, and a general declaration that all things were made by God. Episcopus again, and others, thought that the creation and fall of the bad angels took place in the interval here spoken of: and misplaced as such speculations are, still they begin to shew that it is natural to suppose that a considerable interval may have taken place between the creation related in the first verse of Genesis and that of which an account is given in the third and following verses. Accordingly, in some old editions of the English Bible, where there is no division into verses, you actually find a break at the end of what is now the second verse; and in Luther's Bible (Wittenburg, 1557) you have in addition the figure 1 placed against the third verse, as being the beginning of the account of the creation on the first day. This, then, is just the sort of confirmation which one wished for; because, though one would shrink from the impiety of bending the language of God's book to any other than its obvious meaning, we cannot help fearing lest we might be unconsciously influenced by the floating opinions of our own day, and therefore turn the more anxiously to those who explained Holy Scripture before these theories existed. You must allow me to add, that I would not define further. We know nothing of creation, nothing of ultimate causes, nothing of space, except what is bounded by actual existing bodies; nothing of time, but what is limited by the revolution of those bodies. I should be very sorry to appear to dogmatise upon that, of which it requires very little reflection or reverence to confess that

we are necessarily ignorant. 'Hardly do we guess aright of things that are upon earth, and with labour do we find the things that are before us; but the things that are in heaven who hath searched out?'—Wisdom, ix. 16.—E. B. Pusey."

We shall not quote further from this part of the work, and we have purposely refrained from attempting to shew the successive steps of the Professor's argument, as, had we done so, we must have extracted the whole chapter. All we wish is, if possible, to tempt our readers to address themselves to the perusal of the work itself, assuring them, that the gratification they will derive will amply repay them. After settling the point between geology and sacred history, Dr. Buckland next proceeds to notice the several rocks, stratified and unstratified, and gives an admirable detail of the various organic remains found in each. We can only present our readers with a few extracts, confined to the coal formation, than which scarcely any part of the earth's surface subserves so much the comfort and luxury of man.

"Some idea may be formed of the vegetation which prevailed during the deposition of the upper strata of the transition series, from the figures represented in our first plate. In the inferior regions of this series plants are few in number, and principally marine; but in its superior regions the remains of land plants are accumulated in prodigious quantities, and preserved in a state which gives them a high and two-fold importance; first, as illustrating the history of the earliest vegetation that appeared upon our planet, and the state of climate and geological changes which then prevailed: \* secondly, as affecting, in no small degree, the actual condition of the human race. The strata in which these vegetable remains have been collected together in such vast abundance, have been justly designated by the name of the carboniferous order, or great coal formation. (See Conybeare and Phillips' 'Geology of England and Wales,' book 3.) It is in this formation, chiefly, that the remains of plants of a former world have been preserved and converted into beds of mineral coal; having been transported to the bottom of former seas, and estuaries, or lakes, and buried in beds of sand and mud, which have since been changed into sandstone and shale.† Besides this coal, many strata of the carboniferous order contain subordinate beds of a rich argillaceous iron ore, which the near position of the coal renders easy of reduction to a metallic state; and this reduction is further facilitated by the proximity of limestone, which is requisite as a flux to separate the metal from the ore, and usually abounds in the lower regions of the carboniferous strata. A formation that is at once the vehicle of two such valuable mineral productions as coal and iron, assumes a place of the first importance among the sources of benefit

\* "The nature of these vegetables, and their relations to existing species, will be considered in a future chapter."

† "The most characteristic type that exists in this country of the general condition and circumstances of the strata composing the great carboniferous order, is found in the north of England. It appears, from Mr. Forster's section of the strata from Newcastle-upon-Tyne to Cross Fell, in Cumberland, that their united thickness along this line exceeds 4000 feet. This enormous mass is composed of alternating beds of shale, or indurated clay, sandstone, limestone, and coal: the coal is most abundant in the upper part of the series, near Newcastle and Durham, and the limestone predominates towards the lower part; the individual strata, enumerated by Forster, are thirty-two beds of coal, sixty-two of sandstone, seventeen of limestone, one intruding bed of trap, and one hundred and twenty-eight beds of shale and clay. The animal remains hitherto noticed in the limestone beds, are almost exclusively marine; hence, we infer, that these strata were deposited at the bottom of the sea. The fresh-water shells that occur occasionally in the upper regions of this great series, shew that these more recent portions of the coal formation were

to mankind; and this benefit is the direct result of physical changes which affected the earth at those remote periods of time when the first forms of vegetable life appeared upon its surface. The important uses of coal and iron in administering to the supply of our daily wants, give to every individual amongst us, in almost every moment of our lives, a personal concern, of which but few are conscious, in the geological events of these very distant eras. We are all brought into immediate connexion with the vegetation that clothed the ancient earth, before one-half of its actual surface had yet been formed. The trees of the primeval forests have not, like modern trees, undergone decay, yielding back their elements to the soil and atmosphere by which they had been nourished; but, treasured up in subterranean storehouses, have been transformed into enduring beds of coal, which, in these later ages, have become to man the sources of heat, and light, and wealth. My fire now burns with fuel, and my lamp is shining with the light of gas, derived from coal that has been buried for countless ages in the deep and dark recesses of the earth. We prepare our food, and maintain our forges and furnaces, and the power of our steam-engines, with the remains of plants of ancient forms and extinct species, which were swept from the earth ere the formation of the transition strata was completed. Our instruments of cutlery, the tools of our mechanics, and the countless machines which we construct, by the infinitely varied applications of iron, are derived from ore for the most part coeval with, or more ancient than the fuel by the aid of which we reduce it to its metallic state, and apply it to innumerable uses in the economy of human life. Thus, from the wreck of forests that waved upon the surface of the primeval lands, and from ferruginous mud that was lodged at the bottom of the primeval waters, we derive our chief supplies of coal and iron; those two fundamental elements of art and industry, which contribute, more than any other mineral production of the earth, to increase the riches, and multiply the comforts, and ameliorate the condition, of mankind."

The following extract is important; and we trust that the hint which the Professor gives will not be thrown away—

"As there is no reproduction of coal in this country, since no natural causes are now in operation to form other beds of it; whilst, owing to the regular increase of our population, and the new purposes to which the steam-engine is continually applied, its consumption is advancing at a rapidly accelerating rate; it is of most portentous interest to a nation that has so large a portion of its inhabitants dependent for existence on machinery, kept in action only by the use of coal, to economise this precious fuel. I cannot, therefore, conclude this interesting subject without making some remarks upon a practice which can only be viewed in the light of a national calamity, demanding the

deposited in water that was either brackish or entirely fresh. It has lately been shewn, that fresh-water deposits occur, also, occasionally, in the lower regions of the carboniferous series. (See Dr. Hibbert's account of the limestone of Burdie House, near Edinburgh; Transactions of the Royal Society of Edinburgh, vol. xiii.; and Professor Phillips's notice of fresh-water shells of the genus *Unio*, in the lower part of the coal series of Yorkshire; London Phil. Mag. Nov. 1832, 349.) The causes which collected these vegetables in beds, thus piled above each other, and separated by strata of vast thickness, composed of drifted sand and clay, receive illustration from the manner in which drifted timber from the existing forests of America, is now accumulated in the estuaries of the great rivers of that continent, particularly in the estuary of the Mississippi, and on the River Mackenzie. See Lyell's Principles of Geology, 3d edit., vol. iii., book iii., ch. xv.; and Professor Phillips's article *Geology*, in Encyclopedia Metropolitana, part 87, p. 695."

attention of the legislature. We have, during many years, witnessed the disgraceful and almost incredible fact, that more than a million chaldrons per annum, being nearly one-third part of the best coals produced by the mines near Newcastle, have been condemned to wanton waste, on a fiery heap perpetually blazing near the mouth of almost every coal-pit in that district. This destruction originated mainly in certain legislative enactments, providing that coal in London should be sold, and the duty upon it be rated, by measure, and not by weight. The smaller coal is broken, the greater the space it fills; it became, therefore, the interest of every dealer in coal to buy it of as large a size, and to sell it of as small a size as he was able. This compelled the proprietors of the coal-mines to send the large coal only to market, and to consign the small coal to destruction. In the year 1830, the attention of parliament was called to these evils; and, pursuant to the report of a committee, the duty on coal was repealed, and coal directed to be sold by weight instead of measure. The effect of this change has been, that a considerable quantity of coal is now shipped for the London market in the state in which it comes from the pit; that, after landing the cargo, the small coal is separated by screening from the rest, and answers as fuel, for various ordinary purposes, as well as much of the coal which was sold in London before the alteration of the law. The destruction of coals on the fiery heaps near Newcastle, although diminished, still goes on, however, to a frightful extent, that ought not to be permitted; since the inevitable consequence of this practice, if allowed to continue, must be, in no long space of time, to consume all the beds nearest to the surface, and readiest of access to the coast; and thus enhance the price of coal in those parts of England which depend upon the coal-field of Newcastle for their supply; and, finally, to exhaust this coal-field at a period, nearer by at least one-third than that to which it would last if wisely economised. (See Report of the Select Committee of the House of Commons, on the state of the Coal Trade, 1830, page 242, and Bakewell's Introduction to Geology, 1833, pp. 183 and 543.) We are all fully aware of the impolicy of needless legislative interference; but a broad line has been drawn by nature between commodities annually or periodically reproduced by the soil on its surface, and that subterranean treasure, and sustaining foundation of industry, which is laid by nature in strata of mineral coal, whose amount is limited, and which, when once exhausted, is gone for ever. As the law most justly interferes to prevent the wanton destruction of life and property, it should seem, also, to be its duty to prevent all needless waste of mineral fuel; since the exhaustion of this fuel would irrecoverably paralyse the industry of millions. The tenant of the soil may neglect or cultivate his lands, and dispose of his produce, as caprice or interest may dictate; the surface of his fields is not consumed, but remains susceptible of tillage by his successor; had he the physical power to annihilate the land, and thereby inflict an irremediable injury upon posterity, the legislature would justly interfere to prevent such destruction of the future resources of the nation. This highly favoured country has been enriched with mineral treasures, in her strata of coal, incomparably more precious than mines of silver or of gold. From these sustaining sources of industry and wealth let us help ourselves abundantly, and liberally enjoy these precious gifts of the Creator; but let us not abuse them, nor, by wilful neglect and wanton waste, destroy

the foundations of the industry of future generations. Might not an easy remedy for this evil be found in a legislative enactment, that all coals from the ports of Northumberland and Durham should be shipped in the state in which they come from the pit, and forbidding, by high penalties, the screening of any sea-borne coals before they leave the port at which they are embarked? A law of this kind would at once terminate that ruinous competition among the coal-owners, which has urged them to vie with each other in the wasteful destruction of small coal, in order to increase the profits of the coal-merchants, and gratify the preference for large coals on the part of rich consumers; and would also afford the public a supply of coals of every price and quality, which the use of the screen would enable him to accommodate to the demands of the various classes of the community. A further consideration of national policy should prompt us to consider, how far the duty of supporting our commercial interests, and of husbanding the resources of posterity, should permit us to allow any extensive exportation of coal from a densely peopled manufacturing country like our own; a large proportion of whose present wealth is founded on machinery, which can be kept in action only by the produce of our native coal-mines, and whose prosperity can never survive the period of their exhaustion."

We have now endeavoured to give our readers a fair specimen of the work: we may, however, take another opportunity of directing their attention more particularly to certain portions of it; and at present conclude, with offering our sincere congratulation to the learned author, for the production of, if not the best, at least one of the best and most interesting treatises of the series. The plates are of the most costly description; and must nearly, if not entirely, have absorbed Dr. Buckland's portion of Lord Bridgewater's legacy.

*The Holy Wells of Ireland; containing an authentic Account of those various Places of Pilgrimage and Penance, which are still annually visited by thousands of the Roman Catholic Peasantry; with a minute Description of the Patterns and Stations periodically held in various Districts of Ireland.* By Philip Dixon Hardy, M.R.I.A. Dublin, 1836.

If Mr. Hardy had fulfilled the promise held out by his title-page, which we have copied, we believe that he might have presented us with a folio volume of 660 pages, instead of a pamphlet of 66. This little work is made up of extracts from the publications of Inglis, Crofton Croker, Carleton, and Barrow; with some original communications, respecting the superstitious ceremonies still practised in Ireland, and which connect themselves with wells, lakes, caves, rocks, and other local objects. These are accompanied by illustrative woodcuts, and linked together by remarks from the pen of Mr. Hardy; who seriously calls the attention of the Christian public of Great Britain to practices that not only degrade, but demoralise, the Irish peasantry.

The account of St. Patrick's Purgatory, an island in Lough Dearg, in the north of Ireland, would, if completely treated, with its historical and literary associations, form one of the most curious pieces of history of the human mind that could be written. We are assured, by good authority, that the pilgrims who resorted to St. Patrick's Purgatory, in the year 1835, numbered no less than thirteen thousand! and this in the nineteenth century!

## MISCELLANEOUS.

*Walton's Complete Angler.* Parts X., XI.

XII. (the latter a double Part).

MR. PICKERING has splendidly fulfilled his conditions with the public. The original notes and memoirs, by Sir Harris Nicolas, are worthy of that diligent and able antiquary, and of the subject. Nothing can excel the appropriateness and beauty of the illustrations after Stothard and Inskipp. As a miscellany, reflecting the times, as well as the author, the whole work is one of infinite attraction.

*The Church of England Quarterly Review*, No. 1. London, Pickering; Cambridge, Deighton; Oxford, Parker; Dublin, Milliken; Edinburgh, Laing and Forbes.

MUCH learning and talent are displayed by our new contemporary, who has taken up the cause of the church with a strong and zealous hand. Among the articles is one of a literary character, on Lord Brougham's "Introduction to Paley;" and a rather long but literarily interesting one, on the Sacred Poetry and Poets of England.

*Philosophy and Religion, with their mutual Bearings comprehensively considered, and satisfactorily determined on clear and scientific Principles.* By W. Brown Galloway. 8vo. Pp. 544. Lond. Smith, Elder, and Co. WE have only time this week to notice a performance of very great ability, and by a very young author. His work reflects honour both on himself and his school (Glasgow); but it requires a degree of attention which induces us to defer remark altogether till we have fully examined it.

*Birmingham and its Vicinity, as a Manufacturing and Commercial District*, by W. Hawkes Smith. 8vo. (London, Tilt; Birmingham, Radcliffe and Co.; Showell; Drake.)—A complete and useful account of this celebrated manufacturing town: it merited such a record of its principal features, manufactures, &c. &c.; and the author has diligently executed his task. A number of well-executed plates add to the value of his descriptive labour.

*Wordsworth's Poetical Works*, Vol. III. (London, Moxon.)—This volume contains the Miscellaneous Sonnets; a rich treasure of English poetry.

*The Life of Alcuin*, by Dr. F. Lorenzo Halle; translated from the German by J. May See. 12mo. Pp. 283. (London, Hurst.)—Few individuals deserve better than Alcuin to be rescued from the shadowy mass of eminent men who illuminated a darker age, and set before us as an object for undivided attention. The great influence and importance which marked his career are ably traced; and the period of Charlemagne is curiously illustrated by the whole tenor of his life.

*La Hougue Bie de Hambie, a Tradition of Jersey; with Historical, Genealogical, and Topographical Notes*, by J. Bulkeley, Esq. 2 vols. 12mo. (London, Whitaker.)—This production is so strangely mixed, that we must recommend Vol. I. to romance readers for a very romantic story of De Hambie, a companion of Robert Duke of Normandy, near the middle of the 11th century; and the 2d to antiquaries, for a collection of very curious notes. The illustrations are no less so.

*A Treatise on Penmanship*, by W. Dove. 4to. (London, Simpkin and Marshall; Huddersfield, Dewhurst.)—An excellent book of instruction, full of good advice and useful lessons for beauty in writing.

*Captain Marryat's Novels*, Vol. I. *Peter Simple*. (London, Saunders and Otteley.)—A new edition of these popular works, with illustrations. In the first instance, the latter do not appear to us to be worthy of the captain's sea-scenes: they are but indifferently executed.

*Theological Library*, Vol. XIV. (London, Rivingtons.)—Biographies of the early fathers, with a portrait of Polycarp, make an interesting volume of this valuable series.

*Testimonies of Heathen and Christian Writers of the First Two Centuries to the Truth and Power of the Gospel*, by the Rev. T. Browne. Pp. 170. (London, Rivingtons.)—Selected and separated from several large works, the testimonies to the early progress of the truths of Christianity, here thrown together in a popular little volume, well merit the encouragement of the religious world.

## ARTS AND SCIENCES.

## DISCOVERY IN SCIENCE.

OUR readers will see, from our weekly list of scientific meetings, that those of the Royal Institution commence for the season on Friday next. Always interesting, we believe we may

truly announce, that the opening of this session will produce matter of higher importance than has recently been brought under the notice of the philosophers of England. Few persons in this country are aware of the remarkable labours of Professor Mossotti, of Corfu. This gentleman has, we are informed, by recent clever and deep investigation, shewn that it is probable the phenomena of *electric attraction and repulsion*, with the attraction of *aggregation* and the attraction of *gravitation*, may be reduced to one simple law, as much more universal than gravitation as these three sets of effects exceed those of gravity alone! This novel and extraordinary proposition will be developed in its most popular form by our distinguished countryman, Faraday; and our scientific friends will, therefore, anticipate, with us, that Friday is likely to form an epoch in the history of the Newtonian theory.

#### SOCIETY OF ARTS.

THE Secretary on the Metallurgical History of Iron. Part II.—Mr. Alkin, suffering by an attack of influenza, did not finish the illustration. His remarks were chiefly confined to the manufacture and properties of Indian iron. In India, iron was manufactured from the earliest period; and the manufacture is still pursued in its primeval rudeness. The furnaces are all of the same construction, simple, and ill-adapted for the process: in the smaller, fusion lasts six hours, in the larger, twelve. The Indian smelter, with his rude apparatus, cannot smelt iron-stone, though abundant in various parts of the Indian territory, with any thing like a remunerating profit: hence it is not followed to a great extent. The fuel employed is charcoal, made from the bamboo;—this gigantic grass furnishing the fittest substance for that purpose. The process of smelting has been sometimes dispensed with here. The Sultan Tippoo, being once sadly in want of cannon-balls, and unable to obtain a sufficient quantity, set some of his people to the hammering of crude iron, and so supplied the want. Amongst the many specimens of iron which were exhibited, there was one from Ceylon, part of which had been forged by a member of the Society, who had also made a rivet-nut out of it; that being the best test for trying the tenacity of the material, which proved to be of excellent quality. Iron was found in plenty in that island, and iron-works were established under the auspices of the last governor; but they failed, in consequence of financial difficulties, and had since been abandoned. The secretary then described the ancient furnaces of Styria—a country famous for the excellence of its iron. He then pointed out the difficulties of reducing manganese steel to iron; but, owing to the cause mentioned above, the remaining branches of the illustration were postponed until another occasion.

#### GEOGRAPHICAL SOCIETY.

SIR JOHN BARROW, Bart. in the chair.—Members were elected, and several donations announced. Read, Letter from Mr. Willshire, dated Mogadore, 28th November, 1836, in which the writer states, he has much pleasure in acquainting the Society, that Mr. Davidson started from Wednoon on the 9th November, on his journey to Timbuctoo, with a guard of thirty horsemen, accompanied by the eldest son of the Sheikh of Wednoon, to pass him through that district to Yeisat, and Sheikh Mohammed El Abd of the Tajacanth, under whose protection, and some picked men of the tribe, he

travels across the desert of Sahara to Timbuctoo. Mr. Willshire was in hourly expectation of receiving letters from Mr. Davidson, which he promised to write before he sets out from Yeisat; after which, it is very doubtful if any further intelligence of him will be received until his arrival at Timbuctoo, as the party will avoid the Cafla track, and push on straight for Arowan. Every possible precaution had been taken by Sheikh Beyrook for the personal safety of Mr. Davidson in crossing the desert; of whose success Mr. Willshire expresses the greatest confidence. Read also, Extract of a letter, received from Swan River, dated 22d May, 1836, addressed to Major Irwin. It is from Mr. Moore, the judge-advocate, and describes his discoveries to the N.N.E. of Perth, Swan River, in the month above mentioned. Mr. Moore, it appears, had made an excursion to the N.N.E. for ninety miles, and had discovered another river, with an extensive country of rich pasture land beyond it, as far as the eye could reach—decidedly the best he had seen in the colony; he traced it down towards the sea, for about eighty miles, and then returned, having been out eleven days: he was only accompanied by one policeman and a native; the force was too small for him to attempt any thing more, and the time allowed him by the governor had expired. The natives he met with were friendly; the communications, however, which he held with them, have induced him to come to the conclusion, that there is a great inland lake in the interior, so large, that they conceive it the terminus of the country—that it runs north and south, and that they cannot see across it. On his return, having stated his surmises, reports confirmatory came to him, among the rest from Drummond's sons, who had heard of such a salt inland sea from the natives, so large, that if a man in the prime of life were to walk round it, he would be gray before his return (such was their idea of its size); that there were many rivers falling into it; that the winds were high, and the waves large upon it; the beach sandy, like that of the sea. Mr. Moore was so fully impressed with the idea of such a lake existing, that he had determined to apply for permission of the governor to make an expedition in search of it. The natives say, it would not take many moons to enable them to go and return; from the writer's calculations, this would give a distance of between 400 and 500 miles to it: too much to be undertaken by an individual, at his own expense; but, as the question is one of great importance to the colony, and also in a geographical view, it would be well worth the attention, observes the judge-advocate, of the Geographical Society; and it is probable they would give funds to assist in the enterprise, if applied to. It is suggested that a few camels, taken in such an adventure, would be more useful than horses, on account of their not requiring such regular supplies of water, carrying more luggage, and travelling with greater rapidity. Suppose the expedition to consist of twelve persons, viz. five gentlemen, four policemen, and three natives, they should push forward 250 miles to the north-east from their starting-place (say, head of the Swan); this, at twenty-five miles per day, would occupy ten days. They should then form a resting-place, and a depot for provisions, where one gentleman, two policemen, and a native, should remain; whilst two gentlemen, a policeman, and a native, should push on from thence due north 200 miles, or eight days, and a like force proceed due east the same distance; then fall back upon their

supplies, if their provisions are exhausted, and no discovery made; but, if their provisions lasted, and game should be found plentiful on the way, to keep pushing forwards, in their respective directions, so long as they, from circumstances, should deem it expedient. The writer, after making some allowances, states, that such a party would be able to make 500 miles to the N.N.E. of Perth, and 500 to the E.N.E. in about two months. He does not think any of the natives ever went so far, and that, if it has been seen by them, this long-conjectured lake would be found within that distance. There was, likewise, read a letter from Captain Alexander, dated Clan William, 200 miles north of Cape Town, 27th Sept. 1836. At this place the gallant officer arrived a week prior to the date of his letter, on his way to the Damara country. In a day or two, after some necessary repairs of the wagon were completed, and the oxen rested, he intended to resume his journey: his next halt would probably be the missionary station at Kamiesberg. He left Cape Town on the 10th, and the first week his party had many difficulties to contend against, but they afforded the travellers excellent lessons. The wagon was very heavy, much rain fell, and the roads were full of mud-holes: in one of these holes they remained stuck fast two nights. After many accidents and delays, with swollen rivers, &c. they crossed the Berg river, and since that have got on smoothly. Captain Alexander visited the cedar mounts in this neighbourhood, and was about to inspect a Bushman's cave, with rude drawings in it: he, also, intended to see the mouths of the Elephant's and Orange rivers, and one or two undescribed bays.—Sir John Barrow had great pleasure in stating to the meeting, that the expedition under Lieutenants Grey and Lushington into Australia, had now received the sanction and support of the Admiralty.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

*Hulsean Dissertation.*—The following is the subject of the Hulsean dissertation for the present year:—"To compare the evidence, which Christians of the present age have for the truth of the Gospel, with that which the first converts possessed."—*Cambridge Chron.*

##### ROYAL SOCIETY.

THURSDAY evening.—A highly philosophical paper by Dr. Ritchie, being an attempt to account for the actual discrepancy in sound, and that in theory, was read. The effects of the prevailing influenza were, however, so overpowering, that the paper could neither be distinctly read nor heard, and our reporter was unable to note distinctly consecutive sentences of the author's communication. Thus much, however, he is able to state with certainty,—that Dr. Ritchie differs from Laplace, whose theory on the subject the doctor considers unfounded.

##### SOCIETY OF ANTIQUARIES.

MR. HAMILTON in the chair.—Mr. Akerman exhibited a small bronze bottle found at Autun, in France; it was curiously ornamented, and apparently belonged to the best period of Roman art. The Rev. Mr. Ellercomb communicated a memoir written by Mr. Pearsall, on a horrible instrument of death, called the Virgin, by which persons were privately despatched, after being condemned by the old irresponsible tribunals in Germany: one had been stated to have been erected at Nuremberg, in 1533; but, after a careful search there, Mr. Pearsall found

no "Virgin," although he met with the remains of a rack, and other instruments of torture. Part of the memoir being read, the remainder was postponed.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday.*—Statistical, 8 P.M.; British Architects, 8 P.M.; Medico-botanico Anniversary, 8 P.M.; Marylebone (Mr. Hemming on the art of Embossing Paper), 8 P.M.; Russell Institution, (on Geology, by T. Webster, Esq., and five ensuing Mondays).

*Tuesday.*—Linnean, 8 P.M.; Horticultural, 2 P.M.; Civil Engineers, Anniversary, 7 P.M.

*Wednesday.*—Geological, 8 P.M.; Society of Arts, 7 P.M.; Southwark Literary, (Mr. Phillips on our National Melodies), 8 P.M.

*Thursday.*—Royal Society, 8 P.M.; Antiquaries, 8 P.M.; Islington Literary (Mr. Goadby on the Anatomy of Insects, illustrated by the Oxy-hydrogen Microscope), 7 P.M.; Russell Institution (Dr. M. Truman on the Comparative Physiology of Respiration).

*Friday.*—Royal Institution, 8 P.M.

*Saturday.*—Royal Asiatic, 2 P.M.

#### FINE ARTS.

##### NEW PUBLICATIONS.

*Domestic Architecture, in the Tudor Style; selected from Buildings erected after the Designs, and under the Superintendence, of P. F. Robinson, Architect, F.A.S., F.G.S., &c.* Williams.

This is the first of an intended series of publications on the subject. It describes and exhibits alterations and additions recently made, by Mr. Robinson, in the house of J. H. Vivian, Esq. M.P., near Swansea; and, certainly, if we may judge from two of the plates—the one representing the original form of the mansion, and the other, its present condition,—it has been vastly improved, not only in commodiousness, but in that picturesque appearance which is the distinguishing character of old English architecture. The plates, which shew the changes that have been made in the interior of the edifice, are highly curious and interesting.

*The History and Antiquities of Haddon Hall: illustrated by Thirty-two highly finished Drawings; with an Account of the Hall in its present State.* By S. Rayner. Derby, Moseley; London, Weale.

This is the first Part of Mr. Rayner's work. "It consists of a review of the history of Haddon, from the original grant of the territorial domain, by William the Norman, to his natural son, William Peverel; the subsequent transfer of the property from the family of the first grantee to the Avenells, the Vernons, and the family of the present noble owner, the Duke of Rutland; with accounts of such individuals among the successive proprietors as were at all distinguished on account of their talents or offices; and notices of all those national events in which they were concerned. The second Part will comprise a description of the house in its present state, with such information as can be collected relative to the periods at which different portions of it were erected."

The lithographic views of this ancient and singularly curious and picturesque edifice, are from sketches by Mr. Cattermole, some of which were noticed in the *Literary Gazette*, when they were exhibited at the Gallery of the Society of Painters in Water-colours. In transferring them to stone, Mr. Rayner has been very successful in preserving their spirited and masterly character. It is due to all parties to mention, that Mr. Rayner states, that "the sketches were presented to him, without any remuneration, at a time when more than one publisher was negotiating for the purchase of them." In these sordid days, such an anecdote is peculiarly pleasing. The getting-up of the

work, which has been lithographed and printed at Derby, does great credit to the taste of that town.

*Twenty-one Views in Belfast and its Neighbourhood.* Dublin, Hardy; London, Groombridge.

ENGRAVINGS in wood, possessing little or no merit as works of art, but interesting, as shewing the growing prosperity and importance of the metropolis of the north of Ireland. They are accompanied by a brief historical record of the town of Belfast.

*Down Charge.—The Gamekeeper's Stable.* Painted by A. Cooper, R.A.; engraved by T. Bromley. White.

Two as pretty little prints of the kind as ever were engraved. Mr. Cooper's merits, as a painter of animals, are too well known to require any eulogium from us; and Mr. Bromley has entered fully into the character and spirit of the originals. To any sporting friend we cannot imagine a more agreeable present.

*The Father Confessor; or, The New Year's Gift.* J. Knight.

Oh, fie! A double entendre! Very clever, however.

#### MUSIC.

##### VOCAL SOCIETY.

THE fifth season commenced on Monday night, with a selection of a highly popular cast, if we may judge from the unprecedented number of *encores* which occurred during the evening. The madrigals were as delightful and as cordially received as ever. The first was Willbye's charming one, "Sweet honey-sucking bees;" the other (a new one), "Come, gentle swains," from the *Triumphs of Oriana*. The name of the composer, Cavendish, is not so well known as, judging from this specimen, it deserves to be. As regards one item in the bill, we cannot forbear remarking, that the Vocal Society ought not to administer to a taste that can be gratified by any thing so puerile and commonplace as the music (?) of Sir J. Stevenson's round, "Come, buy my cherries." We never expected to have heard such a thing in a concert-room,—least of all, in the concert-room of the Vocal Society. The glees were admirably performed, and warmly applauded. Mozart's noble choral motet, with the English version, by Mr. E. Taylor, "O praise the Lord!" was an especial treat. Among the songs, Purcell's "I attempt from love's sickness to fly" shone pre-eminent. Mr. Hobbs evinced no less good taste in selecting than sound judgment in singing it with correctness and simplicity; and he was duly rewarded, by a hearty and unanimous *encore*. All that the singer lacked was a spice of that fervour which animated the poet and composer. Horn's song, "Come, mariner, down in the deep," is a pretty affair enough for a drawing-room, but hardly possesses raciness and vigour sufficient to recommend it to a classical concert. Miss Hawes displayed the well-trained musician, by varying her embellishments on the repetition of this song. In Mozart's scena, "Mi tradi," Mrs. Seguin succeeded so far as physical force was required; but in the nicer shades of expression—in the transitions from indignation to tenderness, she was by no means effective. Her voice was also distressingly loud and overpowering in Winter's lovely duet, "Vaghi colli." This lady, who is a correct, and, in many essential respects, a most valuable performer, appeared, on this evening, to forget

that the Hanover Square Rooms and the King's Theatre are not precisely alike, as regards the volume of sound required to fill them. Among the solo performers, we must not forget the veteran Bellamy, who executed a song from one of Handel's operas with a degree of spirit and energy that could hardly have been expected from one who has witnessed two commemorations of the great composer. After the first part of the concert, Mr. Eliason performed some variations on the violin, which gave him an opportunity of displaying considerable execution in the modern school of difficulty and new effects. The concert was of so reasonable a length as to be over at an early hour, notwithstanding the numerous *encores*. This is good: a musical feast should never amount to a surfeit. Q.

#### DRAMA.

*Adelphi.*—A new farce, from the pen of Mr. Coyne, entitled, *The Humours of an Election*, was produced here on Monday, with good effect. It introduced "glorious John" as a parish overseer, and we hardly ever saw him more funny, or more perfect. Mrs. Stirling, as a young lady who wishes her sweetheart returned for the borough of Puddlewell, was very good; but the chief novel feature was Mr. Fitzgerald, whose imitations of O'Connell were excellent. He preserved all the originality of the agitator, without offending the politics of any one; and Whig, Tory, and Liberal, joined in a hearty laugh at his personation. Mr. F., on the stage, is remarkably like O'C. in every thing except height and age. The piece is full of capital *equivoque*, but rather too long. We have no doubt that it will draw bumpers for some time, for it is a treat that we recommend our readers not to miss.

*Queen's Theatre.*—A new piece, called *Caspar Hauser*, with beautiful scenery and good acting throughout, introduced, on Monday, Mr. Hill, the Yankee Pedler, in a new character, as a *Dr. Lot Whittle*; in which he loses none of his former celebrity. His jokes are capital, and the quaint way in which he tells his stories keeps the audience in a continual roar. Miss Grey played *Caspar*, a half-dumb boy, very beautifully. The piece is too long, we think; but, with a little shortening, it is sure to have a run.

*Opera Buffa.*—On Thursday, *Nina*, by Coppola, was produced here, with entire success; a Mlle. Giannoni, a fine mezzo-soprano, made an equally fortunate *début*, as *prima donna*. Puzzi, in a horn accompaniment, enchanted the audience. These entertainments are, indeed, altogether charming.

#### GARRICK CLUB AND C. KEMBLE.

ON Tuesday the members of the Garrick Club gave a dinner to Mr. C. Kemble on his retirement from the stage. There not being sufficient accommodation in the club-house, the company met at the Albion Tavern, with Lord F. Egerton in the chair, and about a hundred sat down to table. After the usual loyal toasts, the president addressed the meeting; but, previous to proposing that health which was the occasion of their assembling, called for a musical composition which had been prepared in honour of the day. The following lines, written by Mr. Theodore Hook, and composed by T. Cooke, were accordingly sung by Messrs. Balfe, Cooke, C. Taylor, Duruset, Hobbs, and others, in a masterly style, Sir George Smart accompanying them on the grand piano. The effect was extremely fine; and it was felt by every musical person present,

that instead of being a work produced for a temporary occasion, it would have done honour even to Mr. Cooke's genius had it been executed as the most important piece in a standard opera. Great applause and an *encore* rewarded his exertion.

"Sacred to Genius be this festive day,  
In music be our thoughts express'd,  
While friendly voices swell the lay,  
In honour of our welcome guest.  
Then fill a bumper to his name,  
Fill, fill it to the brim,  
Long since 'twas registered by Fame,  
Long well maintained by Him.  
Still in the wine-cup drops a tear,  
A tribute from the heart,  
That could too soon his bright career,  
This Master of his art;  
No more his varied skill revealing,  
Shall wake each mournful, mirthful feeling,  
Which he so ably could impart.  
Yet banish care, with joys in store,  
No sorrowing grief shall blend,  
For though the Actor's life be o'er,  
We still possess the Friend.  
Then fill a bumper to his name,  
Fill, fill it to the brim,  
Long since 'twas register'd by Fame,  
Long well maintain'd by Him.

The chairman then delivered a most touching and eloquent speech, in which it was difficult to say whether there was most to admire in the aptitude and beauty of the sentiments, or in the rare felicity of the language in which they were clothed. After the loud cheering which attended its close, when the health of Mr. Kemble was given, had ceased, that gentleman returned thanks in a feeling and grateful manner; and Mr. Balfie sung admirably the subjoined charming song, written by Mr. J. H. Reynolds, and composed by him.

Song, by Mr. Balfie.

Farewell! all good wishes go with him to-day!  
Rich in name—rich in fame—he has play'd out the play.  
Though the sock and the buskin for aye be remov'd,  
Still he serv'd in the train of the drama he lov'd!  
We now, who surround him, would make some amends,  
For past hours of enjoyment—we court him as friends;  
Our chief—nobly born—genius crown'd, our seal shares,  
Oh! his coronet's hid by the laurel he wears!  
Well! wealthy we have been, though Fortune may frown,  
And, 'they cannot but say, that we have had the crown!"

Shall we never again see the Spirit infuse  
Life—life—in the young gallant forms of the Muse!  
Through the heroes and lovers of Shakespeare he ran—  
All the soul of the soldier—the heart of the man!  
Shall we never in Cyprus his robe retrace;  
See him stroll into the garden with insolent grace,  
Or greet him in bonnet at fair Dundunane,  
Or meet him in moonlight Verona again!  
Well! wealthy, &c.

Let the curtain come down—let the scene pass away!  
There's an Autumn, when Summer hath squander'd its day!  
We may sit by the fire, when we can't by the lamp,  
And re-people the banquet—re-soldier the camp!  
Oh, nothing can rob us of memory's gold;  
And though he quit the gorgeous, and we may grow old;  
With our Shakespeare in hand, and bright forms in our brain,  
We can dream up our Siddons and Kembles again!  
Well! wealthy, &c.

This also obtained the just honours of a unanimous *encore*; and the chairman proposed the toast of the Authors of the Poetry, and the Composers, to whom they were, this evening, so much indebted. Mr. Reynolds acknowledged the compliment in a few words. On the healths of the Vice-Presidents of the Club being drank, Sir George Warrender, in a neat speech, returned thanks for Lord Mulgrave and himself, and, having paid a just tribute of admiration to the abilities displayed by the noble Chairman, proposed his name as the toast. This was accepted with much of enthusiasm, and his lordship thanked the company. Other toasts of the night: "The immortal Memory of Shakespeare," was introduced in a humorous preface by Mr. Poole; "The Stage and its Professors," by Mr. S. Price, who drew

a melancholy picture of the stage and its prospects; "The living Dramatists of England," by the Chair; "The Fine Arts in their connexion with the Stage," by Mr. Jerdan, who did honour to the artists present, Messrs. Clint, Stanfield, Roberts, and Grieve; "The female Ornaments of the Stage, and particularly those of the Kemble family," by the Chair: these various themes called up Mr. Sheridan Knowles, Mr. James Smith, Mr. Macready, Mr. Kemble, &c.; and at 12 o'clock, the meeting, which might truly be said to possess "the feast of reason and the flow of soul," separated, every individual apparently highly delighted with the entertainment. The glees performed, and songs by Cooke and C. Taylor, contributed much to this result; and we should not omit to notice an imitative address by Mr. Yates, whose prose rivalled the verse of C. Taylor in recalling the living likenesses of members who have graced, or still grace the stage.

#### VARIETIES.

*The Weather-wise.*—Our weather-wise friends had not been over-successful this week. The 10th, it is true, was rainy, as Lieutenant Morrison said, but it cleared off into a very hard frost, and the 11th (his alternative rainy day) continued to be brilliantly frosty. As for Mr. Murphy's "greatest cold on the night of the 13th," it is unusually mild. Well! the lieutenant tells us the "16th is still for rain, and the 17th and 18th have aspects for high winds and heavy rains at times. The aspects of Venus to Saturn and Herschel near the full moon, denote much falling weather; thick, gloomy clouds, rain and wind."

*The Adelaide Gallery.*—We would be doing an injury to our young readers, who visit the capital at this season, did we not earnestly advise them to spend a day or two (the best of their holidays) in these rooms: nor will their parents or tutors be disappointed if they accompany them. The multitude of new and instructive information they will gain will last them for many years; and, in truth, there is hardly a branch of practical science of which they will not be enabled to acquire some knowledge, through apparatus and experiments of the most delightful kind.

*A Dear Lobster.*—The late Duke of Norfolk was fond of the luxuries of the table, and, although apparently as joyous and blithesome as any one, he could be as morose and ill-tempered as any person breathing. Those who knew him could pretty well anticipate when a breeze was likely to spring up, as an ebullition of temper was always preceded by a convulsive heaving of his ponderous shoulders, as exemplified by the following trait. A select party, about twelve in number, had assembled in St. James's Square, and were partaking of a sumptuous dinner, when on a sudden the earl-marshal's shoulders began to undulate, and the following short colloquy between a then favoured servant and his grace took place. "I do not see a lobster on the table, Dodson." "No, your grace." "I think I ordered one, sir?" roared the duke. "Yes," replied Dodson, "you did, your grace, and I bid as far as 4l. 16s. for one; but, there being but one in the market, I could not get it; the same lobster being divided between the Lords Angelsea and Sefton, who were resolved to have it!"—Jockey of Norfolk said no more.

*The Guide to Knowledge.* New Series. No. I.—The old series having closed its pages in the complete and useful manner described a few *Gazettes* ago, a new phoenix has started from its pyre. A portrait of Francis Bacon, which

is presented with it, is a highly creditable work of art, and such as, in other days, would have cost shillings sterling. How any publishers can afford (except by very extensive sale) to give such bribes, we cannot imagine. The sheet itself, with its varied information, is worth the price charged for it.

*The Churches of London*, No. I. (By G. Godwin, jun., assisted by G. Button, Esq. F.S.A. Tilt; Hatchard; Seeley; Weale.)—This undertaking is worthy of the rising talent of Mr. Godwin, and promises to be a very complete and interesting production. The first Number is devoted to our great metropolitan cathedral, St. Paul's; and, besides a good historical and artistical account of the edifice, presents two beautiful views, an exterior and interior, from drawings by Billings, engraved by Le Keux and Challis. The specimen is altogether a very favourable one.

*Gresham Prize Medal.*—The Rev. W. H. Haverhall, A.M. author of *Cathedral Chants*, &c., has been the successful candidate this year.—*Musical World*, No. 43.

*The Big Balloon* again ascended from Paris on Monday, and traversed twenty-five miles in fifty minutes, when it reached the earth in safety.

*Jack*, the ourang-outang of the Jardin des Plantes, Paris, is really dead at last.

#### LITERARY NOVELTIES.

In the Press.

Conspectus of the Pharmacopœia Londinensis of 1836, by Dr. Castle.

Winds S. and S.W. Alternately clear and cloudy; rain on the 6th and 10th. Rain fallen, .15 of an inch.  
Edmonton. CHARLES HENRY ADAMS.

#### TO CORRESPONDENTS.

We have received a letter from Mr. Hering, reclaiming against our expression in the critique upon the Great Seals of England (L. G. No. 1041, p. 842), viz. that the process by which they were engraved had been improved upon by one of our own countrymen. Anxious only to do justice in this respect, *palmam qui meruit ferat*, we are devoting a thorough sifting to the question (one of much interest to the arts), the result of which shall appear in an early L. G.

Proof Impressions of the Plates, 2s. 12s. 6d.

## THE ORIENTAL ANNUAL FOR 1837.

By the Rev. ROBERT CAUTER, B.D.

With Twenty-two Engravings, from Drawings by

William Daniell, R.A.

"In the Rev. H. Cauter's biography of Timur Beg, there is  
all the excitement of a melo-drama. Of the work and its embel-  
lishments we are bound to speak in the highest praise."—*Chroni-  
cle*.

"Nor do we doubt of the present work, from the great interest  
belonging to its subjects, from the ability with which these are  
treated, and the splendid manner in which it is got up, becoming  
one of the most popular—far beyond it—will be among the most  
permanently useful—Annals yet published."—*Monthly Review*.

"A few complete Sets of the Three former Volumes of this  
Work may still be had, price 12s. each.

Charles Tilt, Fleet Street.

Crabbe's Poetical Works, in Eight Volumes, similar to Scott's and

Byron's.

In 8 vols. fcap 8vo. 5s. each.

## THE POETICAL WORKS of the Rev.

GEORGE CRABBE, with his Letters and Journals,

and his Life. By his SON.

Sir Walter Scott says of Crabbe's poems, "I have a set for my  
cabin at Abbotsford as well as in town. The clearness and ac-  
curacy of his painting, whether natural or moral, renders, I have  
often remarked, his poetry generally delightful to those whose  
thought might make them insensible to the other beauties with  
which it abounds."—*Sir Walter Scott*.

John Murray, Albemarle Street.

In 11 vols. uniform with the Works of Scott and Crabbe,

price 5s. each.

## THE COMPLETE WORKS of LORD

BYRON: comprising his Poetry, Letters, and Journals,

and his Life. By THOMAS MOORE, Esq.

In 12mo. price 6s. In boards, the 5th edition of

## A COMMENT upon the COLLECTS

appointed to be used in the Church of England before

the Epistle and Gospel, on Sundays and Holidays throughout the

Year. By the Rev. JOHN JAMES, D.D.

Frederbury of Peterborough.

Printed for J. G. and F. Rivingtons, St. Paul's Churchyard,  
and Waterloo Place, Fall Mall.

THEOLOGICAL LIBRARY, Vol. XIV.

In small 8vo. with Frontispiece, price 6s.

## BIOGRAPHY of the EARLY CHURCH.

Contents: Clement of Rome—Symeon—Ignatius—Poly-  
carp—Marion—Justin Martyr—Tatian—Dionysius of Corinth—  
Hippolytus—Irenaeus—Victor—Appollonius—Clement of Alex-  
andria—Tertullian—Alexandria.

By the Rev. R. W. EVANS, M.A.

Fellow of Trinity College, Cambridge; and Vicar of Tarvin.

Rivingtons, St. Paul's Churchyard, and Waterloo Place.

Lately published, by the same Author,

Scripture Biography. 2 vols. 12s.

BIOGRAPHICAL WORKS,

Printed for Longman, Rees, Orme, Brown, Green, and Longman.

## ANNUAL BIOGRAPHY and

OBITUARY, Vol. XXI. for 1837. 8vo. price 12s.

The principal Memoirs are those of—

Bishop Van Mildert—N. M. Rothschild, Esq.—William God-  
win, Esq.—Dr. Henry—Madame Mallbrun—George Colman, Esq.—  
John Bannister, Esq.—the Duke of Gordon—Sir Francis Free-  
ling, Bart.—Thomas Walker, Esq. &c. &c.

II.

## A History of the Life of Edward the

Black Prince.

By G. P. R. James, Esq.

In 2 vols. 8vo. price 12s. 11s. 6d.

With Observations on the third critique in the *Athenaeum*.

## Memoirs of Sir William Temple.

By the Right Hon. Thomas Peregrine Courtenay.

3 vols. 8vo. with Portrait, 32s.

## Life of Sir Humphry Davy, Bart.

By his Brother, Dr. John Davy.

2 vols. 8vo. with Portrait, 32s.

"The manner in which he (Dr. Davy) has performed his task is  
highly creditable to his talents and learning. The important  
documents, too, which he has published for the first time, are ex-  
ceedingly valuable, and enable us to form a more correct judg-  
ment than we could otherwise have done, of the scientific char-  
acter and general attainments of his brother."—*Edinburgh Re-  
viewer*, No. 127.

## Life and Times of William III. King of Eng-

land, and Stadtholder of Holland.

By the Honourable A. Trevor, M.P. F.R.S. &c.

2 vols. 8vo. with Portrait, &c. price 24s.

## Life of Frederick the Second, King

of Prussia.

By Lord Dover.

2 vols. 8vo. Portrait, 2d edition, 26s.

"A most delightful and comprehensive work. Judicious in  
selection, intelligent in arrangement, and graceful in style."—*Lit-  
erary Gazette*.

## Military Memoirs of Field-Marshal the Duke

of Wellington.

By Major Moyle Sherer.

2 vols. fcap 8vo. 10s. cloth.

"Major Sherer has ably completed his difficult task of com-  
pressing the history of the Duke of Wellington, and of the wars  
of our times, into this excellent system."—*United Ser. Journal*.

Uniform with the above.

## Life and Reign of George IV.

By W. Wallace, Esq. Barrister-at-Law.

2 vols. 12s.

Now ready, price 2s. 6d.

## THE CABINET OF MODERN ART, VOL. III.

In crown 8vo. (the same size as Mr. Rogers's "Italy"), with 24 Engravings on Steel, price One Guinea.

## THE CABINET OF MODERN ART,

AND

## LITERARY SOUVENIR.

Edited by ALARIC A. WATTS. Third Series.

\* In selecting the subjects for the Embellishments contained in the work, the object of the Editor has been to  
introduce as many of the most celebrated productions of modern British art as possible. In this aim he has been  
seconded, not only by the Painters themselves, but by many of the most distinguished collectors throughout the  
country. The new volume contains twenty-four highly finished Engravings, from the burins of the most eminent  
engravers of the day, after well-known Pictures by Howard, Stothard, Collins, Chalon, Martin, Westall, Newton,  
John Chalon, Roberts, Hart, F. P. Stephanoff, Jones, Edmonstone, Parris, and Leopold Robert.

### TESTIMONIES.

*Athenaeum*.—"The best series of designs and engravings we have looked over this season."  
*Literary Gazette*.—"A splendid and beautiful collection of gems."  
*Atlas*.—"There is always the greatest merit in these illustrations; and on the present occasion an unusual variety  
adds a new charm to the beauty of the designs and the skill of the engravings. The whole collection is complete and  
valuable, as in former years."  
*Spectator*.—"Superior, in their general character, to the tribe of annuals. The engravings generally are excel-  
lent; no pains have been spared in this particular."

Published for the Proprietor, by Whittaker and Company, Ave Maria Lane.

2d edition, small 8vo. 10s. 6d.  
**ON the CONNEXION of the SCIENCES.**  
By MARY SOMERVILLE.  
"Mrs. Somerville's delightful volume on the 'Connexion of the  
Sciences.' The style of this astonishing production is so clear  
and unaffected, and conveys, with so much simplicity, so great a  
mass of profound knowledge, that it should be placed in the hands  
of every youth, the moment he has mastered the general rudiments  
of education."—*Quarterly Review*.  
John Murray, Albemarle Street.

In small 8vo. with Frontispiece and Vignettes, price 8s. in cloth  
boards.

**PERANZABULOE, the lost Church**  
found; or, the Church of England not a new Church,  
but Ancient, Apostolical, and Independent, and a Protestant  
Church Nine Hundred Years before the Reformation.  
\* The Volume contains an interesting Account of the History,  
and recent Recovery, of the ancient Church of Peranzabuloe,  
in Cornwall, after being buried in the Sand for Seven Hundred  
Years.  
By the Rev. C. TRELAWNY COLLINS, M.A.  
Rector of Timbury, Somerset, and late Fellow of Balliol College.  
Printed for J., G., and F. Rivington, St. Paul's Churchyard,  
and Waterloo Place, Pall Mall.

Best edition, complete in One Volume,  
Price 18s. in boards.  
**DISSERTATIONS on the PROPHECIES**  
which have been remarkably fulfilled, and at this time  
are fulfilling, in the World.

### REVIEW OF NEW BOOKS.

*Branches of the Country; or, Descriptions of Rural Customs, Objects, Scenery, and the Seasons.* By Thomas Miller, author of "A Day in the Woods." 12mo. pp. 425. London, 1837. Van Voorst.

As we felt on reading the "Day in the Woods," we have again experienced a sense of pleasure in dwelling on the natural freshness and poetical imaginings of Mr. Miller. His are no Cockney scenes of rusticity to be mistaken for rural beauty; no caricatures of suburban patches to be welcomed as the wild exuberance of Nature. He has lived in the country, and has observed its features; and he paints them faithfully and well. His trees actually luxuriate; his streams flow; his fields are spread out in all their varieties; his sunshine produces languor on the flocks and herds; his moonlight sheds a calm lustre o'er the silent earth; his images are just; his effects true; and his reflections full of interest and character. We have seen with regret, in some of our contemporaries, a fling at "the basket-maker;" as if it were a general principle in literature to depress the lowly aspirant, and discourage every attempt which did not proceed from rank or wealth in the paths of poetry and fancy. Never shall we participate in this cruel course: if there be merit, let the individual, not the class, be tried; if he fail, let us lament that the prompting power was greater than the executive; but if he succeed, let us, as in the present instance, freely and cordially award the palm to humble and untaught genius. To illustrate the author's claims to this high honour, we copy from his pages the vivid description of Spring.

"Spring is come at last! There is a primrose colour on the sky—there is a voice of singing in the woods, and a smell of flowers in the green lanes. Call her fickle April if you choose—I have always found her constant as an attentive gardener. Who would wish to see her slumbering away in sunshine, when the daisies are opening their pearly mouths for showers? Her very constancy is visible in her changes: if she veils her head for a time, or retires, it is but to return with new proofs of her faithfulness, to make herself more loveable, to put on an attire of richer green, or deck her young brows with more beautiful blossoms. Call her not fickle, but modest—an abashed maiden, whose love is as faithful as the flaunting May, or passionate June. Robed in green, with the tint of apple-blossoms upon her cheek, holding in her hands primroses and violets, she stands beneath the budding hawthorn, her young eyes fixed upon the tender grass, or glancing sideways at the daisies, as if afraid of looking upon the sun, of whom she is enamoured. Day after day she wears some additional charm; and the sky-god bends down his golden eyes in delight at her beauty; and if he withdraws his shining countenance, she is all tears, weeping in an April shower for his loss. Fickle sun! he too soon forgets the tender maiden, robed in her simple robes, and decorated with tender buds, and, like a rake, hurries over his blue pathway, and pines for the full-bosomed May, or the voluptuous June, forgetting April, and her sighs and tears. Oh!

how delightful is it now to wander forth into the sweet-smelling fields; to set one's foot upon nine daisies—a sure test that spring is come; to see meadows lighted with the white flowers; to watch the skylark winging his way to his blue temple in the skies,

'Singing above, a voice of light!'

to hear the blackbird's mellow flute-like voice ringing from some distant covert, among the young beauties of the wood, who are robing themselves for the masque of summer! All these are sights and sounds calculated to elevate the heart above its puny cares and trifling sorrows, and to throw around it a repose calm and spirit-like as the scene whose beauty hushed its heavings. There is an invisible chord—a golden link of love, between our souls and nature: it is no separate thing—no distinguished object, but a yearning towards the universal whole. We love the blue sky, the rolling river, the beautiful flowers, and the green earth; we are enraptured with the old hills and the hoary forests. The whistling reeds say something soothing to us; there is a cheering voice in the unseen wind; and the gurgling brook, as it babbles along, carries with it a melody of other years—the tones of our playfellows, the gentle voice of a lost mother, or the echo of a sweet tongue that scarcely dared to murmur its love. Who is there that is not a worshipper of Nature? Look at the parties who emerge from the breathless alleys of the metropolis, when the trees have put on their summer clothing!—listen to their merry laughter floating over the wide fields from beneath the broad oak where they are seated: the cares, and the vexations, and the busy calculations of this work-a-day world are forgotten, and they loosen their long-chained minds, and set them free to dally with the waving flowers. They join in chorus with the birds, and the trees, and the free streams; and, sending their songs after the merry breeze, triumph o'er pain and care.

An English village is the next picture with which we will adorn our columns.

"I never look upon the free, open green in our English villages, which no one seems to claim for his own, and see the large old solitary oak, elm, or sycamore, towering in its centre, and spreading its shadowy branches above the rude benches that surround its trunk, but I think of the many good and evil tidings which have, for ages, been talked of there. It is so perfect an English picture, to see the old men, when their day's work is done, assemble there one after another, smoking their long pipes, and sitting down to talk over the progress of crops, the appearance of the weather, the health and prosperity, or adversity of their neighbours; while their children are rolling and laughing upon the unclaimed grass, or playing with the harmless shepherd's-dog. And then to observe the knowing looks of the older children, drinking in the words of the elders with wonder, and marvelling, in their little minds, how such things can be—how care can exist in a world where there are so many bird's-nests, so much good milk, such large lunches of brown bread

and cheese, and so many green fields and beautiful flowers! And then the strange conclusions they leap to when among themselves—the various versions of what they have heard, and the wonderful constructions they put upon things too weighty for their intellects! Even then you may trace vestiges of the stronger mind; the doubting look; the unwillingness to give credence to the decision; the knowing shake of the head, and all those little motions which indicate doubt. The questions they put to their parents, the sparkling of their eyes when their minds are just grappling to advantage with the subjects, and the shrewd way in which they make their inquiries, are well worth studying. Then to look round the green, and see all those little whitewashed cottages, so neatly thatched, seldom containing more than one story, but each standing upon plenty of ground, with a little garden at the front, a few beehives, or a row of milk-pans all clean and arranged in order; some of the fronts overgrown with woodbine, which in their unchecked luxuriance had partially hidden the parlour-window. Then to think of the beauty, the health, the repose, that breathe around such spots; the singing of birds, the humming-bees, the gaudy butterflies, passing or crossing each other, the waving of the trees, the lowing of kine, the bleating sheep, the neighing of young colts, the milkmaid's song as she walks past with well-filled pail, or sits under some pleasant tree. All these are things that sink into the heart—sights that we sigh for in the dense city, amid the roll of carriages and the vociferations of jostled passengers. Then to sit and see the sun set upon such a tranquil scene; the blue smoke rising in unbanded pillars and mixing with the deep foliage; the sloping beam gliding a distant rivulet, or bathing in crimson the top of a far-off wood; the church-spire, rising in its gray antiquity, and looking down upon the lovely groves scattered at its base; the dim outline of the hills, the faint mist spreading over the valleys, a bell just heard from some neighbouring village, the falling weir, the bay of a distant mastiff, the clasp of an old gate, the song of the ploughboy returning home! Live not all these images in the heart, chasing away even care while we contemplate them, and throwing a soothing tranquillity over the soul, a rest which we remember, a poetry which owns no words, a delight which can never be forgotten?"

Valentine's Day affords another example of Mr. Miller's graphic powers.

"'Good morrow to my valentine!' sings sweet Ophelia; and we turn back our memories, and remember with what anxiety we arose on the morning of Valentine's day, hoping that the first person we saw would be she whom we loved, and sometimes shutting our eyes and turning aside at the sight of some old woman emerging from her cottage, whom we would fain not own as our valentine. And in villages where we had no postman, excepting, perhaps, the old servant at the hall, who brought letters from the market-town twice a-week, or as he might be sent by the squire, we were compelled to deliver our own productions. Well do I remember our stealing softly up the

gardens, and looking for some crevice in the cottage-door, depositing the messenger of love under the chink or between the window-shutters. Others, more daring, would throw open the door, and hurl the love-breathing document in the centre of the family. Then there were shoutings of fathers and hobbling of old mothers to see who it was that had selected their rosy daughter for his valentine. But the youth was generally too nimble; and ere they had crossed the threshold, he was over the garden and away across the fields hidden by the darkness. Then the candle was snuffed, and the blushing girl to whom it was addressed, after many entreaties from father and mother, drew it from her bosom and allowed them to look at the pictures. And although the female face was hideously drawn, with a nose projecting like a buttress, and an eye horribly black with ink, and a patch of hideous red upon the cheek, still the mother declared 'that it was the very moral of their Mary.' And there were little Cupids, limbed like callow crows, and flying like harpies, with red hearts in their hands; some round and suspended by a string, pierced with arrows resembling hayforks. Then there was a tree, like a walking-stick with a piece of green baize twined round the top, thick in the middle and tapering upward; and beneath that, something which was intended to represent a man, whilst from his mouth issued the following couplet:

'Cupid with his fatal dart  
Has deeply wounded my poor heart.'

And all along the edges ran such lines as,

'The rose is red, the violet's blue,  
Carnation's sweet, and so are you.'

'The ring is round, and has no end,  
So is my love to you, my friend.'

'First we cast lots, and then me drew,  
And Fortune said, it must be you.'

But these rude hieroglyphics, are, to the heart of the love-smitten maiden, as plain as pike-staves; and her candle will be seen burning an hour later in the cottage window that evening, as she sits, half-drobbled, twisting the rude figures in her own mind into meanings that to others would be incomprehensible: and, committing the simple rhymes to memory, she will warble them all day over her work to a tune of her own. And if she is fortunate enough to wed the youth who was the donor, she will have her valentine framed after marriage; and the callow Cupids, and the pointed tree, and the red hearts, and two figures with blotches for legs and feet, will grin at each other under a glass for many a year."

"May Day" is yet more sweet and pastoral.

"The May-boughs were brought home were suspended from windows, and fastened above the doors, like leafy porches; others were bound together in the form of arches, and stuck into the ground at regular distances—the openings between being filled with lesser branches and trailing flowers, until a beautiful green arbour was formed. At the end of the arbour, elevated above the rude seats, rose a rustic throne, covered with flowers of every hue: this was erected for the May-queen. Ladders were now reared against the May-pole, and the village girls brought out the garlands which they had woven, of flowers and gaudy ribands; and many a boy gave up his string of birds' eggs to decorate it. Old and young assembled upon the green; and many a dim eye glistened with joy when they saw the rich garlands wave in the sunshine, and heard laugh, and shout, and song, mingled with bursts of music. Then we commenced dancing, forming

ourselves into a circle, and wheeling rapidly round the May-pole. Hand in hand we flew in giddy mazes, the roses trembling in the long locks of our fair partners as their measured steps bounded from the greensward. Within the ring which we had formed stood a youth, holding in his hand a garland of roses: this he presented to the village girls as they danced around him. How beautiful they looked, as, with averted heads, they turned from the flowery chaplet, blushing, and glancing downward abashed—each one expecting to be crowned Queen of May, yet uncertain upon whose brow the garland would be placed. At length it was thrown around the nut-brown ringlets of Mary Gray, and all with one acclaim hailed her 'Queen of May!' She was, indeed, the most beautiful girl in the village. How lovely she looked, robed in white, with a pink sash round her slender waist, as she was led, blushing, to her flowery throne, amid the clapping of hands, and silver-sounding music, and the waving of scarfs! The day was spent in innocent amusements; such as singing, dancing, love-making, and feasting. How much happier should we be if these good old customs were universally kept! I like not to see our peasantry seated over their humming ale, discussing politics. The garlanded May-pole, the festive merriment of bringing home harvest, the sheep-shearing feast, and the dance upon the village green under the old oak-tree, are more in accordance with their simple habits. Such scenes infuse a poetry into their hearts, and soften down their ruder habits, causing them to venerate their green woods and flowery meadows. Why should we envy sunny Italy, or the classic shores of Greece, while our own green hills lift up their wood-crowned foreheads to heaven, and our velvet valleys are musical with brooks? Are we not rich in golden poetry? Old Chaucer has shed a glory over our plains: and Spenser has hal-lowed our forests. Shakespeare, the immortal, has 'warbled his wood-notes wild,' and let loose an eternal music through our land, whose melody can never die; and the god-like Milton hath struck a harp-string whose vibration shall never cease while an echo haunts our lovely hills. Let us look with an eye of love upon our country: the greenery of sweet groves invites us,—the violet and primrose call us forth with a still voice of music, which our ancestors heard,—the daisy waves its white head as if beckoning us to the fragrant fields. Up, and away, then, to the woodlands, to worship the month of love and flowers!"

His picture of "Summer" shews that the author has read the poets of Nature, as well as studied Himself.

"Summer is come again, waving her green garlandry over hill and valley, and bending the long grass with her breezy foot-steps in the luxuriant meadows. She has spread her gorgeous carpet of crimson heath-bells over the wide forest wastes and brown moors, and left a deep twilight in the dense foliage of the trees; you hear her clear voice whispering through the green corn, and smell her fragrant breath in the balmy hay-field; you catch the deep blue of her skyey eyes mirrored in the sleepy rivers, and see the skirts of her golden drapery trailing over a thousand flowers. She touches the green leaves with her sunny fingers, and they bound upon their branches in rustling music; the silvery willow nods gracefully before her, and the scarlet poppy waves its rich velvet banner as she passes. There is but one voice lifted up in the earth, exclaiming, 'Summer is come again!' What is there so pleasant as to

enter an old wood on a sultry summer's day, and to throw oneself at the root of some goodly tree on the cool moss or long grass? Perchance a brook murmurs at our feet, welling away between its shelving bank, now in sunshine, now in shade, while myriads of lovely flowers bend over it, gazing upon their own beautiful shadows; how like Narcissus appears a solitary primrose arching its slender stem as if to kiss its own image in the clear water! and it will die away, gazing upon its own beauty! Oh, what delight to ramble from glen to glen, from thicket to thicket! How like Jason we seem, threading such leafy labyrinths! What if he bore off the golden fleece—cannot we carry home the golden saxifrage, with its rich-wrought flowers? Poetry—nothing but dreamy poetry seems to haunt us here. Hark! heard you Ophelia singing, 'Oh, willow! willow!' No! it was but the dashing water. Surely, yonder is Una leading her milk-white lamb! passed she not the glade? No! 'twas but a sunbeam that fell for a moment upon the white trunk of a noble tree, then vanished. But did not Gurth, the swineherd, blow his horn, and summon his dog Fangs to drive the herd to Cedric's castle? or did he laugh at Wamba's jest? No! 'twas but the woodpecker that sent his merry laugh through the greenwood. Hark! it 'came as near as near could be!' Was it not Geraldine complaining to Christabel that they had 'bound her to a palfrey white!' No! 'twas merely the wood-pigeon cooling to its distant mate. Oh! delusive poetry!—dreamy old wood! I will shut mine eyes, and then I shall hear nymph, and faun, and dryad, steal lightly past me, as if afraid to waken the flowers!"

But we have quoted enough to enable our readers to judge of the Basket-maker, and prove that he is not a book-maker, in its depreciating sense; and we conclude with his note on flowers.

"Who would wish to live without flowers? Where would the poet fly for his images of beauty if they were to perish for ever? Are they not the emblems of loveliness and innocence—the living types of all that is pleasing and graceful? We compare young lips to the rose, and the white brow to the radiant lily; the winning eye gathers its glow from the violet, and the sweet voice is like a breeze kissing its way through the flowers. We hang delicate blossoms on the silken ringlets of the young bride, and strew her path with the fragrant bells, when she leaves the church. We place them around the marble face of the dead in the narrow coffin, and they become symbols of our affections—pleasures remembered and hopes faded, wishes flown, and scenes cherished the more that they can never return. Still we look to the far-off spring in other valleys; to the eternal summer beyond the grave, when the flowers which have faded shall again bloom in starry fields, where no rude winter can intrude. They come upon us in spring like the recollections of a dream, which hovered above us in sleep, peopled with shadowy beauties, and purple delights, fancy-broidered. Sweet flowers! that bring before our eyes scenes of childhood—faces remembered in youth, when Love was a stranger to himself! The mossy bank by the wayside, where we so often sat for hours drinking in the beauty of the primroses with our eyes; the sheltered glen, darkly green, filled with the perfume of violets, that shone in their intense blue, like another sky spread upon the earth; the laughter of merry voices; the sweet song of the maiden—the downcast eye, the spreading blush, the kiss ashamed at its own sound—

are all brought back to the memory by a flower."

We have only to add, that the volume is embellished with twenty-six beautiful wood-cuts.

*Indian Reminiscences; or, the Bengal Moofussul Miscellany.* Chiefly written by the late G. A. Addison, Esq. 8vo. Pp. 339. London, 1837. Bull.

THIS appears to be a republication of an Indian periodical of considerable literary variety and talent; and it is stated that the profits arising from its sale are to be devoted to a charitable purpose. The merits, however, of its chief contributor are sufficient recommendation to notice: and while we peruse his effusions, we are doomed to experience great regret that one so gifted should have perished in the very flower of youth. Mr. Addison was the son of John Addison, in the civil service of the East India Company, of whom it is stated, that he, "as the nearest collateral descendant, was heir-at-law to the celebrated moralist,—that great man having a daughter only in the direct line, who died unmarried." His son, born in Calcutta, was educated in England, and, returning to the land of his nativity, became private secretary to Sir Stamford Raffles, the Governor of Java, where he died, beloved and lamented, in the twenty-second year of his age. To his compositions a few others have been added by other hands, and the whole forms a very light and agreeable miscellany. As a sample, we copy the account of a singular mode of taking bees' nests.

"A large swarm of bees had fixed their abode on the ceiling of a verandah, and, in due time, when their honey was deposited, we wished to collect it, but were for some time at a loss for the means. Hearing, however, that there was a gardener who possessed a peculiar art of doing it unhurt, he was sent for and desired to bring down the honey. I watched him closely through the whole process, and was told by him, and believe, that he used no other precaution than the following. He took some of the plant called *toolay*, and rubbed it over his body, face, arms, and hands; he then chewed a little, and held a sprig of it in his mouth. With no other than this apparently slight defence, he mounted a ladder, a large dish in one hand, and a sharp knife in the other; and though as thinly clad as his class usually are, with thousands of bees swarming about his naked body, he with the greatest *sang froid* cut immediately through the upper part of the comb, where it was suspended to the roof, and receiving the whole of it in his dish, brought it down without having suffered from a single sting!

The plant is the black ocymin of botanists. Its aromatic odour is, perhaps, the strongest there is. I know that some of the species of this genus are cultivated with success in England: this, therefore, might be, in all probability, if it is not so already. Sir William Jones addresses it in one of his poems—

'Hail! sacred toolay, pride of plains!'

This epithet he has given to it from its particular prevalent use in the Brahminical rites: indeed, the extraordinary sanctity attached to it is evinced, by its forming, with Ganges' water, the basis of the Hindoos' most solemn oath: his mode of swearing is by touching these. The legend respecting it in the Sanscrit records is, that it was once a most beautiful nymph of the same name, passionately beloved by Krishna, who, to perpetuate her memory, transformed her into this plant, and

ordained that no worship to him should be availing, or complete, which was not graced by her presence: hence it is invariably used in all *poojahs* made by the followers of Vishnu. On such a metamorphosis, with the circumstance added of the bees still paying so deep a respect to her charms, how elegant an Ovidian tale might be formed!"

The subjoined "Anecdotes" will shew what the slighter features of the Moofussul are.

"One of the first English vessels that visited the Indian seas, fell in, when off the Comandul coast, with a catamaran; there were two natives on it, whose bodies, of course, seemed to be rising out of the water, and they were paddling in their usual manner, that is, with quick strokes alternately to the right and left. The crew of the ship, as may well be imagined, were greatly surprised and alarmed at this strange and unheard of phenomenon; and the report of it entered in their log-book, ran as follows:—'Good ship. The trades increase. August 15th, 1616—lat.—, long.—, at 2 P.M.—beheld, distinctly, two black devils in the water, playing at single-stick!!! They were within twenty fathoms of the ship, and the whole crew saw, and can vouch for the truth of this statement: these infernal imps remained visible for at least an hour, and were then lost in the distance. 'They who go down to the sea in ships shall see the wonders of the deep;' and from this learn, ye incredulous, how vain be the hardness of your hearts! N.B.—Certe, this matter should portend a great storm; or some revolution in the states of Europe; or, peradventure, somewhat relating to the pope of Rome!! Heaven send no ill betide us!'"

It would be curious if the following piece of D. Garrick's should have first appeared in India:—

"To Miss Ann Wilton, by D. Garrick.  
O Nanny! why, when ardent love  
Beats in each trembling pulse of mine,  
Dost thou the generous flame reprove,  
By ev'ry killing look of thine?  
But, Nanny, thou wilt nothing stake,  
No little trifling danger run,  
For him, who, freely for thy sake,  
A thousand ways would be undone."

The correspondent adds, "the above was set to music by Dr. Burney, but it has never yet, I believe, appeared in print. It certainly is not in Kearsley's collection of Garrick's poetical works, though nothing can be more beautiful. Of the lady to whom these lines were addressed, I will only observe, that this is not the only tribute paid to her by Garrick; nor was he the only poet that broke a lance in her honour. Of her beauty and accomplishments what testimony can be given superior to the verses themselves?"

Our next quotation is pompo-ludicrous enough.

"In a conversation I some time since had the honour of holding with the present Emperor of Hindostan, Achar Sanees, his majesty recited to me an anecdote of his royal and ill-starred father, Shaw Allum; which at once displayed his own manly and nervous appreciation of character, and fineness of tact, in seizing on that happy minuteness which marked, more than the most elaborate description could have done, the form and measure of his illustrious father's mind; and displayed both the deepest sensations of respect and veneration for that great and much-suffering descendant of Timour. 'My father,' said his majesty to me, 'was a great man: he possessed an exalted mind, and a firmness of character perhaps unequalled. Of this, I will adduce a strong proof.

He was affected, sir, with a disease, which, I believe, is vulgarly termed the Bengal itch. It was represented to him by the most learned of his physicians, that nothing would more exasperate, and, consequently, retard longer his case, than scratching himself; and at the same time it is known, that in this disease the desire of scratching most violently predominates, and is indeed considered invincible. Yet what was my father's conduct on this occasion? He perceived that to scratch would be unwise—and this was for him sufficient. Strong as the inclination must naturally have been, he determined to repress it; and I now assure you, on my royal word, that what I am about to tell you is a solemn truth: Shaw Allum had the magnanimity, sir, not to scratch himself once!! 'Magnanimous indeed!' said I, in a rapture of enthusiasm, 'thus greatly to deny himself a luxury which one of our kings (James the First) has declared to be too exquisite for any but sovereigns to enjoy!'"

Here is a tolerable epigram:

"Epigram from the French.  
This rhymist says he can't write prose,  
However much he tries;  
Now read his verse—It plainly shews  
How much the fellow lies."

"The following is a ridiculous Grub Street mistake I once met with. Lord Bacon mentions as a proof that the Turks are barbarians, 'their want of *stirpes*, or hereditary rank.' A learned writer, who did not quite understand the term, said, 'he thought it very hard that a whole nation should be stigmatised as barbarians, merely because they did not ride with stirrups!'"

There is some fair poetry, but we leave it to the reader of the work; and conclude with one anecdote more.

"During the administration of Lord Clive, when fashion was in its extreme of richness, there came out a letter from the Court of Directors, positively prohibiting their servants from wearing any gold or silver lace on their clothes. Immediately after the receipt of this, Mr. Hosea appeared in the council-room in a dress rather repugnant to the order; his lordship perceiving this, and pointing to the gold binding of his coat, asked him how he reconciled it with the late injunction? Mr. Hosea immediately replied, 'This article of dress, my lord, is in no way affected by the court's letter; for it is notorious, and your lordship must know, that the Company's orders are not binding.'"

*The Pictorial Bible; being the Old and New Testaments, illustrated with many hundred wood-cuts: to which are added, Original Notes, explanatory of passages connected with the History, Geography, Natural History, and Antiquities, of the Sacred Scriptures.* Vol. I. London, 1837. Knight.

THIS is an admirable idea, and improved upon and carried out excellently in the work before us. Illustrations of the Sacred Volume need no argument to prove their high and influential importance on the youthful mind. The experience of every parent convinces him how attractive these pictured forms of history are for the generation growing up under his eye: the experience of every individual recalls the interest with which his infancy pored over these spells of thought; the eagerness with which he sought the explanatory details of passages that otherwise might never have caught his attention; and the depth and clearness of the impressions thus fixed indelibly on the memory. Stamped with mystic awe upon

our infantine reverence, they still rise holiest in the heart, whatever its subsequent wanderings: still, through after life, preserve in the bosom the better half of our religion,—its earliest, purest, and untainted sense; and, amidst the sorrows and sadness of the world, come back upon us, bright in the innocence of former days,—an oil upon the troubled waves, a note of music amidst tempest, breathing peace through all the devastation around us.

We dwell upon this feeling because it is the strongest, the most beneficial, and the most conservative against later errors: and the force of these impressions can never be undervalued by those who have ever recalled their hours of childhood, and who has not? The necessity, therefore, of making wisdom tangible, of realising belief, and rendering religion a sense, is too obviously a duty for the journalist to pass over, especially in a case where, as before us, imagination stamps reality through the eye on the spirit; and it is no small praise to the work in question, that the illustrations are so numerous, that not one material passage of the Scriptures need escape the observation.

Nor is the pictorial form adopted the only claim of this very useful edition. We have looked in vain for years through the various commentaries published on the Bible, with a wish that something should present itself of a popularly instructive shape. The learning of Calmet, Clarke, &c., the disquisitions on words and texts, however admirable in themselves, and useful for the profound and the curious, are too erudite and too subtle for readers at large. Nor was this all that was wanted. The most important was also the most ancient history in the world; full of incident and allusion to a long vanished state of existence, and preserving traces that served to link the categories of past and present humanity, in a historical and physical, not less than a religious view. The researches of travellers and antiquarians, the advance of cultivation and inquiry, and the progressive emancipation from bigotry and prejudice, have enabled us to look, with a widely different eye from of old, upon the relics that remain to us, and the spirit in which we should receive them. And when we find, as we now constantly do, that the passages once most railed at by *pseudo-learning* as erroneous or impossible, are precisely those which the light of modern investigation has brought into the fullest day of reality and living demonstration, we turn the more eagerly to points hitherto less dwelt upon, and ask for all the information that these can afford to our desiring faculties. Truth has prevailed over argumentative ingenuity, even upon its own chosen ground; and the *reasoning* that arrogated to itself the name of *reason*, sinks now in the oblivion of ignorance: the scorner is scorned; and, satisfied of truth, we seek but to obtain its illustration.

It is, then, on both the points we have instanced, the sensual and the intellectual illustration, that the *Pictorial Bible* demands our attention. We shall give it, freely and in full; for the subject is one of the deepest importance, pregnant with consequences to society and to eternity.

We have not forgotten, since we can refer only with praise to, the Bible, published some years since, with notes by D'Oyley and Mant. Admirably explanatory as those notes were of the text, and clear as was the insight they gave into the Scriptural language and doctrines, the historical and local details required by the reader,—they still differ, widely and essentially, from the work under review; for they are

confined to reflecting light upon the common centre of Biblical lore. The *Pictorial Bible* has taken another, and, in this inquiring age, a wider ground of investigation. If we may call the tendency of Mant's note *centripetal*, the *Pictorial Bible* has, in the same sense, a *centrifugal* force, carrying out into investigation all the questions arising from the sacred text. Every point touched upon, even though casually, in the sacred text, of history, geography, or science and manufacture, among the ancients, is taken as the basis of an inquiry or elucidation; and, we are bound to say, in a fair and candid spirit. In rendering passages of some difficulty, the original word is generally given, and rationally commented upon, though not to any unreasonable degree. Of customs and usages that still exist, extracted illustrations are given, sometimes of extreme length: the geographical points are freely discussed, but without either prolixity or parade; so that they are interesting and intelligible to every reader. Of history, a fair, and frequently striking, view is taken, so that even superior minds may refer to the passages with advantage. Botany and natural history receive a large portion of attention: ancient traditions are continually referred to, with the comments of able writers upon them, and upon chronology; and the trade and commerce, as well as manufactures, of the early ages, offer much to reward the reader's curiosity, and infuse unexpected information.

Steering clear, therefore, so far as we have yet seen, of the abstruser portions of philology and doctrine, the *Pictorial Bible* is in itself a popular library of the points more generally required: and, whilst the wisest may read it with advantage, the casual reader cannot fail to have his interest excited and his mind improved by every reference to the volume. Errors, it is true, will occur, and such the partition of extreme opinions is ever able to discern in every work: differences of judgment as to the management of portions, curtailments or extensions, and conclusions, will, of necessity, be found every where; but, in our candid and impartial opinion, these faults are slight, and incidental almost to the merits of the work. The learned may seek in vain for solutions of difficult and abstract questions; the ignorant may pass over the higher branches of inquiry touched upon. The former may think it holds too little; the latter, too much: but it is, and was intended to be, essentially popular; and it has the merit of raising the tone of the general reader's mind to a higher and healthier state; of introducing him, without effort, to a wider field of thought and investigation; and, mingling knowledge with amusement, giving to ignorance itself the seeds of information and the show of research. For young people we consider the work indispensable; and the ample details of Egyptian, Assyrian, Greek, and Roman, and Eastern customs, architecture, and antiquities, together with the numerous cuts that illustrate these, and the accounts from the best and most recent authorities,—as we would evidence in the case of Egypt so universally interesting at present,—all conspire to render the work deserving the patronage it has received from the public.

Upon the various parts we shall probably enter, with some little spirit of analysis, before long, and point out, also, what appears to us most striking in portions of the argument. But the utter want of a map, however slight a one, is a grievous omission in the earlier part of a work of historical geography; and the atlas promised at the end is of little use for the beginning. A

common lithograph, from existing information, would supply the deficiency easily, instead of leaving the reader to wait twelve months or more for his elucidation on this head. We trust, from the quantity of valuable matter in the notes, which require frequent comparison, that an index will be given to these at the conclusion of the third volume, as so much amusing and instructive reading can seldom be met with in so small a compass, and so perfectly adapted for the perusal of all denominations of Christians.

#### *Millengen's Curiosities of Medical Experience.*

(Second notice.)

HAVING briefly described the amusing character of this work in our last *Gazette*, we shall now proceed to afford our readers a further taste of Dr. Millengen's various powers. On the subject of the use and abuse of food, we have much curious information and anecdote: witness the following extracts:—

"The diversity of substances which we find in the catalogue of articles of food is as great as the variety with which the art or the science of cookery prepares them; the notions of the ancients on this most important subject are worthy of remark. Their taste regarding meat was various. Beef they considered the most substantial food; hence it constituted the chief nourishment of their athletes. Camels' and dromedaries' flesh was much esteemed; their heels more especially. Donkey-flesh was in high repute; Mæneas, according to Pliny, delighted in it; and the wild ass, brought from Africa, was compared to venison. In more modern times we find Chancellor Dupret having asses fattened for his table. The hog and the wild boar appear to have been held in great estimation; and a hog was called 'animal proper convivium natum;' but the classical portion of the sow was somewhat singular—'vulvâ nil dulcius [pulchrius? *Ed. L. G.*] amplâ.' Their mode of killing swine was as refined in barbarity as in epicurism. Plutarch tells us that the gravid sow was actually trampled to death, to form a delicious mass fit for the gods. At other times, pigs were slaughtered with red-hot spits, that the blood might not be lost; stuffing a pig with asafoetida, and various small animals, was a luxury called 'porcus Trojanus;' alluding, no doubt, to the warriors who were concealed in the Trojan horse. Young bears, dogs, and foxes (the latter more esteemed when fed upon grapes), were also much admired by the Romans; who were also so fond of various birds, that some consular families assumed the names of those they most esteemed. Catus tells us how to drown fowls in Falernian wine, to render them more luscious and tender. Pheasants were brought over from Colchis, and deemed at one time such a rarity, that one of the Ptolemies bitterly lamented his having never tasted any. Peacocks were carefully reared in the island of Samos, and sold at such a high price, that Varro informs us they fetched yearly upwards of 2000*l.* of our money. The guinea-fowl was considered delicious; but, wretched people! the Romans knew not the turkey, a gift which we moderns owe to the Jesuits. Who could vilify the disciples of Loyola after this information! The ostrich was much relished; Heliogabalus delighted in their brains, and Apicius especially commends them. But, of all birds, the flamingo was not only esteemed as a *bonne-bouche*, but most valuable after dinner; for, when the gluttonous sensualists had eaten too much, they introduced one of its long scarlet feathers down their throats, to disgorge their dinner. The modern

gastronome is, perhaps, not aware that it is to the ancients he owes his delicious fattened duck and goose livers,—the inestimable *foies gras* of France. Thus Horace:

'Pinguibus et fcis pastum jecur anseris albi.'

The swan was also fattened by the Romans, who first deprived it of sight; and cranes were by no means despised by people of taste. While the feathered creation was doomed to form part of ancient delights, the waters yielded their share of enjoyments, and several fishes were immortalised. The *murana Helena* was educated in their ponds, and rendered so tame, that he came to be killed at the tinkling of his master's bell or the sound of his voice.

'Natat ad magistrum delicata murena.'

says Martial. Hirtius ceded six thousand of these fish to Cæsar as a great favour, and Vitellius delighted in their roe. The fame of the lamprey, or the *mustela* of Ausonius and Pliny, is generally known; and the sturgeon, the *acipenser sturio*, was brought to table with triumphant pomp: but the turbot, one of which was brought to Domitian from Ancona, was considered such a present from the gods, that this emperor assembled the senate to admire it. Soles were also so delectable, that, punning on the word *solea*, they were called the *soles* of the gods: the dorad, *sparus auratus*, was consecrated to Venus; the *labrus scarus* was called the brain of Jupiter, and Apuleius and Epicharmus maintain that its very entrails would be relished in Olympus. The *garum*, or celebrated fish-sauce of the Romans, was principally made out of the *sciæna umbra*, and the mackerel; the entrails and blood being macerated in brine until they became putrid.

'Explantis adhuc scombrî, de sanguine primo Accipe fastuosum munera cara garum':—

thus says Martial: and Galen affirms that this disgusting preparation was so precious, that a measure of about three of our pints fetched two thousand silver pieces. So delightful was the effluvia of the *garum* considered, that Martial informs us it was carried about in onyx smelling-bottles.\* But our luxurious civic chiefs are not aware that the red mullet—for such I believe was the *mulus*—was held in such a distinguished category among genteel fishes, that three of them, although of small size, were known to fetch upwards of 200*l*. They were more appreciated when brought alive, and gradually allowed to die, immersed in the delicious *garum*; when the Romans feasted their eyes in the anticipated delight of eating them, by gazing on the dying creature as he changed colour like an expiring dolphin. Seneca reproaches them with this refinement of cruelty—'Oculis quoque gulosi sunt'; and the most renowned of Apicius's culinary discoveries was the *alec*, a compound of their livers. Snails were also a great dainty. Fulvius Herpinus was immortalised for the discovery of the art of fattening them on bran and other articles; and Horace informs us they were served up, broiled upon silver gridirons, to give a relish to wine. Oysters were brought from our coasts to Rome, and frozen oysters were much extolled. Grasshoppers, locusts, and various insects, were equally acceptable to our first gastronomic legislators. Acorns, similar to those now eaten

\* What would *garum* be compared with the modern sauces of our London *Lovetts*? His Duke of Gloucester sauce, his Sicilian, his Episcopate essence, &c. &c. which impart such delicious flavours to every kind of fish—to every sort of flesh—to all poultry—to every variety of game—to bolls, broils, roasts, stews, hashes, hot or cold, young or old—that appetite is created, and the palate gratified by their piquant provocativeness, till the most ignorant feeder becomes, as it were, a capital gourmet, and, instead of merely eating, is taught to enjoy his meal.—Ed. L. C.

in Spain, formed part of a Roman dessert; the best were brought from Naples and Tarentum. It does not appear that the ancients had a great variety in their vegetable diet; condiments, to stimulate the sluggish appetite, seemed to be their principal research: amongst these, the *asafoetida*, which is to this day highly relished in the East, was an indispensable ingredient: this has been doubted by various naturalists, but it appears certain, since Pliny informs us that it was frequently adulterated by *sagapenum*, which bears the strongest resemblance to it. This substance was called *laser*, and, by many tasteless persons, such as Aristophanes and Apuleius, considered offensive and disgusting; hence the latter, '*lasere infectas carnes*,' and '*laseratum porcellum*.' According to Theophrastus, *asafoetida* was collected and preserved, as it is at present, in skins; and, despite its estimation as a culinary ingredient, it was not unfrequently named *stercus diaboli*. In addition to this gum, they seasoned their food with various other strong articles, such as coriander and cummin seeds, sumac, saffron, cinnamon, thyme; with diverse peppers, salt, and sal-ammoniac. Instead of bread, which was only introduced in Rome A.D. 580, they used a heavy kind of unleavened paste, similar to the present *polenta*. This nourishment occasioned frequent indigestion; hence the use of warm water after meals, and the necessity of emetics. Warm water was sold about the streets in their thermopolia, and Seneca observed the paleness and debility that arose from its use and abuse:

'Et potet calidam, qui nihil livet, aquam.'

While water was thus freely drunk, wine was not disregarded; but the various articles with which it was adulterated, must have rendered it any thing but a delectable potation, according to our received ideas. Thus we see the Greeks putting salt and sea-water in theirs; at other times dissolving mastic and myrrha, or infusing wormwood, in their choicest Falernian. Like modern tasters, however, they knew the method of developing the *bouquet* by warmth; and, to appreciate the flavour, they frequently added hot water. That wines of a resinous taste were esteemed, appears from Martial:

'Resinata bibis vina, Falerna fugis.'

But we may conclude that, according to our modern taste, their boasted wines did not equal ours either in flavour or in delicacy. \* \* \*

"So refined was the taste of the ancient *bons vivans*, that Montanus, according to Juvenal, would proclaim, at the first bite, whether an oyster was of English produce or not. Sandwich is believed to have been the favoured spot whence Rome imported her oysters and shell-fish. \* \* \* Our early ancestors were remarkable for their frugality, and it is supposed that luxurious, or, at least, full living, was introduced by the Danes: it has been even asserted that the verb *gormondise* was derived from *Gormond*, a Danish king, who was persuaded by Alfred to be baptised. Erasmus observed that the English were particularly fond of good fare. William the Conqueror, and Rufus, were in the habit of giving most splendid entertainments; and the former monarch was such an irascible epicure, that, upon one occasion, an underdone crane having been served up by the master of the *cury*, he would have knocked him down but for the timely interference of his *dapifer*, or purveyor of the mouth. This office of *dapifer*, with that of *lardrenius*, *magnus coquus*, *coquorum prepositus*, and *coquus regius*, were high dignities in those days. Cardinal Otto, the pope's legate, being at Ox-

ford in 1238, his brother was the *magister coquorum*; and the reasons assigned for his holding that office were his brother's suspicious fears '*ne procuraretur aliquid venenosum, quod valde timebat legatus*.' These officers were not unfrequently clergymen, who were elevated to the bench for their valuable services. \* \* \* That hard drinking was introduced from Flanders and Holland, and other northern countries, seems probable from the derivation of many of the expressions used in carousing. The phrase of being '*half-seas over*,' as applied to a state of drunkenness, originated from *op see*, which, in Dutch, means *over sea*; and Gifford informs us that it was a name given to a stupefying beer introduced in England from the Low Countries, and called *op see*; thus Jonson in his Alchemist:

'I do not like the dulness of your eye;  
It hath a heavy cast, 'tis up *see Dutch*.'

An inebriating draught was also called an *up see freeze*, from the strong Friesland beer. The word '*carouse*,' according to Gifford and Blount, is derived from the name of a large glass, called by the Danes *rouse*, or from the German words *gar, all, and auss, out*: hence, *drink all out*. \* \* \* In the middle ages, drinking was resorted to by the monks as a religious libation; and they also drank to the dead, a custom which was condemned as idolatrous. These excesses were restrained by various regulations, and in 817 the quantity of wine allowed each monk was fixed at five pints. Charlemagne, in his Capitularies, forbids the provocation of drinking healths and hob-nobbing (*pléger et trinquer*). Temperance societies are not modern institutions. In 1517, Sigismund de Dietrichstein established one under the auspices of St. Christopher; a similar association was formed in 1600 by Maurice Duke of Hesse, which, however, allowed a knight to drink seven *bocaux*, or glasses, at each meal, but only twice in the day. The size of these *bocaux* is not recorded, but no doubt it was an endeavour to obtain a comparative condition of sobriety. Another temperate society, under the name of the Golden Ring, was instituted by Frederic V. Count Palatine. Whether the influence of temperate societies or their advocates will tend to diminish the consumption of wine and spirituous liquors in the British empire, it is difficult to say. Hitherto, every act of interference, either from individuals or on the part of the legislature, has proved not only abortive, but has increased the evil it was intended to remedy. The imposition of heavy duties only threw the distillation of spirits into the hands of illicit speculators instead of respectable capitalists; and, as Mculloch justly remarks, '*superadded the atrocities of the smuggler to the idleness and dissipation of the drunkard*.' During the latter part of the reign of George I. and the early period of George II. gin-drinking was so prevalent, that it was denounced from the pulpit and the press. At length, ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors except as a cordial or medicine. To accomplish this end, a duty of twenty shillings was laid on spirits, exclusive of a heavy license duty to retailers, while a fine of 100*l*. was levied on all defaulters. But, instead of the anticipated effects, this act produced results directly opposite: the respectable dealers withdrew from a trade proscribed by the legislature; and the sale of spirits fell into the hands of the lowest and most profligate characters. The officers of the revenue were hunted down by the populace, and did not dare to enforce the law; and Tindal, in his Continuation of Rapin,

says, 'within two years of the passing of this act, it had become so odious and contemptible, that policy as well as humanity forced the commissioners of excise to mitigate its penalties.' During these two years, twelve thousand persons were convicted of offences connected with the sale of spirits, while no exertion could check the torrent of smuggling, and seven millions of gallons illicitly distilled were annually consumed in London and its environs. Our present consumption of British, Colonial, and Foreign spirits, is immense, but not equal to what it was at the period alluded to. The following is the account of this consumption in 1832:—

In England,	1,530,688 imperial gallons, Foreign.	—
	3,377,507 — Colonial.	—
	7,289,387 — British.	—
In Scotland,	89,236 gallons, Foreign.	—
	112,086 — Colonial.	—
	5,407,087 — British.	—
In Ireland,	33,413 — Foreign.	—
	24,438 — Colonial.	—
	8,657,786 — British.	—

In that year, 1832, the total amount of spirits that paid duty in the united kingdom was 2,646,258 gallons, yielding a revenue of 8,483,247. In the same year, the appearance and dread of the cholera produced a singular increase in the consumption of brandy. In the preceding year, 1831, the entries for home use in England had amounted to 1,194,717 gallons; but during this state of alarm it increased to 1,508,924; in 1833, the danger having subsided, the consumption declined to its former level, and did not exceed 1,356,620 gallons. From the above observations it may be inferred, that no penal enactments, no denunciations of canting senators or fanatic preachers, will ever succeed in checking the evils which must arise from excesses in the use of spirituous liquors. Gluttony and drunkenness can only be combated by the salutary effects of good example held out by the superior classes of society; by a gradual improvement in the moral education of the lower grades, for whom salutary amusements should be procured when a cheerful repose from their weekly labour will no longer be considered a breach of the sabbath."

The author, we observe, is a little bit of a phrenologist, though he halts far short of the apostles of that science: we will not, however, enter upon the topic, but rather give a small portion of the notice of that propensity, which is known by the name of longing.

"Roderic à Castro relates the case of a lady who could eat twenty pounds of pepper, and another who lived upon ice. Tulpus mentions a woman who, during her pregnancy, longed for salt herrings, and ate fourteen hundred of them at the rate of five herrings per diem. Longius affirms, that a lady in Cologne, who was in that state that ladies wish to be who love their lords, took such a fancy to taste the flesh of her husband, that she actually assassinated him; and, after indulging in as much fresh meat as the weather permitted, salted the remainder for further use. This cannibal inclination seems not to be uncommon. The said Roderic à Castro knew a woman in the same thriving condition, who felt an inexpressible desire for a bit of the shoulder of a neighbouring baker; and her husband was persecuted, by her constant prayers and lamentations, to prevail on the worthy man to allow her one bite for charity's sake; but the first bite was so heartily inflicted, that the crusty baker would not submit to a second taste. In the 'Philosophical Transactions' there is a case related of a woman, whose fauces were not quite so solid, and who used to gratify her aerial appetites by putting the nozzle of a bellows down her throat, and blowing away until

she was tired. These longings of parturient women are most common; but it is rather curious, that, among our negroes in the West Indies, the husbands pretend to long for their wives, and endeavour to gratify them by proxy. Possibly such might have been the fancy of Cambes, the Lydian prince, who, according to Ælian, took it into his head, one night, to eat up his beloved wife."

Reserving ourselves for another complimentary turn to our worthy physician, we, for the present, conclude.

#### GRUND'S AMERICANS.

[Second notice: conclusion.]

MR. GRUND takes a favourable view of the rising literature of America; but, as we are often in the habit of taking our own, we shall pass it by with the concluding portion of the author's concise and catalogue-like enumeration:—

"Washington Irving's style is superior to Cooper's in elegance and finish; but his pictures are diminutive, and he succeeds best in sketches. His acquaintance with, and I may perhaps say, predilection in favour of, European characters, rather please the Americans, who are flattered to see him ranked amongst the most classical English writers of the age. James Paulding is likewise one of the most fertile novelists of America. 'The Dutchman's Fireside,' 'John Bull in America,' 'Westward Hoe,' &c. are well known even in England, and are honourable productions of a descriptive mind. He has, also, written several plays, and a parody on Walter Scott's 'Lay of the Minstrel,' entitled, 'Lay of the Scotch Fiddler.' Among the lyric poets of the Americans, James G. Percival holds decidedly the first rank, though Bryant and Dana have, perhaps, more taste and elegance. He is a calm contemplative genius, joining a powerful imagination to a masculine style, and a patriotic ardour which we only recognise again in the works of Fennimore Cooper. His poems, entitled 'Clio,' were republished in England; and he was the coadjutor of Webster in the publication of his dictionary. Bryant was, for a time, editor of 'The New York Evening Post,' and George Dana, editor of the 'North American Review.' The best prose work of the latter is, 'The Man of Leisure;' and amongst his poems, 'The Buckaneer' is justly entitled to the high reputation it enjoys in America. John Howard Payne and Hill-house are the Coriphaes [sic] of American dramatic literature. The best works of the latter are, 'The Last Judgment,' 'Percy's Mask,' and 'Hadad.' The plays of Payne appeared first in England, and, I believe, met with a favourable reception. The author has since returned to America, where some of them have been revived on the stage, and performed to fashionable audiences. Besides these authors, there is yet a number with whose names the British public are familiar. Miss Searney, Miss Sedgwick (author of 'Hope Leslie'), Mrs. Child (particularly known as a moral and political writer), and Charles Brockden Brown (author of 'Edgar Huntly,' 'Carwin and Wieland'), need no commendation from my pen. Nathaniel P. Willis, the youngest of the American minstrels, has earned glory and the minstrel's reward in England, and Mr. Theodore S. Fay is well known as the author of 'Norman Leslie.' Mrs. Child has just published a new novel, 'Philothea,' replete with imagination and classical learning, and imbued with that spirit of morality which distinguishes all her productions."

The following is a curious addendum to the sketch of literature:—

"But, if the Americans are not all poets, they, at least, read poetry with an avidity which borders on gluttony. Poetry is the necessary condiment of an American newspaper. The first page of it is always adorned by a poem, and there are some which are even graced with half a dozen. Supposing only two thousand daily papers to be published in the United States (which is but a small average, exclusive of semi-weekly and weekly publications), and their annual number will amount to 730,000. Allowing but one out of a thousand to be good, and you will have 730 good poems in the course of a year, which will make two volumes 12mo. and, consequently, more than is published in a twelvemonth in any other part of the world. I wonder no American bookseller has ever thought of collecting these fugitive poems, which would certainly present a greater variety of entertainment than any one single volume. But the want of enterprise in the venders of books is supplied by the kindness of youths, who are in a habit of composing volumes by pasting the best 'daily poems' to the blank leaves of their albums; satisfying, in this manner, the cravings of their tastes, by paying a just tribute to the merits of the author. Let no one smile at the simplicity of this description. Children are sometimes better judges of poetry than adults; and, if they do not always understand what they are reading, their feelings are often better guides than the nicest distinctions of critics. Besides, who of all that read poetry pretend to understand it? Is poetry not often found the more beautiful the more it is unintelligible? Let any one read Lord Leveson Gower's translation of Goethe's 'Faust,' or some of Coleridge's translations of Schiller, and he will at once be satisfied of the truth of my assertion. Is the author himself obliged to comprehend the sense of it? Would this not be crushing genius in the cradle? As long as these questions are not satisfactorily answered, I am for the pasting system of America, as being at once an easy, cheap, and comprehensive method of transmitting the fame of our contemporaries to the latest posterity. Poetry is produced and consumed in America in most enormous quantities. Besides the publications in the newspapers, to which I have already alluded, there hardly passes a day without ushering a new volume into existence, which is greedily read, admired, censured; but, at any rate, sold. There are, certainly, more poets among the Americans than prose writers, owing to a kind of musical impulse, which makes them express themselves in rhymes. But, above all, it is the prevailing taste of the readers which calls for this extraordinary exertion on the part of the authors, as the manufactory of goods must increase with the consumption. The Americans, as a nation, are the most reading people on the face of the earth. I can safely assert, that there are annually more volumes read in the United States of America than either in England, France, or Germany; but the favourite works are poetry, and, next to them, novels."

The second volume treats of American activity and industry, strong passion for trade, internal communications, national means of offence and defence, political relations and prospects, and the southern provinces, with their system of slavery. Mr. Grund justifies the extirpation of the red men, and considers it to be a law of nature. It is not "reasonable to suppose (he says) that the quitting of their favourite hunting grounds can give the Ameri-

can Indians the same pangs which an everlasting farewell to the paternal soil, the scene of all early attachments, and the habitation of all that we love, fraught with the memory and tradition of centuries, can cause to a civilised nation. The Indians quit what never was precisely their own; they leave no object of memory or tradition behind; and, although the loss may be felt by the tribe, no individual is actually despoiled of his own. But it is the feelings of individuals which we must here consider, not that of the tribe or nation. A people cannot be said to feel the wrongs and pains inflicted upon it by another, except in proportion as the sufferings of the whole are felt and responded to by individuals. This, however, presupposes a degree of moral development, and a pitch of national enthusiasm, of which even history is sparing in furnishing us with examples, and of which, certainly, but few traces are to be found in the Indian character. Let no one mistake the hatred which the coloured races bear to the whites, and to each other, for a strong love of country and an attachment to their native woods. Hatred of others is but a negative and barbarous qualification of nationality, and is by no means a necessary concomitant of its positive virtues. The hatred between the different races is something animal and instinctive, and is far removed from the noble disinterestedness of genuine patriotism. Whatever colour poetry may lend to the removal of the Indians, it is, nevertheless, but the removal of a sick-bed from a place where death is certain to one from which it is more remote. Neither is it the death of youth or of manhood, but that of old age and decrepitude, which the Indian is doomed to die; and in his mouldering ashes germinates the seed of empires destined to change the face of the world. This is but applying the universal law of nature to man: there is no life without death to precede it; no seed without destroying the blossom; no offspring without destruction to its genitors. One nation must perish to make room for another; and it is the peculiar good fortune of America that she can suffer these revolutions to go on without a feverish excitement of her vitals, or hurrying the succession of events by the horror and bloodshed of war."

Our author admires, but we cannot, the propensity to stick to traffic and think of nothing else, which he states to be a peculiar characteristic of the Americans.

"Neither (he says) is this hurry of business confined to the large cities, or the method of travelling; it communicates itself to every village and hamlet, and extends to and penetrates the western forests. Town and country rival with each other in the eagerness of industrious pursuits. Machines are invented, new lines of communication established, and the depths of the sea explored, to afford scope for the spirit of enterprise; and it is as if all America were but one gigantic workshop, over the entrance of which there is the blazing inscription, 'No admission here except on business.'"

This must be a very disagreeable mode of life and country to live in—no cessation, no enjoyment, no repose, no rest, but in the grave. We must, however, bring our illustrations to a close, which we shall do by adverting to the author's opinions on the slavery question. It is striking to read such doctrines from a republic-loving pen; but, like all the south-folks, Mr. Grund strenuously denies that negroes are to be reckoned human beings, entitled to similar consideration with whites.

"Slavery cannot be defended on philosophical or religious grounds; but, where it once exists, it is but reasonable to look to the proper means by which it is to be abolished, and not to choose those which, without advancing the moral condition of slaves, ruin and destroy their proprietors. The question admits of three distinct considerations; viz. the legal, the political, and the moral. Let us begin with the legal one. The slaves in the southern states are the property of the planters; a kind of property which is not transferable, except amongst themselves, and which would be of no value to the inhabitants of the northern states. When the northern states emancipated their slaves, it was really because the expense of maintaining them was greater than the profits obtained from their labour; and because the same kind of work could be obtained as cheap, or cheaper, by hiring the services of the whites. The negroes, moreover, are the foundation of every other species of property in the southern states; for without them real estate would be of no value, as it is physically proved that neither the climate nor the soil will ever admit of the independent labour of the whites. It is evident, then, that if the negroes be emancipated, they must be retained to cultivate the plantations, and the proprietors obliged to hire them, which amounts to paying interest on their own capital.

"I do not pretend to describe the situation of the West India planters, but it can scarcely be doubted that their prosperity is on the decline. The emancipation of negroes may precipitate events, and must, at least for a time, render the position of the proprietors precarious. The white and black races can never be made to amalgamate, and, where they exist mutually independent on one another, must always assume an attitude more or less hostile to each other's interests.

"It remains for us only to give the definition of slavery. If we define it as an abuse of power in one man, and a forced submission to that power in the other, we shall find that it exists in almost every part of the world; though it is disguised in a variety of shapes, and often in the form of justice. We must, therefore, seek for a more narrow definition, perhaps in these terms,—'Slavery consists in reducing or retaining those who would otherwise be our equals, in a state of servitude, by means of absolute force.' I have added 'absolute' force; because the idea of violence is most revolting to our feelings. We would hardly commiserate a slave who should have voluntarily submitted his person to the will and pleasure of another, in order to obtain a subsistence. But even this definition does not apply to the negroes. It remains to be proved that the African negroes are equal to the whites; and that, in forming part of the same state, in any other condition, they would not be subjected to the will and pleasure of the latter. If it could be made out that the negroes are naturally inferior to the whites, or incapable of enjoying the same rights and privileges, without endangering the safety of moral and political institutions; if it could be established, that their physical passions are greater, and their judgment and understanding more limited, than those of the white race, then these facts would, at least, contain an apology for retaining the negroes in bondage; though it would not establish a right to abuse their inferior capacities. When I speak of slavery, I speak of what exists, and not of the principle which established it. The first introduction of slavery I consider as an act of abomination,

which, in its fatal retribution, has retarded the progress of the white race wherever it was admitted. But the states which are now burdened with it must naturally adopt a different method of reasoning. They must start from given premises, and not from general principles. They must apply their philosophy to a particular case; not to humanity in general. It is very certain, that the negroes would not have left Africa, if they had not been carried away in European vessels; and it is equally certain, that they would not have been introduced into America, if they had not been brought thither to be sold. They have since increased in numbers, and become naturalised on the American soil. They have had the means of acquiring a certain degree of civilisation, and have, in their intercourse with the whites, assumed a particular character. This character, in its relation to the original African, and to that of the American people, we must now consider, in order to pronounce on the claims of the blacks to a philosophical equality with the whites. But, before I proceed further, I must state that I write this as a German, and not as an American partisan; as a person whose education made him detest slavery, in all its various ramifications, whether the slaves were black or white; and as one who has no further interest at stake than that which is identified with truth. I have lived in several slave-holding states in North and South America, and have had an opportunity of impartial observation. I never held any property in the least connected with slavery, and was a stranger to the inhabitants of those countries. I must then give it as my honest conviction, that the negroes are an inferior human race, and not capable of enjoying, without excess, the same degree of freedom as Americans. In order not to be misunderstood,—as the latter clause will hold of the people of many other countries,—I will add, that I think the negroes wholly unincited to, and entirely incapacitated for, living in a state of society similar to that of the whites; and that, if they were capable of forming such a state of society, they would not form it while surrounded by the whites. With regard to the mental inferiority of the negroes, the argument may be divided into an examination of the reasoning of those who pretend that they are equal to the whites, but only backward in education, and a proper illustration of facts calculated to establish the proposition. Those who take it for granted, that the negroes have the same capacity as the whites, belong, generally, to a set of philosophers accustomed to reason *a priori*; in whose minds the idea of humanity is so abstract and exalted, that they cannot apply it to any particular race, without bestowing on it its inestimable attributes. 'They are men,' they say; 'why should they not be possessed of the same qualities as men?' In vain will any one plead the difference in colour, conformation of limbs, and especially the different formation of the skull. 'They possess the main physical characteristics,' they will reply, 'and therefore the principal qualities of the mind.' But the argument is exactly the reverse. They have very marked distinctions from any other race of men; and where nature points out a physical disproportion, we may, in all cases, safely conclude that a moral one corresponds to it. And how does history support their arguments? All other people have either themselves laid the foundation of their civilisation, or of their own free will imitated the refinements of others. The negroes have been known to the remotest people of antiquity,

but always in the same state in which we know them now; though they have had commercial intercourse with foreign nations, and visited, in part, other countries. What are their manners and customs now? The same as two thousand years ago. It is usual for a people to express their natural inclinations in their favourite amusements, among which the national dance occupies the foremost rank. The Scotch dance is expressive of strong martial inclinations; the German waltz bears the strongest characteristic of the peculiar frankness and gaiety of the Germans; the French quadrille expresses the desire of pleasing, by graceful attitudes; the fandango is indicative of unrestrained passion: but the original negro dance is stamped with the marks of brutal sensuality. So are their ornaments. Those of their bodies consist chiefly of the entrails of animals; those of the interior of their houses, of ordure. The same brutality they evince in their worship. Their idols are the most hideous, and their adoration the most ferocious, of any people with which we are acquainted; and they are almost entirely destitute of that noble virtue of barbarous nations, for the sake of which we willingly pardon a number of other faults—bravery. Compare the negroes to the American Indians. The former, with his frightful gods and base cowardice; the latter, with his sublime belief in the 'Great Spirit,' and his utter contempt for human sufferings and death: the eloquence and poetry of the Indians, and the dulness and want of imagination of the negroes. And yet there are few persons who have had an opportunity of observing the Indian character, would believe the 'red men' capable of the same degree of civilisation as the whites; and the experience of two centuries seems to warrant this ungenerous belief. What, then, are we to think of the moral perfectibility of the negroes, who are avowedly inferior to the Indians? The civilisation of which the negroes are reputed to be possessed they have not acquired of their own accord; it has been forced upon them, and is, thus far, only upheld and nourished by the whites. No other human being is, by nature, so entirely adapted to his climate, as if to prevent him from spreading over other parts of the world. The skin of the negroes, their colour, hair, and feet, are made for the African sun; and, being naturally heedless of the future, they are surrounded by trees and plants, which blossom and bear fruit at the same time. The negro is the slave of nature; the white man is her companion. Born in a more northern latitude, and, consequently, less exposed to the most powerful physical agent, the sun, his mind waxes superior to the scenes which surround him. His physical wants rouse his energy, and quicken his ingenuity; and the approaching winter commands his cares of the future. He is born to subdue and improve nature, and not to be dependent on her generosity. All that has ever improved the condition of man, every valuable principle of philosophy and religion, poetry, painting, and music, are the offsprings of the temperate zones. The universal history of all ages is but the history of that clime; the moral lever of the world was ever moved by its children. But, to return to the negroes; who, to this moment, are ignorant of the mechanic arts, and are even slow in acquiring dexterity, when instructed and guided by the whites; who have never prospered or improved in their own country; on whom the lights of science or religion never dawned, except through the intercession of other nations; to whom the refine-

ments of poetry and the arts are entirely unknown; whose worship is the most hideous and barbarous on earth; who war upon one another, for the sole purpose of reducing each other to slaves; who first sold one another, and enriched themselves with the blood of their brethren; who, during more than three thousand years of their known existence, have not even made the first step towards civilisation, by improving their soil with agriculture, and are unequally unskilful in the chase, and destitute of courage or ambition; who possess nothing of the natural skill and agility of other races; who never dreamt of an equality with the whites, before it was discovered by European philosophers; who never knew the definition of liberty, but are slaves in their own country: to that race, finally, who, in whatever relation we have known them, have always shewn themselves inferior beings, and declare them equal to the whites, and inferior only in point of education!! There is not one point in which the equality has been established; and should we be entitled to a general conclusion? This is not elevating the negroes, but degrading the whites, by ascribing to accident the development of those eminent qualities which have rendered them masters of the world."

But we have done enough to exhibit the character of this work; which we now submit, without further comment, to the public. As the work of a foreigner upon America, the views it takes deserve to be contrasted and compared with those of native and of English writers.

#### MISCELLANEOUS.

*Rambles in Egypt and Candia, &c.* By Capt. C. Rochfort Scott, H. P. Royal Staff Corps. 2 vols. 8vo. London, 1837. Colburn.

CAPTAIN SCOTT gives us a lively account of a tour in Egypt, which, however, did not go over any new grounds; and, as we have of late reviewed several works on the same country, and are, indeed, yet in arrear with extracts from Mr. Lane, we shall abstain from details in the present instance. The gallant officer gives us his views of the military condition of Egypt, and the government of the present Pacha. He also relates the incidents of a journey in Candia to Canea; the whole being written in a pleasant manner, and conveying the opinions of an eye-witness on the interesting points connected with this portion of the world.

*The City of London Corporation Annual, &c.* Pp. 170. (London, J. Thomas.)—An annual quiz upon the ward elections on St. Thomas's day, not very important out of the city, if it create a laugh within it, where the parties are better known.

*The Pocket Guide to Modern Geography.* Pp. 64. (Glasgow, M'Phun.) With no fewer than thirty-three maps, this very small guide is a particularly neat and useful one. *Spain and Barbary: Letters to a Younger Sister during a Visit to Gibraltar, Cadix, Seville, Tangier, &c.* Pp. 196. (London, Hatchard and Son.) A graceful volume from a young lady who took this excursion for her health; and who, in a pleasing style and manner, relates to her sister at home what struck her most in the course of her travels. It is quite a young lady's book, and will be interesting to female readers.

*The Christian's Penny Magazine, Vol. V. for 1836.* (London, Hodgson.)—Embellished with a number of well-chosen woodcuts, this work contains a fund of curious matter, selected from many sources; together with some instructive original writing; the whole well deserving the attention of serious and well-disposed family circles. A new series is, we observe, announced.

*Goethe's Novel.* Translated from the German. Pp. 63. (London, Moxon.)—A novel in sixty-three pages—a little monster! Why was it not spun into three volumes? We have seen such things with little more materials, and far less design or imagination. As it is, this fragment of Goethe is not extremely well, though fairly translated; and his German effects and lyrics do not tell so strongly in another language.

*The Voluntary System,* by the Rev. S. R. Maitland. Second edition. 12mo. Pp. 377. (London, Rivingtons).

—Originally published in the *Gloucestershire Chronicle*, these papers present a vigorous high-church attack upon the Voluntary system for upholding religion, and upon dissent and dissenters on many other points. We may say, that, in one way or other, it raises and embraces the whole question at issue.

*Home: its Joy and its Sorrows; a domestic Tale.* Pp. 141. (London, W. Ball.) The words "second edition" say all that need be said for this natural and touching story.

#### ARTS AND SCIENCES.

##### ASTRONOMICAL SOCIETY.

THE following communication was read, on a remarkable phenomenon that occurs in total and annular eclipses of the sun, by Mr. Baily.—The author states, that, having read of certain singular appearances that are recorded as having taken place in annular eclipses of the sun, at the moment that the whole disc of the moon enters on the disc of the sun, he was desirous of witnessing those phenomena at the solar eclipse of May 15th last; and, finding that the central path of the moon's shadow would pass nearly in a straight line from Ayr, on the western coast of Scotland, to Alnwick, on the eastern coast of Northumberland, he proceeded to Scotland for that express purpose. Having computed, from the elements given in the *Nautical Almanac*, that the central line of the moon's umbra would pass directly over, or very near to, Jedburgh in Roxburghshire; and having ascertained that this place was within eight or ten miles of Makerston, the seat of Lieut.-General Sir Thomas Macdougall Brisbane, Bart., who has a well-furnished observatory there, and from whom he was sure of obtaining the correct time for his chronometers, he resolved to make that town his head-quarters. Mr. Baily took with him a 34-feet refracting telescope by Dolland, 2½-inch aperture, and magnifying about 40 times; a 20-inch Rochon's prismatic telescope, for measuring the distances between the borders of the sun and moon; two thermometers; a burning glass; and four pocket chronometers. Mr. Baily took up his station at the house of Mr. Veitch, a very ingenious gentleman, residing at Inch Bonney, about half-a-mile to the southward of the town of Jedburgh, who afforded him every facility for making the observations. The morning of the 15th of May is described as being remarkably fine and clear; not a cloud to be seen in any part of the heavens during the whole time of the eclipse. Observations on the times of the beginning and ending of the eclipse, and of the formation and dissolution of the annulus, Mr. Baily does not lay much stress on—more especially those connected with the annulus—since his attention was taken up with other more interesting phenomena. He says he was in expectation of meeting with something extraordinary at the formation of the annulus; but imagined that it would be only momentary, and, consequently, that it would not interrupt the noting of the time of its occurrence. In this, however, he was deceived, as the following facts will shew: for, when the cusps of the sun were about 40° asunder, a row of lucid points, like a string of beads, irregular in size, and distance from each other, suddenly formed round that part of the circumference of the moon that was about to enter on the sun's disc. This he intended to note as the correct time of the formation of the annulus, expecting every moment to see the thread of light completed round the moon; and attributing this serrated appearance of the moon's limb (as others had done before him) to the lunar mountains; although the remaining portion of the moon's circumference was perfectly smooth and circular, as seen through

his telescope. He was somewhat surprised, however, to find that these luminous points, as well as the dark intervening spaces, increased in magnitude; some of the contiguous ones appearing to run into each other like drops of water. Finally, as the moon pursued her course, these dark, intervening spaces were stretched out into long, thick, black, parallel lines, joining the limbs of the sun and moon: when, all at once, they suddenly gave way, and left the circumferences of the sun and moon in those points, as in all the rest, apparently smooth and circular, and the moon perceptibly advanced on the face of the sun. This moment of time Mr. Baily considers to be that which most persons would assume and record as the formation of the annulus; but he adduces strong reasons afterwards to shew that the true formation of the annulus was some seconds prior to that event. After the formation of the annulus, as thus described, the moon preserved her circular outline during its progress across the sun's disc, till her opposite limb again approached the border of the sun, and the annulus was about to be dissolved. When, all at once (the limb of the moon being at some distance from the edge of the sun), a number of long, black, thick, parallel lines, exactly similar in appearance to the former ones above mentioned, suddenly darted forward, and joined the two limbs as before: and the same phenomena were repeated, but in an inverse order. For, as those dark lines got shorter, the intervening bright parts assumed a more circular shape, and at length terminated in a fine, curved line of bright beads (as at the commencement), till they ultimately vanished, and the annulus consequently became wholly dissolved. This remarkable and singular phenomenon was also observed by Mr. Veitch, and also by Sir Thomas Brisbane, as well as by Mr. Henderson at Edinburgh; with some slight differences, however, in the detail. The appearance of the dark lines, or threads, was likewise noticed by Mr. Bell, at Alnwick, who sent an account of the same to the Philosophical and Literary Society at Newcastle. Mr. Baily describes them to have been as plain, as distinct, and as well-defined, as the open fingers of the human hand held up to the light; and that there could not have been any doubt as to their form and existence, since they were seen by different observers, at different places, and with different telescopes. Several drawings accompanied the paper, shewing the appearances at various stages of the annulus. The number of these dark lines, or threads, Mr. Baily considers to have been about eight; in which opinion he was confirmed by Mr. Veitch. Sir Thomas Brisbane, however, thinks there were not more than six; whilst Mr. Bell, who noticed four at the dissolution of the annulus, says that there were only two at its formation. On these and other points Mr. Baily thinks there is ample room for a diversity of opinion, since the observer is taken, as it were, by surprise, and the phenomenon itself, during the short period of its existence, is constantly varying in some minute particulars. Mr. Baily remarks, that the diminution of light was not so great during the existence of the annulus as was generally expected, being little more than might be caused by a temporary cloud passing over the sun: the light, however, was of a peculiar kind, somewhat resembling that produced by the sun shining through a morning mist. The thermometer in the shade fell only about three or four degrees. The birds in the hedges were in full song during the whole time of the eclipse. About twenty minutes before

the formation of the annulus, Venus was seen with the naked eye; and a few minutes afterwards it was impossible to fire gunpowder, with the concentrated rays of the sun, through a lens of three inches in diameter. The same lens, likewise, had no effect on the ball of a thermometer during the existence of the annulus.

## GEOLOGICAL SOCIETY.

ON Wednesday, Mr. Lyell in the chair, several communications were read. 1. An account, by Mr. Bowerbank, of a deposit containing recent land shells at Gore Cliff, in the Isle of Wight. The cliff consists of the upper green sand capped with chalk-marl, on which rests the bed containing the recent shells. It consists of detritus of chalk and chalk-marl, is 10 feet thick, and ranges to the foot of St. Catherine's Down, a distance of about 660 yards. The shells are dispersed through every part of the bed, and belong entirely to well-known recent species. Similar deposits were observed by Mr. Bowerbank near St. Lawrence, and between Ventnor and Bonchurch. 2. A letter from Mr. Wyatt to Dr. Buckland, on a trap-dyke in the Penryn slate-quarries near Bangor. A few months since, in carrying on the highest opening in the quarry, the men came suddenly in contact with trap. The width of the dyke is 11 feet; its direction apparently between WNW. and NW., and it intersects the strata nearly at right angles. The slate immediately in contact with it, is in some parts, highly indurated, having lost its fissile character, and the colour is changed from purple to black; but at the distance of two or three feet from the dyke, the slate recovers its usual colour and fissile structure. 3. A notice, by Mr. Richardson, of a successful boring for water at Mortlake, in Surrey. The point at which this undertaking was commenced is within 100 feet of the Thames, and on the property of Mr. John Randall. In the first instance, an auger 7 inches in diameter was used in penetrating 20 feet of superficial detritus, and 200 feet of London clay. An iron tube, 8 inches in diameter, was then driven into the opening, to dam out the land-springs and the percolation from the river. A 4-inch auger was next introduced through the iron tube, and the boring was continued until the clay having been perforated to the depth of 240 feet, the sands of the plastic clay were reached, and water of the softest and purest nature was obtained; but the supply was not sufficient, and it did not reach the surface. The work was proceeded with accordingly, and, after 55 feet of alternating beds of sand and clay had been penetrated, the chalk was touched upon. A second tube, 4½ inches in diameter, was then driven into the chalk to stop out the water of the plastic sands, and through this tube an auger, 3¼ inches in diameter, was introduced and worked through 35 feet of hard chalk abounding with flints. To this succeeded a bed of soft chalk, into which the instrument suddenly penetrated to the depth of 15 feet. On the auger being withdrawn, water gradually rose to the surface and overflowed. The expense of the work did not exceed 300l. The general summary of the strata penetrated is as follows:—

Gravel .....	20 feet.
London clay .....	240
Plastic sands and clays .....	55
Hard chalk with flints .....	35
Soft chalk .....	15
	365

4. A paper on the strata usually termed plastic

clay, by Mr. John Morris. After alluding to the description of the Paris Basin by Cuvier and Brongniart, and to the memoirs of Mr. Webster, Dr. Buckland, Mr. Richardson, and Mr. Rofe, on the strata immediately above the chalk in England, the author proceeded to detail the results of his own observations on the lower portion of the same beds. He divided them into three groups; (a) the oyster-beds; (b) the Woolwich and Upnor strata; and (c) the lower arenaceous beds of the London clay. (a) The oyster-beds, well known at Reading, rest upon the chalk, and consist of green or gray sands, containing great abundance of a large species of oyster. The localities at which they have been examined by Mr. Morris, are Hertford, Northam, and Hadley. (b) The Woolwich and Upnor strata consist chiefly of clay, sand, pebbles, and a calcareous rock; and are distinguished by containing fresh-water, estuary, and marine shells. In the local distribution of these remains, the author has noticed considerable differences; thus, at the Woolwich pits the greater number of the shells are fresh-water or estuary, while at Plumstead and Upnor, near Rochester, marine remains prevail. The principal localities mentioned in the paper are, Woolwich, Sunbridge Park, near Bromley, Chiselhurst, Orpington, Beckenham, Sydenham, Counter-hill, between New Cross and Lewisham, Bexley-heath, Erith ballast-pit, Green-street, near Stoke, and Upnor. They are said to occur, also, at Stifford and Plaistow, in Essex. The thickness of the beds varies greatly even within a few yards, and the order of their succession differs in every pit. The following is the section presented by the opening on Bexley Heath:

Vegetable mould and gravel .....	2 feet.
Sand and pebbles .....	6 inches.
Ferruginous sand .....	3 feet.
Mottled clay .....	2
Brown clay with shells .....	1 foot.
Blue slaty clay, lower part sandy .....	2 feet.
Loam with numerous shells .....	3
Ferruginous sand .....	depth unknown.

(c) The lower arenaceous beds of the London clay consist of gray or green sands with calcareous sandstone, and have been long known for containing, at Bognor, great abundance of shells which belong to marine genera. The localities mentioned by Mr. Morris are numerous; but those which have produced the greatest number of fossils are, Bognor, Herne Bay, Pegwell Bay, Alum Bay, Binfield, Bray Hampstead (in sinking a well), and Faversham. He is also of opinion that the sandy limestone of Lainscourt in France, is of the same age. 5. A memoir on the geology of Suffolk, by the Rev. W. B. Clarke, was commenced. The portions which were read described the physical features, the drainage of the country, the chalk and the plastic clay. As we shall have occasion to notice this memoir when the remainder has been read, we shall defer, till then, our analysis of the part brought forward on Wednesday evening.

## LINNEAN SOCIETY.

MR. LAMBERT in the chair.—Read, the commencement of a paper by J. O. Westwood, Esq. entitled "Illustrations of the relationships existing amongst natural objects, termed affinity and analogy, selected from the class of insects." A short abstract of this paper will be given in an early No. of the *Literary Gazette*. The chairman exhibited a specimen of the sugar obtained from the sugar-maple (*Acer saccharinum*) from New Brunswick; a fruit of the golden apple of Otaheite (*Spondias dulcis*); fruits and root of the *Tacca pinnatifida*, which yields the arrow-root of the Sandwich islands.

Specimens of a purple grape, producing berries of a large size, were sent for exhibition from Kimmel Park, the seat of Lord Dinorben, by command of the Duke of Sussex. Several new members were proposed; and, amongst the books presented were five volumes of memoirs of the Natural History Society of Geneva.

#### STATISTICAL SOCIETY.

MR. PORTER in the chair.—A valuable paper, entitled, "A Statistical Account of the Mineral Products obtained in France during the Year 1834, taken from official Documents," by the chairman, was read. In the commencement of his paper, the author observes that it is to the mineral treasures of this country that we are indebted, primarily and principally, for the means of prosecuting those branches of industry which have made England the first among manufacturing and commercial countries, and which have mainly enabled her to take and maintain the proud station which she holds among the nations of the earth. Under these circumstances, it might naturally be imagined that every thing connected with our mining industry would have been sedulously explained; that, at least, we should have made ourselves acquainted with its extent and progress throughout its various branches. This, however, is not the case; and, except where the interest of the revenue has been concerned, no systematic effort has been made to acquire authentic information upon these important points. After noticing McCulloch's recently published statistical account of the British empire, Mr. Porter proceeds to state truly, that Englishmen may well consider it a reproach to the nation collectively, that our best-founded suspicions as to the correctness of our statistical data concerning the production of coal and iron, the most important by far of our mineral treasures, are derived from the researches of a French gentleman, who, in the course of a recent tour through the three kingdoms, has visited every iron-work, and, with very few exceptions, every coal-field, in England, Scotland, and Ireland; and has ascertained on the spot, and within the smallest possible limits, the capability and actual working of each individual establishment: and it may be stated, that the estimates of production hitherto formed in regard to both coal and iron have been ascertained by Mons. Le Play, the foreigner alluded to, to be very far below the truth. The fact, that a foreign gentleman, known to be the agent of a foreign government, has been able, through the frank and liberal kindness of the coal-owners and iron-masters throughout the united kingdom, to obtain satisfactory answers to his inquiries, is highly honourable to our countrymen, and may be offered as some set-off against those feelings of mortification which we cannot but experience at the necessity which compelled him to make a long and toilsome journey in search of information which ought to have been accessible to him without leaving his own country. It is well known that the French government has established a board of commissioners, under the control of the Minister of the Interior; the duties of which are pretty well defined under the title of "Direction Générale des Ports et Chaussées, et des Mines." This board has under its orders a competent staff of well-educated engineers, part of whose duty it is to collect the statistical details of the works they are appointed to inspect. A report, in which these details are embodied, has very recently been made, in which the amount and value of the industry of each department of France during the year 1834, are given with a degree of mi-

nuteness and of accuracy, that cannot fail to be satisfactory and practically useful. The following is a very brief extract of the results brought forward in the report of the commissioners. The subject is divided under six heads,—viz. iron-works; fuel; metals, other than iron; salt, alum, and copperas (sulphate of iron); quarries; and lastly, various operations connected with mineral substances. The iron-works of France are spread over a great part of the kingdom, there being only twelve out of the eighty-six departments into which France is divided, where iron-works are not carried on. The quantity of ore extracted from the whole of the iron-mines of France in 1834 amounted to 15,750,990 metrical quintals, equal to 1,551,473 tons, English weight; and the value, 3,606,308 fr., or 144,252*l*. The number of smelting furnaces in use is stated to have been 374, and the weight of iron produced, 221,886 tons. About five-sixths of this quantity was made in the form of pig-iron, and the remainder into castings of various kinds. The value added to the material by these operations, was 32,437,551 fr., or 1,297,502*l*. Under the head of mineral combustibles, the French report includes coal, lignite, and anthracite. Coal-mines are worked in thirty-four of the departments of France, but only to a very small extent in most of them; the whole number of coal-mines is stated to be 209, of which only 140 were worked during the year. The quantity of coal extracted was 15,741,430 metrical quintals, equal to 1,550,530 tons; the value, at 95 centimes per met. quin., or 7*s*. 6*d*. per ton, amounting to 581,448*l*. Lignite is found in fourteen departments. The number of mines of this mineral is seventy-five; only forty-eight of which were in operation in the year. The produce amounted in quantity to 702,302 metrical quintals, or 69,177 tons; in value, 557,840 fr. or 22,314*l*. Anthracite is produced in four departments: out of thirty-two mines, twenty-two are in activity, and yielded in the year 389,830 met. quin., or 38,398 tons; the value of which, calculated at the rate of 1*l*. 31*c*. per met. quin. was 512,080 fr., or 20,483*l*. Mineral bitumen is found in three departments. The author then, in detail, notices the production of peat, lead, silver, and copper; and then recapitulates the value created, and the number of workmen employed in the different mining operations. After the paper was read, Mr. Porter stated that, from the inquiries already alluded to, it appeared that the quantities of iron and coal raised in the united kingdom had been very much underrated; the former having been, in the year 1836, no less than 1,000,000 tons; and the latter, which had never been rated above 23,000,000, and generally accepted at 15,000,000, amounted to 30,000,000. Notice was given of the appointment of a committee upon criminal statistics, and, the secretary having read an extract upon the same subject from a French newspaper, a conversation of considerable interest ensued. A report of the Statistical Society of Manchester was laid on the table, containing an account of the number of schools, and of children at school, in Liverpool, and of the general state of education in that town. Foreign members were elected.

#### MEDICO-BOTANICAL SOCIETY.

JANUARY 11. Henry Cope, jun., in the chair.—A paper was read from Dr. Hancock on the *Coaruvalli* of British Guiana. The plant is a large and very elegant herbaceous perennial, growing in considerable abundance in light, sandy soils, on the sides of hills and ravines. It is a species of *Alpinia*, but whether the

*Alpinia exaltata* of Meyer, or not, is a matter of doubt. Great uncertainty, however, exists in regard to the whole of this natural order of plants, which are very abundant in the forests of Guiana: this proves the great importance of not neglecting the native names to those who go in search of new plants. The *Coaruvalli* has been administered, in Demerara, with very great success in cases of dropsy, dysentery, fever, colic pains, asthma, and whooping-cough—more especially in the latter. By the natives it is regarded as a sort of panacea, like the *Ginseng* among the Chinese and Tartars. The root, which is the part more usually employed, is diaphoretic, diuretic, and, in large doses, emetic. The leaves are laid over the parts affected, and not unfrequently the whole body is enveloped in them, by which means a profuse perspiration is induced, and the patient becomes quite free from his complaint. The bruised root is also employed in cases of poisoned wounds, a decoction of it being taken inwardly. Great stress was laid by the author on the value of attending to the indigenous remedies of the country; and he considered that much advantage might be derived from the external application of leaves of certain plants of our own country in aid of internal medicaments; such as the *Clinopodium*, *Arum maculatum*, and others.

#### BOTANICAL SOCIETY.

ON Thursday, Mr. W. H. White in the chair, preliminary business was transacted, donations received, and members balloted for and elected. A paper was then read from Dr. MacIntyre, being the continuation of his paper on the plants met with about Warley Common, Essex. It appeared, that the following ferns are found about this district: *Aspidium filix femina*, *Aspidium dilatatum*, *Aspidium angulare*, *Aspidium libanum*, *Aspidium trichomanes* (sparingly), and *Asplenium adiantum nigrum*. The paper contained some general remarks on the plants in this vicinity; and Dr. MacIntyre stated, that he, in conjunction with a friend, had observed there 205 in one day. After some discussion, the chairman announced that, at the next meeting, the continuation of Mr. Dennes's paper on the plants found about Deal, Walmer, and Dover, Kent, would be read.

#### LITERARY AND LEARNED.

##### ASIATIC SOCIETY.

SATURDAY, 7th. Sir George Staunton, V.P., in the chair.—Several donations to the library were laid before the meeting, and members were elected.—A paper, by J. M. Dickenson, Esq., of the Bombay civil service, on the ancient history of Assyria, as connected with the destruction of the kingdom of Israel, was read. The writer endeavours to reconcile the apparent discrepancies found in the Greek, Persian, and Hebrew accounts of Assyria, by a process of reasoning, which it is impossible to abridge; the result of which is, that the Median sovereigns mentioned by Herodotus and Ctesias form, in fact, two separate dynasties; that of Ctesias being the one which had possession of the throne of Western Asia, and was Median in name only, being founded by Arbaces the Mede; that of Herodotus, on the other hand, was a dynasty of revolted Medes, who, under Cyaxares, obtained the supremacy, and expelled the more ancient dynasty of Ctesias. This will account for the agreement of the last two reigns in both authors; as the accession of the revolted dynasty to the supreme throne

gave it a place in the legitimate list furnished by Ctesias. — This difficulty once conquered, the other accounts are more easily reconciled; though, from the loose chronology of orientals, much exactness is not to be expected. A striking conformity is, however, shewn to exist in the period assigned by the Greeks to the establishment of the Assyrian empire under Ninus, with that of the Pashadian dynasty of Ferdui; and this is in perfect accordance with the era of the division of the earth in the time of Peleg, as deduced from the accounts of Scripture. The remainder of the paper, which treats of the location of the ten tribes of Israel when carried into captivity, was reserved for another meeting.

## SOCIETY OF ANTIQUARIES.

MR. HAMILTON in the chair.—The reading of Mr. Pearall's memoir on the old German instrument of execution called the Virgin, was concluded. Mr. Pearall was informed, that all the instruments of torture had been removed from the vaults of Nuremberg on the approach of the French army. He then pursued his inquiries in various other places, but with so little success (although all the common people spoke of having heard of such a thing), that he began to think that such an instrument had never really been in existence, but that the accounts of it were mere legendary fables, invented by some of the feudal barons to awe the people; at length, however, his perseverance was crowned with success, and he found the machine in a collection of arms and armour, in the possession of Baron Diedrich, at Feistritz; and several circumstances led him to believe that it was the same that was erected at Nuremberg, in 1533, and subsequently removed. It was made of iron, and represented the wife of a Nuremberg citizen of the 16th century, in a cloak reaching to the ground; the figure opened in the front by two doors, on the interior of which were fixed dagger-blades, two in the upper part to meet the eyes, and several below, opposite to the chest. The victim was placed in the figure with his face forwards, and these horrible doors closed upon him. A somewhat similar machine is said to have been formerly in use in the Spanish Inquisition, and it is supposed to have been communicated from Spain to Germany. The mode of disposing of the body appears to have been as follows:—the floor beneath the figure was removed by machinery, and the body fell through into a vault beneath upon a number of intersecting swords, fixed on two parallel movable beams, and having balance-weights attached below; these, being set in motion by the weight of the body falling on them, kept vibrating for some time, and literally minced it, while a stream of water ran beneath to carry off the morsels as they fell through this infernal chopping-machine, and oblivion closed on the unhappy wretch for ever.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

Monday.—Royal Geographical, 9 P.M.; Entomological (Anniversary), 8 P.M.

Tuesday.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers 8 P.M.; Zoological, 8½ P.M.

Wednesday.—Society of Arts, 7½ P.M.; Medico-Botanical, 8 P.M.

Thursday.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Russell Institution (Dr. Truman on the Physiology of the Voice); Southwark Literary (Dr. Southwood Smith on the Animal Economy), 8 P.M.; Islington Literary (Annual Meeting for Elections, &c.)

Friday.—Royal Institution, 8½ P.M.

## FINE ARTS.

## INSTITUTE OF BRITISH ARCHITECTS.

AT an ordinary meeting of the members, held on Monday last, P. F. Robinson, Esq., V.P., in the chair, Lord Viscount Kingsborough, W. R. Hamilton, Esq., and J. B. Greenbough, Esq., were elected honorary members.—The secretary announced donations from the Society of Literature, the Society of Civil Engineers, Mr. Railton, Mr. Inman, and others, for which thanks were voted. Mr. G. Taylor explained the construction of some of the roofs lately erected by him over the Admiralty Docks and building-slips at Woolwich and Chatham; a model of which he presented to the Institute. Some of these roofs, it was stated, cover an area of an acre and a half, and the average cost is about 6500*l.* each. Mr. George Godwin, jun., then read a paper on the means lately employed at Paris to raise the obelisk brought from Luxor by M. Lebas; in the course of which he made some interesting remarks on the form and object of obelisks generally. On the origin of the term, obelisk, there is much difference of opinion. These monoliths appear to have been dedicated, in the first instance, principally to the sun; and, according to Pliny, the name in the Egyptian language expresses the idea of a ray of that luminary; others, however, suppose it to proceed from *obelos*, Gr., a needle or skewer. The practice of setting up single stones to commemorate events, or in honour of individuals, was not confined to the Egyptians, although carried out by that nation to a greater extent than by any other. The Roman emperors bore away a great number to decorate their capital; in fact, Publius Victor speaks of forty-two transported for that purpose, but of these not more than twelve remain. Mr. Godwin detailed all the circumstances connected with the transport of the obelisk from Luxor, and explained the operation of raising it in the *Place de la Concorde* at Paris, by means of some excellent diagrams and models; instituting, at the same time, a comparison between the course pursued on this occasion, and a similar operation as conducted by Fontanor in 1586, when 40 capstans, 140 horses, and 800 men, were employed. The apparatus used by Lebas was much more simple, and its success redounds greatly to his honour. The weight of the obelisk, it is calculated, is more than 200 tons. The paper was listened to with profound attention by one of the most numerous meetings of the season. In addition to many other models in illustration of the discourse, there was a fine cast of the upper part of an enormous obelisk at Carnac, covered with hieroglyphics, which was made by M. Bonomi.

## NEW PUBLICATIONS.

*Civil War in Spain. Characteristic Sketches of the Different Troops, &c., Scenes of Military Operations, and Costumes of the Peasantry, &c.* By Major C. V. Z., Staff of the Queen's Army. No. I. London, J. Dickinson.

THESE are but amateur sketches, as productions of art; but they are so extremely characteristic, that they possess an interest "beyond the reach of art." Don Carlos, Zumalacarréguí, and other prominent persons, are faithfully represented; and the various troops,—Christinos, Carlists, Chapelgories, British Legion, &c. &c., as well as peasantry, smugglers, Spanish women, &c., appear in their habits as they live. It is lamentable to see our countrymen as such tattered demilions,—shoeless, shirtless, and ragged.

## ORIGINAL POETRY.

DIRGE ON THE DEATH OF RICHARD  
WESTALL, ESQ. R.A.

By Mrs. Gent.

He's dead!

We've strewn him o'er with flowers,\*  
The lovely things he lov'd in life,  
When human cares and human strife,  
Embittered his sad hours.

Alas, he's dead!

His was a polish'd mind,  
Enrich'd with Poetry's bright store,  
Enamour'd deep of Nature's lore—  
But now he's dead.

His was a gentle soul,  
He had communion with all fair things;  
The birds, the flowers, lent sweet imaginings  
To him that's dead.

Fancy was his—  
Sweet Fancy, with her radiant brow,  
Inspiring visions few can know.  
But he is dead.

Fled is the master mind;  
The skilful hand to light that brought  
Those graceful forms his genius wrought,  
Is cold, and he is dead!

Closed is his eye—  
That eye that kindled with a poet's fire:  
But the bright soul that struck the living lyre,  
That is not dead.

It mounts to heaven;  
Rapt in its new-found ecstasy,  
It soars, it cleaves, the upward sky,  
Where are no dead.

His cold clay rests:  
Amidst the glories of his fame,†  
The tracings of a deathless name,  
He's laid—till, with imperious claim,  
Earth takes her dead.

## BIOGRAPHY.

## LADY FARNBOROUGH.

THE fine arts, and the highest society, have lost one of their most graceful ornaments in Lady Farnborough, who died at Bromley on Sunday last. Lady Farnborough was a daughter of Sir Abraham Hume; and, both from her descent and from her union with her now bereaved lord, inherited and imbibed that love of art for which she was so eminently distinguished. Her taste was of the purest order, and her own productions marked by a degree of genius far above the usual class of amateur painting. Some of her landscapes were exquisitely natural; and, amid touches of spirit and beauty, evinced a tone of feeling which shewed that the best effects of mechanical execution were the least of her merits. In private life her ladyship adorned the station to which she belonged; and, rich in acquired information, accomplished in the noblest sense of the word, and at once simple and refined in her manners, she was the true pattern of what an Englishwoman ought to be. Her loss will be greatly felt by the poor, to whom she was a judicious friend and a generous benefactor.

## DRAMA.

*Covent Garden.*—On Thursday, the *Country Squire*; or, *Two Days in the Hall*, written by Mr. C. Dance, was produced here. It is

\* One who esteemed him for his virtues, and admired him for his talents, sent a sweet offering of flowers to be strewn upon his corpse.

† The remains of Mr. Westall were placed in a room adorned with some of his most splendid works, both scriptural and poetical.

founded on the ballad of "The Old English Gentleman," whom Farren represents to admiration, and is altogether a charming and amusing sketch of character, with excellent stage situations. The other parts are ably played by Misses Vincent and Lee, Mrs. Glover, and Messrs. Pritchard and J. Webster. Success was complete.

**St. James's.**—Mr. Braham has produced *Love in a Village*, compressed into two acts, with a capital cast and great *éclat*. Mr. Leffler, who took Phillips's place at the English Opera House, made his first appearance here as *Steady*, in *The Quaker*, on Thursday, to a good house; he was received throughout with great applause, and the piece announced for repetition with unanimous approbation.

**Adelphi.**—Mrs. Yates's beautiful acting in *Vaubalière*, and we ought not to omit the notice of some exquisite strokes of dramatic art and skill in Yates, Mr. Fitzgerald's inimitable imitation of O'Connell, and Reeve's rich humour as the overseer, continue to draw bumpers to the Adelphi. *Jim Crow Rice* is to return here shortly.

**Queen's Theatre.**—After an arduous campaign, Miss Grey is reaping the fruits of her enterprising and judicious management in well-filled houses. During the week, Sheridan Knowles has been *starring* as *Master Walter*, in *The Hunchback*, ably seconded by the dramatic corps; Miss E. Clifford's *Julia*, and Miss Grey's *Helen*, are equally excellent in their way, and Mr. Green's *Modus* is a very praiseworthy performance. *Caspar Hauser* goes on prosperously, *Dr. Lott Whittle* being characteristically adapted to Mr. Hill: there is a dry quaintness in his manner which is perfectly irresistible; and we hope that he will long continue to amuse us Londoners with his Yankee peculiarities.

#### VARIETIES.

**The Weather-wise.**—No high winds have obeyed the summons of Lieutenant Morrison, either on the 16th, the 17th, or the 18th,—the whole week has been distinguished by very dense fogs. Never mind! The air, he predicts, will be "milder about the 22d and 23d, yet mist and small rain prevail. The sun, coming to the same declination as Mars, will render the air mild about the 25th or 26th, but there are some signs of high winds."

**Cold.**—A note of the 12th, from Sir D. Brewster, Allerley, near Melrose, says: "Last night and this morning have been the coldest I have ever observed; so that, if your prophet changes his day to the 12th, he will be right. At 2, p. m. yesterday, the 11th, the thermometer was at 25°; at 5, it was 20°; at 7, 15°; and, after several oscillations from 15° to 17°, and 17° back to 15°, it began to fall regularly after 9 o'clock, and at 2 in the morning of to-day, the 12th, it was as low as 10°. It has kept about 32° all to-day, but now (1½ p. m.) has risen to 34°, and thaw has commenced."

**M. Gerard**, the celebrated French painter, some of whose works have been brought to, and greatly admired in, England, died at Paris on Wednesday week, aged 66.

**Mrs. Irvine**, the poor woman who last week fell from the rope at Covent Garden Theatre, and was very seriously injured, continues to be in considerable pain and danger. Surely, such an accident ought to put an end to these disgraceful exhibitions in any national theatre.

**The Metropolitan Society of Florists and Amateurs** held their anniversary at the Crown and Anchor Tavern, in the Strand, on Thursday. Arrangements were made for shows

during the ensuing season, and above a hundred persons dined under the presidency of Mr. Glennie.

**Vesuvius.**—By the latest accounts from Naples, volumes of smoke were issuing from Vesuvius, and an eruption was anticipated.

South Molton Street, Jan. 19.

**Cheap Literature.**—Sir,—I have just seen an American paper, that, besides a large quantity of other matter, as well as numerous advertisements, foreign and domestic news, contains the whole of this year's Annual, "Friendship's Offering," consisting of 384 pages, price (I believe) 18s. or a guinea!! This paper is published weekly, at two dollars per annum, or about twopence per paper. One of its titles is "The Literary Gazette;" and it contains 64 closely printed columns, of nearly 240 lines in a column. It is printed with a small type, and is about as large as four *Literary Gazettes*; and can be forwarded to all parts by post. Your obedient servant,

W. A. SCRIPPS.

"Malouin, physician to the Queen of France, was so fond of drugging that it is told of him, that once, having a most patient patient, who diligently and punctually swallowed all the stuff he ordered, he was so delighted in seeing all the phials and pill-boxes cleaned out, that he shook him cordially by the hand, exclaiming, 'My dear sir, it really affords me pleasure to attend you, and you deserve to be ill.' The London practitioners must surely meet with incessant delight."

**Millengen's Curiosities of Medical Experience.**—"A bit in the morning is better than nothing all day. After dinner sit awhile, after supper walk a mile. After dinner sleep awhile, after supper go to bed. If you would live for ever, you must wash milk from your liver. Butter is gold in the morning, silver at noon, and lead at night.

An egg and to bed.

You must drink as much after an egg as after an ox.

He that goes to bed thirsty rises healthy.

Qui couche avec la soif, se leve avec la santé.

The best physicians are Dr. Diet, Dr. Quiet, and Dr. Merryman.

Si tibi deficient medici, medici tibi fiant.

Hec tria; mens laus, requies, moderata diæta.

You should never touch your eye but with your elbow.

Non patitur ludum fama, fides oculus.

That city is in a bad case, whose physicians have the gout.—*Hebrew Proverb.*

Who goes to bed supperless, all night tumbles and tosses.

*Ibid.*

**Payne and Foss's Catalogue, for 1837**, is a splendid list of books in all languages; and peculiarly interesting from its Aldine Catalogue, numerous remarkable manuscripts, papal bulls, and other literary curiosities. The numbers extend to nearly 10,000 articles!!

**The New London Magazine, No. I.** (London, Wilson, jun.)—This is another cheap publication, without any feature in its first No. to distinguish it from the usual run.

*On a Pair of Lovers who were always billing.*

Oh! who can paint these lovers' bliss!

The day to them was one long kiss:

You would have thought, sir, had you seen them,

They'd but one pair of lips between them.

#### LITERARY NOVELTIES.

**Literature and Art.**—Bent's List of New Books and Engravings for 1836, with their sizes and prices, exhibits a decrease of new publications last year, the number of books amounting to 1250 (1500 volumes), exclusive of new editions, pamphlets, or periodicals, being 150 less than in 1835. The number of Engravings is 56 (including 40 portraits), 17 of which are engraved in the line manner, 60 in mezzotinto, and 15 in chalk, aquatinta, &c.

*In the Press.*

The Fourth and last Volume of the *Fauna Boreali Americana*, containing the Insects, by the Rev. W. Kirby, F.R.S., &c.—Saint Agnes's Fountain; or, the Enshrined Heart; an old English Legendary Ballad, with other Poems, by T. W. Kelly, author of "Myrtle Leaves."—With numerous illustrations, Temples, Ancient and Modern; or, Notes on Church Architecture; comprising the Principles which should guide us in the Erection of new

Churches, by W. Bondwell, Architect.—Sermons preached at Hodnet, by the Rev. Charles B. Taylor, M.A. author of the "Records of a Good Man's Life."—Lectures on Romanism and Dissent, by the Rev. J. H. Newman, M.A.—A Treatise on the Church of Christ, by the Rev. W. Palmer, author of "Origines Liturgicæ."

#### LIST OF NEW BOOKS.

Glennionely, a Novel, 3 vols. post 8vo. 17. 11s. 6d.—Heath's Gallery of British Engravings, Vol. II. royal 8vo. 12. 1s.; large paper, 17. 11s. 6d.—The Rivers of France, from Drawings by J. W. M. Turner, R.A., royal 8vo. 12. 4s.; large paper, 17. 16s.—The Cathedral, a Poem, 8cap 8vo. 2s.—The Transactions of the Entomological Society of London, Vol. I. Part III. 10s. 6d.—A Letter to Archdeacon Singleton on the Ecclesiastical Commission, by the Rev. Sydney Smith, 1s.—A Letter to Lord Melbourne on Money Market, by R. Torrens, Esq. 2s.—Harmony of Christian Faith and Character, by John Abercrombie, M.D. 18mo. 2s. 6d.—The Relaxation; or, Christmas Book for the Young, 18mo. 4s. 6d.—The Culture and Discipline of the Mind, by John Abercrombie, M.D. 18mo. 1s.—Tints of Talent, 12mo. 5s.—Sandford and Merton Abridged and Modernised, by Mrs. R. M. Zornlin, 12mo. 3s. 6d.—The Family History of England, Vol. III., by Gleig, 12mo. 6s. 6d.—The Voluntary System, by the Rev. J. R. Maitland, 18mo. 6s. 6d.—Beauties of the Country, by Thos. Miller, post 8vo. 12s.—Lectures on the History of Moses, by the Rev. J. S. Ross, 12mo. 6s.—Confirmation of Maria Monk's Disclosures, by the Rev. J. J. Stocum, of New York, 18mo. 4s.—Flittings of Fancy, by R. Sullivan, Esq. 2 vols. 8vo. 17. 1s.—Rambles in Egypt and Candia, by Capt. C. R. Scott, 2 vols. 8vo. 17. 8s.—Delille's Introductory Lessons in the French Language, 18mo. 1s. 6d.—An Essay on Natural Religion and Revelation, by the Rev. J. Gidderdale, post 8vo. 7s. 6d.—Peter Parley's Tales about Europe, by the Rev. T. Wilson, 18mo. 2s. 6d.—Something New from Aunt Mary, by Mary Hughes, 18mo. 1s.

#### METEOROLOGICAL JOURNAL, 1837.

January.	Thermometer.	Barometer.
Thursday . 12	From 19 to 36	30.06 to 29.65
Friday . . . 13	29 . . . 49	29.44 . . . 29.53
Saturday . 14	30 . . . 39	29.82 . . . 30.10
Sunday . . . 15	26 . . . 38	30.25 . . . 30.28
Monday . . 16	25 . . . 37	30.20 . . . 30.20
Tuesday . . 17	31 . . . 43	30.19 . . . 30.17
Wednesday 18	33 . . . 39	30.08 . . . 30.01

Winds N. and N.W. Except the 14th and 15th, generally cloudy; rain on the 13th, 16th, and 17th; snow on the afternoon of the 12th.

Rain fallen, .425 of an inch.

Edmonton.

CHARLES HENRY ADAMS.

*Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society, December 1836.*

Thermometer—Highest . . . . . 55.25 . . . the 5th.  
Lowest . . . . . 32.50 . . . 29th.  
Mean . . . . . 38.90766  
Barometer—Highest . . . . . 30.15 . . . 31st.  
Lowest . . . . . 29.71 . . . 9th.  
Mean . . . . . 29.54344

Number of days of rain and snow, 21.

Quantity of rain and melted snow, in inches and decimals, 2.24375.

Winds.—0 East—9 West—4 North—1 South—0 North-East—1 South-East—11 South-West—5 North-West.

**General Observations.**—The maximum of the thermometer was above any, in the same month, in the last thirteen years; and the mean temperature was higher than in the last two years. Rain or snow fell on twenty-one different days; yet, the whole quantity of rain and melted snow was less than in any December in the period before-mentioned. The barometer was lower than in the corresponding months in 1834 and in 1835, and than the average of the month. Snow fell on the last seven days of the month; and the whole quantity, if added together, was but little more than eight inches in depth, where the influence of the gale, in the night of Christmas, did not affect it. In the vicinity of High Wycombe, the snow was drifted to the depth of seven and eight feet; and in the town, while the southern side of the street was covered by only a few inches, on the northern side the snow was three and four feet deep; this, too, under the lee of the houses, the wind having been from the northward; much of eddy wind must therefore have prevailed during the gale.

#### TO CORRESPONDENTS.

**On Medal Engraving.**—Having now examined the claims, read the evidence, and compared productions involved in this question, so important to antiquities, numismatics, and national history, as to the Fine Arts, we shall in our next *Gazette* state our opinions upon it, and illustrate them by extra and beautiful engravings. Orders for the Number are requested to be sent on or before Friday; and means will be adopted to supply our country and foreign subscribers with the plates.

S. H. declined.

**ERRATUM.**—In notice of "The Churches of London," in our last Number, 3d column, line 9, for "assisted by G. Button, Esq." read "assisted by John Britton, Esq."

## ADVERTISEMENTS,

Connected with Literature and the Arts.

## KING'S COLLEGE, LONDON.

Senior Department. The Classes in Theology, the Classics, Mathematics, English Literature, and History, under the superintendence of the Principal and Professors, the Rev. T. G. Ball, R. W. Browne, and T. Dale, will be Re-opened on Tuesday, the 24th of January next.

The Classes for Private Instruction in Hebrew, the Oriental, and other Foreign Languages, will also be resumed.

Junior Department.—The Classes in the School will be re-opened on Tuesday, the 24th of January, at Nine o'clock, A.M.

Dec. 23, 1896. H. T. ROSE, B. D. Principal.

## THE PARTNERSHIP which has subsisted

for the past Fourteen Years between S. MORDAN and G. RIDDLE, under the Firm of S. Mordan and Co. Mechanists, and Manufacturers of Patent and other Articles, having expired this day, G. Riddle therefore desires this a suitable opportunity for returning his grateful thanks to his Friends and the Public at large, for the encouragement the Firm has received, and begs to inform them that he will continue to Manufacture the Patent and other Articles, at No. 178 Blackfriars Road, to which address he respectfully requests that any Orders or Communications may in future be addressed.

London, Dec. 20, 1896.

## J. D. HARDING'S NEW WORK.

This day is published, half-bound in morocco, price 3s. 6d.

**HARDING'S PORTFOLIO OF DRAWINGS**, containing Twenty-four highly finished Sketches. An edition has also been prepared, so exactly to imitate the original Drawings, price 5s.

Of whom may be had, in imperial Folio, price 6s. 6d.

Harding's Sketches at Home and Abroad, containing Sixty of the most interesting Scenes selected from a large Collection of Foreign and Domestic Sketches.

## BULL'S NEW SYSTEM

of supplying Book Societies and Families throughout England, Scotland, and Ireland, with all Works, Magazines, &c. for perusal, upon most advantageous terms, is fully detailed, for the information of the literary public, on the last page of the *Athenæum* for Dec. 31. Money Advanced upon Duplicate Portions of Booksellers' Stock, upon Libraries, and Literary Property in General.

## BOOKS PUBLISHED THIS DAY.

## A Second edition of

## FRASER'S MAGAZINE for January

1897, is now ready. Subscribers' Names are received by the Publisher, at 315 Regent Street; and all Booksellers in Town and Country.

The cost is Half-a-Crown, Monthly.

GOLDSMITH'S GEOGRAPHICAL WORKS.  
**GRAMMAR of GENERAL GEOGRAPHY**; being an Introduction and Companion to the larger Work of the same Author.  
By the Rev. J. GOLDSMITH.  
New edition, improved, and revised, in the principal Capitals of the World, Maps, &c. 2s. 6d. bound.

## A Key to the Same, 9d.

**Geography on a Popular Plan**; containing all the interesting and amusing Features of Geographical Knowledge, and calculated to convey Instruction by means of the striking and pleasing Associations produced by the peculiar Manners, Customs, &c. of all Nations. By the Rev. J. Goldsmith. New edition, including Extracts from recent Voyages and Travels, with Engravings on Steel, Maps, &c. 14s. bound.

**Dowling's Introduction to Goldsmith's Grammar of Geography**; for Junior Pupils. 9d.

**Dowling's 500 Questions on the Maps in Goldsmith's Grammar of Geography**. 9d.

## Key, 9d.

London: Longman, Rees, Orme, Brown, Green, and Longman.

In 8vo. 21s. cloth.  
**A COMPLETE LATIN-ENGLISH DICTIONARY**; compiled from the best sources, chiefly German, and adapted to the Use of Colleges and Schools.  
By the Rev. J. E. RIDDLE, M.A.

The compiler of this Dictionary is the Translator and Editor of Scheffer's large Latin Lexicon, which has recently appeared in its Latin-English form, from the Oxford University Press. It has been his object to produce a correct, complete, and systematic Dictionary of the Latin language, precisely adapted to the wants and use of Colleges and Schools; a work which, up to this time, English Literature did not possess.

London: Longman, Rees, Orme, and Co. Paternoster Row; and John Murray, Albemarle Street.

**ROMAN ANTIQUITIES for SCHOOLS**.  
In 1 vol. 18mo. price 6s. 6d. in cloth boards, illustrated with 30 Wood Engravings.

**A MANUAL of ROMAN ANTIQUITIES**; to which is appended a Series of 1300 Questions, for examination, a Chronological Table, and an ample English and Latin Index for reference, exhibiting a Select Illustration of 8000 Words and Phrases.

By THOMAS SWINBURNE CARR.

One of the Classical Masters in King's College School.

"This Work, besides exhibiting many features of originality, presents, in a condensed form, all that is available in the work of Dr. Adam, for tuition in schools. We can positively say that this is a capital affair, well adapted (as the preface term it) for the business of the school. Every page shows signs of industry, and the arrangement is clear and methodical."—*Spectator*.

Printed for T. Cadell: Longman and Co.; J. G., and F. Rivington; J. Hooker; Baldwin and Cradock; Tegg and Son; Hamilton and Co.; J. Duncan; Cowie and Co.; Whitaker and Co.; Simpkin and Co.; Houlston and Son; J. Parker, Oxford; Bell and Bradfute, and Stirling and Kenney, Edinburgh.

In one thick volume of upwards of 1500 pages, 8vo. with 83 Maps, drawn by Sidney Hall, and upwards of 1000 other Engravings on Wood, from Drawings by Swainson, T. Lacaze, Sowerby, Strutt, &c. representing the most remarkable objects of Nature and Art, in every region of the Globe, price 3s. half-bound vellum, 4s.

**ENCYCLOPEDIA of GEOGRAPHY**; comprising a complete Description of the Earth; exhibiting its relation to the Heavenly Bodies, its Physical Structure, the Natural History of each Country, and the Industry, Commerce, Political Institutions, and Civil and Social State of all Nations.

By HUGH MURRAY, F.R.S.E.  
Assisted in Astronomy, &c. by Professor Wallace; Geology, &c. by Professor Jamieson; Botany, &c. by Sir W. J. Hooker; Zoology, &c. by W. Swainson, Esq.

The above may be had done up in two volumes.  
"It is without a rival."—*Asiatic Journal*.  
"The most perfect book on its subject."—*Atlas*.  
London: Longman, Rees, and Co.

In 18mo. new edition, greatly augmented, 2s. 6d. in cloth.

**STUDENT'S MANUAL; an Etymological and Explanatory Vocabulary of Words derived from the Greek**.  
By R. H. BLACK, LL.D.

By the same Author,  
**Etymological and Explanatory Dictionary of Words derived from the Latin**. New edition, 5s. 6d. cloth.  
London: Longman, Rees, Orme, Brown, Green, and Longman.

New Botanical and Agricultural Works, by J. C. Loudon, F.L.S.

With nearly Ten Thousand Engravings on Wood. 2d. edition, corrected, 1 large vol. 8vo. 2l. 12s. 6d. boards.

**Hortus Britannicus; a Catalogue of all the Plants Indigenous to, Cultivated in, or introduced into Britain** Part I. Linnean Arrangement; Part II. Jusselean Arrangement. 8vo. 22s. 6d. in cloth.  
London: Longman, Rees, Orme, and Co.

In 8vo. 24th edition, carefully revised, 9s. bound.  
**ELEMENTS of EUCLID**; viz. Books I. to VI., XI., and XII.; also, the Book of Euclid's Data.  
By R. SIMPSON, M.D.

Professor of Mathematics, Glasgow.  
To which are added, the Elements of Plane and Spherical Trigonometry; and a Treatise on the Construction of the Trigonometrical Canon. Also, a concise Account of Logarithms.  
By the Rev. A. ROBERTSON, D.D., F.R.S.,  
Professor of Astronomy, Oxford.

London: Longman and Co.; T. Cadell; J. Richardson; J. M. Richardson; J. G., and F. Rivington; Baldwin and Co.; E. Williams; Darton and Harvey; Hamilton and Co.; Whitaker and Co.; Sherwood and Co.; Simpkin and Co.; J. Souter; Smith, Elder, and Co.; B. Fellows. Cambridge; J., and J. J. Deighton.

Of whom may be had,

**Elements of Euclid**; viz. Books I. to VI., XI., and XII. From the Text of R. Simpson, M.D. with a few Variations and additional References, carefully corrected by Samuel Maynard. 18mo. 6s. boards.

The same work, edited in the Symbolical Form, by R. Blake-lock, M.A. Fell. Cath. Hall, Cambridge. 18mo. 7s. boards; and oblong 8vo. (Leath-room edition), 10s. 6d. cloth.

The 3d edition, price 4s. 6d.  
**THE PHILOSOPHY of EDUCATION**; with its practical application to a System and Plan of Popular Education as a National Object.

By JAMES SIMPSON, Esq. Advocate.  
"We have read many books which begot feelings of elevation and pride for the dignity of man, which improve him morally and socially; but never any—no, not one—which lets in such a flood of hope for the future, for the intellectual improvement and happiness of the universal species."—*Monthly Review*.

"The humane and intelligent must hail such a work as that of Mr. Simpson with a pure and unmixed delight."—*Glasgow Free Press*.

"His thoughts form themselves into words with the precision and brilliancy of crystallisation."—*Metropolitan Magazine*.

London: Longman and Co.; Orr and Co.; Sherwood and Co. Edinburgh; A. and C. Black. Dublin: John Cumming; and Hodges and Smith.

## RECORD COMMISSION.

Also, by Dr. Noehden,  
**German Grammar**, 7th edition, 10s. 6d.  
**Exercises in Writing German**, 5th edit. 8s.

## NEW YEAR'S GIFTS.

**THE ENGLISH BOY at the CAPE;**

An Anglo-African Story.  
By the Author of "Keeper's Travels."

In 2 vols. royal 18mo. embellished with Engravings, price 6s. 6d. bound and lettered.

"A great deal better worth reading than the generality of new-year-books for the benefit or amusement of youth of both sexes, and than very many of our formal novels."—*Monthly Review*.

**2. The Rural Muse; Poems.** By John

Clare, the Northamptonshire Peasant, Author of "The Village Minstrel," "The Shepherd's Calendar," &c. In 1 vol. foolscap 8vo. Illustrated by a View of the Poet's Cottage, and other embellishments, in cloth, price 7s.

"We rejoice to find, that the rural muse has been with him during his long retirement; that his poetic abilities have suffered no abatement under the influence of time; and although he says, 'ill health has almost rendered me incapable of doing any thing,' it has not, in any degree, weakened his mental powers, nor dulled his genius."—*Blackwood's Magazine*.

**3. Shipwrecks and Disasters at Sea.** By

Cyrus Redding, Esq. In 4 vols. 18mo. Illustrated by Engravings and Woodcuts, price 14s. cloth.

"Volumes of considerable interest, not only for their narrations of hardships endured, difficulties surmounted, and hair-breadth escapes, but for the quaint style of the olden historians, or, still better, the homely simplicity of the sufferers themselves."—*Spectator*.

**4. Marine Natural History; or, the Sea-**

side Companion. By Miss Roberts, Author of "The Conchologist's Companion," &c. Foolscap 8vo. Illustrated by numerous Woodcuts, by Baxter, price 6s. 6d.

"This is an excellent book for the youthful and inquisitive, placing before them, in the most popular and agreeable form, the interesting facts of natural history connected with marine productions, zoophytes, sponges, coralline, and fishes. It is full of instruction and amusement."—*Literary Gazette*.  
"The woodcut embellishments (by Baxter) are in the finest style of the art."—*Sunday Times*.

Also,

**5. The Conchologist's Companion; a Familiar Description of Testaceous Animals.** By Mary Roberts. In foolscap 8vo. with several Engravings, the 2d edition, price 3s. 6d. "This is, in every sense of the word, an exquisite little volume."—*New Monthly Magazine*.

By the same Authoress,

**6. The Wonders of the Vegetable Kingdom Displayed.** New edition, 18mo. 6s.

**7. A Popular Guide to the Observation of Nature; or, Hints of Inducement to the Study of Natural Productions and Appearances in their Connections and Relations; shewing the great extent of Knowledge attainable by the unaided exercise of the Senses.** By Robert Mudie, Author of "The Feathered Tribes of the British Islands," &c. 18mo. 3s. 6d. cloth.

"We are furnished with matter for the philosopher, the poet, the historian, the antiquary—all who contemplate nature and earth; and this is furnished in a little book which all may carefully take in the pocket over the whole earth or the whole sea, and thus enable themselves to think, if they have never thought before, and if they have, to think much better."—*Gentleman's Magazine*.

Also, by the same Author,

**8. First Lines of Zoology, by Question and Answer: For the Use of the Young.** In a thick vol. 18mo. with Engravings, price 6s. bound.

"A useful and well-arranged catechism, going through the various branches of Zoology in a clear and simple manner, well adapted for the instruction of youth."—*Literary Gazette*.

**9. The Book of Butterflies, Moths, and**

Spangles. By Captain Thomas Brown, F.R.S. F.L.S. &c. Embellished with numerous highly coloured illustrations. In 3 vols. 8vo. 10s. 6d.

"This is a delightful work, with no fewer than 144 engravings, coloured after nature; and, both by the style of its scientific descriptions and its general arrangement, well calculated to convey ideas at once correct and popular, of the habits and economy of the beautiful tribes of which it treats."—*Literary Gazette*.  
"The engravings alone would be astonishingly cheap at the price of the volume."—*Sunday Times*.

**10. The Natural History of Selborne.** By

the late Rev. Gilbert White, M.A. With Additions by Sir William Jardine, Bart. Also, an enlarged edition of the same Work, with Additions, &c. 6d. A new edition, with 18 superior Engravings by Branstetter, price 3s. 6d.

"A work which men of science, as well as general readers, agree in considering one of the most delightful books ever written."—*New Monthly Magazine*.

**11. The Beauties of the British Poets, with**

a few Introductory Observations by the Rev. George Croy, D.D. &c. 2d edition, illustrated by several highly finished Wood Engravings, 18mo. 7s.

**12. Selections of the most Remarkable Phenomena of Nature.** By H. G. Bell, Esq. 18mo. 3s. 6d. cloth.

**13. Letters from a Mother to her Daughter,** at or going to School, pointing out the Duties towards her Maker, her Government, her Schoolfellows, &c. By Mrs. J. A. Sargent, Author of "Ringstead Abbey," &c. 5th edition, elegantly bound in silk, 18mo. price 3s. 6d.

**14. My Ten Years Imprisonment in Italian**

and Austrian Dungeons. By Silvio Pellico. Translated by Thomas Roscoe. The 2d edition, price 6s.

"This little volume is the record of ten years' imprisonment suffered by Pellico—a person whose reputation as a man of literary taste is acknowledged in Italy; and whose privations and deep sorrows render him an object of interest to all who value liberty, and would not see it shorn of its beams in any land."—*Sun*.

**15. A Juvenile Cyclopaedia.** Pinnock's Ca-

techisms of the Arts and Sciences, forming a complete Cyclopaedia for the Young. A new edition, in 12 vols. Price 3s. 12s. in cloth boards; or, 4s. 10s. half-bound and lettered.

\* \* \* The above can be had in various elegant Bindings, at moderate prices.

Whittaker and Co. Ave Maria Lane, London.

## MISS EDGEMORTH'S WORKS.

With superb Embellishments, in Eighteen Volumes,

**THE TALES and NOVELS of Maria Edgeworth,** complete in Eighteen Volumes, price 5s. each, handsomely bound in water-lined cloth, and lettered. The Illustrations drawn by W. Harvey, and engraved in the first style of excellence by Goodall, C. Kells, Goodyear, H. Robinson, Finden, Hacon, Englehart, &c.

This elegant edition corresponds in size and illustration with Southey's, Cooper, Byron, Crabbe, and Scott's works; and must be a desirable acquisition to all libraries. As a present for youth it is unexceptionable; and for the drawing-room table no work can be more appropriate.

The edition contains the following, any portion of which may be had separately, price 5s. each volume, viz.:

Castle Rackrent and Irish Bulls, 1 vol.

Moral Tales, 2 vols.

Popular Tales, 2 vols.

Tales of Fashionable Life, and Modern Grields, 5 vols.

Bellinda, 2 vols.

Leonora, and Letters for Literary Ladies, 1 vol.

Patronage, 3 vols. Harrington, 1 vol.

Ormond, 1 vol.

London: Baldwin and Cradock, and other Proprietors.

Bound in silk, gilt edges, price 2s. 6d. with Frontispiece from Design by Corboud.

**HOME is its Joys and its Sorrows.** A Domestic Tale.

London: William Bail, Aldine Chambers, Paternoster Row.

3d edition, with very considerable Additions, price 2s. 2s. in sheets.

**A NEW and IMPROVED GEOLOGICAL and MINERALOGICAL MAP of ENGLAND and WALES,** and a large portion of Scotland, as far North as Dundee and Forfar; shewing also the Inland Navigation, by means of Rivers and Canals, with their Elevation in Feet above the Level of the Sea; together with all the Railways, and principal Roads. By J. and C. WALKER.

"The only work which can be said to exhibit, with clearness and accuracy, the progress of British Geology up to the present time."—*Mining Journal*.

Also, intended as an Accompaniment to the above, **Introduction to the Study of Geology,** designed to facilitate a general acquaintance with the principal Facts and Theoretical Deductions of that Science, more particularly as applied to the Internal Structure of Great Britain. By Frederick Burr. Price 4s.

Whittaker and Co. Ave Maria Lane; and J. and C. Walker, a Bursleigh Street, Strand.

Corrected to the Present Time.

Folded in half, half-bound in Russia ..... 29 9 0  
Full size, half-bound in Russia ..... 10 0 0

**A HISTORY of IRELAND, from the Earliest Times to the Union with Great Britain.** By ELIZABETH BLACK BY Whittaker and Co. Ave Maria Lane.

18mo. price 2s. 6d.

**THE ELEMENTS of LATIN**

GRAMMAR, for the Use of Schools.

By RICHARD HILEY,

Author of an English Grammar, &c. &c.

London: Simpkin, Marshall, and Co.; Banks and Co. Manchester; John Heston, Leeds.

Where may be had, by the same Author, 18mo. 1s. 6d.

**First Progressive Latin Exercises, adapted to the Orthography and Etymology of Hiley's Latin Grammar;** to which are added, Exercises on the most general Rules of Syntax.

This Grammar has already obtained the approbation of some of the most distinguished Foreigners of the Age, whose sanction, in the estimation of Scholars, will be a sufficient guarantee as to the merits of the work itself.

The Right Rev. Kameel Butler, D.D., late the Learned Head Master of Shrewsbury Free Grammar School, now Lord Bishop of Lichfield and Coventry, has, in a Letter to the Author, honoured the work with the following Opinion:—

"I think your book, wherever I have examined it, done with care and ability; it is short, clear, and well selected, and likely to be very useful."

The learned and distinguished Author of the "Gymnasium," Dr. Alexander Crombie, thus speaks of the book:—

"I have read your little volume, and shall have no hesitation in recommending it as an excellent compendium of the principles of Latin Grammar. It contains much useful matter, well arranged, and comprised in a small compass. It does equal credit to your industry and your judgment."

In 2 vols. 8vo. price 1l. 11s. 6d.

**A HISTORY of the LIFE of EDWARD the BLACK PRINCE, and of various Events connected therewith, which occurred during the Reign of Edward the Third, King of England.**

By G. F. R. JAMES, Esq.  
With some Observations on the Third Notice in the Athenaeum. London: Longman, Rees, Orme, and Co.

**Z U L N E I D A;**  
a Tale of Sicily.

By Dr. ARTHUR MOWER,  
Author of "The White Cottage,"  
John Macrone, St. James's Square.

## SPLENDID BOOKS OF PRESENTS.

In imperial 4to. price 42s.; India Proof, 62s.

**FINDEN'S TABLEUX;**

A Series of Picturesque Scenes of National Character, Beauty, and Costume.

Edited by Mrs. S. C. HALL.

"An Annual of the same class to which the 'Flowers of Loveliness' and 'Gems of Beauty' belong; and it is superior to both in its plan and execution."—*Spectator*.

"Every one of the engravings is worth the notice of the collector, and the whole form a charming portfolio; the binding is so rich and tasteful as to merit a distinct notice."—*Atlas*.

II.

Price 1l. 11s. 6d. superbly bound in morocco,

**Finden's Gallery of the Graces.**

A Series of Thirty-six beautiful Female Heads, illustrating celebrated Passages in Modern British Poets, with accompanying Extracts.

The Paintings were designed expressly for this work by the most eminent Artists. The binding, in richness and luxury, far surpasses any thing of the kind ever attempted.

III.

Price 1l. 11s. 6d. morocco, elegant,

**Le Byron des Dames;**

Or, Portraits of the principal Female Characters in

Lord Byron's Poems.

\* \* \* This Volume is in large 2d. bound in rose-coloured morocco, very richly gilt, and contains Thirty-nine Plates from original Paintings, engraved under the superintendence of W. and E. Finden. Each subject is illustrated by critical remarks and poetical extracts.

Charles Tilt, Fleet Street.

## MOORE'S LALLA ROOKH.

Just published by Longman, Rees, Orme, and Co. London.

I.

**THE AMERICANS, in their Social, Moral,**

and Political Relations.

By FRANCIS J. GRUND.

2 vols. 8vo. 9s. cloth.

"This is the result of a long residence in the country, and a careful observation of its moral and social habits."—*Lit. Gaz.*  
"Exhibits such an amount of ability, and is written with such a familiar knowledge of the subject, that it is entitled to a large share of consideration."—*Atlas*.

II.

**Glenlonely; a Novel.**

2 vols. post 8vo.

"This is a smart, well-written work—one of which no man need blush to avow the authorship. Indeed, we can scarcely suppose it to be a first attempt, for the author has arranged his materials with all the skill of a veteran novelist. His characters are powerfully, and at the same time naturally drawn."—*Sunday Times*.

III.

**Education Reform;**

Or, the Necessity of a National System of Education.

By Thomas White, Esq. M.P.

Vol. I. 8vo. price 15s. in cloth.

"Less than thorough will not do it."—*Lord Stafford*.

To be published in a few days.

IV.

*New Work by the Author of "Moral of Flowers."*

**The Spirit of the Woods.**

Illustrated by Twenty-six beautifully coloured Engravings.

1 vol. royal 8vo.

 Agent for Paris, G. W. M. Reynolds, Librairie des Etrangers, 55 Rue Neuve, St. Augustin.

### REVIEW OF NEW BOOKS.

1. *The Book of the New Covenant of our Lord and Saviour, Jesus Christ.* By Granville Penn, Esq. 8vo. pp. 470. 2. *Annotations to the Book of the New Covenant; with an Expository Preface, in which is reprinted, J. L. Hug, De Antiquitate Codicis Vaticani Commentatio.* By the Same. 8vo. pp. 509. London, 1837. Duncan.

MR. PENN is well known to biblical scholars, as a gentleman who has devoted a large portion of his life to the illustration of the Scriptures. Actuated by the desire, the most honourable, pure, and wise of all, of giving his tribute to the cause of God and the well-being of his fellow-men, he has been a vigorous assailant of the infidelity which, in his judgment, has attempted to shake the Mosaic history. In his latest work, the volumes before us, bringing to his noble task the aids of intelligent scholarship, clear judgment, and religious sincerity, he has conferred an inestimable service on the Christian world.

From the commencement of the eighteenth century, a remarkable degree of attention had been directed to the Greek text of the New Testament: Mr. Penn calls it the New Covenant, and justly; but we retain the name, in this fugitive notice, merely from its common use. A great deal of most valuable information was obtained by comparison of the MSS. which then began to be drawn from the libraries abroad and at home; but this was scarcely more than an exhibition of scholastic dexterity. The practical application of the discoveries was still wanting; and when the application was made, it was, unhappily, made by hands, of all others, the most unfitted for a duty of such incomparable importance. Of all the nations that tread the earth, the Germans possess the least of that faculty which enables men to draw a rational conclusion. They are admirable pioneers. No nation can toil with more indefatigable drudgery; but when the way through the wilderness is once opened by those sturdy serfs, hands of a much higher order must convert it into usefulness, or cover it with beauty. One great misfortune which pervades the German theological school is, that nearly all the leading scholars are professors in their universities, and dependent on the casual popularity of their lectures. The general result is, that truth gives way to income. The professor must consult novelty; cultivate the fashionable mode of thinking; be supremely cautious of offending public prejudice; and, above all, in-  
~~duce~~ <sup>duce</sup> his hearers in those daring defiance of scriptural reality, and in those flighty and fantastic views of scriptural mysteries, which gratify the presumption of the immature. The example of Frederic the Second, the witty and singularly worthless king of Prussia—himself the mimic of Voltaire, as he made his kingdom the mimic of France—spread infidelity through Germany; a crime for which his country afterwards feebly atoned, by years of chains and torrents of blood.

Another great misfortune of Protestant Germany is, the want of an Established church, thereby wanting all the invaluable advantages

that are to be derived to religion—from a public and acknowledged repository of doctrine from ancient times;—a perpetual provision of learning and learned men, expressly appointed to the defence and illustration of the ancient truth;—a standard of sufficient authority to restrain the caprices, without controlling the freedom of the human mind, and a power, invested with that salutary civil discipline, by which men are kept from outrage until they have learned to reason; and gross insults and voluntary violence to religion are held in a degree of order, essential less even to the peace of the church than the safety of the community.

The number of the MSS. of the New Testament already collated, is about 500. Many of those are copies of each other; many are fragments; and nearly all exhibit marks of that haste, error, and ignorance, which were to be expected from copyists, untaught, hurried, or terrified by the fear of persecution. The extinction of the Scriptures has been the especial object of persecution, from the days of Trajan, down to the last decree of the pope, which actually describes the Bible Society as “the operation of the devil.” Four classes, or families, of those MSS. have been supposed by the German scholars. Griesbach, their most celebrated name, arranges those “Recensions” under the Alexandrine, the Occidental, and the Byzantine. Michaelis has added the Edessene. Scholz reduces them to two, the Alexandrine and Constantinopolitan, of which he regards the former as the inferior. Mr. Penn, on the contrary, regards the Alexandrine as palpably the superior, and substantiates its claim.

Our authorised translation is chiefly from the Latin vulgate, an unfortunate source, for the vulgate is frequently inaccurate; and the Latin, by wanting the article, is unequal to give the *exactness* of the Greek. The text of our Greek Testament is nearly in the same condition. It is based on the text published by Erasmus, originally in 1516, and subsequently corrected in four editions. He does not appear to have had more than four MSS. for this work; and even to the last he had but eight, and none of those older than the tenth century. The “*Editio Princeps*” of Erasmus, in 1516, successively corrected by himself, Stephens, Beza, and Elzevir, is our present *textus receptus*. Thus, its authority rests upon about four MSS. of low date. We have since had between six and seven hundred MSS., some of them rising up to the fifth century. It is to give the world the advantage of those important aids, that Mr. Penn has produced his translation.

On the first principle of criticism, that of presuming the oldest MS. authority to be nearest the truth, he has taken the entire text of the most ancient surviving MS., the “Codex Vaticanus,” or Vatican MS., noted 1209 in the Vatican catalogue, and marked B by Wetstein. This celebrated MS., from its acknowledged priority in age to all other existing MSS., possesses an authority to which none of those can lay claim, by which the latest revisers of our authorised version sought to improve the English translation. It is the

only surviving MS. so ancient as to have been written, not only before the general adoption of the Ammonian and Euthalian divisions of the Scripture, but also before the incorporation of the name of “Ephesus” with the context of St. Paul’s introduction to the circular Epistle to the churches of Asia Minor. Of this MS. Scholz says, “that it takes precedence of all MSS. in point of venerable antiquity, for it was written in the fifth century.” Other authorities place it higher still. Schulz says, that Hug has *proved* that it was written before the middle of the fourth century.

But the Christian student is not to be alarmed by such announcements of discoveries in the text of the Scriptures: it is his business to know the truth, and to follow it. Yet, it is remarkable that those varieties of the MSS. are almost wholly confined to points which, in any other book, would be regarded as scarcely more than the play of criticism. A sentence here and there is taken away, which, in the course of time had crept from the note in the margin into the body of the text. A misreading of a part of a word, which confused the sense, is corrected, and the sense is thus far restored; and this is nearly all. There is no impeachment of any of the great received doctrines; no obscurity thrown on any of the received facts; no aid given to any of the ancient or modern heresies, which have with such melancholy effect oppressed the career of Christianity: they have not been able to stain the purity of Scripture. On this point we have, with especial respect to the great primary doctrine of Christianity—the *divinity of our Lord*—the valuable testimony of Michaelis. “After the most diligent inquiry,” says this celebrated scholar, “especially by those who would banish the divinity of Christ from the articles of our religion, not a single serious reading has been discovered in the two principal passages—John, i. 1, and Rom. ix. 5; and this very doctrine, instead of being shaken by the collations of Mill and Wettstein, has been rendered more certain than ever. The adversaries of the Christian religion, then, have no reason to triumph in the formidable number of our various readings.” (Introd. vol. i. 266.)

It is not our purpose to detail the many examples in which an adherence to the Vatican MS. has cleared the text, and, through it, the excellent translation which Mr. Penn offers to the public. Without any touch of pertinacity or pedantry, he has shewn the uses of calm and vigorous knowledge applied to the elucidation of Scripture difficulties. Some of his new translations of words and sentences are undeniable; and, if we do not always agree with them in their full generality, we are sure to find reason for very closely examining our previous opinions. Thus, in the instance of the word, *δικαιοσύνη*, Mr. Penn pronounces it to be, in every case, *justification*, and not, as is usual, *righteousness*. We fully admit that the doctrine of “imputed righteousness,” taken literally and coarsely, is a hazardous one; that it produces boasting, and that it is wholly impossible to conceive how the virtues of one man can be substantially transferred to the person of another. But, if this word is always to be

threshold of the cottager, and betakes itself to the budding woods, where it joins the vernal chorus. It now loses much of its familiarity with man, and its habits become fully as shy and secluded as the rest of the sylvan choristers. Still, however, though it seldom enters our houses during the summer months, yet it evinces its attachment for the dwellings of man by frequenting, chiefly, such woods as are in the neighbourhood of them. Thus, if you enter the heart of an extensive wood, you are not likely to meet with it; but as you advance to its skirts, and especially where there are houses, you are sure to be saluted with its 'wood-notes wild.' Like the house-sparrow, it is not met with in uninhabited places, bleak moors, extensive commons, &c., but occurs, and that plentifully, near the dwellings of man. Thus far, certainly, it has claims on our protection; but when, on the other hand, we look to its pugnacious and relentless habits, its revengeful and vindictive propensities, one would almost feel inclined to close one's door against it in the time of need. The whole summer is spent in quarrelling, and this warfare is carried on without regard to either sex or age. Like game-cocks, the young redbreasts begin to fight as soon as they leave the nest: nor do they pay more respect to their own relations; nothing being commoner than to see the adults pursuing even their own offspring, with unrelenting ardour, amid the very bushes, perchance, where, but a few days ago, they had been so fondly cherished and protected in the nest. So much for the parental affection of this apparently lovely and innocent bird. But, kind reader, if you will only have patience, I can tell you some more tales about your favourite—tales, too, which you might verify any day with your own eyes, if you would just take the trouble of strolling through the grove adjoining your house in summer. My esteemed correspondent, Mr. Blyth, says he has seen two of these birds fight in his garden until one was killed; and, though I have never known their battles come to that extremity, yet I have, on many occasions, observed them skirmishing with such relentless ferocity and unabated ardour, that, had I not interposed, fatal consequences must inevitably have ensued to one party. On one occasion, especially, I remember to have found two of these birds engaged in such glorious conflict, under a laurel bush, that neither of the combatants observed my approach, or, at all events, they heeded it not; and both of them fell into the hands of the 'prying naturalist.' On putting them into a cage, capacious enough to have held a dozen birds of a more peaceful nature, to my no small surprise they renewed the combat as fiercely as ever. I now released one of my prisoners, and each of them instantly poured forth its song in defiance of the other—the one within the wires, and the other at full liberty. The next day I set my other captive at liberty, and, on the evening of the same day, found the champions again at their post, fighting each other 'tooth and nail.' I now separated them for the third and last time. This is what one would call carrying the spirit of revenge rather too far. The organ of destructiveness must be very fully developed in this bird. I have often taken advantage of the extreme pugnacity of the robin-redbreast, for the capturing others of its species. The method alluded to is as follows:—if you tie a robin-redbreast by the leg inside a small cage, and leave the door open, many minutes will not elapse before another of its kind, attracted by its fluttering, approaches the cage, hops round it two or three times, uttering its

note of menace, and, lastly, boldly rushes into the cage, and enters into close combat with the unfortunate captive. How the battle might terminate, if the birds were left to themselves, I know not; but suffice it to say, that the new comer may be captured, and, in his turn, be tied to the cage, as a lure for its brethren. But it is unnecessary even to use a cage for this purpose. The birds may be tied, as soon as caught, to a stake, or any thing that is at hand; for the robin redbreast, when intent on destroying one of its fellow-creatures, is little mindful of any danger that may threaten itself. Whether or not that dreadful enemy to birds, the wily cat, would have any influence on them at such times, I am not aware; but, so far as I have observed, man has not. It may also be captured by smearing the edges of a vessel, filled with hemp or canary-seed, with birdlime; but this is apt to soil its delicate plumage to such a degree, that the bird is scarcely 'fit to be seen' afterwards. If it were worth while, however, it might be wiped off with sand or dry earth. There are many other ways of capturing the robin-redbreast, but these it is unnecessary to detail; for, whatever excuse there may be for keeping other birds in cages, there surely can be none for confining this, as it may be both seen and heard at all times and all seasons, with very little trouble. While it requires the enthusiasm of a Wilson, an Audubon, a Montagu, or a Mudie, to investigate the habits of the feathered inhabitants of the rock, the mountain, the swamp, and the river, the ways of our familiar songster are always open to the view of the most careless observer. And this it is which has caused it to become so general a favourite in all the countries it visits or inhabits. The song of the robin-redbreast is not very loud, but is remarkable for its sweet, soft, and melancholy expression. In summer, as I have before observed, it is little noticed, but in autumn it is peculiarly delightful; though I am certain of the truth of Selby's supposition, that the notes which are heard in autumn and winter, proceed from the throats of the young of the year. Nor do I ever remember to have heard the adult bird singing, in its natural state, during the inclement seasons; but, when confined to the house, or in a cage, both old and young will carol away 'right merrily.' In sweetness and softness, I think the song of the robin-redbreast is unexcelled by any of our other sylvan choristers, though, as a whole, it is surpassed by many. Witness, for instance—leaving the brake-nightingale, the 'leader of the vernal chorus' out of the question—the ethereal strains of the garden-fauvet, the black-capt-fauvet, the wood-lark, and many others. But none of these—no, not even the brake-nightingale itself, possesses that ineffably sweet expression which we must pronounce to be peculiar to our humble favourite."

Mr. Wood has tried some curious experiments in placing the eggs of one bird in the nest of another, a practice well worth the notice and pursuit of every observer of their habits; and he tells us,—

"I once added to a garden thrush's nest, containing five eggs, other five eggs belonging to a garden ouzel in the neighbourhood, whom I had taken the liberty of robbing of her lawful property. Eight of these were hatched, and nearly the whole got safely through their infancy. The parents appeared to have some difficulty in providing for so large a progeny, and, after a few days, one of the young garden ouzels died; though I believe it was rather crushed than starved to death. I had the pleasure of

seeing this motley brood follow their parents among the long grass and low bushes many days after they had quitted the nest, but observed that after a time they parted company, and the garden ouzels were no longer seen. The rest remained with their parents a considerable time (as is their custom), and were fed by them."

Again, speaking of sparrows:—

"I once found a nest in a small hole immediately over a passage, amongst some offices, where servants were constantly passing and re-passing. Having taken out the eggs, six in number, I replaced them by an equal number of garden thrush's eggs, which, notwithstanding their large size, were duly hatched. After this, I visited the spot every day; but three of the young birds died in succession, having been either squeezed or starved to death. Two now remained, and I saw them till they were fully fledged, when they disappeared, and probably escaped in safety. I was very desirous of seeing how the young birds were fed, but never succeeded in attaining this object."

The following, respecting the ivy-wren, is singular:—

"It is a curious, and, to naturalists, a well-known fact, that this bird varies the materials of its nest according to the situation in which it is placed; and, accordingly, those built in ivy-clad walls or trees, and in mossy places of any kind, invariably consist almost wholly of green moss outside. But when it builds in raspberry bushes, scarce a particle of green moss is used; the whole structure, both externally and internally, being composed of the leaves of the raspberry. This is one of the most extraordinary departures from the ordinary mode of nest-building with which I am acquainted; and, though three or four instances of it have fallen under my observation, it appears to have been noticed by no writers on British ornithology whose works I have consulted."

As Londoners aforesaid, and used to their company, we are sorry to find that Mr. Wood is a determined enemy to sparrows, which he calls familiar and detested creatures.

"Few birds," he declares, "are so common, or so universally met with, as the pert, mischievous, thieving house-sparrow."

"The house-sparrow has never been a favourite with me; and, looking at its bold, vulgar, and impudent aspect, one would scarce imagine it to rank in the same family as the common goldwing, the hedge coalhood, the buntings, or, in short, with any of the other British *Fringillidae*. Indeed, its 'radically plebeian' manners go very far to justify the train of maledictions poured upon its hapless head by the eloquent and illustrious, but faulty Buffon. It everywhere carries with it a bad reputation; though, of course, its extensively frugivorous propensities, and its voracious appetite, weigh infinitely more—and, perhaps, justly—with the multitude, than any defects in plumage, manners, or even voice."

It is not, perhaps, for us to endeavour to stem this torrent of abuse; but we would urge, in exculpation to a certain degree, that it may be owing to his near neighbourhood and constant intercourse with mankind, that the sparrow has become voracious, thieving, bold, vulgar, impudent, and plebeian. These are all human propensities and habits, and birds may catch them as we catch birds: at any rate, we should like to hear a sparrow's version of the matter, or read a small volume from his quill, dedicated to his esteemed and highly gifted friend, Chaff Finch, Esq. F.O.S. But inimical as our author is to these *Fringillidae*, he is

obliged to confess they have some good qualities—some virtues that would do honour to their human associates. For,

"Few birds are more careful of their young than the present species, and fewer still of our small birds take such effectual means of preserving them. The parents will follow their caged young to any distance; and, if they happen to be absent at the time of the capture, scent them out in an incredibly short space of time. I remember, on one occasion, caging four young birds, from a nest in the thatch of a cottage. They were instantly carried off to a distance of about two miles, in the absence of the parents, and were imprisoned in a small out-house, where their cries, if they made any, could not possibly be heard by the old birds. Scarcely had they been there five minutes, however, when the parents arrived, and made their way to the young captives through a broken pane of glass. As soon as they had been fed and fondled, the parents departed, in search of more food, as the young birds were by no means satisfied. I now carried them to quite a different part of the house, and lodged them in a kind of cellar, with but one small aperture for light and air. Here they made no noise, but lay perfectly still, and must have been very hungry. For some hours the old sparrows were observed flying about in all directions, in search of their young. At length, I perceived them fly over the very spot where they were concealed, when the prisoners instantly set up loud cries. This acted like an electric shock upon them—they dropped down as if 'thunder-struck;' but, recovering their wings before they reached the ground, a few minutes found them feeding the young birds, which were now allowed to escape. This proves how great is the affection of the house-sparrow for its young, and how sagacious it is in searching them out when lost."

They need no Foundling Hospitals. But these few selections must suffice for all we have to do for Mr. Wood's book, which is altogether a very pleasing one, and full of that sort of observation which is invariably delightful to readers of every description. We have now to notice—

*The Ornithological Guide, &c.* By C. Thorold Wood, Esq. pp. circ. 240. London. Whitaker.

IN this the author discusses (as he says on his title-page) several interesting points in ornithology, particularly the subject of nomenclature, one of the greatest stumbling-blocks in the science. The early part of the work is occupied with a rather strongly worded argument against the opinions of Mr. Strickland, addressed to *The Analyst*, on this question, which we must leave to the original fields of fight. Mr. Wood then passes under brief review most of the works on ornithology which have recently been published, and, we think, very justly remarks on their merits and defects. But his best portion is an appendix—a catalogue of the birds of Britain; which, in spite of the uncertainty and multiplicity of names still given to almost every genus and family (and, in spite of some of his own rejections and innovations much confusing the student), will be found to be of essential use to the ornithologist in every district of Great Britain.

*Recollections of Europe.* By J. Fenimore Cooper, Esq., author of "The Pilot," "The Spy," &c. 2 vols. 8vo. London, 1837. Bentley.

"I HAVE (says Mr. Cooper, in his Preface) no excuse of haste, or of want of time, to offer for the defects of these volumes. All I ask is, that

they may be viewed as no more than they profess to be. They are the gleanings of a harvest already gathered, thrown together in a desultory manner, and without the slightest, or, at least, very small pretensions, to any of those arithmetical and statistical accounts that properly belong to works of a graver character. They contain the passing remarks of one who has certainly seen something of the world, whether it has been to his advantage or not; who had reasonably good opportunities to examine what he saw; and who is not conscious of being, in the slightest degree, influenced 'by fear, favour, or the hope of reward.' His *compte rendu* must pass for what it is worth."

This is a fair statement and challenge; in observing upon which, we can truly say that we have found many things to interest and amuse us in these "desultory pages." They are an *omnium gatherum*, as folks call things of the sort; but when they proceed from observant persons, they, however slight, are almost sure to have enough to gratify observant readers. We will follow in Mr. Cooper's track, as given in his letters, and endeavour to illustrate this position. In June 1826, he left New York, and arrived safely in England, where we select his first experience (this voyage after twenty years) at Cowes:—

"The Isle of Wight is celebrated for its butter, and yet we found it difficult to eat it! The English, and many other European nations, put no salt in their table butter; and we, who had been accustomed to the American usage, exclaimed with one voice against its insipidity. A near relation of A——'s, who once served in the British army, used to relate an anecdote on the subject of tastes, that is quite in point. A brother officer, who had gone safely through the celebrated siege of Gibraltar, landed at Portsmouth, on his return home. Among the other privations of his recent service, he had been compelled to eat butter whose fragrance scented the whole Rock. Before retiring for the night, he gave particular orders to have hot rolls and Isle of Wight butter served for breakfast. The first mouthful disappointed him, and, of course, the unlucky waiter suffered. The latter protested that he had executed the order to the letter. 'Then take away your Isle of Wight butter,' growled the officer, 'and bring me some that has a taste.'"

Among the London sights and sensations, the following smacks of the originality with which an intelligent American will view what to us are familiar objects,—it relates to Westminster Abbey:—

"I stood gazing at the pile, until I felt the sensation we term 'a creeping of the blood.' I knew that Westminster, though remarkable for its chapel, was by no means a first-rate specimen of its own style of architecture; and, at that moment, a journey through Europe promised to be a gradation of enjoyments, each more exquisite than the other. All the architecture of America united would not assemble a tithe of the grandeur, the fanciful, or of the beautiful (a few imitations of Grecian temples excepted), that were to be seen in this single edifice. If I were to enumerate the strong and excited feelings which are awakened by viewing novel objects, I should place this short visit to the abbey as giving birth in me to sensation No. 1. The emotion of a first landing in Europe had long passed; our recent 'land-fall' had been like any other 'land-fall,' merely pleasant; and I even looked upon St. Paul's as an old and a rather familiar friend. This was absolutely my introduction to the Gothic,

and it has proved to be an acquaintance pregnant of more pure satisfaction than any other it has been my good fortune to make since youth."

From England Mr. C. proceeded to France, and landed at Havre, where every thing was most uncomfortable. Thence he steamed up the Seine for Rouen, and, by land, to Paris. At Paris the annexed remarks on centralisation strike us:—

"It was the policy of Napoleon to create a system of centralisation, that should cause every thing to emanate from himself. The whole organisation of government had this end in view, and all the details of the departments have been framed expressly to further this object. The prefects are no more than so many political *aides*, whose duty it is to carry into effect the orders that emanate from the great head; and lines of telegraphs are established all over France, in such a way that a communication may be sent from the Tuilleries to the remotest corner of the kingdom in the course of a few hours. It has been said, that one of the first steps towards effecting a revolution ought to be to seize the telegraphs at Paris, by means of which such information and orders could be sent into the provinces as the emergency might seem to require. This system of centralisation has almost neutralised the advancement of the nation in a knowledge of the usages and objects of the political liberty that the French have obtained, by bitter experience, from other sources. It is the constant aim of that portion of the community which understands the action of free institutions, to increase the powers of the municipalities, and to lessen the functions of the central government; but their efforts are resisted with a jealous distrust of every thing like popular dictation. Their municipal privileges are, rightly enough, thought to be the entering wedges of real liberty. The people ought to manage their own affairs, just as far as they can do so without sacrificing their interests for want of a proper care, and here is the starting point of representation. So far from France enjoying such a system, however, half the time\* a bell cannot be rung in a parish church, or a bridge repaired, without communications with, and orders from, Paris."

In Paris, Mr. Cooper met Mr. Canning at an entertainment given by the American minister, and he tells us:—

"Mr. Gallatin did me the favour to present me to Mr. Canning. The conversation was short, and was chiefly on America. There was a sore spot in his feelings in consequence of a recent negotiation, and he betrayed it. He clearly does not love us; but what Englishman does?"

Speaking more generally, he adds:—

"I have learned early to understand, that wherever there is an Englishman in the question, it behoves an American to be reserved, punctilious, and sometimes stubborn. There is a strange mixture of kind feeling, prejudice, and ill-nature, as respects us, wrought into the national character of that people, that will not admit of much mystification. That they should not like us may be natural enough; but, if they seek the intercourse, they ought, on all occasions, to be made to conduct it equally, without annoyance and condescension, and on terms of perfect equality; conditions, by the way, that are scarcely agreeable to their present notions of superiority."

We are glad to see such sentiments at least partially corrected in a note:—

\* The meaning here seems obscure.

"The change in this respect during the last ten years is *patent*. No European nation has, probably, just at this moment as much real respect for America as the English, though it is still mixed with great ignorance, and a very sincere dislike. Still, the enterprise, activity, and growing power of the country are forcing themselves on the attention of our kinsmen; and if the government understood its foreign relations as well as it does its domestic, and made a proper exhibition of maritime preparation and of maritime force, this people would hold the balance in many of the grave questions that are now only in abeyance in European politics."

We abstain from the past politics and revolution in Paris, respecting which Mr. Cooper's details possess considerable interest, and rather refer to his more peculiar topics. His meeting with Sir Walter Scott (with whom a Princess ——— had promised to make him better acquainted) is characteristic. A carriage drove up to his residence as he was going out, but he returned to ascertain if the visit might be to himself.

"The carriage-steps rattled, and presently a large, heavy-moulded man appeared in the door of the hotel. He was gray, and limped a little, walking with a cane. His carriage immediately drove round, and was succeeded by mine, again; so I descended. We passed each other on the stairs, bowing as a matter of course. I had got to the door, and was about to enter the carriage, when it flashed on my mind that the visit might be to myself. The two lower floors of the hotel were occupied as a girl's boarding-school—the reason of our dwelling in it, for our own daughters were in the establishment; *au seconde*, there was nothing but our own *appartement*; and above us, again, dwelt a family whose visitors never came in carriages. The door of the boarding-school was below, and men seldom came to it at all. Strangers, moreover, sometimes did honour me with calls. Under these impressions I paused, to see if the visitor went as far as our flight of steps. All this time, I had not the slightest suspicion of who he was, though I fancied both the face and form were known to me. The stranger got up the large stone steps slowly, leaning with one hand on the iron railing, and with the other on his cane. He was on the first landing as I stopped, and, turning towards the next flight, our eyes met. The idea that I might be the person he wanted, seemed then to strike him for the first time. 'Est-ce Mons. — que j'ai l'honneur de voir?' he asked, in French, and with but an indifferent accent. 'Monsieur, je m'appelle —.' 'Eh bien, donc — je suis Walter Scott.' I ran up to the landing, shook him by the hand, which he stood holding out to me cordially, and expressed my sense of the honour he was conferring. He told me, in substance, that the Princess ——— had been as good as her word, and, having succeeded herself in getting hold of him, she had good-naturedly given him my address. By way of cutting short all ceremony, he had driven from his hotel to my lodgings. All this time he was speaking French, while my answers and remarks were in English. Suddenly recollecting himself, he said—'Well, here have I been *parlez-vous*ing to you, in a way to surprise you, no doubt; but these Frenchmen have got my tongue so set to their lingo, that I have half forgotten my own language.' As we proceeded up the next flight of steps, he accepted my arm, and continued the conversation in English, walking with more difficulty than I had expected to see. You will excuse the vanity of my repeating the next observation he made,

which I do in the hope that some of our own exquisites in literature may learn in what manner a man of true sentiment and sound feeling regards a trait that they have seen fit to stigmatise as unbecoming. 'I'll tell you what I most like,' he added, abruptly; 'and it is the manner in which you maintain the ascendancy of your own country on all proper occasions, without descending to vulgar abuse of ours. You are obliged to bring the two nations in collision, and I respect your liberal hostility. This will, probably, be esteemed treason in our own self-constituted Mentors of the press, one of whom, I observe, has quite lately had to apologise to his readers for exposing some of the sins of the English writers in reference to ourselves! But these people are not worth our attention, for they have neither the independence which belongs to masculine reason, nor manhood even, to prize the quality in others. 'I am afraid the mother has not always treated the daughter well,' he continued, 'feeling a little jealous of her growth, perhaps; for, though we hope England has not yet begun to descend on the evil side, we have a presentiment that she has got to the top of the ladder.' There were two entrances to our apartments; one, the principal, leading by an ante-chamber and *salle à manger* into the *salon*, and thence, through other rooms, to a terrace; and the other, by a private corridor, to the same spot. The door of my cabinet opened on this corridor, and though it was dark, crooked, and any thing but savoury, as it led by the kitchen, I conducted Sir Walter through it, under an impression that he walked with pain; an idea of which I could not divest myself, in the hurry of the moment. But for this awkwardness on my part, I believe I should have been the witness of a singular interview. General Lafayette had been with me a few minutes before, and he had gone away by the *salon*, in order to speak to Mrs. —. Having a note to write, I had left him there, and I think his carriage could not have quitted the court when that of Sir Walter Scott entered. If so, the general must have passed out by the ante-chamber about the time we came through the corridor. There would be an impropriety in my relating all that passed in this interview; but we talked over a matter of business, and then the conversation was more general. You will remember that Sir Walter was still the Unknown, and that he was believed to be in Paris in search of facts for the Life of Napoleon. Notwithstanding the former circumstance, he spoke of his works with great frankness and simplicity, and without the parade of asking any promises of secrecy. In short, as he commenced in this style, his authorship was alluded to, by us both, just as if it had never been called in question. He asked me if I had a copy of the — by me; and, on my confessing I did not own a single volume of any thing I had written, he laughed, and said he believed that most authors had the same feeling on the subject: as for himself, he cared not if he never saw a Waverley novel again, as long as he lived. Curious to know whether a writer, as great and as practised as he, felt the occasional despondency which invariably attends all my own little efforts of this nature, I remarked that I found the mere composition of a tale a source of pleasure; so much so, that I always invented twice as much as was committed to paper in my walks, or in bed, and in my own judgment much the best parts of the composition never saw the light; for what was written was usually written at set hours, and was a good deal a matter of chance, and that going over and over the same subject in proofs

disgusted me so thoroughly with the book, that I supposed every one else would be disposed to view it with the same eyes. To this he answered, that he was spared much of the labour of proof-reading, Scotland, he presumed, being better off than America in this respect; but still he said he 'would as soon see his dinner again after a hearty meal, as to read one of his own tales when he was fairly rid of it.' He sat with me nearly an hour, and he manifested, during the time the conversation was not tied down to business, a strong propensity to humour. Having occasion to mention our common publisher in Paris, he quaintly termed him, with a sort of malicious fun, 'our Gosling;\*' adding, that he hoped he, at least, 'laid golden eggs.' I hoped that he had found the facilities he desired, in obtaining facts for the forthcoming history. He rather hesitated about admitting this. 'One can hear as much as he pleases, in the way of anecdote,' he said, 'but then, as a gentleman, he is not always sure how much of it he can, with propriety, relate in a book; besides,'—throwing all his latent humour into the expression of his small gray eyes,—'one may even doubt how much of what he hears is fit for history on another account.' He paused, and his face assumed an exquisite air of confiding simplicity, as he continued, with perfect *bonne foi* and strong Scottish feeling, 'I have been to see my *countrysman*, McDonald, and I rather think that will be about as much as I can do here, now.' This was uttered with so much *naïveté* that I could hardly believe it was the same man who, a moment before, had shewn so much shrewd distrust of oral relations of facts. I inquired when we might expect the work. 'Some time in the course of the winter,' he replied, 'though it is likely to prove larger than I at first intended. We have got several volumes printed, but I find I must add to the matter considerably, in order to dispose of the subject. I thought I should get rid of it in seven volumes, which are already written, but it will reach, I think, to nine.' 'If you have two still to write, I shall not expect to see the book before spring.' 'You may: let me once get back to Abbotsford, and I'll soon knock off those two fellows.' To this I had nothing to say, although I thought such a *tour de force* in writing might better suit invention than history. When he rose to go, I begged him to step into the *salon*, that I might have the gratification of introducing my wife to him. To this he very good-naturedly assented, and, entering the room, after presenting Mrs. — and my nephew, W., he took a seat. He sat some little time, and his fit of pleasantry returned, for he illustrated his discourse by one or two apt anecdotes, related with a slightly Scottish accent, that he seemed to drop and assume at will. Mrs. — observed to him that the *bergère* in which he was seated had been twice honoured that morning, for General Lafayette had not left it more than half an hour. Sir Walter Scott looked surprised at this, and said, inquiringly, 'I thought he had gone to America, to pass the rest of his days?' On my explaining the true state of the case, he merely observed, 'He is a great man;' and yet I thought the remark was made coldly, or in complaisance to us. When Sir Walter left us, it was settled that I was to breakfast with him the following day but one. I was punctual, of course, and, found him in a new silk *douillette* that he had just purchased, trying 'as hard as he could,' as he pleasantly observed, to make a Frenchman of himself—an undertaking as little likely to be successful, I should think, in the case of his

\* His name was Goselin.

Scottish exterior, and Scottish interior, too, as any experiment well could be.

"He did not appear to me to be pleased with Paris. His notions of the French were pretty accurate, though clearly not free from the old-fashioned prejudices."

At the princess's evening party,—"As a matter of course, all the French women were exceedingly *empresses* in their manner towards the Great Unknown; and, as there were three or four that were very exaggerated on the score of romance, he was quite lucky if he escaped some absurdities. Nothing could be more patient than his manner under it all; but, as soon as he very well could, he got into a corner, where I went to speak to him. He said, laughingly, that he spoke French with so much difficulty, he was embarrassed to answer the compliments. 'I am as good a lion as needs be, allowing my mane to be stroked as familiarly as they please, but I can't growl for them in French. How is it with you?' Disclaiming the necessity of being either a good or a bad lion, being very little troubled in that way, for his amusement I related to him an anecdote. Pointing out to him a Comtesse de —, who was present, I told him I had met this lady once a-week for several months, and at every *soirée* she invariably sailed up to me to say,—'Oh, Monsieur —, quels livres! — vos charmans livres — que vos livres sont charmans!' and I had just made up my mind that she was, at least, a woman of taste, when she approached me with the utmost *sang-froid*, and cried—'Bon soir, Monsieur —; je viens d'acheter tous vos livres, et je compte profiter de la première occasion pour les lire!' I took leave of him in the ante-chamber, as he went away, for he was to quit Paris the following evening."

*Flittings of Fancy.* By Robert Sullivan, Esq. 2 vols. post 8vo. London, 1837. Colburn. Most of these flittings are familiar friends, having appeared in different annuals, periodicals, &c.; but Mr. Sullivan is welcome, in any shape, for the vein of originality which characterises his sketchy productions is always delightful. These two volumes consist of tales in prose and verse, dramatic pieces, &c. from which medley we extract portions of a *fil* which is new to us: it is entitled, "Editors and Authors," and faithfully tells some of the sufferings of the unfortunate caterer to public taste.

"I dare say there are few amateurs or incipient professors of literature, who do not think that the editor of a magazine is the most comfortable workman in the craft."

Now, to prove the contrary, we have a reply to a polite note.

"The Editor of the — Magazine presents his compliments to Mr. —, and begs to offer his best thanks for the perusal of his 'Essay on Pathos,' which he regrets exceedingly his great supply of that article obliges him to return. Sir,—I am extremely glad to have my 'Pathos' again, as it was only sent for the support of a magazine which has no chance of succeeding by its wit. At the same time, I must inform you, that it was a matter of some condescension for a person so well known as myself (in private circles), to submit my works to the judgment of one who is only likely to be conspicuous from his incapacity to appreciate them. My friends, upon whose taste I can fully rely, are of opinion, that my 'Essay on Pathos' has great power; for it was read before them a month ago, and they have been dull ever since. This, however, is not said that you may send for it back, and I think

it right to inform you, that I shall listen to no future solicitations to write for the — Magazine, and remain, sir, yours," &c. &c.

Some are so heartless as to find fault with praise: thus, a juvenile Apollo.

"Sir,—I have just seen in your magazine, a review of my poem, which you clearly do not understand, and of which you have materially injured the sale, by misleading the public opinion. You call it sublime, when, in fact, it is pathetic. People are tired of the sublime, and the comparison with Milton is ruinous to me. I will defy you or any one else to find a single passage which might be mistaken for Milton's. You call it harmonious, when it is meant to be abrupt and impassioned throughout. You call the conclusion to the story moral and edifying, when nothing can be more the reverse. In short, you have played the deuce with all its greatest beauties, and the consequence is, that nobody will read it. My friend, Mr. —, the artist, is with me, and begs that you will not mention his picture again, having put him to great inconvenience in contradicting all that you have said. It is not like Claude, or Nature, or any thing else, but is entirely original. The colouring is upon a new principle, and is not transparent, but opaque throughout. The figures are not well drawn, but are touched off with a graceful negligence; and, instead of an evening scene, it is intended to be sunrise.—I remain, &c."

In addition to these woes, hints from friends, recommendations from other editors, &c. our unfortunate friend was lionised, which he thus feelingly describes:

"When I first took office, the celebrity of the magazine was a fair guarantee for the talent and taste of the new editor, and my heart was elated by invitations to every house in town where those qualities were most estimated and patronised. I thought myself (and I believe my mistake was very common to most other folks in my station) a very superior character, and considered that, as I was to lead the public judgment, it was incumbent upon me to shew my capabilities. Besides, I knew I was asked out in order that I might entertain the company, and do credit to those who introduced me. A great deal was expected of me, and I never liked to cause disappointment if I could help it. I used to take pains to be a brilliant talker. The blue-stockings got to think me an oracle, and I never made my appearance without being surrounded by a coterie of delighted listeners, as though I had been a crier on a market-day, or a juggler at a fair. My opinions were adopted, my *bon-mots* repeated, and I had the reputation of half the good things which had been said by other people. I was 'the glass of fashion,' and used to see myself at second-hand in troops of young aspirants, who thought to steal into the temple of Fame in masquerade. Alas! the triumph was of short duration; my wits broke down under my cares. I had started from my zenith, and was on the wane from the first. I went to my displays with a sore heart, and a nervous dread of finding society as fastidious respecting my opinions, as I had found my legion of authors. I began to think that the attention bestowed upon me was to ascertain how much nonsense I could talk, and that all my listeners were laughing in their sleeves. When a man doubts himself, he is sure to be doubted by every one else. All those who had never ventured to think anything right or wrong till they had looked to me for the cue, were heard to decide for themselves, to differ

with me, to argue, and to make their case good. I was considered a vapid composition of small beer, with a little froth when I was first poured out, and nothing but deleterious drugs behind. Parties were given to which I was not invited, and I felt that general opinion denounced me as a stupid dog, and that all who had been so lavish of their praises, were obliged to retrieve their credit by retracting every word."

Our editor finished his career at the end of one month. In the following note to the publisher, he announces his retirement, hinting that, had he waited another post, his own epistle might have been needless.

"Dear sir,—It is with deep regret that I feel myself under the necessity of resigning my high and honourable post, which requires qualifications to which I have no pretensions; for I have neither the quills of the porcupine nor the hide of the rhinoceros. Should the gentleman whom you may be pleased to appoint as my successor, be desirous of any hints descriptive of the community over which he is destined to preside, I shall have great pleasure in gratifying him: it will also be a heart-felt satisfaction to turn over to him a large pile of contributions, which I trust will suit his purpose, for I really have not nerve to send them back to their owners. If any one should inquire for me at your house, pray be good enough to have him bound over to keep the peace. The state of my health renders it absolutely necessary that I should go to some retired watering-place, where I may enjoy, without molestation, the benefits of sea-bathing and asses' milk.—Believe me, dear sir,

"We shall conclude here, recommending these volumes as light and pleasant friends, which may be taken up and thrown aside at pleasure."

#### *Millengen's Curiosities of Medical Experience.* [Third notice: conclusion.]

Books like this recommend themselves to publications like ours, inasmuch as, while we can offer a fair and exemplary portion of them to the public for the formation of judgment, the extracts serve to lighten and relieve the more grave departments of our weekly labour. Still, we must not suffer them to encroach too far; and, therefore, with the present sheet we have to say farewell to our pleasant doctor. His first paper in the second volume treats of mandragore; but concludes with another plant of high superstitious reverence, viz. the *Gin-seng*, respecting which the following are entertaining particulars:—

"According to Jartoux, *Gin-seng* signifies 'the representation of man.' It appears, however, that the learned father was in error. *Jin*, it is true, signifies 'man'; but *chen* does not mean 'representation,' but 'a ternary body. Hence *gin-seng* signifies the ternary of man, making three with man and heaven!—no doubt some superstitious tradition, since this root bears various names in other countries, that plainly denote the veneration in which it was held. In Japan it is called *mindsin*, and *orkhoda* in the Tatar-Mandchou language, both of which mean, 'the queen of plants.' Father Lafitau informs us, that the name of *garent-oguen* of the Iroquois, which it also bears, means the thighs of man. The *gin-seng* is a native of Tartary, Corea, and also thrives in Canada, Virginia, and Pennsylvania, in shaded and damp situations, as it soon perishes under the solar rays. The Chinese attach considerable value to it. Thunberg informs us that it sometimes fetches forty pounds a-pound; and

Osbeck states that, in his time, it was worth twenty-four times its weight in silver. This enormous price frequently induced foreign smugglers to bring it into the Chinese territory; but the severest laws were enacted to punish this fraudulent traffic. The Tartars alone possess the privilege of cultivating and collecting it; and the districts that produce this precious plant are surrounded with palisades, and strictly guarded. In 1707, the Emperor of China, to increase his revenue, sent a body of ten thousand troops to collect the *gin-seng*. According to the Chinese physicians, this root possesses the faculty of renovating exhausted constitutions; giving fresh vigour; raising the drooping moral and physical faculties; and restoring to health and *embonpoint* the victim of debauchery. It is also said, that a bit of the root, chewed by a man running a race, will prevent his competitor from getting the start of him. It is somewhat singular that the same property is attributed to garlic; and the Hungarian jockeys frequently tie a clove of it to their racers' bits, when the horses that run against them fall back the moment they breathe the offensive odour. It has been proved that no horse will eat in a manger if the mouth of any other steed in the stable has been rubbed with the juice of this plant. I had occasion to ascertain this fact. A horse of mine was in the same stall with one belonging to a brother officer; mine fell away and refused his food, while his companion thrived uncommonly well. I at last discovered that a German groom, who had charge of the prosperous animal, had recourse to this vile stratagem. It is also supposed that men who eat garlic knock up upon a march the soldiers who have not made use of it. Hence, in the old regulations of the French armies, there existed an order to prohibit the use of garlic when troops were on a march."

The progress of chirurgical art is a short paper, but of curious information; and so is another on life and on the blood: two on dreams, and on flagellation, have not so much of novelty. There is next an able account of, and disquisition on, the homœopathic doctrines; to which, passing over from scepticism, our author, in some cases, attaches more consideration than, in our opinion, they deserve. For curiosity's sake, we extract a piece of the early history of its Oracle, Hahnemann.

"The medicine is to be tried in its most pure and simple state, possessing all its energies, taking special care that it is not combined with any heterogeneous substances during the day it is exhibited, and the time while its action is supposed to last. The diet must be moderate; all spices and high-seasoned food to be avoided, as well as green vegetables, roots, salads, &c. which are known to possess medicinal properties. The dose of the medicine to be similar to that which is usually prescribed by practitioners. If, at the expiration of about two hours, no effect is observed, a stronger dose is to be given. Should the first dose operate powerfully at the commencement, but gradually lose its influence, the second will be given the following morning; and a still stronger one, four times the strength of the first, be administered on the third day. The result of these experiments being recorded, homœopathic agents are selected to oppose morbid symptoms; and when the choice of remedies has been appropriate, an aggravation of the symptoms is observed. This aggravation is usually considered as an increase of the disorder, whereas it is solely the effect of the homœopathic remedy. 'For these phenomena,' say the homœopaths, 'are frequently observed by physicians, who

little thought, at the time, that they were the result of the medicines they had given.' Thus, when the pustules of itch became more rife after the exhibition of sulphur, it was thought that the increase of the eruption was merely the affection coming out more freely; whereas, the aggravation was occasioned by sulphur. Leroy informs us that the heart's-ease, *viola tricolor*, increased an eruption in the face. Lyrons says that elm-bark aggravated cutaneous affections, which were cured by this remedy; but neither of them were aware of the nature of this homœopathic development. For further information on this head, the Organon of Hahnemann must be consulted. Such were his doctrines for a period of about twenty years,—doctrines which he emphatically pronounced infallible, and founded on the immutable laws of homœopathy. In 1828, however, convinced, by numerous failures in the treatment of chronic diseases, that other causes than those which he acknowledged,—such as the improper preparation of the medicine, or dietetic neglect on the part of the patient,—contributed to these disappointments, he announced that he had discovered the hidden source of the obstacles he encountered; and that, after many years of experiments and meditation, he had come to the conclusion, that almost all chronic diseases originated from constitutional miasmatic affections or predispositions, which he divided into *sycosis*, *syphilis*, and *psora*, or, in plain English, the itch. To this latter affection he attributes innumerable disorders. In diseases of a syphilitic character he had found his mode of treatment infallible, and he therefore concluded that all obstinate and rebellious affections were the result of some other constitutional predisposing circumstances. He tells us that he laboured in profound secrecy to discover this great, this sublime desideratum: his very pupils knew it not; the world was to remain in ignorance of his pursuits until he could proclaim the most inestimable gift that Divinity bestowed upon mankind. This immortal discovery was neither more nor less than the itch, to which malady, according to his views, since the days of Moses, seven-eighths of the physical and moral miseries to which flesh is heir were to be referred. Whether rendered evident by eruptions, or latent from our cradle, it was a curse transmitted to us, by the modification and degeneration of leprosy, through myriads of constitutions; and which only disappears from the surface to fester in malignity, until it bursts forth again in the multifarious forms of innumerable diseases, amongst which we find scrofula, rachitis, phthisis, hysteria, hypochondriasis, dropsy, hydrocephalus, hæmorrhage, fistula, diseases of the head and liver, ruptures, cataracts, tic douloureux, deafness, erysipelas, cancers, aneurisms, rheumatisms, gout, apoplexy, epilepsy, palsy, convulsions, stone, St. Vitus's dance, nervous affections of every description, loss of sight, of smell, of taste, stupidity and imbecility. In support of this doctrine Hahnemann adduces ninety-five cases recorded by medical writers, in which the disappearance of the itch was followed by various acute and chronic maladies. The next miasmatic generator is *sycosis*, or the disposition to warty excrescences; but this source of disease Hahnemann does not consider so prolific as syphilis, or his favourite psora. Such are the principal features of the homœopathic system. I have already stated that its followers consider the most minute particles of medicine more powerful than larger doses: they, therefore, have recourse to infinite trituration, or

dilution in three vehicles, which they consider free from any medicinal property,—distilled water, spirits of wine, and sugar of milk; by these means they procure a decillionth or a quintillionth fraction of a grain. One drop of their solution is considered sufficient to saturate three hundred globules of sugar of milk: and three or four of these globules are deemed a powerful medicine."

Enough, however of *itch* and homœopathy; and, leaving all other matters, we conclude with a quotation touching quackery, and another on memory and the mental faculties.

"Some of the stratagems resorted to by needy empirics to get into practice are very ingenious, and many a regular physician has been obliged to have recourse to similar artifices to procure employment. It is related of a Parisian physician, that, on his first arrival in the capital, he was in the habit of sending his servant in a carriage, about daybreak, to rap at the doors of the principal mansions, to inquire for his master, as he was sent for to repair instantly to such and such a prince, who was dying. The drowsy porter naturally replied, with much ill-humour, 'That he knew nothing of his master.' 'What! did he not pass the night in this house?' replied the footman, apparently astonished. 'No,' gruffly answered the Swiss; 'there's nobody ill here.' 'Then I must have mistaken the house. Is not this the hotel of the Duke of —?' 'No. Go to the devil!' exclaimed the porter, closing the ponderous gates. From this house his valet then proceeded from street to street, alarming the whole neighbourhood with his loud rap. Of course, nothing else was spoken of in the porter's lodge, the grocer's shop, and the servants' hall, for nine days. Another quack, upon his arrival in a town, announced himself by sending the bellman round, offering fifty guineas reward for a poodle belonging to Dr. —, physician to his majesty and the royal family, professor of medicine, and surgeon-general, who had put up at such and such an inn. Of course, the physician of a king, who could give fifty guineas for a lost dog, could not but be a man of pre-eminence in his profession."

"Cases are recorded of the forgetfulness of a language constantly spoken, while one nearly forgotten from want of practice was recovered. A patient in St. Thomas's Hospital, who had been admitted with a brain fever, on his recovery spoke an unknown language to his attendants. A Welsh milkman happened to be in the ward, and recognised his native dialect; although the patient had left Wales in early youth, had resided thirty years in England, and had nearly forgotten his native tongue. Boerhaave relates a curious case of a Spanish poet, author of several excellent tragedies, who had so completely lost his memory in consequence of an acute fever, that he not only had forgotten the languages he had formerly cultivated, but even the alphabet, and was obliged to begin again to learn to read. His own former productions were shewn to him, but he could not recognise them. Afterwards, however, he began once more to compose verses, which bore so striking a resemblance to his former writings, that he at length became convinced of his being the author of them."

We have known several people quite the reverse of this, who fancied and asserted that the works of other persons were their own; such are the strange differences of human nature.

*Some Inquiries in the Province of Kemaon relative to Geology and other Branches of Natural Science.* By Assist.-Surgeon John McClelland. 8vo. pp. 334. Calcutta, 1836, Thacker and Co.; Cantor and Co.; London, Richardson.

MR. McCLELLAND appears to be a zealous geologist and naturalist; and, while thus contributing his offering to our knowledge of India in these respects, he feelingly deprecates the little that has hitherto been done for science in that quarter: but, as the train is now lighted, let us hope that the reproach of neglect will soon cease to be applicable, and that the important features of our vast empire will attract the investigation to which they are so eminently entitled. In the present instance we have a satisfactory report of the geology of the province of Kemaon, a district of much interest, though we find it impracticable to make any abstract which would be acceptable to our readers. Granite, gneiss, hornblende, mica-slate and clay-slate, various limestone, dolomite, floetz rocks, and alluvium, are the principal formations; all of which are distinctly described. There is also a chapter on zoology; and a treatise on goitre, which occurs in Kemaon.

We select a passage relative to the copper-mines at Gungowly and Barabice, "which, from want of the attention usually paid to such works in Europe, appear to be only a source of misery to those who are engaged in working them; while the revenue they afford to the state is merely nominal. These mines are farmed, or let at a trifling rent, to mercenary contractors or Teekedars, whose only object is to procure the greatest quantity of metal, at the smallest possible expense. These Teekedars again contract (as well as I could understand) with the owners of slaves for the labour of extracting and smelting the ores; and, between both parties, the unfortunate workmen are ground down to such a degree that, if their squalid looks did not bear testimony to the truth of their complaints, I could not have believed them. The origin of these mines must be referred to a very early period, yet no improvement in the mode of operations adopted appears to have marked their progress; so that it is probable the art of mining was as perfect in Kemaon a thousand years ago as it is at the present day: a fact which illustrates the baneful influence of tyranny and oppression, rather than a condition of the human mind that is incapable of profiting by experience. The drifts or passages of the copper-mines are so contracted as only to allow children to creep into them with any degree of facility; and it is this imperfection that occasions much of the cruelty already adverted to. About a hundred persons are employed at the mines of Gungowly and Barabice. They are nearly all frightfully deformed; and, although this has been, in another part of my researches, referred to criticism, yet it is by no means incompatible with what is there stated, to suppose that their evils are caused, in some measure, or at least aggravated, by the practice of sending them into the earth, while they are mere children, for the purpose of dragging out the ores; a labour which they are forced to commence at the age of nine or ten years, and to continue during the remainder of their lives. For this, their only reward is a small quantity of earth and stones, containing particles of copper-ore; from which, with much additional labour, they extract about eight annas worth of copper a month. At these two mines there are from thirty to fifty children, under the age of twelve, thus em-

ployed, without the hope of release during the period of their natural lives; and, if disqualified by age or infirmities for this duty, they are then employed, as long as they are fit for labour, either in the workings of the mines, or in the smelting-houses; but, if quite incapable of further employment, they are left perfectly destitute, or, at best, only dependent on their miserable offspring, who are brought up to the same bondage. On mentioning the cruelty of the practice to the Teekedar, he informed me that it has existed since the earliest times, and that it prevails generally in all copper-mines throughout every part of the neighbouring provinces. In the company's territories, however, I am sure the evil of employing children in the mines only requires to be pointed out in order to be soon suppressed, when it is to be hoped that Nepal and other mountain states will follow the example. The next step towards the improvement of our mines would be the introduction of machinery, which might be easily furnished from the great military arsenals; and a few European mechanics and practical miners might be placed over the natives, with a view to instruct them in the European principles of working mines. A new establishment of this kind would at first be attended with some little expense; but, if conducted with the requisite skill, it would ultimately prove no less important to the commerce and welfare of the nation, than to the advancement of the native character. Under the present policy, the province of Kemaon, though abounding in ores of copper and iron, with inexhaustible forests for the supply of fuel, barely affords sufficient revenue to support its own establishments. The repositories of metallic minerals which have occurred to my observation are only of two kinds, and they belong to that class which is of contemporaneous origin with the rocks in which they exist. The first is where the ores are disseminated in the strata seams, and in the substance of rocks in nests and kidneys; and the second is where they occur in lying masses. Examples of the first are presented by the repositories of copper, and of the second, by those of iron. The copper is found only in the slate of yellow sulphuret; but of this there are three varieties, which differ much in value from the quantity of metal they afford, as well as from the labour required to reduce them."

The following are examples from the zoological portion of the volume:

"The domestic dog of the higher Himalaya regions, a variety of mastiff of great size and power, is different from any of the dogs of Europe. He is distinguished by the smallness of his eyes in proportion to the breadth of his forehead, by a short thick neck and body, with rather long hair, and of a stupid expression, and sulky indifferent manner. These dogs accompany the merchants of Bhotan in their travels across the mountains between Tartary and Hindustan, during which the hardy mountaineers pass the nights in the forests, equally secure, under the protection of their dogs, both from wild beasts and robbers. The necks of the dogs are decorated with strong collars of brass or iron, which answer the purpose of armour during their encounters with wild beasts. They are extremely docile, but uncertain in their temper. They are also said to be more liable to hydrophobia in hot climates than other dogs. They are of all colours, such as gray spotted, black sides, white breasts, reddish yellow, brown, &c.

"*Canis Aureus*.—The jackal. This animal is much larger than the jackal of the plains.

He is distinguished from the wild dog above described, by being of a stronger make; by having a dusky hue on the back, the crown of the head, and tail; by its eyes as well as head being rounder; by being tameable, while the wild dog is not; and by its hideous howl. The jackal is remarkably shy and cautious, so much so as never to allow itself to be caught in a trap. They have, in Kemaon, much of the intelligence ascribed in England to the fox, from the dexterity with which they elude pursuit; and, if hunted by a single dog, other jackals assemble and intercept his return, and, unless quickly relieved, the dog is soon destroyed.

"*Canis Vulpes*.—The fox. He has gray legs, becoming darker to the feet; dark, sharp nose; bushy tail—that of the male having a white tip: the upper surface of the ears velvet black, inner surface cream yellow. They are somewhat larger than the English fox, and are very easily caught in traps.

"*Felis Tigris*.—The tiger is one of the greatest scourges to which the inhabitants of Kemaon are subject. Their haunts are the deep valleys and lower ranges of mountains which skirt the plains, where the warmth of the climate is congenial to them in the cold season; but, during the hot weather and the rains, when the herds return to the higher altitudes, the tigers then penetrate into the interior of the mountains, keeping possession of the deep valleys, where they prey upon unfortunate travellers; or, when pressed for food, they even approach the villages in open day, and seize the first animal they meet. It is calculated, as I have been informed, that the loss of human life by tigers, in Kemaon alone, amounts on an average to no fewer than two hundred and fifty per annum. This is a most frightful proportion of victims out of a country so thinly inhabited. Extensive tracts are, indeed, quite deserted from this cause; and, although the government allows a reward of ten rupees for every tiger's head that is produced at Almorah, their number is very slowly, if at all diminished. There is, however, some reason to fear, that in the remote parts of the province, great abuses exist as to the payment of the reward so humanely given by government, and thus the important object for which it was intended is, in some degree, thwarted.

"*Felis Leopardus*.—The leopard is the most numerous of the feline genus in Kemaon. Unless on the defensive, they never attack human beings; but they are very destructive to sheep, goats, and to cattle in general. Dogs are also their favourite prey; and to procure them, I have known instances of the greatest audacity and cunning resorted to by the leopard; such, for instance, as concealing himself in a dark corner close to his intended victim, and there awaiting a favourable opportunity, when, by one spring, he seizes his prize, and carries him off in defiance of the yells and bludgeons of surrounding spectators. Some of the leopards are nearly as large as the panther, and others, as small as the common hunting leopard; but, except in size, there does not appear to be sufficient reason to describe them as distinct varieties. If the form of the spots be a sufficient criterion, they would all be described by some authors as panthers."

With these specimens we commend Mr. McClelland's work to the European world.

#### MISCELLANEOUS.

*Sacred Songs for British Seamen*, by the Lady Jane Willehelmina St. Maur. 12mo. pp. 59. (London, Shaw.)

This is rather a singular book for a lady of rank. We do not see that the compositions are, except in the use of the word in addressing them, very peculiar to *Seamen*, and, indeed, when she adopts naval phraseology her ladyship is not very successful. But the main purpose is wrought out with a benign spirit, and the poetry is not unworthy of the religious feelings which animate the writer. We add an example.

"Anchor a-hoy."

'Anchor a-hoy!' the bontawain's cry,  
Echoes aloft the world's wide strand;  
'All hands,' and hoist your signals high,  
Get under weigh for Canaan's land!

Ye breezes rise, propitious blow,  
And waft us to yon distant shore;  
Ye tides and rapid waters flow,  
For we can linger here no more.

Unfurl the sails! and through the deep,  
The vessel steer and safely guide;  
The Lord of Love our souls shall keep,  
Through dark oblivion's rolling tide.

Farewell! our earthly friends, farewell!  
We leave you for a happier clime;  
List! the last stroke of Time's loud knell  
Falls on our ear with grateful chime.

Now launch'd into the stormy main,  
Earth's passing scenes fade on our sight;  
Oh, rend the veil of night in twain,  
That we may hail the realms of light!"

The merits of the following are more questionable; but it exhibits the author, and with it we leave her to the public:—

"The many Miracles wrought by the Disciples.

Who heard the sick, who rais'd the dead,  
When the last hope of life was fled,  
And cheer'd the drooping mourner then?  
Say, poor seamen!

Who chas'd the shades of night away,  
Restor'd, through Christ, the visual ray,  
And on the blind pour'd sight again?  
Say, poor seamen!

Who spake, and made the deaf to hear,  
To slumbers brought salvation near,  
And fill'd with praise each vale and glen?  
Say, poor seamen!

Who heal'd the impotent and lame,  
And taught the dumb to bless the name  
Of Him, the chiefest among men?  
Say, poor seamen!

Who made the evil spirits flee,  
And preach'd the Word from sea to sea,  
Wand'ring in desert, cave, or den?  
Say, poor seamen!

Who suffer'd with their Saviour here,  
Nor chaf'd nor death for Him to fear,  
His promise was their sure amen?  
Say, poor seamen!

Who stands around yon glorious throne,  
Praising with notes of sweetest tone,  
The Lord, whose eye does all things ken?  
Say, poor seamen!

'Twas seamen made the deaf to hear,  
The dumb to speak, and sinners fear;  
'Twas they who rais'd the hopeless dead,  
And suffer'd all for Christ their Head.

And seamen form yon glorious band,  
Who round the Lord Jehovah stand,  
And all th' eternal glory see;  
E'en those poor men of Galilee!"

*The Despatches, Minutes, and Correspondence of the Marquess Wellesley, K.G., during his Administration in India.* Edited by Montgomery Martin. Vol. III. 8vo. pp. 677. London, 1837. Allen and Co.

THIS volume continues the able and statesman-like documents of the noble marquess, and chiefly relates to a very important period in the history of India—the beginning of the present century—when the Mahrattas required, indeed, all the powers of even a Wellesley to preserve and consolidate the British Empire in the East. The papers are of vast importance, and tend more and more to exalt our admiration of the conduct and skill of the governor-general.

*My Travels: a Series of Conversations with a Younger Sister, after returning from Journeys in France, Italy, Malta, and Turkey.* Pp. 302. London, 1837. Wesley and Davis.

WE do not remember to have met with any work precisely like this. It is evidently the result of actual travel, and acquires though youthful female observation; and thus, albeit it is addressed to the young, there are a number of remarks in it which possess much originality

and intelligence, such as have not occurred to male travellers, men of science and learning. It is altogether one of the most pleasing volumes of its kind, and admirably adapted to give an early taste for a species of reading not generally made prominent enough in the system of youthful instruction.

*The Christian Correspondent: Letters, Private and Confidential, by eminent Persons of both Sexes, exemplifying the Fruits of Holy Living, and the Blessedness of Holy Dying. With a Preliminary Essay, by James Montgomery, Esq. 3 vols. 12mo. London, 1837. W. Ball.*

THIS selection from a hundred works, some of them of great size, will be recommended to religious popularity by the name of the distinguished individual with whom the idea of forming it originated, and to whom we are indebted for an interesting preliminary essay on letter-writing. It refers to, and is taken from, the epistolary correspondence of men of all ages, from our early churchmen to the present period. Many of the letters are very striking, and all of them fully illustrate the solemn subjects announced in the title-page.

*Enigmatical Recreations, &c. &c. By L. Hake. 12mo. pp. 130. Printed for the Author by Gilbert and Rivington; sold by W. Buck, Mount Street, Westminster Road.*

THE young are already indebted to Mrs. Hake for some instructive books; the present is one to exercise their ingenuity and amuse them. Rebuses, enigmas, conundrums, charades, &c. are interspersed with historical and biographical anecdotes; the whole being, what the well-meaning author wished, a medium "to enliven and exercise the mental faculties."

*An Essay on the Force of the Negative Particle, considered with Reference to Poetry, and Composition in General; with an Appendix, chiefly illustrated by Example. By M. Gordon, A.M. Painter.*

"THE past belongs to History, of which only any thing can be positively predicated; the present and the future, on the contrary, are the province of Poetry, of which nothing can be positively asserted; hence, the Negative has been, always, a favourite of the Muse."

Such is Mr. Gordon's dictum in his Introduction. We confess that we very imperfectly understand it; but, as far as we do understand it, we deny its justice. With respect to the Essay itself, it really communicates no information of which every decently educated person is not already in possession. We are tempted to exclaim, in the elegant language of Lord Duberly, "What's the use of telling us a cock and bull story of what we knew before?"

*The Album of the Cambridge Garrick Club, containing Original and Select Papers on the Drama, and the Proceedings of that Society. With Illustrations. Edited by a Member of the Club. (Cambridge, W. H. Smith.)*—This club has been instituted by dramatic amateurs; and, during some three years, has pursued an agreeable course for promoting a love of the drama, and of dramatic and polite literature. Its objects appear to be very laudable, and the means adopted to accomplish them of a character to encourage taste and social feeling. This volume is for the benefit of the society, which is, however, in a green and flourishing condition. The papers do not offer us any thing for extract, though they are miscellaneous and amusing. There are portraits of S. Knowles, Garrick, Macready, Miss Mitford, C. Kemble, Braham, Liston, and Douglas Jerrold; but, except the last (which is, we believe, almost, if not the only likeness of this distinguished writer which has been published), they do not deserve very favourable notice. There are some characteristic letters in the correspondence, relative to electing honorary members; and the little volume is well worth a place in libraries where theatrical matters are preserved.

*Memoir of Therrouanne, &c. &c. By Christopher Godmond, Esq. Pp. 94. (London, Bull.)*—This curious little antiquarian volume gives us the history of Therrouanne, the unfortunate capital of the Morin, and

situated near St. Omer; which, after being desolated by Romans, Huns, Franks, and other barbarous conquerors, was finally taken by storm by the generals of Charles V., its population butchered, its walls raised, and the ground on which it stood sown with salt, in 1553. This is followed by a discourse on the *Portus Itius* of Caesar, which the author adduces strong reasons for concluding to be Wisant, about ten Roman miles west of Calais; and the *Portus Ulterior*, or Superior, to be at Sangatte, higher up the Channel. We shall not enter into the details of this antiquarian question; but, by way of variety, copy a good story of the "real presence."

"The following anecdote," he says, "was related to the author by his father, many years since. A person of eminence was sent on an embassy to one of the popes: having fulfilled his mission, he made preparation for his departure to England. His holiness had, in the mean time, attempted to make a convert of his son: the doctrine of transubstantiation was the chief obstacle in the argument. On taking leave, the pope lent this personage a fine horse, highly caparisoned, which he was to return on his arrival on the coast. It so happened the promise was forgotten, and the horse taken to England. On this breach of good faith, a letter of remonstrance was written by his holiness, to which his unconverted son sent the following *jeu d'esprit*:—

'Nonne meministi,  
Quod mihi dixisti.  
De corpore Christi?  
Credo quod edis, et  
edis.

'Idem tibi scribo  
De tuo palfrido—  
Credo quod habes, et  
habes."

Thus attempted:

Sir, don't you remember,  
One day in September,  
What to me you did say,  
Of Christ's body, I pray?  
Believe that you eat, and  
You do eat.

Of your horse too, I say,  
He's eating oats all day;  
He's now in your stable,  
Believe it you're able,  
Munching away,  
Munching away!"

*The Bible Garden, &c. by Joseph Taylor, (London, Dean and Monday), is a charming little book for children; with brief descriptions of all the trees and plants mentioned in the Scriptures; and accurate and picturesque etchings of them on steel, by W. H. Brooke. Solar Eclipses; or, the Two Almanacs, by R. Maria Zornlin. (London, Ridgway).—A taking lesson on astronomy, and an excellent child's book. The Child's Help to Self-Education, by H. S. Herschel. (London, Unwin).—Far above its subject, and, in our opinion, as dangerous and improper a book as could be placed in the hands of youth and inexperience.*

*A Visit to London, &c., by F. Coghlan. Pp. 107. (London, Baily and Co.)—A useful guide for strangers who may visit our Babylon; pointing out the lions, and furnishing the usual useful information.*

*Botanist's Manual. Pp. 107. (London, Groombridge.)—A list of British flowering plants and ferns, according to the Linnaean system, and the clear arrangement of Hooker: very convenient for collectors.*

*Marriage the Source and Perfection of Social Happiness and Duty, by the Rev. H. C. O'Donnoghue, A.M. Pp. 148. (London, Smith, Elder, and Co.)—This is a second marriage, or rather a second edition; and the author stands up manfully for the blessedness of conjugal life, giving much good advice upon the subject both to wives and husbands.*

*A Treatise on the Teeth of Wheels, &c. &c. Translated from Camus, by J. T. Hawkins, Civil Engineer. 8vo. Pp. 181. (London, Hodson.)—Camus, one of the best authorities upon this, among other mechanical subjects, is here faithfully rendered in an improved second edition, with eighteen plates. It is a volume of infinite value to mill-wrights, and all other mechanists.*

*The Penny Cyclopaedia of the Society for the Diffusion of Useful Knowledge. Vol. VII. (London, Knight.)—Not one of the productions under this appellation and sanction has deserved better to be classed under the standard of useful knowledge, coupled with its cheap and, consequently, popular diffusion, than the Penny Cyclopaedia, of which the seventh volume is now before us. It ranges from the letters Char. to Cop. (Charlton to Coppyhold), and is truly a valuable dictionary, brought down to the information of the present day.*

*Deville; Introductory Lessons in the French Language. Pp. 77. (London, Groombridge.)—With exercises, &c., and is a very nice elementary book.*

*The Use of Talents, by Mrs. Cameron, author of the "Fruits of Education," &c. Pp. 225. (London, Houlston and Son.)—A moral tale of pleasing construction.*

*The Sacred Muse; No. I. Pp. 24. (London, Hodson.)—A cheap monthly selection of religious poems, and, as far as this sample goes, displaying no great poetical taste.*

*A Geographical, Statistical, and Commercial Account of the Russian Parts of the Black Sea, &c. Pp. 48. (London, Schloss.)—With a map, and a tabular report of the European commerce of Russia in 1835, this pamphlet, from authentic German sources, contains a straightforward and useful account of matters very desirable to be generally known and understood by the politician and merchant.*

Much of the information is curious; and the shores of the Black Sea, as well as the trade of its ports with various parts of the world, are well described and explained.

*The Imperial Classics, Parts I. II.* (London, W. Smith; Edinburgh, Fraser and Co.; Dublin, Curry and Co.)—This new undertaking, in large 8vo., commences with "Burnet's History of his own Times;" a work which never can be too often reprinted. Historical and biographical notes are added, and the parts nearly got up.

*The Student's Cabinet Library of Useful Tracts, XIX. XX. Scientific Series, I. and II.* (Edinburgh, T. Clark; London, Simpkin and Marshall; Hamilton, Adams, and Co.; Dublin, Curry and Co.; Milliken.)—This deviation from the preceding trade is one of which we highly approve. Professor Hitchcock's essay, on the connection between geology and the Mosaic account of the creation, contains much valuable matter and learning; and Professor Stuart's philological view of the modern doctrines of geology, though holding different opinions, deserves a similar character.

*British Colonial Library.* (London, Whitaker and Co.)—Mr. Montgomery Martin's Second Volume of the West Indies, and quite a credit to this small and cheap edition.

## ARTS AND SCIENCES.

### ROYAL INSTITUTION.

MR. FARADAY'S lecture on Friday was just what we anticipated; one of the most admirable and important ever heard within these walls. Purposing to give a more ample report of it, we shall now merely notice, that, after explaining as a ground-work, and demonstrating experimentally the leading principles of the Newtonian theory, the lecturer expounded the new doctrine in the clearest manner. Its element is, that every atom of matter is surrounded by a fluid electricity: every atom attracts and repels every other atom, till they repose in a state of neutrality: electricity attracts and repels electricity; but electricity attracts matter, and it is the balance of this third power which sustains all that is upon the earth, and the entire universe of worlds, in their actual condition.

### GEOGRAPHICAL SOCIETY.

JAN. 23d. Mr. Baily in the chair.—Extracts from various papers were read. 1st. Another letter from Capt Alexander, on his way to the Damara's country, from the Cape of Good Hope, dated Kamiesberg, October 17, and stating, that he had arrived there quite well, and was to start the following day for the Orange River. 2d. Letter from Mr. Willshire, dated Mogadore, 13th December, 1836; in which the writer mentions, that he had had the satisfaction of receiving a letter from Mr. Davidson, dated Yeist, 15th and 16th ult. Mr. Davidson says, in his communication, "All is at length settled, and we start to-morrow morning, at first day. I believe, also, the Caffla will be allowed to proceed, although one mital a head is to be paid by all who pass. We have here about 50 persons and 100 camels. I am unable to tell you, for certain, the route I take; this is to depend upon circumstances; but two persons besides Mohammed El Abd accompany us, so that, after all the talk of Wednoon, I am going in my original way, of a party of only five, including Abd and self." Mr. Willshire then proceeds,—"Yeist is three days' journey south of Wednoon; from Tamzerst to that place Mr. Davidson describes as a beautiful ride of eight hours, and speaks in high terms of the attentions and civilities of Sheikh Hammo, who, with a party of twenty horse, accompanied him from Tamzerst to Yeist." Mr. Davidson remarks: "Every step we have taken from Wednoon we found the people better, more liberal, more hospitable, and, although somewhat savage, having yet a little nobleness of character, of which there is none at Wednoon." From the latest letters received from Sheikh Beyrook, Mr. Davidson had been

gone from Yeist eighteen days, without there being any intelligence of him, which argues favourably for his safety; the greatest danger being upon the borders of the desert, where there are many wandering and warlike tribes. I have reason to believe, continues Mr. Willshire, that Mr. Davidson and party have pushed on as fast as possible; the journey must be done in a very short time, as the camels were only to drink six times, and by not visiting the tents of the Tajacanis, nearly six days' journey would be saved. Mr. Davidson, in the concluding paragraph of his letter, writes:—"I am happy to say, I have picked up amazingly, and have now no fears about my health; and I beg to assure you, I flatter myself with the hope, that the intrepid traveller may pass a merry new year's day at the famed city of Timbuctoo, which event I trust to have the high pleasure of announcing to you in about three months. Sheikh Mohammed El Abd having promised to be the bearer of a letter, which he is to deliver to say, 'there is a letter from Yayba Ben David—the Tajacanis have kept their word.'" "God grant he may, is the hearty and sincere prayer of (signed) Wm. Willshire." 3d. An account of Mr. Barker's travels in Syria, in September 1834, from Beyrút to Batrún and Kanobin, over Mount Lebanon to Baalbec,—thence across Anti-Lebanon to the source of the Orontes, returning by Ain-nata to Tripoli,—thence along shore to the northward 120 miles, as far as Suedia: a distance of 400 miles altogether. "From Baalbec," says Mr. Barker, "I started for the source of the Orontes,—a place little known, and visited by few, if any, European travellers, from the danger said to be attending it. The Mutualis, who are in possession of these parts, are known for their hatred of all sects that differ from them in point of religion; but, by passing myself for an officer of Ibrahim Pacha, I procured a guide, with whom I slept that night in the forest; we lighted a fire, and had a provision of bread and cheese for ourselves, and barley for my horse. My daring thus to confide myself to the honour of reputed robbers, has been the astonishment of every one to whom I have since stated the circumstance." Traversing the plain, Mr. B. regained the Labroe, along the banks of which a two hours' ride brought him, towards evening, to the source of the Orontes, called by the people "the rebel," from the many windings it takes in its violence and inundations in a northerly direction, through Hams and Hamma; and, finally, discharging itself into the sea at Suedia, near Antioch. The source springs with some violence from a natural basin of a triangular form, of about fifty paces on each side, cut in the rock, round which grow so many trees and bushes, that it is nearly concealed. The chestnut, willow, and a low wild oak, are the commonest of the trees. The fourth communication, extracts from which were read, is entitled, Narrative of a Journey from the Tower of Bae-l-haff, on the southern coast of Arabia to the ruins of Nugub ul Hadjar. By Lieut. Wellsted, I.N. The author is the first Englishman who ever proceeded so far into the interior; he gives an interesting account of his travels amongst the Bedouins. Speaking of the numerous ruins of buildings which he met with, Lieut. Wellsted observes, that there is no appearance of these ruins having suffered from any other ravages than those of time; and, owing to the dryness of the climate, as well as the hardness of the material, every stone, even to the marking of the chisel, remains as perfect as the day it was hewn. We were naturally

anxious to ascertain if the Arabs had preserved any tradition concerning these buildings, but they refer them, in common with the others met with, to their pagan ancestors. "Do you believe," said one of the Bedouins to the author, upon his telling him that his (the Bedouin's) ancestors were then capable of greater works than themselves, "that these stones were raised by the unassisted hands of the Kafirs? No! no! they had devils, legions of devils (God preserve us from them!) to aid them." And this was generally credited by others. Lieut. Wellsted concludes his paper by stating, that, "by the assumption of a Mohammedan, or even of a medical character, and by sacrificing every species of European comfort, a traveller might have very little doubt of penetrating to the very heart of this remarkable country."

*St. James's Ornithological Society.*—The aquatic birds turned out on the sheet of water in the New Gardens, by the St. James's Ornithological Society, are in full feather, and go on swimmingly. Among them, we notice the Chinese, bean, white-fronted, Egyptian, and barnacle goose. Of the duck tribe are to be seen, the sheldrake, Muscovy, hook-bill, pintail, tufted, and call. The list of members is rapidly on the increase.

## LITERARY AND LEARNED.

### UNIVERSITY INTELLIGENCE.

OXFORD, Jan. 16, the first day of Lent term, the following degrees were conferred:

*Masters of Arts.*—Rev. G. D. Hill, Trinity College; Rev. H. Blisset, Balliol College.

*Bachelor of Arts.*—R. Alexander, Christ Church.

### ROYAL SOCIETY.

MR. BAILY in the chair.—A paper on the Structure of the brain in the marsupial animals, by Richard Owen, Esq. was read. We are afraid that, without the delicate drawings which accompanied this valuable paper, we cannot convey a satisfactory notion of the author's researches. The object of the paper was limited to a description of the modifications of the brain in these singular animals; which, Mr. Owen considers, belong to a distinct class of mammalia—*habitat*, South Australia. The following is an abstract of a paper, entitled, Researches towards establishing a theory of the dispersion of light, by the Rev. B. Powell, M.A. F.R.S., Savilian Professor of Geometry, Oxford, accidentally omitted in our last *Literary Gazette*. This paper is a continuation of two former ones inserted in the *Phil. Trans.* 1835 and 1836. In these, the author had compared with theory all the refractive indices for definite rays in different media, which had as yet been determined by observation, and found them agree very closely with the formulæ resulting from the system of undulations developed by M. Cauchy. In the present paper a similar comparison is carried on for another series of observations, including some of highly dispersive media, which are by far the most important, derived from the author's own observations (an account of which was given at the Bristol meeting of the British Association, and which have since been published by the Oxford Ashmolean Society). The calculations are given in a tabular form; and the author deduces the general conclusion, that for all substances *not very highly dispersive* the formulæ hold good perfectly. As we advance to the *higher cases*, the differences increase, and are too great to be ascribed entirely to errors of observation. Hence we infer that some further development must be given to

the formula, so as to include as a simplified case the formulae hitherto used, and which applies so well to low dispersive bodies.

#### SOCIETY OF ANTIQUARIES.

Mr. HALLAM in the chair.—Mr. S. Smirke exhibited three curiously carved Norman capitals, found in the walls of Westminster Hall, and a longitudinal section of the east side of the Hall (interior) restored, from existing portions, to its appearance before the alterations of the 14th century. Sir Thomas Phillippe communicated a copy of the will of Augustine Phillippe, an actor of the time of James I. residing at Mortlake; giving to William Shakspeare a 30s. piece of gold: several musical instruments are mentioned as legacies, and Burbage appointed one of the executors, in the event of the testator's wife marrying again. Sir Frederick Madden communicated a paper on the subject of an autograph of our great dramatist, on the fly-leaf of a copy of the first edition of Florio's translation of Montaigne's Essays, the property of a gentleman, in whose family it has been ever since the year 1780, and, probably, much longer. It has been subjected to the examination of several gentlemen eminently qualified to decide on the question, who are unanimous in the opinion that it is free from all suspicion of spuriousness. That *Shakspeare* (so spelt in the autograph) possessed a copy of this work is highly probable; several lines in the second act of the *Tempest* being, with little variation, borrowed from it. The author of the paper entered at some length into the disquisition respecting the orthography of the poet's name; and expressed his conviction that, in all the genuine autographs yet discovered, including the present one, the spelling agrees with that just mentioned. The copy of Montaigne remains, for the present, in the custody of one of the librarians of the British Museum.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—British Architects, 8 P.M.; Marylebone Library, 8½ P.M. (Mr. M. Wyle on the Arabian Empire), and Feb. 6th.

*Tuesday*.—Civil Engineers, 8 P.M.

*Wednesday*.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.

*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.; Islington Literary (S. Knowles on the Drama), 8 P.M., and following Thursday.

*Friday*.—Royal Institution, 8½ P.M.; Islington Literary Meeting.

*Saturday*.—Royal Asiatic, 2 P.M.

#### FINE ARTS.

##### THE BRITISH GALLERY.

A GLANCE at the Annual Exhibition of Works from our own Native School (though, in the midst of touching, wiping, and varnishing, &c.), enables us to have the pleasure of saying, that the public will be much gratified with its opening on Monday. Without a catalogue, we could, under any circumstance, and with plenty of time, give but a meagre account of the paintings: as it is, we have only space to state, that Turner and Howard have fine specimens, and that Stanfield, M'Clise, Chalon, Cooke, Grant, Burnet, Partridge, Fraser, and other contributors, have adorned the walls with an interesting variety of subjects, in every class of art, and of very high merit.

#### ETRUSCAN AND GREEK ANTIQUITIES.

ONE of the most remarkably curious exhibi-

\* Mr. Knowles is also announced in the card of the Western Literary and Scientific Institution, to lecture on the Drama, February 2d, 9th, and 18th, 8½ P.M. This is our latest notice, and he cannot be in two places, "like a bird."

tions of such antiquities, ever witnessed in London, has been opened at 121 Pall Mall. The chambers of the ancient dead, in their exact proportions, with fac-similes of the tombs, and the paintings on the walls; together with most interesting specimens of armour, vases, female trinkets, candelabra, &c. &c. found within them, even to the poor remains of humanity, with golden and glittering ornaments, form, altogether, a museum well worthy of the inspection of the classic, the antiquary, and the community at large.

#### NEW PUBLICATIONS.

*Sunday*. Painted by W. Collins, R.A.; engraved by S. W. Reynolds. Boys.

If we were required to say which of the many pleasing productions which we have seen from Mr. Collins's pencil struck us as being the most pleasing, our unhesitating answer would be, that from which the clever print now before us has been engraved. We do not refer merely to the beauty of execution,—although, in that respect, it was never surpassed,—but to the subject, and the manner in which that subject is treated. It is, indeed, Mr. Collins's distinguishing merit, that, not being content with being one of the most admirable landscape painters of whom England, rich in that charming department of the arts, can boast, he always introduces into his scenes a few simple human beings, to tell some story of rustic interest and happiness. In the present case, what can be more touching than the figure of the old farmer's widow, leaning on the arm of her dutiful and affectionate son, and advancing, with tottering step, to the faithful steed which is to convey her to the village-church? Her attendant daughter; her grandchildren—one offering Dobbin the refreshment of an apple, another placing a chair to enable his grandmother to mount to her pillow, and a third, whose spatterdash a little charity-girl is lacing; the clergyman, pacing slowly along the green lane, chequered with shade and sunny gleams; and the various members of the congregation, gathering from different quarters, gratefully to worship their divine Creator and Protector: altogether, form a composition which cannot be contemplated without feelings of strong emotion, and of self-congratulation on belonging to a country, of the character and habitual sentiments of so large a portion of the inhabitants of which it is the unexaggerated representation. The print is finely engraved, in mezzotint; and is published, most appropriately, "under the especial sanction and patronage of her majesty the queen."

*Views of Dudley Castle, the Lime Caverns, &c.*

From Drawings, by Cox, Walker, and others: with Notices, Historical and Descriptive, by William Hawkes Smith. London, Tilt; Birmingham, Radcliffe and Co. "DUDLEY CASTLE," says Mr. Smith, "is a relic of feudal strength, of baronial magnificence, lingering—an isolated guest of another age—among the evidences of modern change, and commercial bustle; bearded and put out of countenance by the encroachments of trade and manufactures, and its glories obscured, and its solitude invaded, by the noise and smoke of mechanical arts. From the elevated site on which it is placed, and which it once occupied in regal state, the lords of Dudley Castle looked forth and saw nothing but the forests and chases which ministered to their pleasures; the dwellings of those who waited their commands, laboured for their accommodation, and sought their protection; or the

more distant lands of those who owed them 'suit and service,' and who periodically attended, as vassals, to pay their homage at the court of their paramount lord. The change is total. The castle is dismantled and ruined; the forests have vanished; the extensive surrounding campaign country, on all sides, is occupied by independent seekers of their own fortunes; and the neighbouring town of Dudley has rapidly increased in magnitude, as one of the centres, or nuclei, towards which the results of the prevalent industrial occupations are congregated."

Is this alteration for the better? "We have our doubts." But we are travelling out of our province. Our sole business is with the graphic illustrations of Mr. Smith's book, nine in number; and of them we can justly say, that they are very picturesque and pleasing. Among the most striking are, "Dudley Castle, from the Birmingham Road," and "Cavern at the Wren's Nest, near Dudley."

*Transactions of the Institute of British Architects of London. Sessions 1835-1836. Vol. I. Part I. 4to. Pp. 127. London, 1837. J. Weale; Williams.*

THE names of the members, and the constitution of this excellent and much-needed Institution, appear on the earlier pages, after which the communications and transactions are given. Having reported these as the meetings occurred, and done, though certainly but slender, justice to their interest and importance, we shall now simply repeat our great satisfaction at seeing an institution so much wanted proceeding in a course of excellent management, and producing effects which promise to realise every thing its most sanguine friends could have hoped or anticipated.

#### MUSIC.

##### VOCAL SOCIETY.

THE best among many good things at the second concert, on Monday last, were Purcell's fine anthem, "O give thanks!" the *Gloria* of Haydn's first mass; and the quartet from *Oberon*, "Over the dark blue waters." The madrigals, "Have I found her?" by Bateson (first time of performance); and "So saith my fair," by Luca Marenzio, were effective, as usual: the basses here are particularly fine, both as to the quality of the voices, and the admirable management of the lights and shades. "The Pirate's Song," by Mr. E. Taylor, sung by himself, was less warmly received than it deserved to be. Not only was the composition melodious and pleasing throughout, but it was instrumented with great taste and judgment; the symphonies and accompaniments presenting an uninterrupted succession of charming effects for the orchestra. Miss Birch is a new and very decided acquisition to the vocal corps. We feel it due to Mrs. Seguin to observe, that she sang the recitative preceding Zingarelli's song, "Ombra adorata," with much delicacy; and the applause which followed must have convinced her that a considerable impression may sometimes be made on an audience, without the exercise of any uncommon physical force. The glees were well selected and charmingly sung; those for the male voices only, are especially delightful. The spirited chorus, "Quoniam," which forms the last movement of Haydn's *Gloria*, went with the utmost precision, and was most keenly relished by the audience, who *encored* it with enthusiasm. Between the two parts of the concert, a young *harpiste*, Miss Coward Richardson, performed a *fantasia*, in which she manifested a command

over her instrument, that gave considerable promise of future eminence. Q.

### DRAMA.

**Opera Buffa: English Opera House.**—Ricci, whose music is little known in this country, will become a favourite with the English, for the two best operas produced at the Lyceum have been his; namely, *Scaramuccia* and *Chiara di Rosenberg*, acted, for the first time, on Tuesday, to a very full house. The music is of an original order, and there are many sweet arias in the opera. The story is a simplified *Siege of Rochelle*\*—leaving out cannon and soldiery. The cast was strong, and did its best; but their forte is comic rather than serious, which this opera is. Miss F. Wyndham appeared as the *Princess*, and warbled most sweetly. Mdle. Blasia was like a canary; Miss Glossop as usual; and Signors Torri, Catone, Bellini, and Ruggiero, in excellent voice. There were many encores.

**Adelphi.**—Mr. Yates has added the *real* Bedouin Arabs to the *real* *Jim Crow*—and his house, with such attractions, is nightly crowded.

**St. James's.**—*Guy Mannering*, with one of the best casts we remember for many years, was revived at Mr. Braham's beautiful little theatre, on Monday, with much success. We cannot individualise, as the whole was so excellent, that to particularise would be invidious; suffice it to say, that it embraces the whole strength of certainly the best English opera company in London. Mr. Leffler is in good repute as *Steady*, in the *Quaker*, which has been played very often, Harley being *Solomon*; Bennett, *Lubin*; and Miss Rainsforth, *Gillian*.

**Olympic.**—On Monday, a new burletta, which has been continued during the week, entitled, *Folly and Friendship*, was produced with tolerable success, Mrs. Honey being the magnet: she sang a couple of ballads in a most charming manner. We have seldom witnessed greater improvement, in a short time, than she exhibits both in her acting and singing. Selby, Vining, Oxberry, and Wyman, added, by their acting, to the success of this trifle, which will but "fit its hour on the stage." Madame Vestris, we are sorry to add, has been too unwell to act. Miss Murray played *Emeralda*, in *Riquet*, with much spirit.

**Queen's Theatre.**—Mr. Hill appeared in a new character on Wednesday, in an amusing farce called *A Down East Bargain*: he has so much humour, that he is sure to succeed; and it is well worth while to go to the *Queen's*, if it were only to hear him play the flute, a tune on which instrument is nightly encored: we have no doubt he will be as great, if not a greater, favourite than his countryman, Mr. Hackett. The other characters were well played by Messrs. Loveday, Reid, W. Davidge, Mrs. Loveday, Miss Wroughton, and Miss A. C. Grey; the last lady's place was, on Thursday, filled by Miss Treble, as Miss Grey was laid up with the influenza.

### VARIETIES.

**Weather-wisdom.**—This week has been more obedient to prediction: in the ensuing—"The sun, coming to Saturn's declination on the 30th, the month ends cold, with snow-storms." [This is very decided]. About Feb. 2d, "heavy rains and violent storms" are predicted. "Wind and sleet continue, and thick fogs or heavy clouds."—*Meteorological Almanac*. We are in-

\* This story has been very much dramatised during its existence, in addition to that already mentioned; at the Adelphi it was *The Chain of Gold*, and at the English Opera, *A Father's Crime*.

debted to Lieutenant Morrison for the annexed meteorological report at Cheltenham, contemporaneously with Sir D. Brewster's in Scotland; and it is but justice to him to quote a passage in his note to us:—"P.S. I find that I fell into an error as to the sun having the declination of *Saturn* on the 30th instant; it should be *Jupiter*; the weather will not, therefore, be quite so severe as I have predicted."

State of the Thermometer at Cheltenham, January 11th and 12th, 1837.

11th day, 2 P.M. 31°-3, 32°-4, 31°-5, 29°-6, 29°-7, 29°-8, 29°-9, 29°-10, 29°-11, 29°-12.  
12th day, 8 A.M. 31°-9, 32°-10, 33°-11, 34°-12, 34°-1 P.M. 35°-2, 35°-3, 35°-4, 35°-5, 36°-6, 36°-7, 41°-8, 42°-9, 44°-10, 44°.

**Dr. Macnish**, of Glasgow, the author of several literary and medical works of high merit, including the *Philosophy of Sleep*, and the *Anatomy of Drunkenness*, both very interesting productions, died last month, after a few days' illness, aged only 35. Dr. Macnish was of very retired habits.

**The Italian Opera** opens in three weeks. The season begins with the *Hermit*.

**Australian Expedition.**—The *Beagle* is fitting out at Woolwich, under Captain Wickham, and is to proceed, in a few weeks, with Lieutenants Gray and Lushington, for Swan River, on their expedition to explore Australia. Mr. Porter accompanies them as surgeon and naturalist.—*Newspapers*.

**King's College.**—The council of this Institution, in consequence of the charter to the London University doing away with religious distinctions, have issued a declaration of adherence to their original principles, and that, in their judgment, "there is no other sure foundation for national education, than the doctrines of the Christian religion." In their own establishment they continue to adhere to the church of England.

**The Epidemic.**—It has been calculated that about a thousand funerals took place within the bills of mortality on Sunday last.

**An advertisement in the Times** of Tuesday, reclaims, *inter alia*, a lost "knife, and other memorandums, of no use to any person but the owner." The knife, at least, must be an odd one.

**Sir John Soane.**—This distinguished and venerable professor of architecture of the Royal Academy died yesterday week: in our next we propose to give a brief memoir of his life and works.

**Loudon's Magazine of Natural History, No. 1.**—*New Series*, conducted by E. Charlesworth. (Longman and Co.)—This No. is what might be anticipated from Mr. Charlesworth's talents—the promise of a very excellent scientific work, in which the editor will dare to take his own original views, and offer his own independent opinions, without following any servile track, or giving us the Balaam of compilation. He distinguished himself in the geological section at Bristol; and this magazine shews that he is likely to continue in the same course of distinction. A notice of shells in the crag formation is a very interesting paper. Mr. C., we observe, criticises "The Naturalist" (and the Messrs. Neville and T. C. Wood) rather severely: *non nostrum*!

**Medical.**—*The Lancet* (January 21) gives us a long and interesting report of a meeting at Exeter Hall; the object of which is the formation of a British Medical Association, to redress grievances complained of in the existing constitution of the medical tripartite body—

\* Moon south, being 135° from *Mars* (a sesqui-square aspect), when the thermometer began to rise.

physicians, surgeons, and apothecaries,—chartered and incorporated with many privileges. Some strong language was used on the occasion; and a constitution was finally adopted. The same periodical contains a singular statement of the mal-conformation of the poor creature found in the Edgeware Road; and an account (with an engraving) of a remarkable operation in *lipoma*, performed by Mr. R. Liston, at the North London Hospital. It appears from this that our great operator reduced the extraordinary nasal protuberances of a shoemaker, named Snell; and sent him off *beautifully* cured in the space of a little month. Previously, the unfortunate man could hardly eat or breathe from the oppression and size of his monstrous deformities.

**The Wrangler.** No. 1. (Whittaker; and Watts, Wilsbeach.)—A new literary monthly journal; the papers in which are honourable to the tastes and talents of the writers, and embrace a variety of well-chosen subjects. A poem, on Banwell Cave—that osteological wonder—is its most original feature.

### LITERARY NOVELTIES.

### TO CORRESPONDENTS.

Medal Engraving.—The orders for the *Lit. Gaz.* on this subject having exceeded the possibility of getting impressions of the plates from the printer in time to meet the demand, we are compelled to defer the publication till next week.

Correspondents who, under particular circumstances, request us to send them single copies of the *Literary Gazette*, had much better take it in regularly. This is the wisest way to learn what is thought of their own productions, and what others engaged on similar pursuits are doing. *Verb. sat.*—Ed.

We are sorry we cannot give H. (Harriet) the invitation she requests.

E. H. is also declined, with thanks.

## ADVERTISEMENT,

Connected with Literature and the Arts.

BRITISH INSTITUTION,  
PAUL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, will be opened on Monday next, the 30th inst. and continue open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

**THE INSTITUTE OF BRITISH ARCHITECTS**, being desirous to evince their high respect for the Memory of Sir John Soane, R.A. Honorary Fellow, and their earliest Benefactor, whose Funeral will take place on Monday next, the 30th instant, defer the ordinary Meeting, which would otherwise be held on that Evening, until the Monday following, on which occasion the Charter of Incorporation, granted by his Majesty to this Institute will be laid on the Table. By order of the Council,

T. L. DONALDSON, } Honorary Secretaries.

CHARLES FOWLER, }

33d January, 1837.

MARYLEBONE LITERARY and  
SCIENTIFIC INSTITUTION, Edwards Street,  
Portman Square.

Lectures on various Branches of Literature and Science are delivered every Monday Evening.

The Reading Rooms, supplied with the English and Foreign Newspapers, Magazines, Reviews, &c. &c., together with a valuable Library, are open daily, for the use of the Members.

The Lectures during the ensuing quarter will be by J. Hemming, Esq. on Chemistry; Dr. Grant on Zoology; Dr. Ritchie on Natural Philosophy; E. Taylor, Esq. on Vocal Music; C. C. Clarke, Esq. on Early Poetry; W. Newton, Esq. on Woollen Manufacture.

The Lecture on Monday next will be on the Arabian Empire. Subscriptions, Two Guineas per Annum.

U. H. GARNETT, Hon. Sec.

**TO THE CLERGY, &c. MR. BROSTER** still continues giving Instruction in the System discovered and practised by him, in Edinburgh, in 1834, for the Restoration of the Organ of Speech, under every defect, either as Impediments, or Limping, as well as Weakness of Voice, rendering the Duties of the Clergy more effective, without fatigue or exhaustion. References, in proof, can be given to the highest authorities, including the testimonial from Sir David Brewster, and may be had of Mr. Thomas Broster, Surgeon, 4 Brompton Row, Knightsbridge. Terms, and every other particular, from Mr. Broster, at his residence, East Cowes, Isle of Wight.

## INVITATION CARDS.

La Rivière's Unique Perforated Invitation Cards, which form Transparent Writing, with Envelopes, perforated and embossed, are now ready, and, together, form the most elegant mode of sending Invitations, ever presented to the Nobility and Gentry.

The Trade may be supplied at the Agents, Riddle and Meymott, 25 Finsbury Row, London.

**NOTICE.**—Advertisements having appeared within these last few days calculated to, and which, perhaps, may mislead the Trade, S. MORDAN and Co., in justice to themselves and the Public, beg to inform their Friends, and the Trade generally, that their Business is conducted as usual at 22 Castle Street, Finsbury, London.

## ENCYCLOPEDIA LONDINENSIS.

The Proprietor of the above work begs to inform those Gentlemen who may have sets incomplete, that the same may be made perfect, at the following reduced prices:—Per volume, with Engravings, plain, 11. 1s.; or, with Engravings, coloured, 11. 11s. 6d.

W. Edwards, 12 Ave Maria Lane, London.

## PORTRAIT of the late SIR JOHN SOANE, R.A. engraved by Jas. Thomson, from the original Painting by Sir Thomas Lawrence.

The Portrait and Memoir are also published in Part LX. of the National Portrait Gallery. Price 3s. 6d.  
London: Fisher, Son, and Co.

## COFFEE.—S. PARKER having perfected

his Patent Steam-Fountain Coffee-Pot, confidently recommends it to the Public. It produces most economically and rapidly, over an open fire, an Extract of Coffee more aromatic in quality and delicious in flavour than can be made by any other machine. Every variety, with printed testimonials of its advantages, may be seen at No. 12 Argyl Place, Regent Street, where, also, are on sale his Patent Indian, Argyl, and original Sinumbra Lamps.

The Five following Plates:—

**DIURNI**, Lady Hester Stanhope's Romantic Residence; Remains of the Port of Seleucia; Beirut and Mount Lebanon; Court of a Turkish Country House at Nalabeh; Convent of St. Antonio, near Eden,—are published this day, in Part X. of "Fisher's Views in Syria, the Holy Land, Asia Minor," &c. Demy 4to.

N.B. An entirely new edition of Part I. (the original Plates having been worn out) will be published March 1st, and be continued monthly.

To be completed in Ten Monthly Parts, Part I. price 3s. of Family Prayers for Every Morning and Evening throughout the Year; with Additional Prayers for special occasions. By John Morrison, D.D.

March 1st will be published,

**Memoir of the Rev. Rowland Hill, M.A.** By William James, author of "Testamentary Counsels;" with a Preface, by the Rev. James Sherman.  
\* Be particular in ordering "Rowland Hill's Memoir," with Mr. Sherman's Preface.

London: Fisher, Son, and Co.; Cumming, Dublin; and Oliphant, Edinburgh.

2. **Russell's Atlas of Ancient Geography;** in Twenty-two 4to. Maps, with Index of Names on the same plan, and as a companion of the above. Royal 8vo. coloured, price 12s. half-bound; uncoloured, price 10s.

3. **Russell's Atlas of Ancient and Modern Geography,** together, in royal 4to. with Consulting Indexes. Price 12s. handsomely half-bound.

4. **Ostell's General Atlas,** in royal 4to. on an enlarged scale, with a Consulting Index, containing references to every Place laid down in the Maps, with the Latitude and Longitude. Coloured Outlines, price 12s. half-bound; or, 21s. full coloured.

\* \* \* The same work, on Imperial drawing-paper, for the Library, price 17. 11s. 6d. handsomely half-bound.

N. B. The great attention paid to the above Atlases, by constantly adding the information gleaned from recent travellers, and the thorough repair the plates are always kept in, have given to them a decided advantage over every other Atlas.

5. **The Bible Atlas;** or, **Sacred Geography;** finely engraved and coloured, with a copious Index. Large 8vo. price 12s. half-bound; or uncoloured, 9s.

6. **A New Map of Palestine,** and the adjacent Countries, from the best authorities. 24 inches by 30. Price 18s. coloured.

7. **School Geography,** on a new, easy, and highly improved plan. By Joseph Guy, late Professor of Geography at the Royal College, Great Marlow. The 13th edition, corrected, royal 16mo. Seven Maps. Price 3s. bound in red.

8. **Key to the Problems.** Price 1s. 6d.

9. **Guy's Epitome of British Geography.** Price 1s.

10. **Bruce's Introduction to Geography and Astronomy,** in 12mo. A new and enlarged edition, price only 6s. bound.

**RIDDLE'S NAVIGATION, ADAPTED TO THE NAUTICAL ALMANAC IN ITS PRESENT FORM.**

In 8vo. the 2d edition, with numerous Additions and Improvements, price 18s. bound.

**A TREATISE ON NAVIGATION and NAUTICAL ASTRONOMY,** adapted to Practice, and to the Purpose of Elementary Instruction; with an Extensive Series of Examples for Exercise, and all the Tables requisite in Nautical Computations.

By EDWARD RIDDLE, F.R.A.S.  
Master of the Mathematical School, Royal Hospital, Greenwich.  
\* \* \* Grateful for the patronage which this work has received, as evinced by the sale of two very large editions, the author has endeavoured to make the present edition still more worthy of support; and he has adapted it to the Nautical Almanac, in the entirely altered and greatly improved form in which, by order of the Lords Commissioners of the Admiralty, it has appeared since 1836.

London: Printed for Baldwin and Cradock, Paternoster Row.

**The System pursued in the Model Schools of the Glasgow Normal Seminary.**

Price 3s. bound in cloth,  
**THE TRAINING SYSTEM,** adopted in the Model Schools of the Glasgow Educational Society; a Manual for Infant and Juvenile Schools, which includes a System of Moral Training suited to the Condition of Large Towns.

By DAVID STOW, Esq.  
One of Secretaries of the Glasgow Educational Society.  
"This is an able, useful, and most amusing book. It will be productive of much benefit to hundreds and thousands of the rising generation."—*Newcastle Mercury.*

"This volume should be in the hands, not only of every instructor of youth, but of every parent and guardian."  
The present manual is at once elegantly and cheaply got up."  
—*Berwick and Kelso Warder.*

W. R. M'Phun, Glasgow; N. H. Cotes, 139 Cheapside, London.

New edition, 2s. 6d. bound in red.  
**ENTICK'S SPELLING DICTIONARY**

of the ENGLISH LANGUAGE; in which the Parts of Speech are accurately distinguished, and the Syllables accented according to the just and natural Pronunciation of each word.

London: James Burns, 17 Portman Street, Portman Square.  
Of whom may be had the Author's other Works.

# THE EDINBURGH MEDICAL AND SURGICAL JOURNAL, No. CXXX. January 1857.

This Number contains Dr. Macfarlane's Surgical Report of Cases treated in the Glasgow Royal Infirmary from 1st May, 1855, to 1st August, 1856.—Dr. Ogston on the Morbid Appearance in Death by Drowning.—Dr. Mace on the Coagulability of Urine as a Diagnostic and Therapeutic Sign in Dropsies.—Mr. Wood on Scarlet Fever.—Dr. Hamilton on Scarlatina Anginosa.—Mr. Gulliver on Fractures of the Patella.—Dr. Dempster's Case of Death from the Bite of a Poisonous Snake, &c.

In the department of Critical Analysis the following books are reviewed:—Sir Henry Halliday's *Diagnosis and Oration*—Doehaetelet on Prostitution in Paris—Report from the Select Committee on Medical Education—Coulson on Disease of the Hip Joint—Priehard on Insanity.

The Number is concluded with the most recent and important Medical Intelligence.

Adam and Charles Black, Edinburgh; Longman and Co. London.

## THE HALL OF JOHN HALL.

In 8vo. pp. 662, price 3s. elegantly printed on fine wove paper, embellished with illuminated and other Plates, and handsomely bound in cloth, and lettered, the First Volume of **PROLUSIONES HISTORICÆ**, or, Essays illustrative of the Halls of John Hall, Citizen and Merchant of Salisbury, in the Reigns of Henry the Sixth and Edward the Fourth.

By the Rev. EDWARD DUKE, M.A. F.A.S. and L.S. The Author apprises the Public, that this, the First Volume of his work, is restricted more especially to the Lord of the Manor, and his Dress. It contains very interesting Memorials of his Life. Hence arise numerous Disquisitions on the Origin and Progress of Heraldry—on the Origin and History of the Staple—on the varying Fashions of successive Eras, &c.; and it closes with numerous Illustrative Notes.

The Second Volume will be appropriated to the Hall itself, and the many subjects connected with it. This will also be illustrated with Plates and copious Notes.

Sold by Nichols and Son, Parliament Street; W. Pickering, Chancery Lane; and J. A. Arch, Cornhill; and by Brodie, and Co. Salisbury.

## THE ESSENTIALS OF FRENCH GRAMMAR, by which a competent Knowledge is easily attainable in a few Months.

By the Rev. J. MACGOWAN, Master of a Classical and Commercial School in Liverpool; formerly Private Secretary to Lord Seaford, Private Tutor to the Earl of Errol, &c.

"We recommend the 'Essentials of French Grammar,' by the Rev. J. Macgowan, to the pocket of the student: it contains much in a small space."—*Scotsman's Magazine*.

Sold by Shewell and Co. Paternoster Row; and by Oliver and Boyd, Edinburgh.

Of whom may be had, by the same Author,  
First French Lessons. 1s.  
Infant's First English Lessons. 3d.  
Second English Book. 9d.  
Third ditto. 6d.

Or Second and Third bound, 1s. 6d.  
First Arithmetic. Approved by some of the principal Officers of the Custom Houses of Liverpool and Hull.  
English Grammar, and Introduction to Composition. 2d edition, 2s. bound.

Essays by Pupils. 6d.  
First Lessons in Latin Reading, Grammar, and Composition. 4th edition, 3s. bound. Second Part, or Second Course, 3d edition, 3s. bound.

Latin Grammar for the Higher Classes. 3d edition, 2s. bound.

The *Literary Gazette*, after enumerating most of these works, recommends them strongly, on account of "their practical utility," and because they are "adapted to teach children to think, as soon as possible."

## THE FOLLOWING HINDOOSTANEE WORKS OF DR. J. B. GILCHRIST, considerably reduced in price, are on Sale by Publishers, Wm. H. Allen and Co. 7 Leadenhall Street.

**PHILOSOPHY and RELIGION**, with their Mutual Bearings comprehensively considered, and satisfactorily determined, on clear and scientific Principles. By WILLIAM BROWN GALLOWAY, A.M. Smith, Kider, and Co. Cornhill, Booksellers to their Majesties.

SPLENDIDLY ILLUSTRATED BOOKS.  
In imperial 4to. price 42s.; India Proof, 62s.  
**FINDEN'S TABLEAUX**; a Series of Picturesque Scenes of National Character, Beauty, and Costume.

Edited by Mrs. S. C. HALL. The Plates in this work are double the size of those in the largest of the *Annuaire*, and have been carefully engraved by the first artists, under the direction of William and Edward Finden. As it is splendidly bound in morocco, richly and appropriately embellished after a design by Courboud, it forms decidedly the most magnificent and attractive work ever published.

"Every one of the engravings is worth the notice of the collector, and the whole forms a charming portfolio: the binding is so rich and tasteful as to merit a distinct notice."—*Atlas*.

"The most richly illustrated production of the present day."—*Court Magazine*.

Price 31s. 6d. superbly bound in morocco,  
Le Byron des Dames;  
Or, Portraits of the principal Female Characters in Lord Byron's Poems.

\* \* \* This Volume is in large 4to. bound in rose-coloured morocco, very richly gilt, and contains Thirty-nine Plates from original Paintings, engraved under the superintendence of W. and E. Finden. Each subject is illustrated by critical remarks and poetical extracts. For luxury and elegance, it surpasses every work of a similar class yet produced.

Price 11. 11s. 6d. similar to "Le Byron des Dames,"  
Finden's Gallery of the Graces.

A Series of Thirty-six beautiful Female Heads, illustrating celebrated Passages in Modern British Poets, with accompanying Extracts.

The Paintings were designed expressly for this work by the most eminent Artists, and the whole engraved with the greatest care, under the superintendence of the Messrs. Finden.  
Charles Tilt, Fleet Street.

Bishop Butler's School Atlases, &c.

**ATLAS of MODERN GEOGRAPHY**, consisting of 28 coloured Maps, from a new set of Plates. 15s. half-bound.

By SAMUEL BUTLER, D.D. Lord Bishop of Lichfield and Coventry, late Head Master of Shrewsbury School.

Also, by the same,  
II.  
Atlas of Ancient Geography, consisting of 22 coloured Maps, with a complete acousticated Index. 12s.

III.  
General Atlas of Ancient and Modern Geography. 45 coloured Maps and 2 Indexes. 24s.

\* \* \* The Author begs to observe that in the present editions he has added Maps of the West Indies and Australia to the Modern, and of Mauritania, Numidia, and Africa Propria to the Ancient Atlas; and has had several of the Maps redrawn and re-engraved, especially those of Greece and Italy, on a larger scale, and one of Italy also added, without any increase of price.

Sketch of Modern and Ancient Geography, for the Use of Schools. New edition, 1 vol. 8vo. 8s. boards.

An Abridgement of the same Work, for the Use of Beginners, 2s.

By the late CLAUDE JAMES RICH, Esq.  
The Honourable East India Company's Resident in Bagdad, Author of "An Account of Ancient Babylon."  
Edited by his WIDOW.

The *Edinburgh Review*, just published, concludes a long review of this work in the following words:—"Such are the contents of the volumes which we now recommend to the public attention, and especially to those who consider a knowledge of the nations of Asia, with whom our relations, political and commercial, are every day augmenting, essential to a people who possess, as we do, a vast stake in the East."  
London: James Duncan, 37 Paternoster Row.

13 Great Marlborough Street, January 27.  
**MR. COLBURN** has just published the following New Works:—

I.  
**Rambles in Egypt and Candia.**  
With Observations on the Government, Policy, and Commercial System, of Mohammed Ali.  
By Capt. C. R. Scott, H.P. Royal Staff Corps.  
In 3 vols. 8vo. with Plates.

II.  
**Fittings of Fancy.**  
By Robert Sullivan, Esq. 2 vols. post 8vo.

III.  
**Henrietta Temple; a Love Story.**  
By the Author of "Vivian Grey." 3 vols.

IV.  
**The Romance of the Duchesse de la Vallière and Madame de Maintenon.**  
2 vols. post 8vo. 12s.

In a few days,  
**The Divorced; a Tale.**  
By Lady Charlotte Bury.  
Authoress of "Flirtation," &c. 2 vols. post 8vo.

II.  
**Piccioli;**  
Or, Captivity Captive. 2 vols. post 8vo.

### REVIEW OF NEW BOOKS.

*Report from the Select Committee on Record Commission; together with the Minutes of Evidence, &c.*

THIS long-delayed volume has, at last, reached us, and we take an early opportunity to give our readers a sample of its contents. Considering it merely as a work affording a vast mass of information respecting the depositories and actual condition of our national records, it is of the greatest value: but it has higher and more serious claims upon the attention of government and the public; since it offers the only detailed information that can be obtained concerning the management and expenditure of the present Record Commission, and involves, to use the words of a member of the committee, "the character and the fortune of individuals, as well as the reputation of a public body, and the interests of the country, in a large expenditure of the public money." It will be recollected, that, in a series of articles which appeared in this journal during the past year, we endeavoured, with but scanty materials for our guidance, to point out the errors of the Commission; and the object of the present, and a future article, will be to shew, that the evidence affords the fullest proofs that can be required of its constitution being, in every respect, inadequate to the fulfilment of the measures proposed at its formation.

The Commons, in the fourteenth, were as anxious for the due care and preservation of the records as their descendants in the last and present century; but the brief and energetic expression of their sentiments on the subject, in the reign of the third Edward, was productive of more benefit than the elaborate report of the committee of 1800. To the former we are indebted for those precautionary measures which have served to hand down to us the records of five centuries, comparatively free from all injuries but those inflicted by the delinquencies of record-keepers and their servants: while to the latter we are indebted for the establishment of a series of imbecile commissions, nominally inquisitorial, and, in some respects, dangerously executive; absolutely without power to remedy any one of the many evils reprobated in the report, but possessing sufficient authority to squander thousands in printing a score or two of trashy volumes, edited by individuals whose attainments would have scarcely qualified them for a seat on the lower form of the most indifferent public school in the country. Unfortunately, the waste of public money is the least of the charges to be brought against them: in the opinion of a competent witness, "More of the Records of England have been destroyed since the Record Commission was first instituted, in 1800, than were destroyed during the four previous centuries."—*Sir Thomas Phillips*, q. 7551.

The method adopted by the present board, in selecting works for publication, is well illustrated by the evidence. We have hinted, more than once, that, if the ability of the commissioners to decide upon the propriety of printing any one record was presumed, rather than understood, there could be no doubt as to the

general principles upon which they, or their secretary, acted in making choice of the works already before the public. Among the individuals, twenty-two in number, forming the present board, are two to whom the world attributes some credit for their historical writings; we allude to Messrs. Hallam and Allen. Any one ignorant of the chicanery of the day would naturally suppose, that to these gentlemen the board would have left the task of selecting records worthy of publication, and of securing the services of competent editors: moreover, it might not only be rationally concluded, that the board had deferred to the judgment of persons of such literary notoriety, but that they themselves felt some anxiety to forward the interests of that branch of literature in which they obtained their reputations, by taking care that no absurd and useless productions were allowed to swamp the public money, and to disgrace the commission. What are the facts? Let Mr. Hallam speak for himself.

"You have been a commissioner since 1831? I have.—Have you frequently attended the board? I have attended pretty frequently.—From your experience as a commissioner, should you say, that you have had an accurate knowledge of the proceedings of the board all that time? By attending the board, I have had so far a knowledge, that I have known the proceedings when I have been present, which has been generally the case.—Have you generally known what works were going to make their appearance, under the sanction of the board? Not entirely. The meetings have not been very frequent; I should think, upon an average, six or eight in a year: but the general management of the board has rested with the secretary, and some commissioners with whom he has had communication. I cannot say that I have always known what was going forward, but I have always had the power of doing so."

Mr. Allen answers,—"Will you explain the phrase which you used, that you could not say whether they were all selected with reference to those which remain unprinted, and which you, a commissioner, knew nothing of, or knew very little of? I should say that I know very little of a work that I never considered with a considerable degree of attention. I do know that the Pipe Rolls are very valuable; but I must confess that, except the Pipe Roll of Stephen,\* I know nothing of the Pipe Rolls but through Maddox.—How is it that, as a commissioner, you have been allowing works to be selected for printing and publication, not knowing whether or not there were more valuable works? It is to be considered that two persons may have different opinions as to the comparative value of different publications: the publications that were ordered to be printed I know to be valuable; whether they are more or less valuable than others is a matter of opinion, upon which I might have one notion, and another person another notion.—But, not knowing what was in the office, you could hardly form an opinion upon that subject? I knew from Maddox that a great deal of valuable

matter was to be got from the Pipe Rolls; and perhaps a particular record might be preferred because there was a person qualified to edit it!"

Thus, it is quite clear that these gentlemen knew but little about the relative value of Records; that they were no better informed concerning the works proceeding under the direction of the commission; and it is doubtful whether they cared to learn any thing relating to them. But, circumscribed as their knowledge of Records appears to be, it is great compared to the utter innocence of their colleagues, and might have been turned to account had they not been mystified by "the secretary, and the commissioners with whom he was in the habit of communicating." Mr. Allen, also, lets out that their plan was to publish a work for the sake of the editor, and palms upon the committee the astonishing and absurd sophism, that different Records require editors of different degrees of knowledge! Mr. Hallam acquired a little insight into the affairs of the commission in a very odd way. "The secretary, and the commissioners with whom he was in the habit of communicating," discovered in that gentleman a latent talent for arithmetic, and, with a laudable anxiety to develop it for the public benefit, they set him to audit the accounts of the secretary. In the discharge of his labour—for labour it must have been if he succeeded in understanding the most confused and unbusinesslike statements ever made by a highly paid and responsible servant—the historian of the middle ages learned, for the first time, that the commissioners had purchased a library at the cost of several hundred pounds; that they employed agents abroad to collect materials for British history; and, lastly, by the same process, he became acquainted with the names of many persons in the employment of the board, and of works already printed, of which, as a commissioner frequently attending the board, he had never before heard. The evidence of Mr. Protheroe, his fellow-auditor, is to the same effect, and goes, perhaps, somewhat further, as the following extracts will shew:—"In auditing the accounts, did you become acquainted with any expenditure or payment of which you had been previously ignorant? Yes, a great many.—Of any amount? A very considerable amount.—At which audit did you first become acquainted with any expenditure of which, as a commissioner, you were ignorant? We became acquainted with expenditure, of which we were ignorant as to its nature and object, only, perhaps, at the first audit; but in all subsequent audits I have become acquainted, and I should say that my colleagues have become acquainted, with payments to individuals with whose names, even, we were wholly unacquainted, although the objects for which those payments had been made had become known to us at the previous audit. Perhaps I shall best explain my answer by stating that, for instance, in the purchase of books, we became acquainted, for the first time, with any large expenditure of that nature on our first audit; but subsequent bills for books were sent in from other booksellers, which purchases we had not been previously acquainted with. We became cognisant at the

\* There is no such Roll!

first audit of sums paid for foreign collections, said to be for the continuation of the *Fœdera*. At our subsequent audit we became acquainted with the names of other parties to whom payments had been made, besides those whose names had occurred the year before.—By whom were those payments made? By Mr. Cooper.—By any authority from the commissioners? I am not aware of any general order for incurring this expenditure: certainly none for the particular payment.\* And a little further on we have the following important questions and answers:—"The accounts did not come to you as accounts sanctioned by the board, but accounts presented by Mr. Cooper, as what were afterwards to be certified to be accounts incurred by the sanction of the board by a quorum commissioner? The result of the demand for the subsequent signature of a quorum commissioner proves that this representation is correct; but we received those bills as bills of expenses incurred by the secretary in the discharge of the business of the commission.—In fact, the same gentlemanlike indifference pervaded the accounts as the Records? I should certainly say, yes. . . . Do you think it possible for you, or any other commissioner, to say what is the amount of any particular branch of your expenditure? Certainly not: I could form a pretty accurate opinion for one or two years, but I should be sorry to put in evidence from such a statement, inasmuch as it is made upon very rough calculations.—Do you think that the other commissioners are better informed than you are upon these subjects of finance? I should conceive not so well informed: no one, I believe, has attempted any thing like an analysis or digest of the accounts but myself." In detailing the manner in which the best practical men on the commission became acquainted with its principal operations, we have purposely strayed into the financial evidence, which is so closely connected with the subject we are discussing; and we have quoted enough of it to convince any unprejudiced person that reform cannot be too soon extended to this department of the commission: perhaps, our next statements may prove that the whole system is thoroughly bad and corrupt. "The secretary, and the commissioners with whom he was in the habit of communicating," having disposed of Mr. Hallam in the way we have mentioned, went on and expended upwards of a thousand pounds in collecting abroad for the "Materials for British History;" and, having omitted to consult the most competent member of the board respecting them, they also scrupulously concealed from Mr. Petrie, the editor of the work for which these researches were principally undertaken,\* the efforts they were making to assist him, but worked on from year to year, silent as the grave, and chuckling, perhaps, at the thoughts of the glorious moment when, having hatched their golden eggs, they should be at liberty to surprise the learned gentleman by announcing to him their past exertions, exhibiting their accumulation of treasure, and insinuating how much they had learned of which he was ignorant. Alas, for the plans of men! In the meanwhile comes the parliamentary inquiry; and Appendix C., the silly mouse of this second edition of the *Mountain in Labour*, is handed to the committee, and unquestionable evidence is given that almost all the documents contained in it, collected abroad at a great—we may say a vast, expense, are enrolled either at the Tower or the Town Clerk's office!! The *Rotali Selecti*, and

the Chancellor's Roll, and their blundering editors, sink into nothing compared with this amazing charlatany. Here our learned, unpaid, irresponsible commissioners, and their "enlightened secretary" (*vide* Preface to *Ancient Fines*), have actually been carrying coals to Newcastle; and, in return for the compliments of *doctissimi, illustrissimi*—we had almost said, *ineptissimi*, which are matters of course to a German senate, and cost but a few strokes of the pen, spending the broad gold pieces of England in the employment of learned Hamburgers to copy copies of instruments, of which the legal and authentic enrolments might have been consulted and transcribed at the cost of a few shillings, and the trouble of a walk into the good city of London. We may add, as an appropriate termination of this capital farce, that the copies thus procured were so exceedingly incorrect that a further expense was incurred to render them intelligible, which was accomplished by collating them with enrolments in the Tower. Thus, the cost of the raw materials of Appendix C. may be classed under the following heads:—Expense of printing the titles of the commissioners, their patent, and certain questions, the same having been previously written either in Latin or German,\* to send to Hamburg; postage of answers from Hamburg to London; postage back again of orders to copy; expense of transcripts and carriage of the same to London; cost of rendering the same intelligible; and, lastly, the heavy expenses of printing and corrections: and all this for an appendix to a report not yet printed, which was to be eventually treated as waste paper, while the documents were to be incorporated in the new edition of the *Fœdera*, or the "Materials for British History," and would thus have been twice printed at the public expense. We leave our readers to make their own comments on these facts, observing, that there are many other appendixes of a similar character, which we may fairly presume to be of equal value with volume C.; and adding, by way of elucidating the case, the following passages from the Report of the Committee:—

"The business of the commission was [is?] nominally conducted at meetings or boards, held at the official or private residence of some one of the commissioners. It appears from a Return laid before your committee that, in a period of nearly five years, thirty-eight boards were held, and only seven of the twenty-five commissioners attended at more than half of these. These boards were called by the secretary at his discretion. They sat rarely more than two or three hours, their duration depending on the time at which some of the leading official members could conveniently come, and that at which they were forced to go away to attend to other business. The business to be done at these boards was arranged by the secretary. The correspondence of the commission was carried on by the secretary. Letters of great importance were not laid before the board. Notices and communications of the commissioners themselves appear, in the same way, to have been liable to be suppressed, or only partially communicated to the board. Some business of the commission was also done by committees."

In fact, the administration of the affairs of the commission appears, in a great measure, to have been vested in the hands of the secretary, consulting occasionally two or three of the commissioners.

It appears also, from the evidence of Mr.

\* Translated, also, into French and Portuguese.

Protheroe, "that it was an express understanding between him (the secretary) and Lord Brougham, that the Record business was to yield to his private law avocations; and, to use his (the secretary's) own words, 'that the condition on which he accepted the office of secretary was, that its duties should be made in all respects secondary and subordinate to his professional avocations.'"

To conclude, for the present, with the result come to by the committee:—

"The undefined and almost unlimited authority exercised by the secretary exhibits, in the judgment of your committee, an obvious defect in the constitution and management of the board: since he possessed, as will appear from the following more detailed statement, the entire control over the funds and disbursements of the commission; of the preparation of its works; of the engagements, salaries, and duties, of all persons in the employ of the commission; and of the distribution of its publications."

*Falkner. A Novel.* By the Author of "Frankenstein," the "Last Man," &c. 3 vols. 12mo. London, 1837. Saunders and Otley.

Mrs. SHELLEY wields a powerful pen for a female hand. Energy and highly wrought passion are her most characteristic features; and when she smiles, it is very *Cassius-like*. The relief of playfulness does not suit her pictures; and she therefore rarely attempts that variation, but substitutes, instead, passages of tenderness and pathos. The whole becomes a production of highly wrought excitement, with only the repose—if repose it can be called—of some natural touches of infantile and common feelings; and thus, though forcible in detail and general effect, the prevailing colours are sombre and gloomy.

Falkner bears a near resemblance to Sir Edward Mortimer; and Elizabeth Raby, the heroine, his adopted daughter, reminds us (only that she is of another sex) of the general construction of the plot and the incidents of the "Iron Chest." The principal characters, as well as the leading events of the story, belong rather to the regions of romance than to that representation of actual life which we understand by the term, "Novel;" and the reader, without being much at a loss to guess the mystery enveloped in the narrative, or the way in which affairs will end, is led along by the talent of the writer through certain walks of imagination, till her task is completed, and the *dénouement* allowed.

\* This Review will probably be displeasing to our worthy contemporary, the *Gentleman's Magazine* (or the writer therein upon the subject of the "Record Commission," over whom the editor is civil enough to throw the shield of his responsibility); but, as the *Literary Gazette* took the lead in calling the public attention to this subject, we have not felt that we could be justified in retiring from the disagreeable task of following it up, truly and impartially, to the end, to the best of our judgment, without prejudice or favour towards any one. That we have thus cooled some of our friends, we must regret; but, at the close of nearly twenty years' discharge of a public duty, which we took upon ourselves to perform, there could be no inducement sufficient for us to compromise the character of this journal. We refrained from noticing the *Gent.'s* attacks upon us last July; whether we shall put up with his new assault, remains to be seen. We made allowance for his zeal to protect a contributor and ally; though we thought he need not try to bespatter us so much in the job. His conduct reminded us of that of the old Highland wife in the anecdote of the rebellion, who, when her crouny, talking over public affairs, said, "God defend the right!" replied, with vehemence, "God defend the right! What d'ye mean, Janet? God defend Hamilton's regiment, quoth I, whether right or wrong!" So the *Gent.'s* *Mag.* has its Hamilton's, or Hunter's, regiment; and the more wrong the more stoutly does it stand up for the cause.

\* A few appear to have been collected for the *Fœdera*. We speak on the authority of Mr. Cooper's evidence, and that of Mr. Petrie.

With these few remarks we shall (without removing any of the veil which covers the plot) give a few examples of Mrs. Shelley's genius, in different lights. Her description of the orphan Elizabeth, whose father and mother have died, and are buried in the churchyard of a remote sea-bathing village in Cornwall, is very affecting.

"The little orphan grew, meanwhile, as a garden-rose that accident has thrown amidst briars and weeds—blooming with alien beauty, and unfolding its soft petals, and shedding its ambrosial odour beneath the air of heaven, unharmed by its strange position. Lovely as a day of paradise, which, by some strange chance, visits this nether world to gladden every heart, she charmed even her selfish protectress; and, despite her shabby attire, her cherub smiles, the free and noble steps which her tiny feet could take even now, and the music of her voice, rendered her the object of respect and admiration, as well as love, to the whole village. The loss of her father had acquainted the poor child with death. Her mother had explained the awful mystery as well as she could to her infantile intellects, and, indulging in her own womanish and tender fancies, had often spoken of the dead as hovering over and watching around his loved ones, even in the new state of existence to which he had been called. Yet she wept as she spoke. 'He is happy,' she exclaimed; 'but he is not here! Why did he leave us? Ah! why desert those who loved him so well, who need him so dearly? How forlorn and cast away are we without him!' These scenes made a deep impression upon the sensitive child; and when her mother died too, and was carried away and placed in the cold earth beside her husband, the orphan would sit for hours by the graves, now fancying that her mother must soon return, now exclaiming, 'Why are you gone away? Come, dear mamma, come back—come quickly!' Young as she was, it was no wonder that such thoughts were familiar to her. The minds of children are often as intelligent as those of persons of maturer age, and differ only by containing fewer ideas; but these had so often been presented to her, and she so fixed her little heart on the idea that her mother was watching over her, that at last it became a part of her religion to visit, every evening, the two graves, and saying her prayers near them—to believe that her mother's spirit, which was obscurely associated with her mortal remains reposing below, listened to and blessed her on that spot. At other times, neglected as she was, and left to wander at will, she conned her lesson, as she had been accustomed at her mother's feet, beside her grave. She took her picture-books there, and even her playthings. The villagers were affected by her childish notion of being 'with mamma,' and Missy became something of an angel in their eyes; so that no one interfered with her visits, or tried to explain away her fancies. She was the nursing of love and nature: but the human hearts which could have felt the greatest tenderness for her beat no longer, and had become clods of the soil,—

'Borne round in earth's diurnal course,  
With rocks, and stones, and trees.'

There was no knee on which she could playfully climb, no neck round which she could fondly hang, no parent's cheek on which to print her happy kisses: these two graves were all of relationship she knew upon the earth; and she would kiss the ground and the flowers, not one of which she plucked, as she sat embracing the sod. 'Mamma' was every where

around. 'Mamma' was there beneath, and still she could love and feel herself beloved. At other times she played gaily with her young companions in the village, and sometimes she fancied that she loved some one among them. She made them presents of books and toys, the relics of happier days; for the desire to benefit, which springs up so naturally in a loving heart, was strong within her, even in that early age: but she never took any one with her in her churchyard visits—she needed none while she was with mamma. Once, indeed, a favourite kitten was carried to the sacred spot; and the little animal played amidst the grass and flowers, and the child joined in its frolics. Her solitary gay laugh might be heard among the tombs—she did not think it solitary: mamma was there to smile on her as she sported with her tiny favourite."

The love of children is well illustrated in the annexed:—

'We human beings are so unlike one to the other, that it is often difficult to make one person understand that there is any force in an impulse which is omnipotent with another. Children, to some, are mere animals, unendued with instinct, troublesome, and unsightly—with others they possess a charm that reaches to the heart's core, and stirs the purest and most generous portions of our nature.'

The young hero, Neville, is perhaps drawn too strongly for his tender years. At sixteen, this seems to be more of creative fiction than truth:—

"He was wondrously handsome; large, deep-set hazel eyes, shaded by long dark lashes—full at once of fire, and softness; a brow of extreme beauty, over which clustered a profusion of chestnut-coloured hair; an oval face; a person, light and graceful as a sculptured image—all this, added to an expression of gloom that amounted to sullenness, with which, despite the extreme refinement of his features, a certain fierceness even was mingled, formed a study a painter would have selected for a kind of ideal poetic sort of bandit stripling.'

Then Elizabeth, at thirteen, is equally premature:—

"Every other arrangement for their voyage was quickly made, and it remained only to determine whether Miss Jervis should accompany them. Elizabeth's mind was divided. She was averse to parting with an unoffending and kind companion, and to forego her instructions—though, in truth, she had got beyond them. But she feared that the governess might hereafter shackle her conduct. Every word Falkner had let fall concerning his desire to die, she remembered and pondered upon. To watch over and to serve him was her aim in going with him. Child as she was, a thousand combinations of danger presented themselves to her imagination, when her resolution and fearlessness might bring safety. The narrow views and timid disposition of Miss Jervis might impede her grievously."

We conclude with the original sketch of the last representative of one of the oldest families in England, the grandfather of Elizabeth; to whose protection, Falkner, for urgent reasons, is most desirous to consign her.

"The first step he took, in furtherance of this new resolution, was to make inquiries concerning the present state of Elizabeth's family; of which, hitherto, he knew no more than what he gathered from her mother's unfinished letter: and this was limited to their being a wealthy Catholic family, proud of their ancestry, and devoted to their faith. \* \* \* The present head of the family was an old man; he had long been a widower, left with a

family of six sons. The eldest had married early, and was dead, leaving his widow with four daughters and one son, who was heir of the family honours and estates, and resided with his mother, for the most part, at the mansion of his grandfather. Of the remaining sons, little account could be gained. It was the family custom to concentrate all its prosperity and wealth on the head of the eldest son; and the younger, precluded by their religion, at that time, from advancement in their own country, entered foreign service. One only had exempted himself from the common lot, and become an outcast, and, in the eyes of his family, a reprobate. Edwin Raby had apostatised from the Catholic faith; he had married a portionless girl of inferior birth, and entered the profession of the law. His parents looked with indignation on the dishonour entailed on their name through his falling off; but his death relieved their terrors—he died, leaving a widow and an infant daughter. As the marriage had never been acknowledged, and female offspring were held superfluous, and an encumbrance in the Raby family, they had refused to receive her, and never heard of her more."

Falkner proceeds to Northumberland to restore the orphan, his adopted daughter.

"At length he arrived at his destination, and reached the entrance to Belleforest. The mansion, a fine old Gothic building, adorned by the ruins of an ancient abbey, was in itself venerable and extensive, and surrounded by a princely demesne. This was the residence of Elizabeth's ancestors—of her nearest relatives. \* \* \* Every thing around denoted grandeur and wealth: the very circumstance that the family adhered to the ancient faith of the land—to a form of worship which, though evil in its effects on the human mind, is to the eye imposing and magnificent—shed a greater lustre round the place. On inquiry, Falkner heard that the old gentleman was at Belleforest—indeed, he never quitted it; but that his daughter-in-law, with her family, were in the south of England. Mr. Raby was very accessible: on asking for him, Falkner was instantly ushered in. He entered a library of vast dimensions, and fitted up with a sort of heavy splendour; very imposing, but very sombre. The high windows, painted ceiling, and massy furniture, bespoke an old-fashioned, but almost regal taste. Falkner, for a moment, thought himself alone, when a slight noise attracted his attention to a diminutive, and very white old gentleman, who advanced towards him. The mansion looked built for a giant race; and Falkner, expecting the majesty of size, could hardly contract his view to the slender and insignificant figure of the present possessor. Oswi Raby looked shrivelled, not so much by age as the narrowness of his mind, to whose dimensions his outward figure had contracted itself. His face was pale and thin; his light-blue eyes grown dim: you might have thought that he was drying up and vanishing from the earth by degrees. Contrasted with this slight shadow of a man, was a mind that saw the whole world almost concentrated in himself. He, Oswi Raby, he, head of the oldest family in England, was first of created beings. Without being assuming in manner, he was self-important in heart; and there was an obstinacy, and an incapacity to understand that any thing was of consequence except himself, or rather, except the house he represented, that gave extreme repulsion to his manners. It is always awkward to disclose an errand such as Falkner's; it was only by plunging at

once into it, and warming himself by his own words, that he contrived to throw a grace round his subject. A cloud gathered over the old man's features; he grew whiter, and his thin lips closed as if they had never opened except with a refusal. 'You speak of very painful circumstances,' he said; 'I have sometimes feared that I should be intruded upon in behalf of this person; yet, after so many years, there is less pretence than ever for encroaching upon an injured family. Edwin himself broke the tie. He was rebellious and apostate. He had talents, and might have distinguished himself to his honour: he preferred irreparable disgrace. He abandoned the religion which we consider as the most precious part of our inheritance; and he added imprudence to guilt, by, he being himself unprovided for, marrying a portionless, low-born girl. He never hoped for my forgiveness; he never even asked it. His death—it is hard for a father to feel thus—but his death was a relief. We were applied to by his widow; but with her we could have nothing to do. She was the partner of his rebellion—nay, we looked upon her as its primal cause. I was willing to take charge of my grandchild, if delivered entirely up to me. She did not even think proper to reply to the letter making this concession. I had, indeed, come to the determination of continuing to her a portion of the allowance I made to my son, despite his disobedience; but from that time to this no tidings of either mother or daughter have reached us.' 'Death must bear the blame of that negligence,' said Falkner, mastering his rising disgust. 'Mrs. Raby was hurried to the grave but a few months after your son's death, the victim of her devoted affection to her husband. Their innocent daughter was left among strangers, who did not know to whom to apply. She, at least, is free from all fault, and has every claim on her father's family.' 'She is nothing, and has no claim,' interrupted Mr. Raby, peevishly, 'beyond a bare maintenance, even if she be the person you represent. I beg your pardon, sir, but you may be deceived yourself on this subject; but, taking it for granted that this young person is the daughter of my son, what is she to me?' 'A grand-daughter is a relation,' Falkner began; 'a near and dear one—' 'Under such circumstances,' interrupted Mr. Raby, 'under the circumstances of a marriage to which I gave no consent, and her being brought up at a distance from us all, I should rather call her a connexion than a relation. We cannot look with favour on the child of an apostate, educated in a faith which we consider pernicious. I am an old-fashioned man, accustomed only to the society of those whose feelings coincide with mine, and I must apologise, sir, if I say any thing to shock you; but the truth is self-evident: a child of a discarded son may have a slender claim for support—none for favour or countenance. This young person has no right to raise her eyes to us; she must regulate her expectations by the condition of her mother, who was a sort of servant, a humble companion or governess, in the house of Mrs. Neville of Dromore.' Falkner grew pale at the name, but, commanding himself, replied, 'I believe she was a friend of that lady. I have said I was unacquainted with the parents of Miss Raby; I found her an orphan, subsisting on precarious charity. Her few years, her forlorn situation, her beauty and sweetness, claimed my compassion: I adopted her—' 'And would now throw her off, again interrupted the ill-tempered old man. 'Had you

restored her to us in her childhood; had she been brought up in our religion among us; she would have shared this home with her cousins. As it is, you yourself must be aware that it will be impossible to admit, as an inmate, a stranger—a person ignorant of our peculiar systems—an alien from our religion. Mrs. Raby would never consent to it; and I would on no account annoy her, who, as the mother and guardian of my heir, merits every deference. I will, however, consult with her, and with the gentleman who has the conduct of my affairs; and, as you wish to get rid of an embarrassment, which, pardon me if I say you entirely brought on yourself, we will do what we judge due to the honour of the family: but I cannot hold out any hopes beyond a maintenance—unless this young person, whom I should then regard as my grand-daughter, felt a vocation for a religion out of whose pale I will never acknowledge a relation.' At every word Falkner grew more angry. He always repressed any manifestation of passion, and only grew pale, and spoke in a lower, calmer voice. There was a pause; he glanced at the white hair and attenuated form of the old man, so as to acquire a sufficient portion of forbearance, and then replied, 'It is enough: forget this visit; you shall never hear again of the existence of your outraged grandchild. Could you for a moment comprehend her worth, you might feel regret at casting from you one whose qualities render her the admiration of all who know her. Some day, when the infirmities of age increase upon you, you may remember that you might have had a being near, the most compassionate and kind that breathes. If ever you feel the want of an affectionate hand to smooth your pillow, you may remember that you have shut your heart to one who would have been a daily blessing.'

*A New and Enlarged English and Latin Dictionary, containing all the chief Words and Phrases in the English Language, and a classical Latin Version of each Word; to which is added a New and Improved Latin and English Dictionary, on the Plan of Schrevelius's Greek Lexicon.* By the Rev. J. W. Niblock, D.D., F.R.S.L. &c. London, 1837. Valpy.

WE have always opposed, to the best of our power, that rage for cheap knowledge and speedy learning, which seemed disposed to manufacture wisdom by steam, and infuse it by high pressure into the mass of mankind: an excellent idea in itself, and only wanting practicability to render it generally effective. The influx of penny, or, rather, catchpenny publications has, therefore, more than once called forth our decided reprobation; for, if their cost was next to nothing, their value was even less: while the injury they do, by substituting superficiality for soundness, is, by this time, we suppose, tolerably obvious to all but the blind. In fact, a man who would attempt, on the strength of such reading, to pass himself as a scholar upon the public, would be about as well received as a guest who should enter a drawing-room by the window, with the assistance of similar rubbish heaped outside the walls.

The outcry against the old and wholesome system of gradual improvement is, in truth, as rational as to object against a foundation in building. The groundworks in learning, as in architecture, may be unseen, but what security is there for superstructures without them? and what for the people's heads amongst whom they are suffered? The child, in his education,

acquires not merely Latin and Greek, but the lessons that antiquity utters in them; his memory is stored, not with words alone, but with maxims and facts; he learns, not barely to repeat as a parrot, but to reason as a man; his judgment grows with his intellectual powers, themselves slowly formed: and he thus gradually acquires that invaluable habit of application, and consequent self-confidence, so indispensable for mastering difficulties in after life, and without which no man ever became great, or wise, or worthy.

Yet, we have never denied that improvement was necessary in our scholastic system to keep pace with the increasing wants of the age. The most learned of our schoolmen have felt this necessity, and the elementary works now put into the hands of pupils are of a far higher character than formerly. The greatest desideratum was, however, that of a good Latin dictionary; and such, we think, is the work before us. Dr. Niblock has, for nearly thirty years, applied himself to the compilation, and has been satisfied in this thankless task to devote to it no common portion of learning, classical, modern, and even oriental. In the case of Entick's, the common school-dictionary, the rapid demand and increasing circulation of the various, and successively improving, editions, evidence how strongly the most competent judges felt the errors and deficiencies of its former state. Entick was edited by Crackelt, then revised by Sarjant, then improved by Carey,—great names, doubtless, especially the last; but every scholar acknowledged the omissions they tolerated, and the barbarisms they retained.

We have closely scrutinised the work before us, and compared it with the two prevailing dictionaries, Entick's and Ainsworth's. If the reader turns to the most confessedly defective, i. e. the English-Latin portion of the latest Entick, for *light-house*, it is not there! for *observatory*, he is concisely informed that it is *specula ex qua sidera observantur*! This substantive appears singular, and, we think, plural also, needing little increase in the genitive, whatever that may be; can it not be declined altogether? *Poker* we find difficult to handle as *ferrum ad ignem excitandum*. There are its *similia* innumerable throughout Entick, and Ainsworth also, on the principle, probably, of the Latin rule, *aliquando oratio supplet locum substantivi*. We need but one instance more of this from Ainsworth, who gives to *lumber* the one formidable definition of *instrumenta domestica ponderosiora* (and certainly nothing can be *more ponderosa* than this) in his English-Latin portion, while the Latin-English supplies to *scruta* and *frivola* the very quotations overlooked in the former part: and this has lasted for a century!

Dr. Niblock has not revised, but reframed, or, in the language of the day, *radically reformed* the English-Latin portion of the work; cleansing out the mass of monkish barbarisms from the Augean stable, in a style that may prevent little boys from being *horsed* as heretofore. Those ingenious *didactic* and *descriptive pieces*, as Enfield's "Speaker" would call them, and to which we have referred above as *definitions*, are supplied by terms taken from good authority and Augustan Latinity. Thus, *light-house* is *pharos*, *observatory* is *augurale*, on the authority of Tacitus; *poker*, *suscitabulum ignis*. *Lumber* is *scruta*, on the authority of Horace, and *frivola* on that of Juvenal, as well as *impedimenta*, its sole equivalent in Carey's Entick, to say nothing of *quisquilia*.

From modern blunders to monkish barbarisms the ascent is fortunately easy, owing to the

successive links so carefully preserved in the two dictionaries commonly used. We have, in our ignorance, held it an invariable maxim that words not incorporated into a language did not receive its rules. Dr. Niblock's volume gives us *centuria* for *wapentake*, and this we can comprehend: but, in Entick, that intractable Saxon term (and what modern could incorporate it into the Latin language?) politely changes its native *k* into *g*, out of regard for the Romans, doubtless, and takes its place in pure Latinity with a *w*, of which they were unconscious, passing muster by tacking on a final *um*! The authority that sanctioned this required an authority for itself; much in the manner of the abbot, who proved in court that his monks, and not he, should pay for paying the chancel, by the passage from St. Peter, *illi paveant, non paveam ego*.

The subject is so important for education, that we have gone carefully over the work we are reviewing; and we would recommend comparison between it and its predecessor (or must we call it, rival?) Entick, in such words as *any, attendance, bow, cancerous, comic, demand, dose, ears, feeling, gold, &c. &c.* of which we could furnish more than one hundred and twenty specimens which we have ourselves examined, down to *zone*, which is *going round the alphabet*, as proofs. For instance, the word *half* is above twice the whole given in Ainsworth, and ten times more than Entick offers on the subject; and there can be no competition on the head of additions, accent, classification, corrections, conciseness, purity, and simplicity: unless the reader should conceive, with Entick and his revisers, that the word *hundred* rendered *hundredum* is a superior proof of the last-named attribute, and *wardmole, wardemotus*!—*quo warranto*, we should like to know.

The place of excluded barbarisms is supplied by our author with the addition of nearly *three thousand words*, so as to avoid swelling the bulk of the volume; the insertion of signs of accentuation, quantity, and relative value; the distinction of the parts of speech; of *I* from *J*, of *U* from *V*, so uselessly perplexing in general; the lucid arrangement and valuable notes; the restoration of the mythology to its separate place, which renders this portion amusingly instructive, instead of being lost, as hitherto, in the general alphabet; and, further, the accentuation of the English words also, which dispenses for the scholar with the necessity of *Walker* as well as *Labbe*,—all add to the value of the first part: while similar improvements in the Latin-English portion; the heteroclite cases and tenses; the etymologies, where required for distinguishing similar words,—make this work, in our careful and candid judgment, invaluable for the teacher and student, as it early stamps on the mind, without effort, the purity or impurity of Latin terms and phrases. Perhaps, an appendix of the *two thousand* barbarisms, which need not occupy a dozen leaves (thirty-six columns), would be advantageous; and a quarto, or octavo at least, for our public schools and colleges, we shall hope for speedily from the learned and indefatigable lexicographer.

*Manuella, the Executioner's Daughter; a Story of Madrid.* 3 vols. London, 1837. Bentley. WE hardly know what to say of this half novel, half travels. The multitude of the characters, and the great variety of the scenes and incidents, perplex us; and we whirl through a concatenation of plots, intrigues, assassinations, massacres, Spanish scenery, and Spanish society. In the midst of the civil war, we are not

sure which side we are on, or to what cause our companions really belong: it is the puzzle of a masquerade.

The author is evidently familiar with the present circumstances of Spain, and those who figure on both factions. These he has wrought into an animated story, and presented us with a series of pictures, which pass, like those of a magic lantern, vividly before our eyes. Of their variety we can afford no notion, and are, therefore, glad to select one of them (after a defeat of the Christians) as a sample of the rest.

"The battle-field was deserted: the plunderers of the dead, scared by the pursuit of El Pastor's troops, remitted their harvest. Night for once spread a silent and hallowing veil over the wounded and the slain. Where the contest had most fiercely raged, some bodies were heaped as they had fallen. A young dragoon, Christino officer, who had dropped from loss of blood, occasioned by a sabre wound, was buried beneath them. Freshened by the night and the keen air of the mountains, he recovered his presence of mind, disengaged himself from the gory heap around him, and faintly and with difficulty endeavoured to effect his escape. The well-known track which his buoyant and warlike division had followed but a few hours before, needed not the sun to guide his steps. A toilsome way had been that of the wounded soldier, when the bark of a distant watch-dog proclaimed his approach to the habitations of man. Following the direction of its sound, time and mental energy brought him, exhausted, to the nearest dwelling of a secluded hamlet in a defile of the mountains. Mirth resounded from within: the laugh of exultation struck dismay to the heart of the benighted and weary applicant for hospitality. Beside a huge fire were seated a peasant, his young and handsome wife, and the village curate. 'All—*all sacrificed!*' and the curate's face was lighted up with a triumphant but ungodly joy. 'The glorious arms of our blessed Carlos shall ever be successful, for his is the cause of the holy church.' The peasant crossed himself with instinctive devotion. 'Thus perish every renegade!' continued the curate, when a groan from without startled the trio. The peasant rose from his seat; and, snatching the ever-ready escopeta, proceeded to open the door. 'Gente de paz' was the faint reply to the inquiry he made previous to raising the latch; and, on doing so, the tall and handsome form of a cavalry officer of the defeated troops of Christina was revealed by the light of the blazing hearth. The simple mountaineer, though he beheld in the soldier an enemy to his favourite cause, yet felt, for the moment, his scruples overcome at the supplication of a wounded and defenceless fellow-countryman. The reception of the young officer on the part of the priest was sullen and silently morose; and the peasant's wife, who first glanced at him in order to resolve on her own conduct towards the stranger, veiled the natural expression of her features with a corresponding frown. But hospitality was granted; the modest request of the traveller for a night's repose assented to; and he was suffered to rest his weary limbs in the loft which forms, in ordinary, part of a Spanish hut. The mirth, which had first created forebodings in the breast of the wounded traveller, was hushed, inasmuch as measures of policy and revenge now occupied the mind of the priest. First, he determined to destroy the fugitive partisan of Isabel, so opportunely within his grasp: and, next, to unfold this design to the artless peasant, so as to obtain means of carrying it into execution. The young wife, it was re-

ported in the village, was more frequent at the confessional than the measure of ordinary iniquities might require. Of her aid, we will, therefore, suppose the priest to feel secure: and now, when the officer had taken possession of his humble couch, the curate began, in an under key, to recapitulate the enormities of the queen's partisans, and vehemently to condemn all allegiance to her; whilst excommunication and curse were lavishly bestowed upon her adherents;—lastly, he held out that their extermination alone could be the means of obtaining for the nation celestial grace. Meanwhile, the unfortunate soldier retired to rest. The flooring of the loft, upon which he lay, was rudely constructed; and, through the apertures between the planks, the light from below was visible. He essayed in vain to compose himself: the inhospitable scowl of the friar, the churlish reception of the mountaineer and his wife, failed not to make their full impression; and gloomy thoughts took possession of his mind. The acute pain of his wounds, too, fevered his imagination, and gave rise to frightful fancies. Occasionally closing his eyes, he started anew, as if the step of an enemy approached. At length, the subdued voices of the inmates below reached his ear—a cold sweat bedewed every limb. He eagerly made to a friendly crevice, through which the light was admitted. Their ghostly companion was reciting the *benedictio* to the peasant and his wife, the former of whom held the assassin's knife, and was receiving absolution for premeditated homicide. This task performed, the priest flung his black capa around him—cast a significant look towards the ceiling—and, with a last word of encouragement, 'Corazon!' stole away. With the presence of his holy counsellor vanished the resolves of the peasant, and the knife dropped from his hand. But another adviser was there; and the dying embers on the hearth, in their expiring light, revealed the fury of a Gorgon. The countryman quaked again—it was now from the dread of his better half. Once more he seized the knife. Isidro Imnaz, conde de Nuñez, for such was the intended victim, had watched their proceedings till the light from the hearth no longer aided his observation. He had marked the irascible features of the priest;—the hand which should be uplifted only to invoke a blessing upon the meek and lowly of his flock, was raised in an attitude of fearful menace. He overheard the whispered threat of the wife, spiriting her husband on to the deed of blood. At length, distinctly could he trace the slow, stealthy step of his murderer ascending the ladder. A propitious gleam of moonlight, admitted through the roof, enabled him to discern the opening in the floor of the grange, by which he had gained his dormitory, and at that moment the form of his intended assassin stood before him. Self-preservation will suggest desperate means of rescue to the most timid; but the man of moral courage, of collected energies in the trials of life, surveys danger with a steady eye; whilst, with the same comprehensive view, he embraces every chance of escape. Imminent was the peril of the unarmed guest: his thought and his deed were one. Springing upon the murderer ere he had gained firm footing from the ladder, Isidro's hand at once grasped his throat, and, by compression, effectually prevented his shrieks. Having, with the other, possessed himself of the knife, he hurled his faithless host headlong into the abyss. At the foot of the ladder stood the peasant's wife, also armed with a knife, to complete the work

of murder, should the hand of her husband vacillate in the deed; and, as he fell into the now dark space below, in her eagerness to fulfil the priest's decree, she sprang upon the supposed guest, and severed the head from the body. Armed with the weapon which was destined to destroy himself, Imnaz sprang down the ladder, found the door, and, emerging from the abode of crime, sought a more secure resting place; leaving his hostess to discover, with return of day, in whose blood were imbrued the hands of an hospitable."

*Paynell; or, the Disappointed Man.* By Miles Stapleton, Esq. 2 vols. 12mo. London, 1837. John Richardson.

To deny the author talent, would be to deny truth; but to say he had made a good use of it in these volumes, would be to compromise our honest opinion. Paynell is a sort of Byron, without poetry; and his headlong passions and melancholy amours, are the staple of a web of disappointment, which could not, and ought not, to have been other than a drugged tissue, without a golden thread or a lively sprig to relieve the sombre pattern. Some removes from a peerage, the hero half *misanthropes* and half indulges in excess, till he succeeds to wealth and title. He is then about to marry a Miss Morville; but, in consequence of morbid sentiment, takes a fancy to her cousin, Lady Harland, the wife of an honourable baronet. He *congé*s the miss, but is not bad enough to attempt the mistress: flies to his hereditary hall, and indulges in a sort of Newstead Abbey revels, to induce oblivion; but in vain. He seeks change of scene on the Continent, and meets the Harlands at Avignon. Here the steps of passionate seduction and yielding virtue are traced in the Rousseau fashion; but, at last, from motives, not easily comprehended by the simple in a state nearer nature, he abandons his conquest in the hour of certain victory, and travels about Greece and Turkey, a wanderer, for a number of years. His *liaison* with Zaphia, a lovely lady, of no very good repute, is a sad tragical episode, after the manner of Anastasius; and we feel little for the death of this voluptuous beauty, or for that of her child. Paynell, in the midst of his journey, reminds himself of Lady Harland, and writes to her by a special messenger; but she returns his letter, unopened, to Constantinople. This is a sting; and he resolves for Avignon and personal satisfaction. Circumstances favour him, and the wife of Harland falls. They elope, and are miserable. In Paris he sees a sycophant, Allen, married to a Lady Julia, ruined by gambling: in a jealous fit he challenges and kills his own friend, De Wroth: his lady dies in childbed and wretchedness, and a black pall covers the whole *dramatis personæ*. The intended moral is excellent; but the evils are so unnatural and forced, that they fail to point it, or adorn the tale. There are crowds of sententious, and, many of them, just and laudable reflections, but they smack so thoroughly of Joseph Surface, that we confess we would hang up all the philosophy, expositions of life and society, and religion, without uttering a single sigh of regret.

#### MISCELLANEOUS.

*Results of the Parliamentary Inquiry relative to Arts and Manufactures.* By George Foggo, Historical Painter. Pp. 16. Boone.

MR. FOGGO'S "Results" do not enter upon the many questions embraced by this Inquiry; but are compressed, within sixteen pages, into

points connected with the New School of Design; leading him to a determined attack upon the Royal Academy, its constitution, its administration, its president, and its secretary. Condemning these in every way, the writer naturally censures, in unmitigated terms, the superintendence and patronage of the New School of Design (for establishing which 1500*l.* has been voted by parliament) being vested in the Royal Academy. He speaks very strongly on the subject; which, on that account, we are disposed to leave, without a comment, to the artists and manufacturers of Great Britain, who are all concerned in the proper regulation and government of a plan for employing the former, and improving the latter.

*Dr. Lardner's Cabinet Cyclopædia. Biography. Lives of British Admirals.* By R. Southey. Vol. IV. London, 1837. Longman and Co.

THIS volume contains most interesting memoirs of Robert Devereux, earl of Essex, and Sir Walter Raleigh—two great and memorable names in our history. We observe, in the former, that Dr. Southey utterly discredits the popular story of the ring being withheld from the queen by Lady Nottingham: indeed, a most improbable affair. With the memory of Raleigh, who can forget the introduction into England and Ireland of tobacco and potatoes? Who ever produced a greater change on people and country?

*On Deformities of the Chest and Spine, illustrated by Plates.* By W. Coulson. 2d Edition. Pp. 290. London, 1837. Hurst.

OF this much improved edition, we have only to say, that it not only deserves the best attention of the faculty, but ought to be read, studied, and acted upon, by every female in the empire.

*Sketch of the Comparative Anatomy of the Nervous System, &c. &c.* By J. Anderson, M.E.S. 4to. Pp. 63. London, 1837. Sherwood and Co.; Paris and London, Baillière.

A VERY curious and interesting investigation of a subject on which not only the pains and pleasures of man in a great measure depend, but which also involves the sensations of all, or nearly all, created and living beings. Mr. Anderson has traced and illustrated his inquiry, from humanity to the lowest insects; and his conclusions are, that the foetal brain, at different periods, viz. 3d, 4th, 5th, 6th, 7th, and 8th months, is analogous successively to the brains of fishes, reptiles, birds, mammalia (*ruminantia*, *carnivora*), mammalia (*lower quadrumana*), and mammalia (*quadrumana*). The plates are as curious as the work.

*The Numismatic Journal.* Edited by J. Young Akerman, F.S.A. Nos. I., II., III. 8vo. pp. 207. London, 1837. Wilson, Jun.

WE have waited for the publication of three Nos. of this work (since June last), that we might have sufficient data for a correct judgment; and it affords us much gratification to state that, in our opinion, the editor is producing precisely such a work as is wanted. His subjects are all of high numismatic interest, not to mention their great historical and classical value; and his descriptions of them are at once clear, intelligible, and well-informed. The variety of curious matters to be found in every part relating to Jewish, Persian, Greek, Greek Colonial, Roman, Roman Colonial, Roman Consular, Roman Family, British, Saxon, English, &c. &c. &c. coinage, are a treat to the unlearned as well as to the learned. The publication will, we trust, be patronised, as it deserves to be, universally.

*Compendium of Lithotripsy, &c.* By Henry Belinaye. 8vo. pp. 215. London, 1837. Baillière.

THIS is one of the most complete and comprehensive treatises we have seen, on the means and effect of removing stone without incision. It brings down the history of the process to the present time; gives engraved specimens of the instruments used; and warmly advocates the adoption of this mode of curing a very painful and distressing disorder.

#### FRENCH WORKS.

*Théorie des Volcans.* Par le Comte A. De Bylandt Palsterscamp. With Atlas. 3 tomes, 8vo. 1836. Paris et Strasbourg, F. G. Levrault; London, Dulau.

AFTER thirty years of indefatigable research, the author has, in a *luminous* manner, developed what he designates as a new opening to science. He is well entitled to say, as he does of himself, and comparing with theoretical dogmatists, that he has not cited Nature before him as a judge, but interrogated her as a son would a mother. In a foreign tongue, and comprehensively treated, it is not within our scope to enter at large upon this able publication. It declares that there are no exceptions in nature: the whole which we witness results from the actions of solids and fluids.

The Count observes, that, though the mineralogy of volcanoes has been sedulously examined, there has been little or no inquiry into their causes and connexions. This philosophical course he has followed out, and submitted all the principal volcanoes in the world to test and investigation. The bare accounts of them and their phenomena are very interesting. Humboldt and Saussure appear to be the guides on whom he most surely relies: but his entire work, statements and inferences, is of a very important character. The following passage pretty accurately explains its object and opinions:

"Selon ma manière de voir, l'élevation des montagnes doit être attribuée à quatre causes, quelquefois isolées et quelquefois réunies. La première est due à l'éruption du feu igné central, dès la première époque du développement de la matière. La seconde, à l'affaissement de la croûte minérale après son extension, jusqu'au dernier point de son élasticité, effet du feu central dans l'exercice de toute sa puissance. La troisième, à l'éboulement d'une partie des couches souvent contradictoire dans la même montagne. La quatrième, enfin, est l'exaltation de la croûte supérieure par la passion intérieure dirigée vers l'extrémité sur quelques rayons du globe, lorsque la diminution de la force du feu central ne lui laissait plus que la puissance de soulever les points qui lui opposaient le moins de résistance; et c'est à cette dernière cause que j'attribue la direction verticale des roches et des couches qui se fait remarquer dans plusieurs montagnes; mon ouvrage développera ces idées."

The atlas is a striking and superb appendage to the three volumes of text.

*Manuel des Consuls.* Par Alex. de Miltitz. Tome I. 8vo. London and Berlin, 1837. Asher.

M. MILTITZ has here entered into and expounded the duties of consuls; and his volume is one eminently entitled to the attention of the commercial and diplomatic world. It is full of information on

*Etudes sur l'Economie Politique.* Par J. C. L. Simonde de Sismondi. Tome I. 8vo. London, 1837. Treuttel and Wurtz.

ANOTHER production of great value and in-

terest. It consists of essays on the most important questions, and they are treated in a very able and enlightened manner.

*Encyclopédie des Gens du Monde.* 8vo. Tome Septième. London, 1837. Same publishers. We lately noticed earlier volumes of this work. The present goes on with the letter D, and is quite equal to its precursors.

*Tales, in Prose, for the Young,* by Mary Howitt. Pp. 201. (London, Darton and Son.)—Never is the pen of this excellent person better employed than when tracing moral instruction for youth, and combining it with such playful fancies or attractive anecdotes as are calculated to pave its way most agreeably to the inquiring mind. The present is altogether a pretty volume. An anecdote of a bullfinch dying of sudden joy struck us much, and we believed it: but we were staggered by another of a raven attracting all the knives, forks, and spoons, laid for a stage-coach company, and placing them for the chickens in the yard, while he ceremoniously fed them with bread: "Can such things be?"

*The Land Log-Book, &c. &c.,* by Sarah Hodgins. 18mo. pp. 278. (London, Simpkin and Marshall.)—A young lady, during a residence in America, was advised by a sailor to keep a log-book, and assured her she would find it as useful and entertaining on land as at sea: and this volume is the fruit of that advice. It is in verse, as well as prose, and, of course, light, sketchy, and miscellaneous, and we may add, somewhat flighty; which makes us regret to see it stated in the preface that it is the writer's last refuge against oppression and misfortune. We copy out a few of its most amusing and characteristic passages.

*Evening!*—Oh! for something wonderful before the captain comes! Friend H. is gone out. Orials gone to bed. Neither moon nor nightingales; the former has not been able to break through the formidable rampart of clouds; and for the latter, there are none except a professional gentleman, in Walnut Street, Philadelphia, whose owner has an advertisement in his window, "Birds taught by an English nightingale." I wonder if the captain likes poetry: it will fill up, however.

*The Sea Nymph's Invitation to the Evening Star.*

Bright Star of Evening, oh, whither away?  
A nymph of the dark wave entreats thee to stay;  
Or invites thee to roam

With her to her home,  
Where silvery fishes through coral groves play.

Bright Star of Evening, I pry thee don't fear  
To bathe thy fair face in our element clear;  
And our guest shalt thou be,

While the queen of the sea  
Shall sing of the ocean king sweetly to thee.

Bright Star of Evening, the foam-embossed shell  
Shall bear thee where coral and sea-flowers dwell;  
There crowned shalt thou be

By the nymphs of the sea;  
Then come, brightest star, to our palace of pearl."

*"Ten O'Clock.*—So hot that the locust has not finished his song. I'm wrong; they say he sings the best in the heat. What a taste! what a taste! Nobody's been a locust to know, though; and if he sings when the thermometer's at 95, he will sing at any degree of heat. What a glorious sun! My word! he's lord of all. What an insignificant thing is man, skulking under cedar-trees like cows, putting his consequence in his pocket, until, like the bats and owls, he may enjoy the beauties of nature. Whilst the Alleghany eagle, soaring in broad day, cries, 'I thought, my two-legged featherless brother, you said the creation was made for you; now you perceive no such thing: this blazing orb shines that I may have plenty of light to cheer me in my lofty flight; while you, proud man, cannot endure the heat, nor leave the planet on which you were hatched, any more than the rats. Think of that. Oh, the pride of a human being! You men have never been able to make wings to help yourselves over a gutter.'

*"What an amusing man is Judge James:* he says, in the old revolutionary war he was, I do not know what he called it, but head man at a court-martial, where an English spy was to be tried. The villain told the judge privately, he would give up a whole battalion to the Americans, if they would save his life. 'Your life, you rogue,' cried the judge, 'why, it is not worth saving. Would you give up your countrymen on such paltry conditions?' The poor fellow said he would; but the judge told him, 'No, that is impossible; if you, Moody (that was his name), have any thing to say or settle in this world, I will assist you, as I assure you your time on this earth is very short; and if you had died like a man, I should have thought much better of you. Why, if we could spare your life, in my opinion you are not worth saving.' Moody gave the judge his watch to send to his mother, and a small coin.

*"Earthquakes are frequent in Carracas, the birthplace of Bolivar, who does not seem to think them so dreadful as we do.*

*• Bolivar's Verses.*

Accept, dearest lady, for 'tis all I can give,  
My warmest thanks for your kindness to me;  
May you in the bosom of virtue long live,  
The friend of Columbia, and friend of the free.

Thy present will ever to my sight appear,

Though we are parted no more for to meet;

Thy kindness to me I still will revere,

With the grief of a friend and a test of regret.

When far away, far away, on the billows I roam,

And the rough wave shall cast me on high;

I still will a glance revert to thy home,

Shed a tear of regret, and for my friend sigh.

When to my country I again shall return,

Far from the land which comprehends thee;

Though past recollection shall cause me to mourn,

Yet never shall thou be forgotten by me.

'As a token of your kindness, and the present

which you honoured me with, I respectfully

send to you these verses through the

hands of your brother.

'Your friend, 'F. BOLIVAR.'

Bolivar was only fifteen when this was written, and had been only one year in North America."

*The Star of La Scala.* Pp. 34. (London, Seguin.)—Recollections of the performances of Malibran, in the autumn, in Italy, &c. are interspersed with notices of celebrated Italian singers, not unknown to this country. Of these, Pasini and Salviatori (*the Orfeo and Jago of La Scala*) are highly applauded; the former, as a splendid tenor; the latter, as combining the finished execution of Tamburini with a voice of much greater compass. Frezzolini is spoken of as a capital buff.

*Results of the Crusades.* Pp. 60. (London, Barfield.)—Two lectures delivered, in November last, at the Marylebone Literary Institution, by Mr. Macleod Wylie, and which reflect great credit upon his talents. The subject involves consequences of the deepest interest to the civilised world; and to have them so skillfully pointed out and traced, is no mean achievement. We are decidedly of Gibbon's opinion, that the blow given to the feudal system by the Crusades rather removed an evil than produced a benefit; but all Mr. Wylie's development of the question is well worthy of perusal.

*Tales by Lord Byron, Vol. I.* (London, Murray.)—Following, as the ladies call it, "the love of a little volume," which contains "Childe Harold," Mr. Murray, with a charming View of Mount Parnassus, has here given us, in a small volume, the "Glaucou," "Bride of Abydos," the "Corsair," and "Lara"—four of the popular Tales of the noble poet, whose works are acquiring even additional popularity through this gemlike edition.

*Grant's Advice to the Rich and Poor.* Pp. 41. (London, Grant and Co.)—Would the same advice suit both? We doubt it. At all events, the advice, in this very small book, is (if not very original) good, and has the rare value of not being prosy.

*Observations on Treatment and Cure of Ulcers,* by W. Eccles. (London, Wilson.)—A second edition, and embracing only the experience of the writer—not a general treatise—therefore deserving of attention.

*The Present State of the Claims of London,* by R. Alsille. (London, Seeley.)—An earnest appeal for moral and religious instruction, and for measures to reclaim the erring and uncared-for idle and vicious population of London; instead of wasting efforts on distant objects. Some of the statistical statements of crime are appalling, but, we fear, too true.

*New Conversations, and Easy Dialogues, in the French, English, and German Languages,* by W. A. Bellender, newly arranged, with Additions, by Francis Coghlan. Pp. 210. (London, Baily and Co.)—Conversation is the easiest and quickest mode of learning to "speak" a language; and Mr. Coghlan has proved, in this little work, that two may be learned at one time, *ex. gr.* Et madame vous m'avez dit—Und ihre frau mütter?

*The Purgatorio of Dante.* Translated by J. C. Wright. M.A. translator of the "Inferno." 8vo. pp. 470. (London, Longman and Co.; Nottingham, Dearden.)—We have to recommend this work to the lovers of Italian literature. To the English reader it will afford a sufficient idea of the great original.

*Sketch of the Life of Thomas Singularity, Journeyman Printer,* by Jeremiah Hopkins. Pp. 123. (London, Simpkin, Marshall, and Co.)—This is an odd volume, the Life of a Journeyman Printer in America, who merited, if he did not bear, his singular name. Among his strange adventures, was service where the cazique M'Gregor reigned; and, by way of specimen, we give an extract relating thereto.

"Amelia Island, from the moment of M'Gregor's conquest, had been little better than a den of pirates. It had been selected on the principle on which a feudal baron placed his castle on a cross-road—as a convenient point for robbing in every direction. Vessels bearing patriot commissions granted here, but in fact not fitted out by the colonies, often from the United States, owned in the United States, commanded by Americans, and manned by Americans, seized every Spanish merchantman, and frequently, on shallow pretext, or even without pretext at all, plundered the vessels of every nation. Goods were smuggled from hence into the United States by wholesale, and slaves sent into Georgia, Louisiana, and Mississippi. An asylum, too, was opened for runaway negroes, and for the most abandoned refugees from justice. As Spain was incapable of destroying this hornet's nest, the United States were forced, in self-defence, to take possession of the Floridas, and for that purpose despatched Major Bankhead and Commodore Henly, with a competent land and sea force, against Amelia Island. Aury, seeing that nothing was to be gained by a contest, surrendered the fort on the 23d of December, 1817. Tommy (i. e. Singularity), in his little excursions during the

occupation of the island, had made a very pretty picking; but latterly, a run of ill-luck at cards had stripped him of all but his glory. After the patriots had surrendered their positions, finding himself penniless, and without any method of reaching the United States, he enlisted under Major Bankhead, by which he got fifty dollars bounty, cash in hand. Many things soon occurred to disgust him with the service. The very day after enlisting, he was put under guard for merely appearing on parade a little excited. A report, also, got among the soldiers, that they were to be ordered off to Georgia, to fight against the Seminole Indians. This last intelligence determined him. Taking advantage of the night, he, and three other soldiers, deserted, seized on a boat, and, with a brisk breeze, reached St. Mary's, in Georgia. Some people have sneeringly reported that his principal reason for absconding was the fear of his having his fine head of hair scalped off by the savages; but I take it for granted, he acted on mature reflection. He never considered his enlistment binding in honour, as he had been led to it by necessity, or what lawyers would call duress."

*The Hulsean Dissertation* for 1836, by John Murray, B.A. (Cambridge, Deighton; Edinburgh, Blackwood.)—A very able pamphlet on the Miracles of Christ, written earnestly, in the spirit of piety, and with the aid of learning, for which Mr. Hulse bequeathed his annual prize.

*The Partisan for 1835.* (London, E. Wilson, jun.)—The fifth volume of this agreeable miscellany, which continues to be conducted with the same attention and discrimination as heretofore.

*James's Naval History.* Edited by Captain Brenton. Parts III. to VIII. inclusive. (London, Colburn.)—This excellent publication proceeds with regularity and vigour. Originally it was worthy of a great maritime nation desirous of having a just account of its naval history; and, under the eye of its present editor, it acquires new claims to consideration and applause.

*Relation de l'Entreprise du Prince Napoleon-Louis, par le Vicomte F. de Rigny.* Pp. 60.—The author is a warm admirer and friend of the young scion of the family of Buonaparte, who so recently failed in an attempt at revolutionising France. He ascribes this to fatality, and speaks of the leader as being of a noble mind, and actuated by the purest motives. If, he says, the partial movements which have prevailed in the country are not proof of general discontent, and the preludes to another order of things, Prince Louis was misinformed and misled; if they are, he was only premature and unfortunate.

## ORIGINAL CORRESPONDENCE.

Berlin, 14th January.

THE story of the Friar Vincente of Barcelona, who is said to have been tried there, on account of murder, instigated solely by his love of books, has made the round of your and of our journals. A very intelligent German, in that town, writes to Berlin that no such trial has occurred there; and that the Barcelonense inhabitants were first made acquainted with this story by a French paper. But not even the Italian saying, "*Si non e vero, e ben trovato*," is to be applied to it; for the invention is solely due to our celebrated Berlinian author, Hoffman, who, in his excellently written novel, "*Mdlle. de Scuderi*," described the monomania of the Parisian goldsmith, Cardillac, who, for a long series of years, killed all persons that bought jewels set by him.

The work of your countryman, Mr. John Kemble, "*On the Genealogy of the West Saxons*," written in the German language, and dedicated to our best German scholar, James Grimm, not only gratifies the national pride of the Germans, to see their language used by foreigners, but is truly an enlargement of our literature: competent critics pronounce, that there is not one solecism against the idiom to be found in the whole book.

I have already dilated, in a former letter, on the corruptions and abuses of our universities; but forgot to mention the following:—Some professors, independent in fortune, read so few lectures in the week, that, measuring their salary by the number of their lecturing hours, without reckoning what they receive from their hearers, they are paid one pound sterling for each hour—an immense sum for this country. At one university, it has been found necessary to fine the professors for each lecturing hour they omit without assigning a sufficient cause. Here, at Berlin, our great philologist, Frederic Augustus Wolff, used to announce four hours a-week, but often came

only once: when it was bad weather, of course he could not go out; and, when good, a drive in the Tiergarten was necessary for his health. Another corruption of our universities, and a much more important one, is, that only such young men frequent them as intend entering into the service of their respective governments, after having passed their examinations. Now, this almost general usage degrades those institutions to mere places for drilling government *employés*, whilst they ought to promote the vastly more essential object of spreading science among *all* classes of the people.

A striking characteristic of the methodism in our country is the republication of the works of that mystic natural philosopher, Jacob Boehme. In an age when almost every word which that enthusiast wrote on natural philosophy has been exploded by experiments, to the demonstration of the most obtuse intellect, our pietists not only ignore this, but try to palm the old mystic trash on the present generation as sound sense! but this need be no subject of wonder, when we have here, at our own university, a professor of divinity who scruples not to pronounce, in his *Ecclesiastical Gazette*, that, because of the hereditary sin of human nature, "he is ashamed to be a human being!" Really, the pious professor ought to relieve himself of that painful feeling; for the notion of a human being implying *reason*, none will dare to impute that shame to him who proves himself so totally devoid of it.

#### ARTS AND SCIENCES. ROYAL INSTITUTION.

THE following is our promised report of Mr. Faraday's development of Signor Mossotti's late researches in connexion with electricity, gravitation, &c.—The suspicion, or expectation, that such results of natural causes as gravitation, electrical attractions, chemical action, aggregation, and even organisation, were the consequences of one general and simple law, has been common property for a long time, hundreds having put forth notions corresponding with it. But the beauty of Signor Mossotti's developments consists in this,—that, assuming a certain simple state of matter and electricity, he shews that such different phenomena as gravitation, cohesion, and the ordinary statical attractions and repulsions exhibited by electricity, flow as necessary consequences from it. In gravitation we have a power of attraction exerted by masses acting through almost infinite distances, binding even sidereal systems together; and, by Newton's researches, this is shewn to depend upon an attractive action of the particles of the masses—the force of attraction being inversely as the square of the distance. In the force constituting aggregation or cohesion we have the power which holds the particles of solids and liquids together: and there are many beautiful experiments which shew that the particles of bodies under the influence of this force are not in contact; and, further, that, if brought nearer to each other than in their natural state, they exert a repulsive force; if removed further from each other they exhibit an attractive force; these two forces being of very high power—but the law according to which they increase and decrease, not being as yet ascertained. In common electrical attractions and repulsions, the experiments of Coulomb have shewn that both sets of effects are produced by forces varying inversely as the square of the distance. Franklin accounted for electrical attractions and repulsions, by supposing one electrical fluid, having strong repulsions for its own particles, but

strong attraction for matter. Epinus and Cavendish demonstrated, mathematically, that if the particles of this electric fluid were repulsive of each other, with a force varying inversely as the square of the distance, whilst the mutual attraction between them and matter was inversely as the square of the distance; and, also, if the particles of matter exerted mutual repulsive forces, varying inversely as the square of the distance,—then, all common electric attractions and repulsions could be accounted for. Coulomb and Poisson objected to this theory, that it assumed matter as possessing attractive and repulsive forces at the same moment of time, and according to the same law; a theory contradictory in itself: and the latter, therefore, assumed two electric fluids; and, by giving them attractive and repulsive forces, inversely as the square of the distance, accounted for electrical phenomena, but left no evident tie between these fluids and matter. Dr. Roget, ten years ago, so far justified the theory of Epinus as to shew that his assumptions were not contradictory, but that it might be that gravitation resulted from a mere excess of one of the attractions; and now Mossotti has brought the power of his mathematical attainments to bear upon the subject. He assumes, with Epinus, one electric fluid or ether, the attractions and repulsions of this and matter being as already expressed; except that the repulsive force of matter is not quite so great as its attractive force for electricity, or the repulsion of the particles of electricity amongst themselves. With such a constitution, he shews that every particle of matter will have, as it were, an atmosphere of electricity condensed around it; that these particles, so furnished, will have independent, or true molecular actions; that, at a distance, they will gravitate according to Newton's law; that, as they approach each other, their mutual attraction will, at invisible distances, increase to a high degree, then suddenly diminish, become null, and, at still nearer distances, become repulsive, giving thus the phenomena of aggregation; and, finally, that all common electrical attractions and repulsions are as fully accounted for as in Poisson's theory. Thus, a great step is made towards the simplicity of a general law; and the thanks of all are due to Mossotti, for shewing us the possibility and probability of the one he has supported being a true one.

#### ZOOLOGICAL SOCIETY.

THE usual monthly meeting was held on Thursday afternoon, the Rev. J. Barlow in the chair. About a dozen individuals were elected fellows. Balance in favour of the Society, carried to account on 1st February, 2386l. 7s. 4d.; visitors to museum and gardens during January last, 1835; stock on hand, 294 mammalia, 693 birds, 21 reptiles—total, 1008 subjects. A committee of accounts was appointed, and many valuable donations were announced. From a number of notes by Mr. Williamson, curator to the Natural History Society, Manchester, on the appearance of rare birds in the vicinity of Scarborough, we select the following:—The great or thick-kneed plovers breed on the faldows, and often startle the midnight traveller by their shrill and ominous whistle. This is supposed to be the note so beautifully alluded to by Sir Walter Scott, in the "Lady of the Lake"—

"And in the plover's shrilly strain  
The signal whistle's heard again!"

for it certainly sounds more like a human note than that of a bird. The hooded crow has been known to breed near Scarborough on two or

three occasions. In one instance, a female hooded crow was observed to pair with a carrion crow, on a large tree at Hackness, where they succeeded in rearing their young. The carrion crow was shot by the gamekeeper; but the following year the hooded crow returned with a new mate, of the same sable hue as the former one, to her old nest. The carrion and young crows were again all shot: the old female, by her vigilance, escaped all the efforts of the keepers to destroy her, and a third time returned with a fresh mate. She was not again, however, so successful; but was shot, and is now preserved in the Scarborough museum. The young birds varied; some resembling the hooded, and others the carrion crow, in their plumage.

#### GEOLOGICAL SOCIETY.

WEDNESDAY, Mr. Lyell, president, in the chair. A notice on the occurrence of keuper sandstone in the upper region of the poikilic system, or new red sandstone formation, of England and Wales, by Dr. Buckland, was first read. The author had for many years suspected that certain beds of sandstone, in Warwickshire and other parts of the kingdom, are referable to the keuper formation of Germany; but it was not until his visit to the Continent, in the autumn of 1835, that he was enabled to determine satisfactorily the identity of the English with the foreign strata. The formations, in Germany and France, which occur next beneath the lias, are,—first, the keuper, a considerable series of beds of marl and sandstone; secondly, the muschelkalk, a limestone characterised by peculiar organic remains; and, thirdly, a system of red sandstone, called in Germany *bunter sandstein*, and in France *grès bigarré*. In England the muschelkalk has not yet been detected, and geologists have, therefore, found it extremely difficult to separate the sandstones at the lower part of the red marl from those which constitute the great mass of the red sandstones of Warwickshire, Cheshire, and many other counties. Dr. Buckland, however, has long had in his possession the remains of a saurian, which he considers generically identical with the *pterosaurus* of the keuper of Wirtemberg: and from a careful comparison of the quarries of Sinzheim and Stuttgart with the sandstones which, he had conceived, might represent in England a portion of the keuper, he has decided that they are equivalent deposits. In the neighbourhood of Warwick, keuper sandstone occupies a considerable surface, extending, in breadth, from the banks of the Avon, under Warwick castle, near to the village of Kenilworth, and constitutes Guy's cliff, the excavations connected by tradition with Guy of Warwick being in this rock. Another good section of the sandstone is laid open in the excavation which forms the entrance into Warwick castle. Near the north-east extremity of the new town of Leamington, keuper sandstone is covered by red rock marl, and some of the wells in the brick-yards are sunk through the red marl into the sandstone. Mr. Murchison has observed deposits of keuper sandstone at Tibberton, between Gloucester and Newent; at Ripple, near Tewkesbury; and at Bury Hill, on the south of Malvern. In Somersetshire, it has been ascertained by Dr. Buckland to occur at Sutton Mallet, about six miles east of Bridgewater; and in Glamorganshire, at Pyle, between Bridgend and Neath. At the last locality the surface of some of the beds of sandstone is partially covered with thin layers of green clay, cracked or fissured in the same manner as mud dried by exposure to

the atmosphere; and the cracks are filled by the sand of the stratum resting immediately upon the marl. On the Continent, keuper sandstones are extensively used in building; and, in this country, were employed in the construction of the town-walls, castles, churches, and other ancient edifices of Warwick. The beautiful towers, and the bridge of Taunton, were built from the keuper quarries about three miles distant. The cathedral of Exeter is also constructed of an olive-coloured sandstone, said to have been obtained from Exmouth; and Dr. Buckland has recently ascertained that two strata of a similar stone occur in the sea cliffs at Orchem, about two miles east of Exmouth. The churches and towers of the adjacent villages of Withecomb and Littleham are likewise composed of the same kind of sandstone; and Margam Castle, near Neath, has been recently rebuilt from the Pyle quarries. The only organic remains hitherto noticed in this formation, in England, are the remains of saurians, near Warwick; and obscure fragments of vegetables. A paper on the Geological Structure of the arrondissement of Cherbourg, by the Rev. W. B. Clarke, F.G.S., was then read. The district described in this memoir consists, principally, of several varieties of argillaceous and talcose slate, and quartz rock, irregularly associated. A minute description is given of each variety, as well as of the passage of one formation into the other; details which do not admit of being communicated in an abridged form.

## BOTANICAL SOCIETY OF LONDON.

On Thursday, Mr. J. E. Gray, president, in the chair, donations of plants, collected by the servants of the Hudson's Bay Company, on their journey between York Fort, Hudson's Bay, and the Columbia River, across the Rocky Mountains, presented by James Webster, Esq. were announced. — Specimens of *Lycopodium pallescens*, from South America, were exhibited. A paper was then read from Mr. Freeman, "On a more systematic method in describing and arranging the species of plants." It appeared from this, that in all the Floras of this country which had come under the notice of the writer, a particular description is given for each species; and these descriptions are without any systematic arrangement of characters, except that, occasionally, when the species belonging to a genus are very numerous, they are sometimes divided into groups: no account is taken of the relative value of characters, but it is left to a person's own judgment or experience to determine which characters are essential and invariable, and which are inconstant and apt to vary. A discussion took place upon this paper between the president and Dr. Macreight; after which, the continuation of Mr. G. E. Dennes' paper on the plants found about Deal, Walmer, and Dover, Kent, was read; by which it appeared that he had found about that district 84 genera and 120 species. The meeting then adjourned for a fortnight.

## NEW PUBLICATIONS.

*Scientific Memoirs, selected from the Transactions of Foreign Academies of Science and Learned Societies, and from Foreign Journals.* Edited by Richard Taylor, F.S.A. Parts I. and II.

THE great expediency, if not the necessity, for a periodical of this description, must be acknowledged by every scientific person, and especially by those who, at the meetings of the British Association, have found so much time

wasted on pseudo-discoveries which had been already promulgated in the proceedings of foreign societies, and so much useless clashing of opinions upon questions no longer at issue, having been settled by decisive experiments made by philosophers in other countries. Thus, whether for the particular information of parties engaged in interesting pursuits, or for the general diffusion of intelligence, valuable to the public at large, a work like this of Mr. Taylor's has been a great desideratum.

The two quarterly parts before us (August and November) contain very valuable papers: Melloni's experiments on radiant heat; M. Dove's experiments on the circular polarisation of light, with an account of his apparatus; M. Savart's researches on the elasticity of crystallised bodies; M. Nobili's curious system of Metallochromy, or new chromatic scale of colours for scientific and practical purposes; Poisson's mathematical theory of heat; Dr. Löwig's experiments on the essential oil of the meadow-sweet; Baron Walknaer's learned essay on the insects mentioned by all the most ancient authors as infesting the vine; Dr. Carus on the kingdoms of nature, their life and affinity; M. Balard on the bleaching compounds of chlorine; and E. Lenz on the laws of the conducting powers of wires. All these are striking contributions to the advancement of science and knowledge; and they shew us in what manner, and to what purposes, the genius of France, Germany, and Italy, is directed. All that we shall venture to add is in the way of suggestion. If a brief analysis, or even notice, of the most recent experiments and discoveries in these countries were practicable, it would be an immense improvement on the publication; and we trust that public encouragement would reward the exertion and requite the expense. There is much trouble, we are aware (for we have tried), in having the transactions of learned bodies abroad transmitted to this country of taxes and imposts: but what we propose might be sufficiently attained by a well regulated correspondence. But, let us be grateful for what Mr. Taylor has done, and is doing; thereby conferring a great benefit upon the science and scientific men of England.\*

*A Complete Scientific and Popular Treatise upon Perspective; with the Theories of Reflection and Shadows.* By a Pupil of Monsieur J. P. Thérôt. Illustrated with Twenty-four Plates. 8vo. pp. 152. London, 1836. Simpkin and Marshall.

As far as we have been able to examine this little volume (which comes out with singular happiness at a time when the importance of diffusing the elements of correct and tasteful drawing is generally felt and acknowledged), it seems to be exceedingly well calculated for the object which it has in view. There is a preface to it, from the pen of Mr. A. W. Hake-will, member of the Architectural Society of London, in which the claims of perspective to the attentive study of all artists (especially of architects), are set forth with clearness and force.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, Jan. 26, the Rev. T. Stone, M.A., of St. John's College, Cambridge, was admitted *ad eundem*, and the following degrees were conferred:

*Doctor in Divinity*.—F. C. Plumtre, Master of University College.

*Bachelor in Divinity*.—C. Williams, Fellow of Jesus College.

*Masters of Arts*.—D. Butler, Rev. O. Fox, Lincoln

College; J. G. Domville, Christ Church; R. Blackburn, Fellow, T. Prothero, Brasenose College.  
*Bachelors of Arts*.—G. Mellish, University College, Grand Compounder; F. M. Rowden, Wadham College; W. C. F. Webber, W. G. Penny, Students; J. R. O. Gore, Christ Church; R. Kent, Brasenose College; W. Robbins, Worcester College.

## ROYAL SOCIETY.

THURSDAY, Mr. Baily in the chair.—The paper read was *Observations on Electro-Chemical Influence at Weak Tension*, by Mr. Bird, of Guy's Hospital. The author, in the commencement of his paper, notices the researches and results obtained by Davy, Becquerel, and other philosophers, in reference to the tolerably well-known modes of effecting the reduction of oxides by weak electric currents. He then describes the apparatus by which a continuous current, for some weeks, may be obtained, and by which he reduced copper, lead, silver, &c.; producing, by the first, beautiful crystals of metallic copper; by the second, elegant crystal feathers of metallic lead; by the third, crystals of dazzling whiteness, most commonly in the form of needles; and so forth. Lastly, Mr. Bird details the effects produced with silicon, bismuth, manganese, potassium (with which he failed), and ammonia, which afforded the most conclusive and satisfactory results; and concludes by observing, that, on a review of his experiments, he could not help being struck with the powers of continuous electricity at a weak tension. Cessation, even for a moment, is fatal to success.

## ROYAL ASIATIC SOCIETY.

JANUARY 21. Richard Clarke, Esq. the chair.—Various donations to the library were laid upon the table. A paper on the fate of the Ten Tribes of Israel after the fall of Samaria, by the late T. M. Dickenson, Esq. of the Bombay Civil Service, was read to the meeting. The writer, in this essay, acutely investigates the several opinions which have obtained currency among the learned as to the location of the captive Israelites after the destruction of their kingdom. He considers the opinions of Bochart and Sir William Jones, on this subject, to be without good foundation; but he leaves the question undecided, supposing it more probable that the children of Israel were not long preserved as a separate people. He is inclined, however, to afford more consideration than recent writers have been induced to give to the idea which was advocated so warmly by the early settlers in the New World—that the North American Indians were of Hebrew origin. This opinion, Mr. Dickenson states, was first suggested to John Elliot (the Indian evangelist, as he is sometimes called) by a Mr. Winslow, a commercial agent in New England, about 1549. It was subsequently maintained by several other writers; and supported by arguments drawn from many striking peculiarities which characterise the manners, customs, religious rites, physiognomy, &c. of the American Indians. He then adverts to the black Jews of Malabar, who are invariably termed Beni-Israel, or Israelites, and not Jews, as the followers of the law of Moses are elsewhere designated; and thinks that their origin and history are well deserving investigation; but concludes with observing, that, although the exiles of Samaria should any where be preserved as a separate people, the difficulty of distinguishing them from their brothers of Jerusalem, will, most probably, be an insuperable bar to any thing like a certain decision upon their ultimate fate.

\* Part III. has just reached us (Friday).

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Sir Henry Ellis exhibited a plan of the Roman road between Silchester and Staines, part of the ancient road from London to Bath, very neatly executed by some officers of the Royal Military College at Sandhurst. Mr. Sydney Smirke communicated a description of the Norman remains in Westminster Hall, exhibited last week; and concluded by observing, that the government deserved the thanks of all the admirers of that fine building for the liberal and effective repairs executed there; while he deprecated the site of part of the intended parliamentary buildings, which will block up all the east windows of the hall, lately opened, and destroy the great south window.

## NUMISMATIC SOCIETY.

WE rejoice to find that a few gentlemen of eminence in the study of numismatology, having consulted together on the expediency of forming a society for the cultivation and encouragement of this interesting branch of science, finally adopted the resolution to carry such a plan into effect. A first meeting, accordingly, took place in the apartments of the Royal Astronomical Society, Somerset House, on Thursday evening, the 26th January, Edward Hawkins, Esq. F.R.S. in the chair. A paper was read to the Society by the secretary, on the Farthings of Queen Anne, contributed by Sir Henry Ellis, K.H. Dr. Lee, the president, presented several works on medals, and some coins; and the meeting adjourned to Thursday fortnight. Letters were read from several gentlemen, (among others, the Dean of St. Patrick's, Dublin); all expressing the warmest wishes for the prosperity of the Society, which already reckons upwards of 100 members.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

*Monday.*—Entomological, 8 P.M.  
*Tuesday.*—Linnæan, 8 P.M.; Horticultural, 2 P.M.; Civil Engineers, 8 P.M. (Architectural Essay, by G. G. Scott).  
*Wednesday.*—Society of Arts, 7½ P.M.; Graphic, 8 P.M.; Literary Fund, 3 P.M.; Club, 5½ P.M.; Medico-Botanical, 8 P.M.  
*Thursday.*—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.  
*Friday.*—Royal Astronomical, 3 P.M. (Anniversary); Royal Institution, 8½ P.M. (Dr. Ritchie on the Velocity of Sound, and the Discrepancy existing hitherto between Theory and Experiment.)

## FINE ARTS.

EXHIBITION AT THE GALLERY OF THE  
BRITISH INSTITUTION.

THIS gallery was opened to the public on Monday last, and it is but justice to say, that the present exhibition is equal in merit to most of its predecessors. To expect that, either collectively or individually, art can go on, like manufactures, in regular, progressive, annual improvement, is to expect more than is reasonable. Occasionally, when painters are suddenly inspired, or, in more familiar phrase, have "their lucky moments," something extraordinary is produced; but, otherwise, their works are, generally speaking, of a tolerably uniform and consistent character.

Before we notice the performances with which the walls of the gallery are this year decorated, we must advert to the great amendment which has been made in the gallery itself. The light in the south room, which was formerly considered as a sort of condemned hole, has been so materially improved, that the pictures in it are seen to as much advantage as in either of the other apartments; and the removal of

the keeper's closet in the middle room, is another obvious amendment.

In this, as in almost all collections of art (ancient or modern) which we have seen, there are a few productions of pre-eminent beauty, many highly respectable, and some—what we will not designate. We will begin by referring to two or three of the first-mentioned class.

182. *Rent-day, in the Sixteenth Century, at Haddon Hall, Derbyshire.* J. C. Horsley.—Horsley? With the exception of the celebrated bishop, we do not remember ever having heard the name before: certainly, no picture by such an artist was ever before brought under our notice. "Therefore, as a stranger," we were disposed to "give it welcome." But Mr. Horsley has claims upon our consideration much stronger than those of courtesy. A more successful *début* in art we never witnessed. It is one of the most attractive performances in the rooms. The scene is the steward's apartment in that noble and ancient edifice, engravings from designs of various parts of which, by Mr. Cattermole, were recently noticed in the *Literary Gazette*. At a table in the foreground sit the venerable steward himself, with his ledger before him; and, on his left-hand, his assistant, carefully weighing the gold which has been received from the tenants. At the foot of the table stands a sturdy farmer, respectfully making a statement or remonstrance, to which the steward is attentively and benevolently listening. In the background is a graceful page, to whom two favourite greyhounds are testifying their attachment; and a door, which opens to the corridor, discloses a charming but modest girl filling a horn cup with some refreshing beverage for two cavaliers, who are gazing at her with the admiration that her beauty naturally excites. The whole is simply, chastely, and admirably managed; the parts are painted with the utmost care and truth, and, at the same time, with singular felicity; and the effect of light very much resembles, and is equal to, De Hooze. "But who," exclaims the reader, "is this 'great unknown,' who thus leaps into the arena of art, armed at all points, like Minerva issuing from the head of Jupiter?" Gentle sir, or madam (as the case may be), we have inquired, for the express purpose of satisfying you; and we understand that he is a nephew of Mr. Callcott's. And now your wonder ceases. Yet, how few there are who could have availed themselves so happily of the instruction and guidance of that highly gifted and experienced artist! The nephew is worthy of the uncle, and the uncle of the nephew.

272. *Love.* C. W. Cope.

"Love, in the virgin-breast of Beauty lying,  
Laughs at the fate he doth for her prepare;  
Will swiftly turn her sweetest smiles to sighing,  
And flee when she is fixed in despair."

A circular composition, full of beautiful expression, especially the countenance of the sly little god; but its chief charm is its colouring, than which nothing can be richer and mellow. The half-tints of the flesh, especially, are delightfully clear, pure, and transparent. We like to see lights loaded (as the technical phrase goes): but philosophers say there is reason in the roasting of eggs; and we confess that we think the patch on Cupid's shoulder is rather too sudden and prominent. In fact, it casts a shadow, which detracts from the purpose for which it was placed there.

120. *Regulus.* J. M. W. Turner, R.A.—It has pleased Mr. Turner in this, as in numerous other cases,—with his "Juliet and the

Nurse," in the last (alas, the last!) exhibition at Somerset House,—to give a name to a gorgeous assemblage of splendid hues, which has no, or scarcely any, connexion with the subject indicated in the title. In the work to which we have just adverted, it was not until after considerable research that we discovered, or thought we discovered (for, to the present moment, we are not sure of the fact), Juliet and her Nurse perched, like sparrows, on a house-top. Regulus! There is certainly a little group of little men, rolling a little spiked cask into a little boat; but, *au reste!* Nevertheless, who could have painted such a picture but Mr. Turner? What hand but his could have created such splendid harmony? Who is there so profoundly versed in the arrangement and management of colours? His sun absolutely dazzles the eyes. Those who have never beheld that glorious orb in other climes, undimmed by the mists and vapours which "tone it down" in our northern regions, will probably think Mr. Turner's representation of it too brilliant. They may depend upon it, they are wrong.

26. *The Twin Sisters.* Mrs. Carpenter.—Of this lady her sex ought to be, and, we have no doubt, are proud. The present is one of her most charming performances. It is like Lawrence, in grace of drawing, and vivacity of expression; but it is much superior to him in colour.

3. *Pilot-Boat running into St. Peter's, Guernsey.* 19. *Rigging-Hulk and Frigate at Portsmouth.* 40. *On the Beach of St. Lawrence, Isle of Wight.* 41. *An Interior, with Fish.* 42. *Vessel on the Sands at Hastings.* E. W. Cooke.—When we cast our eyes on these delightful productions, we felt as if Mr. Cooke had done us a personal favour in painting them; for, from his first appearance in the graphic world, we foretold his eminence,—and every prophet likes to see his predictions accomplished. Talk of the Flemish school! It must be one of the very finest works of that school which could for a moment stand in competition with any of the above-named pictures. Their execution is miraculous. Mr. Cooke's pencil is tender, or forcible, as the occasion demands. Where solidity is required, he is like marble; glass is not more diaphanous than are his tints when he wishes for transparency. But the great foundation of his excellence (as it is the foundation of the excellence of every genuine artist) is his knowledge of drawing. In his works you see no shirking from the distinct detail of forms, even in cases in which a little slurring of those forms might be pardoned. For instance, let any one look at the cart, horses, and figures, in the middle distance of No. 42: the aerial perspective is perfectly preserved; but the group is defined with a precision and beauty, which would render it a valuable little picture of itself, if it were cut out of the canvass. In some respects, however, No. 41 is transcendent.

(To be continued.)

*Panorama.*—A new picture opens to-day in this national class of art; which, whether we consider it in relation to its local interest, the difficulty of the undertaking, or its success and excellence as a work of art, has impressed us with a conviction that it will become the most attractive that has been exhibited since the days of Waterloo. Thousands of our countrymen who have visited the Vale of Chamouny will here renew their recollections; thousands who intend to visit the Alps will go, in anticipation of the enjoyment; and

thousands who have been there will take their friends, to shew where they have travelled, and tell their tales over again of dangers and enjoyments encountered on the Montauvert, the source of the Arveron, the Mont Breven, and the Flegère. There is a vastness, a depth below the observer, a height above him, which we have never seen attained before in art: no, not even in panoramic painting—the only means by which such scenes can be represented. We advise all to see it who ever derived enjoyment from a panorama; and we most heartily wish that the patronage of the public may give it all the success it so richly merits, for the care, the exertion, the expense, and the talent, which Mr. Burford has devoted to this splendid work.

## NEW PUBLICATIONS.

*Cooper's Drawing-Book of Animals and Rustic Figures.* Tilt.

WE have already noticed some of the early Numbers of this publication. The series is now complete, and forms a very pleasing collection of "progressive studies, drawn from nature." To the young landscape-painter, especially, this will be a very useful publication, as it will shew him how he may introduce life into his representations of fine scenery, without being guilty of those inaccuracies in drawing, and that tastelessness in grouping, by which some of the best productions of the landscape pencil are frequently deformed.

*A Political Alphabet.* London, Maclean.

THE name of Grant is upon this alphabetic series of caricatures, which will serve to pull out; and amuse a vacant half-hour. Some of the subjects have good hits at things of the day; and the letters L, M, and N, in particular, are not a little malicious.

## MUSIC.

*Drury Lane.*—The "grand concert" at this theatre, on Monday evening, turned out to be no nuisance. A band of the first order; the vocal strength of the Opera Buffa, added to a fair proportion of native talent; an excellent chorus; and a selection made with great judgment, including the first part of Haydn's "Creation," and many other classical and attractive compositions,—formed, altogether, a musical treat of a very superior kind. The only fault of the selection was its extreme length, the bill of fare containing abundant materials for two similar entertainments. We are resolved to wage interminable war against the cramming system pursued in this country by managers and directors of concerts. It is the grossest injustice, both to compositions and performers, to be placed at the latter part of an entertainment four or five hours long; because a large proportion of the audience must, by that time, have their mental and physical capacity for enjoyment much blunted, if not entirely exhausted. It is impossible for us to enter very minutely into particulars. The charming voice and cultivated style of Mademoiselle Blasia, and the pure and powerful tenor of Catone, are now too well known to require comment. Madame Giannoni (who unites a high order of vocal accomplishment to much personal attraction), and the rest of the Opera Buffa performers, merit high commendation. Miss Fanny Wyndham is amongst the most promising of our rising native songstresses. Nature has given her a voice delightfully mellow, rich, and even; and instruction of the very best kind has taught her to emit its tones with the utmost purity and facility. Her near namesake, Miss

Fanny Woodham, exhibits indications of taste and refinement fully sufficient to warrant her in the possession of much more courage than she has yet been able to acquire. Her talent, partially obscured as it was by her excessive timidity, was sufficiently conspicuous to elicit an animated *encore* in the "Flower Girl," a graceful ballad of recent date. This gave her more self-possession; and, as a natural consequence, more command of voice in her next song, Mozart's "Parto," in which she had the advantage of being accompanied by Willman. Miss Romer has the bad habit of incessantly urging on the time, and her style is rendered extremely ungraceful by her not dwelling sufficiently on the accented and significant notes of her musical phrases. Standing so high as she does in public estimation, Miss Romer can afford to pardon and profit by these unpardonable remarks; nor will she fail to do both, if the soundness of her understanding equal the beauty of her voice. The frivolous insipidity of the song selected by Mr. Wilson from *Fra Diavolo*, is unredeemed by any superior excellence in the arrangement. It is a worthless picture, set in an ordinary frame, and we marvel much that a singer possessing so much taste and feeling should have made such a choice. Many of the choruses, which were admirably selected, received a well-merited *encore*, as did the overture to *Guillaume Tell*. Beethoven's lovely septet for the family of stringed instruments, with clarinet, horn, and bassoon, played—exquisitely, of course—by Messrs. Mori, Moralt, Lindley, Dragonetti, Willman, Puzzi, and Baumann, was perfectly delicious, in a building so favourable as this to musical resonance. It is highly gratifying to record, especially when we consider the mixed kind of audience assembled on this occasion, that those compositions which were of the highest class were, throughout the evening, listened to with the most profound attention, and, on some occasions, with the most evident delight. Among the vocalists who deserve honourable mention, were Messrs. Balfé, Seguin, and Giubilei. Q.

## NEW PUBLICATIONS.

WE have been some time a little in arrears with our musical reviews; which reduces them to the state of notices.

*A Guide to the Theory of Practical Double Bass, &c.* by A. Devaux. (Cramer, Addison, and Co.)—The instructive portion of this work deserves great praise; and the learner will have equal cause to be pleased with the numerous exercises, and the fine selections from Purcell, Gluck, Winter, Novello, Balisshall, and other distinguished composers.

*Songs from a Foreign Land.* The Poetry by T. H. Bayley, Esq.; Music composed, selected, and arranged, by A. D. Roche. (Power.)—A most beautiful book of songs; especially the first two. We have not seen so lovely a collection for many months.

*A Fifth Set of Songs.* The Music by Mrs. Robert Arkwright. (Power.)—We are sorry that we cannot continue to praise Mrs. Arkwright's music in this set. The words of some of the songs are by our best poets; but neither for these, nor for the lesser stars, are the compositions of sufficient interest or expression to warrant our panegyric.

*The Child and the Hours.* Duet, written by H. Brandreth; composed by P. H. Loder. (Luff.)—Beautiful words for music; and music worthy of the words.

*A Coronet may Gild thy Brow.* Words by the Rev. W. Fletcher; Music by J. D. Roche. (Dean.)—This charming song was sung by Miss Rainsforth, with great effect, at the *ŷte champagne* on behalf of the admirable Institution, the Royal Dispensary for Diseases of the Ear. It is an affecting reflection, that the efforts of such a charity are directed to enable the sufferers to enjoy the delights of melody, and the enchantments of harmony.

*Flowers were never half so sweet.* Composed by Alexander Lee. (Lee.)—A very sweet ballad; as is also *The Two Weddings.* Haynes Bayley; and Music by J. P. Knight. (Mori and Lavenue.)

*Wake, wake, mine own Love.* Serenade: words by Mrs. S. Davids. Composed by T. Baker. (J. Cooper.)—*Lament on the Death of Amy Claude.* Edward Crue. (D'Almaine and Co.) *Yonder Bark*, a ballad, by R. Bennett, Esq. Composed by G. L. Newton. (Mori and Lavenue.)—Three songs for which we have little to say in accents of praise.

*Brilliant Variations on the Cassata Cesta d'oro, from Bel-*

*lini's "Morna," for the Piano-forte, by F. H. Oldfield. (Shade.)*—These variations are exceedingly clever. They are, we understand, the first composition of a Mr. F. H. Oldfield; and we recommend them to all young pianoforte players.

*Quadrilles, by T. A. Weber, pupil of Kalliwoda. (J. Dean.)*—A very light and pretty set of quadrilles.

*A Collection of Sacred Music from the Works of Handel, Haydn, Mozart, Beethoven, Novello, &c. (Novello.)*—To the lovers of sacred music we strongly recommend this volume. In addition to the above composers we have several original compositions, harmonised by Mr. W. Wilson.

*The Coronet: a Collection of Songs from favourite and popular Writers.* Music by Mr. Alexander Kerr. (Willis and Co.)—Another beautiful set of songs, with sweet music. The first is decidedly the prettiest in the book; and, altogether, we hope this volume will be appreciated as it deserves. The dedication to the Princess Augusta is a favour not undeserved by the merits of the accomplished composer.

*The Royal Rose.* Words by Mr. George Moore; Music by G. F. Stanbury. (Hawes.)—Appropriately dedicated to the parent tree, her Royal Highness the Duchess of Kent. This is a really lovely glee for three voices; the music is highly creditable to the pen of Mr. Stanbury.

*Merry, merry go the Bells.* A Glee for Four Voices. (Dale, Cockerill, and Co.)—A beautifully arranged accompaniment to Kirke White's words. We need hardly say how good it is, when we add that Mr. Richards, the composer, has just been elected King's Scholar, at the Royal Academy of Music.

*The Corsair: a Scena.* The Poetry by the late Lord Byron; the Music by Alexander Lee. (Lee.)—Beautiful music, well adapted to Lord Byron's beautiful words.

*A Fewer New Waltz, with an ad libitum Guitar Accompaniment, composed by B. Speriati. (Chappell.)*—Very simple and pretty.

*The Soldier in Red, and the Sailor in Blue.* (Jefferys and Co.)—Spirit-stirring words, by Mr. Lewis Way, with excellent music by Shelton. This patriotic song must be popular.

*A First Set of Songs, and a Duet.* The Poetry by T. Haynes Bayley, Esq. (D'Almaine and Co.)—Seven of Haynes Bayley's delightful songs, with splendid music by Henri Herz. This is a book to adorn the music-stand, and charm the evening.

## DRAMA.

*Adelphi.*—Mr. Yates gave a medley entertainment on Monday, no performance being allowed, on account of the anniversary of the martyrdom of King Charles. A very attractive bill of fare drew a crammed house; and every body appeared in good-humour. In the first place, we had Mr. Love, with his *polyphonous* entertainment; then the Arabs; then Mr. Thompson's ancient statues; then Mr. Yates's imitations; and then Mr. Child's dissolving views: between each and all, we had songs by John Reeve and *Jim Crow* Rice; and, on the whole, an evening's entertainment which we should like to see often repeated.

*St James's.*—*The Lord of the Manor*, with a strong musical and comic cast, has varied the entertainments here, to the entire gratification of the lovers of song and mirth.

*Opera Buffa.*—On Tuesday, a *comediatta*, entitled *Un Anno ed un Giorno*, composed by M. Benedict, the conductor of the orchestra, was produced at this house: the music of the "mid-dling" order; and even this was marred by the nonsensical story. *Elisa* (Mad. E. Giannoni) promises a young soldier, *Lorenzo* (Sig. Ronconi), that if he return from the wars, we suppose, within a twelvemonth and a day, she will become his bride. At the end of this period the opera begins; but, in the interim, the lady has fallen in love with a peasant, *Giannetto* (Miss F. Wyndham); and, before they are wed, *Lorenzo* returns, and generously renounces his claims in favour of the more fortunate *Giannetto*, joins their hands, and the curtain drops. Madame Giannoni sung sweetly, as did Signor Ronconi; but the charm of the piece was a song by Miss Fanny Wyndham, which was loudly *encored*: it was accompanied on the horn by Signor Puzzi; of his playing we shall say nothing,—it is beyond all praise.

*Olympic.*—The return of Liston and Vestris to their respective charges, have, during the week, given a filip (*i. e.* a fill-up) to this pleasant theatre.

Madlle. Blais took her benefit on Thursday when the entertainments were, *Un Anno ed un Giorno*, and *Scaramuccia*. In the latter, the talents of the fair *bénéficiaire*, Miss F. Wyndham, and Signor Catone, and the other accomplished performers of this establishment, were exerted most successfully, as usual, and gave great delight to a very full audience.

### VARIETIES.

**Weather-wisdom.**—The Almanac has been sadly astray about the bad weather of February 2d and succeeding days (see last *Literary Gazette*): it has been very mild and seasonable! Try again. "New moon (the 5th, 10<sup>th</sup> 8<sup>m</sup> morning) brings snow or rain, and high wind. 8th, Ash Wednesday, a change. The weather very cold, with severe biting winds, and, in all probability, a severe frost,—with wind to N.E. Venus comes to a parallel declination with Mars on the 11th. Expect rain or snow."

**England and America.**—It affords us great satisfaction to record an act of royal condescension and favour, which we think will be very agreeable to American feeling. Mr. Campbell, whose great work, the "History of the American Indians, with splendid Portraits," was described among our literary notices several weeks ago, had the high honour of being admitted to an audience with the king at the Pavilion, when his Majesty graciously devoted nearly an hour to the examination of his first volume, and expressed his entire approbation of it in every respect. But, as a further gratifying proof of his consideration towards a citizen of America, engaged on an undertaking so interesting to both countries, his Majesty not only accepted the dedication of the work, but, with his own hand, signed his name as its earliest subscriber.

**Shakspere!**—A correspondent, referring to our report of the proceedings of the Society of Antiquaries, last week, on a lately discovered autograph of our great dramatist, suggests that, from all that has been hitherto found, it is not improbable that Shakspere wrote his name differently at different times; as it is well known, from authentic autographs of his contemporary, Sir Walter Raleigh, how many different ways the latter signed his name. Once admit the probability that Shakspere did the same, and what becomes of "the disquisition respecting the orthography of the poet's name?"

**Capt. Scott's Rambles in Egypt** (see *Lit. Gaz.* 1044).—Being informed that our having said, in our review of this work, that the author's "Tour did not go over any new grounds," has been misconstrued to mean that Capt. Scott himself had given us *nothing new*, we are desirous to correct the misapprehension. Referring to the index of the *Literary Gazette* for ten years, and especially during the last two years, it will be seen that there is not a step of Egyptian ground trodden by travellers, from Belzoni to Lane, on which we have not been with them, so as to make it impossible for us in that respect to speak of the gallant officer otherwise than we did. But we did not, and could not intend to state that his remarks on the Egyptian forces, on the policy of Mohammed Ali, and on his excursion in Candia, had not both novelty and merit to recommend them to attention: on the contrary, we particularly mentioned these parts as interesting, from the testimony of an eyewitness.

**New Houses of Parliament.**—It is stated in the newspapers, that Mr. Barry, in compliance

with the orders of the Speaker, has presented an estimate of the details in erecting the splendid structure which carried away the prize in this great competition; and that the amount was less than his rough general estimate, by 724,986*l*. The plans, &c. are referred to competent authorities for examination: let us hope that no wretched economy (or its pretence) will be allowed to interfere with this national undertaking.

**Earthquake.**—Two shocks of earthquake were felt on the night of the 23-4 ultimo, at Altkirch, department of the Upper Rhine. They extended to Berne, Basle, Soleure, and the surrounding country.

**University College, London.**—At a general meeting of proprietors on Saturday, the charter was accepted: after some discussion, whether the Act of Uniformity would, or could, be applied to Dissenters in this College. If there was any risk, it was resolved to defy it.

**The Melodists' Club** held its first dinner meeting at the Freemasons' Tavern, on Thursday week. Among the company was M. Moscheles, who contributed delightfully to the general harmony of the day; which was, also, well supported by Sir George Smart, Parry, Parry, jun., Bennett, Spencer, and others of musical popularity.

**Thugs: Secret Murderers.**—The *Edinburgh Review* contains a very remarkable account of a numerous association of secret robbers and murderers, which has long existed in India, and strangled thousands of victims. It is curious that a person, who is fully instructed in the art and mystery (one who is capable of forming a gang of Thugs), is called a *Burka*!

**Dr. Thornton.**—Among recent deaths, we have to announce that of Dr. Thornton, the distinguished botanist, at his house in Howland Street, after a tedious illness and much suffering.

**The Carthusian, No. 1.** (Walker: Simpkin and Marshall). Another literary and periodical *début*; and a very neat one. The Carthusians, including, we presume, youths still at the Charter House, and individuals who have finished their education at that celebrated seminary, ought to be able to produce a work of mark and likelihood; and their first No. is one of fair performance and promise. Some of the poetry is very sweet.

**Quere.**—Our amusing and worthy provincial contemporary, *The Cheltenham Looker-on*, gives us the following difficult piece of astronomical intelligence in its last Number:—"In consequence of the unavoidable postponement of Mr. Wright's Lecture on Zoology, Mr. Comfield, the curator of the institution, took the first opportunity that had offered since the *Winter Solstice*, to make a few remarks on that subject, and, in doing so, took occasion to observe that the increased diameter of that luminary bears the most exact proportion to the elliptic figure of the earth's orbit, and, in fact, is the direct means of ascertaining that figure!"

**Pompeii.**—Professor Iohn, on a scientific journey to Naples, describes several interesting antiquities recently discovered at Pompeii. In the Strada della Fortuna, three skeletons, a male and two females, have been found, in positions as if they had thrown themselves from the upper windows of their house after the lower parts had been filled with lava. A pair of beautifully carved ear-rings, ornamented with pearls, were near the female skeleton of, apparently, the daughter of the others. In the Strada di Mercurio (in which the remarkable service of plate described in a recent

*Literary Gazette* was found), two paintings, in good preservation, have since been uncovered. One represents a hermaphrodite—the other, Venus and Adonis; Adonis wounded, and the goddess and her nymphs washing and tending his hurts.

**Portuguese Literature.**—Mr. John Adamson of Newcastle, the esteemed translator of "Inez de Castro," and author of "Memoirs, &c., of Camoens," has printed a catalogue of his unrivalled collection of Portuguese works, under the title of *Bibliotheca Lusitana*. It extends to 115 pages, and exhibits such a list, that we earnestly trust the whole may be secured for some public or national library, and never be separated in the melancholy way we see so many similar pursuits of men's lives scattered, as it were, to the winds, to shew the vanity of human efforts. Many of these works are of great rarity; and the mere enumeration of them supplies a fund of literary information.

### LITERARY NOVELTIES.

Mr. Le Keux, we understand, is preparing Memorials of Cambridge, to match his "Memorials of Oxford," and to appear in monthly parts, illustrated with plates and wood-cuts. Mr. T. Wright is to furnish the text, and the whole will form a complete history of the university, colleges, and town of Cambridge, from original documents.

Mr. Forrest, the Tragedian, has announced a work, entitled *Rambles in Europe*, in the New York journals.

### In the Press.

A New Translation of the Venerable Bede's Ecclesiastical History of the English Nation.

### LIST OF NEW BOOKS.

On the Extent of the Atonement, by the Rev. T. W. Jenkins, post 8vo. 7*s*.—Rosetta and Miriam, by the Author of "Emma de Lissau," 12mo. 6*s*.—The Art of Writing, by J. Carstairs, 7th edit. 8vo. 7*s*.—Introduction to the Practice of Conveyancing, by J. Martin, Vol. I. Part I. royal 8vo. 12*s*.—The Christian Correspondent; Letters by Eminent Persons of both Sexes, with Preliminary Essays by J. Montgomery, 3 vols. fcap. 18*s*.—The Sanctuary and the Oratory, by the Rev. Thomas Milner, 12mo. 7*s*.—Harding's Drawing-Book for 1837, hf-mor. 1*l*. 1*s*.—Thamuta, the Spirit of Death, and other Poems, 12mo. 4*s*.—J. D. Chambers' Dictionary of the Law of Elections, &c. 8vo. 1*l*. 6*s*.—Paynell; or, the Disappointed Man, by Miles Stapleton, 2 vols. post 8vo. 1*l*. 1*s*.—Compendium of Lithotripsy, by H. Belinaev, 8vo. 4*s*.—The Young Ladies' Friend, by a Lady, 12mo. 3*s*. 6*d*.—Impressions of Italy, by the Lady E. S. Wortley, post 8vo. 10*s*. 6*d*.—Evils of the Factory System, by C. Wing, Esq. royal 8vo. 1*l*. 1*s*.

Longitude..... 3 51, W. of Greenwich.

### TO CORRESPONDENTS.

\* \* We trust that the delay will be found justified by the character of our remarks on Medal Engraving, and the plates to accompany them, which will appear in and, with the next Number of the *Literary Gazette*. The subject assumed more importance, in several points of view, than we anticipated when we took it up; and being anxious to do it justice, both in regard to the arts and to national and individual claims, we have been led into that length of inquiry (having attended to both sides), which will occupy an extra half-sheet of our Journal, and be illustrated by some highly finished engravings. As the latter will deserve preservation, we trust that newsmen, both for their town delivery and for their country and foreign subscribers, will take as much care as they can to keep them clean and unbroken.

W. will find a packet at our office.  
We beg to refer to our Berlin letter for some pleasing notice of English literature.  
Biographical Sketch of Sir John Soane postponed.

## ADVERTISEMENTS,

Connected with Literature and the Arts.

**CHEAP MODERN PUBLICATIONS,**  
being the Duplicates (in every Department of Literature) withdrawn from Andrews's Circulating Library, 167 New Bond Street. The Catalogue is now ready for delivery, gratis. It is printed on a large sheet of paper, and can be sent by post. The Books are in the best condition, and in very few instances do not exceed one-third of the original published price; and in numerous instances, from 35 to 50 per cent less. These Books are sold from the Library to make room for the multiplicity of new Publications announced, which are supplied in unlimited numbers to the Subscribers of this Library. Terms of Subscription, &c. to be had on application, or forwarded to any part of the Country.—N.B. Persons desirous of establishing Book Clubs or Circulating Libraries, will find the above worthy their attention.

**JULIUS KUHR, Book and Printseller,** at Berlin, in consequence of his extensive Connections with every Establishment in his Department, throughout the Continent, offers his services to the admirers of German Literature, and the Classics. His Catalogue includes every Publication connected with Science, scarce Old Works and Prints, which he can supply at the shortest notice, on the most reasonable Terms. He also takes the pains to procure the attention of Collectors to a beautiful Proof, before any Letters, of the very scarce Engraving, by Müller, after Raphael's "Madonna de St. Sisto," in the Dresden Gallery, which he will dispose of for 50*l.*, and is in very excellent condition.  
All communications addressed (post-paid) to Messrs. Ackermann and Co. 39 Strand, will be attended to with punctuality.

**MEDALLIC ENGRAVING, by MACHINERY.** The Mechanic's Magazine, of this day (double Number), price 6*d.* contains an Abridgement of the Evidence given before the Parliamentary Committee, on the British Museum, upon the English and French methods of Medall Engraving, by Machinery. Principal Witnesses: Mr. Vincent Nolle, Sir F. Chantrey, Mr. Brockdon, Mr. Henning, and Mr. Wyon. Also, Letter from Mr. Henning, on the French Piracy of his Works.

Just published,  
**Vol. XXV. of the Mechanic's Magazine,** illustrated with a Medall Engraving, by Mr. Bates, of Heads of Locke, Franklin, Lagrange, and Galileo. Price, in cloth, 3*s.* 6*d.* The Medall Engraving, on large paper, price 6*d.* Proofs on India paper, 3*s.* 6*d.*  
Mechanic's Magazine, and Patent Agency Office, Peterborough Court, Fleet Street.

## MUSIC.

## VOCAL CONCERTS.

Under the immediate Patronage of H.R.H. the Duchess of Kent.

**THE THIRD CONCERT** will be at the Hanover Square Rooms, on Monday Evening next, 6th February, when a selection of Classical Music will be performed, including Dr. Green's Anthem, "O clap your hands," Cherubins, from "Belshazzar and Agrippina," Handel; the celebrated "Wager Scene," from "Buryanthe" (first time of performance); Glee, by J. B. Smith, Evans, Walmisley, and Elliot; and Madrigals, by Weekes and Ward, &c. Messrs. Blagrove, Gattie, Dando, Lucas, and Howell, will play Oswald's Quintet in F. minor.

Single Admissions to these Concerts, Half-a-Guinea each, may be obtained from the Members of the Vocal Society, 8 Regent Square.  
EDWD. TAYLOR, Sec.

## SALES BY AUCTION.

**Capital Modern Drawings,**  
By MESSRS. CHRISTIE and MANSON,  
AT THEIR GREAT ROOM, KING STREET,  
ST. JAMES'S SQUARE,  
On Friday, February 17, precisely at One o'Clock,  
A very Valuable Collection of  
**Modern Drawings in Water-colours,**  
The property of a Gentleman.

Among many capital Specimens of the following highly talented and accomplished Artists:  
Stanfield      Parris  
Poussin      Prout  
Turner      Cox  
J. Wilson      Edmonstone  
Corboold  
H. Wilson      Sheppard  
Montague.  
Also, a very interesting assemblage of Early Studies of Heads, by Sir Thomas Lawrence; many of them possessing great merit, and full of character and spirit.  
May be viewed, two days preceding, and Catalogues had.

**Pictures and Sketches**  
of A. G. Vickers, Esq. deceased.  
MESSRS. CHRISTIE and MANSON

Respectfully inform the Amateurs and Public, that, on Thursday, February 16, they will

**SELL BY AUCTION,**  
AT THEIR GREAT ROOM, KING STREET,  
ST. JAMES'S SQUARE.

By order of the Executors,  
**All the Original Sketches and Drawings of that highly talented and very promising Artist,**

**ALFRED GOMEREL VICKERS, Esq. deceased.**  
Whose works have lately so much interested and charmed the lovers of modern Art.  
They consist of the Original Sketches and Drawings made during his Tours in Germany, Prussia, Russia, and Poland, in 1824; and in Belgium, France, and Switzerland, 1826; including the most important Views in Cities, and Towns, and interesting spots, with Sketches of Costume, &c. &c.  
Also, a few beautiful finished Pictures in Oil.

The reputation which this gifted Artist had acquired for truth of delineation, will make his Sketches highly desirable to the Topographer, as well as the Collector.  
May be viewed, two days preceding, and Catalogues had.

## SOUTHGATES' ROOMS.

## Choice Topographical and Miscellaneous Books,

By MESSRS. SOUTHGATE and SON,  
AT THEIR WEEKLY SALE-ROOMS, No. 25 FLEET STREET.

ON THURSDAY, FEBRUARY 9, AND TWO FOLLOWING DAYS,

Being the very select Library of a Collector.

Chap. XI. and XII.—Minstrelsy, Vol. III.—Sir Tristram. Lay of the Last Minstrel.—Edinburgh Review.—Wordsworth, 1802-04.

Edinburgh: Robert Cadell. London: John Murray; and Whittaker and Co.

**FRASER'S MAGAZINE FOR 1837.**

SECOND EDITION OF THE JANUARY NUMBER.

"From the earliest date of this periodical we do not recollect a Number possessing so many real attractions, or so much intrinsic merit, as that now before us. Replete with justly directed political acumen, criticism tempered with mild and generous sentiment, literature rich with classical elegance, and narrative embodying matter of peculiar and universal interest, we feel that it becomes our duty to recommend it in stronger terms than usual to the notice of the public. After seven years' uncompromising career in the cause which it has so ably and so manfully advocated, we rejoice to find that *Fraser* has again set out, in the year 1837, with fresh and unabated energy, determined to support the glorious constitution of our country in church and state."—*County and North Devon Advertiser*.

"For seven years has Oliver York maintained, unabated, a reputation acquired at once; and the present Number will fully bear competition with any of his former labours."—*Leeds Mercury*.

"The Number for this month is pregnant with interest—literally so—for it is greater in its contents by about one-third more matter than heretofore."—*Dublin Standard*.

"To great and varied talent *Fraser* adds a fund of inimitable humour; in this latter respect he stands unrivalled. Nor is it the least of his recommendation to us, that both his great talents and his slashing wit are expended in bestowing wholesome castigation on the enemies of the Conservative cause. None of his periodical brethren castigate with more elegant severity, or assume a more good-natured air while administering the knout."—*Edinburgh Advertiser*.

"At present *Fraser* stands alone in his glory for the distinguished number and literary reputation of his contributors."—*Preston Chronicle*.

"The January Number of this uncompromising periodical is before us. We bear living testimony, and are proud to add, that much of Conservative success is owing to its able, earnest, and unabated advocacy."—*Western Landmark*.

"*Ragins* continues to rise, and that justly, in the estimation of the public, and may now be considered the most popular periodical of the day. Its writers are men of the first attainments, and the entire management of the work reflects infinite credit on the spirited conduct of Mr. *Fraser*."—*Plymouth Herald*.

To those who are not provided with the previous Numbers of this Periodical, the present is a favourable opportunity for subscribing, as a New Volume commenced with the January Number.

Subscribers' Names may be transmitted direct to the Publisher,

215 REGENT STREET, LONDON;

Or any Bookseller in Town or Country will supply the Work at the published price, viz. Half-a-Crown Monthly.

The February Number contains:

Church Rates. I. Lord Althorp's Plan. II. Dissenters' Plan. III. Proposed by some Churchmen. IV. Further Suggestions.  
Humours of the North. No. II. Hints on Paralmory  
Prince Henry to the Countess of Essex. Six Sonnets, by Sir Egerton Brydges, Bart.  
The Diamond Necklace, by Thomas Carlyle. (Concluded.)  
Statues.—The Smuggler's Daughter  
Fox's Book of Martyrs

Bine Friar Pleasantry. No. I. A Scene in Ticklebrook Church.  
The Diver. A Ballad. From the German of Schiller  
Dress, Dandies, Fashion, &c.  
The Remembrance of a Monthly Nurse. Signora Bassano  
Brougham's Record Commission  
The Two Dinners. "Look upon this dinner, and on this" Sonnets. By Sir M. O'D., Bart.

Just published, and to be had of all Booksellers,

**RECOLLECTIONS OF SIR WALTER SCOTT, BART.**

In 1 vol. uniform with the late issue of the *Waverley Novels*, price 5s. cloth.

"We can confidently recommend this to the public, as exhibiting the most interesting picture of the domestic habits and literary pursuits of Sir Walter Scott that we have yet seen."—*Glasgow Times*.

"We are happy to find this work reprinted in a separate form—a distinction which its literary merits, to say nothing of the interest of its subject, amply deserve. It conveys a clear and lively view of the personal feelings and habits of our great countryman. It is, in short, a most graphic sketch, if not a complete portrait, of the man himself."—*Edinburgh Evening Post*.

James Fraser, 215 Regent Street.

FOR MEMBERS OF PARLIAMENT, AND OF THE  
LEGAL PROFESSION.

Price 12s. 6d. or 15s. by post, alone, 5s.

**THE MANNER OF PROCEEDING ON  
BILLS IN THE HOUSE OF COMMONS,** with a Supplement, comprising 300 pages, mostly on points which have recently occurred in practice.

By GEORGE BRAMWELL,

Of the Inner Temple, London Parliamtary Agent.  
Sold by Clarke's, Fortnight Street, Lincoln's Inn; Henry Butterworth, 7 Fleet Street; Payne and Foss, Pall Mall; and Cadell, Strand.

BURKE'S NEW WORK.

8 vols. 8s. each.

**THE BOOK OF HUMAN CHARACTER.**

Knight and Co. Ludgate Street.

From the circumstance of there having been no intimation that these two volumes are merely the foundation, as it were, of a very comprehensive work. Most readers have been led to suppose that they constitute the whole: the Public, therefore, is respectfully informed, that other volumes will follow when time and circumstances permit; the whole work being finished with the exception of the author's last corrections.

The Public is also respectfully informed, that a new edition of

Burke's Work on

**The Beauties and Sublimities of Nature,** which has been many years out of print, and not to be had at any price, is now in the press, and will be published in three splendid volumes the latter end of April, or the beginning of May.  
January 21, 1837.

Embellished with highly finished Engravings (after Paintings by D. O. Hill, Esq. S.A.) of Riepsath Castle and Loch Skene, &c.

**TALES AND SKETCHES** by the  
ETTRICK SHEPHERD.  
Blackie and Son, London, Edinburgh, and Glasgow.

In 1 thick vol. price 18s. bound, the 3d edition of  
**A GAZETTEER of the most REMARK-  
ABLE PLACES in the WORLD;** with brief Notices of the Principal Historical Events, and of the most celebrated Persons connected with them; to which are annexed, References to Books of History, Voyages, Travels, &c.; intended to promote the Improvement of Youth in Geography, History, and Biography. By THOMAS BOURN.

"We think that Mr. Bourn's particular object in forming it, and the great labour and reading which must have been made subservient to it, deserve the success which it has experienced, and the good opinion which we now readily pronounce on it."—*Monthly Review*.

"For general reference it is superior to any of the same size; and, as a school-book, has no competitor."—*New Monthly Magazine*.

"Mr. Bourn's plan is a very good one, and very pleasantly executed."—*Literary Gazette*.

Also, by the same Author,

**Elements of Arithmetic.** Price 4s. 6d. half-bd.  
**Biographical Copies, with References to But-  
ler's Works, and Bourn's Gazetteer.** Price 1s. sewed.  
Sold by J. Harris, Darton and Harvey; and Simpkin and Marshall.

In 8vo. new edition, materially improved, 15s. bound,  
**ANSWORTH'S DICTIONARY**, English  
 and Latin; Latin and English. Abridged for the Use  
 of Schools.

### REVIEW OF NEW BOOKS.

#### CLASSICAL LITERATURE.

*Two Essays on the "Clouds," and on the *Ἰῆες* of Aristophanes.* By J. W. Süvern. Translated by W. R. Hamilton, F.R.S. London, 1836. Murray.

"THE GRACES," says Plato, "searching for an imperishable temple, found the soul of Aristophanes." This was the judgment passed by one of the wisest of Athens upon her wittyest; and, in truth, if brilliancy of imagination, elegance of feeling, and an unrestrained flow of sparkling language and highly wrought humour, may be considered as signs of the presence of these celestial visitors, the son of Philippos had, without doubt, the honour of being their entertainer. The Greek comedy, selected by Aristophanes as the vehicle to display his variegated acquirements, has been, in comparison with the tragedy of the same nation, somewhat neglected. The latter, as possessing an universality of sentiment, appealing equally to all people and all times, has ever maintained its elevated station in the scale of literature, and has been eagerly cultivated and cherished since its first production. The Athenian comedy, however, which partook more of the nature of a contemporary history of passing events, naturally lost much of its effect as it became more distant from those days, from the occurrences of which it drew its leading features and incidents. Many of those advantages which were then gained from local customs and personal allusions, are lost; and, to use the words of Johnson, upon our own great dramatist, "now only obscure the scenes they once illuminated." In spite, however, of these manifest drawbacks, the Greek comedy still presents us with so many specimens of genuine wit and cutting satire, and enables us to form so just an idea of that combination of opposites, the Athenian people, that, whether we read for amusement or instruction, few works will be more suited to our purpose than those of Aristophanes. In order to appreciate this poet properly, it is necessary, in the first place, to have a clear idea of the nature of the old comedy, as it is generally called. The modern reader must dismiss from his mind all the notions he has derived from the similarly named representations of our own times. He need not seek to be involved in all the intricacies and interests of plot and underplot, scheme and counter-scheme; still less must he look for the numerous stratagems, and amusing absurdities, supposed to be the consequence of love—that indispensable requisite of a modern drama. That passion, as we profess to understand it, was totally unknown in the days of Eupolis and Cratinus. The specimens of intrigue given by Terence, and his model, Menander, are any thing but romantic and ethereal attachments; and it was reserved for the days of chivalry to give the death-blow to Anteros and his followers, and awaken the purer spirit from his protracted sleep. As it has already been remarked, the comedy of Aristophanes discussed the events and topics of the day, and its *dræmas personæ* were often taken from eminent contemporary characters. While this, of course,

gave it an extremely political stamp, it was, also, made the medium of attacking those faults the poet might conceive to exist in social and domestic life; and thus it answered the purposes of an acted satire. At the same time, such a spirit of gaiety was diffused throughout, such an airiness of invention, with the most extraordinary combinations of ludicrous improbabilities, that the minds of the hearers were kept in a constant state of attention and excitement. Schlegel calls the entire poem "one great jest, containing, within itself, a whole world of separate jests;" but, with these witticisms, as they are freely and carelessly rolled along, there flows, at the same time, a current of cutting truths, and sharp-stinging remarks, that could not fail in having their due weight on the minds of the audience, while the accompanying mirth disarmed them of their resentment. The whole character of the comedy has been happily and concisely expressed in the words of Aristophanes' own chorus,

πολλὰ μιν γέλοισι τίπῃν πολλά δὲ σπουδαία,  
Rana, 369.

The natural disposition of the Athenian audience should, also, be always held in remembrance. Their insatiable love of politics; their passion for shows and pageantry; their liability to the grossest flattery; the singular contrast they presented in at one time enjoying, to the utmost, the highest flights of tragedy, and the next minute revelling in the lowest species of scenical buffoonery; their extraordinary acuteness and susceptibility; the manner in which, by turns slaves and tyrants, they suffered themselves to be ruled by some demagogue, or committed the most wanton and violent acts of injustice: all these peculiarities furnished constant material for the comedian and satirist. For some time before the appearance of "The Clouds," Athens had been infested by a new species of pestilence, in the shape of a crowd of "Sophists," whose sole employment consisted in distorting the truth, by a series of subtle fallacies, and fine-spun arguments. Through these abusers of intellect, the sources of education were poisoned, and the whole current of social life, in consequence, became fetid and disturbed. The melancholy picture drawn by Thucydides, of the state of society at that period, gives us a deplorable notion of the effects of the *φροντισται*. Truth, honour, and integrity, became mere metaphysical idealities, and, by an unnatural perversion of language, the worse, in every instance, was made to appear the better cause. About this time flourished Socrates; who, although, as one of the wisest of mankind, he despised the trickery of the Sophists, and perceived its lamentable effects, still did not disdain to have recourse to their own arts, to expose their shallowness, and thus identified himself with those very men who were the objects of his contempt and hatred. His curious mode of living, together with his personal singularities and defects, of which he boasted, marked him as a fit individual to amuse the frequenters of the stage. Aristophanes, accordingly, in his "Clouds,"—a drama designed to lash the follies of this mis-

chievous set, directs the whole of the satire, meant for all the tribe, at the head of the unhappy Socrates, who is represented as endowed with the worst attributes of these destructive pretenders to learning. Schlegel, in his excellent remarks on Greek comedy, says, "It is one of the principal forms of Aristophanic wit to take a metaphor in the literal sense, and place it before the eyes of a spectator." In "The Clouds," the fantastically dressed chorus of ethereal vapours is an allegorical personification of formless ideas hovering in the region of possibilities. The propriety of the application of this visible metaphor to Socrates must be evident to those who know any thing of his unfortunate propensities to abstract metaphysical disquisitions, and his restless annoying spirit of inquiry, and sometimes useless investigation, so concisely expressed in the eloquent words, *ἀερόβατον καὶ φροντίζων*. The essays, by Professor Süvern, accurately translated by Mr. Hamilton, contain a learned and minute discussion of the ends of Aristophanes in the arrangement of his characters, and of what principle or doctrine each may be supposed to be symbolical. It would exceed our bounds to enter into the whole scope and aim of the interesting treatise, and it is nearly impossible to attempt to explain one point without being unavoidably drawn into a disquisition upon the entire nature of the work. We will only notice one branch, as being, in our opinion, ably elucidated by Mr. Mitchell, in his instructive notes to Cumberland's translation of "The Clouds." We allude to the charge made against the philosopher of stealing a cloak, related by one of his disciples to an astonished hearer. This is discussed by Süvern at some length. He refuses the explanation offered of the passage, that it merely means that Socrates shewed his disciples how the cloak was stolen; and contends, somewhat strangely, that whether he really purloined it, or only demonstrated how the theft might be committed, his character would be equally affected. He puts this accusation by the side of the charges of perjury, *ἀδίκημα*, and similar crimes. Whether there was any foundation for this allusion, in some absent deed of the philosopher in his meditations, cannot now be ascertained. It is strange that Eupolis hints at this very same failing. Mr. Mitchell gives this ingenious note: "Let us suppose that the Socratic scholar, beginning to find out the man he has to deal with, determines to mystify Strepsiades a little. He begins, then, with the mystic operations of a conjuror; he breaks his sentences at every two or three words, and, when he has wrought up his gasping auditor to the proper pitch, he concludes his speech by suiting the action to the word, and despoiling his hearer of the cloak." To justify this, he refers us to vv. 856, 1497,\* of the same play. This appears to us a happy and probable idea, and shifts the charge from the shoulders of

\* Ε. Διὰ ταῦτα δὴ καὶ Διόματιον ἀπώλειται;  
ΣΤ. Ἀλλ' οὐκ ἀπολώλειν' ἀλλὰ κατὰ πρῶτον τι.  
Nubes, 856.

ΜΑΘ. Οἶμοι, τίς ἡμῶν περὶ τὴν οἰκίαν;  
ΣΤ. Ἐστίν τις Διόματιον εἰληφέναι.—

164d. 1497.

Socrates to his follower in a manner perfectly agreeable to the spirit of the piece.

Disapproving, as we do, of the nature of that custom which exposed the good and great, as well as the infamous and worthless, to the scoffs and jests of an ignorant populace, still we must remember it was the fault of the age, and not of the poet. If any thing could reconcile us to the practice, it would be the wit employed by this prince of Athenian comedians in his dazzling attacks upon his enemies. He has been compared to many of the moderns—among others, to Rabelais. The French satirist, however, as has been observed, “never lays aside his cap and bells,” while he of Attica soars into the higher regions of religion and ethics, and seems to be, while there, in a kindred element. Swift, perhaps, comes the nearest in copiousness of language, and in that seemingly inherent love for the gross, which was a prominent characteristic in the too sensual comedian and the ill-fated dean. In one peculiarity he reminds us of the author of “Don Juan.” We mean his habit of lavishing the most beautiful poetry (the remains of the religious ceremonies, from which both tragedy and comedy arose), seemingly only in order to destroy its effect by affixing some lines of a totally different and ludicrous character, as if he were laughing at his reader for being led away by the charms of the preceding stanza.

One of Aristophanes' great merits is that of being a zealous patriot. His attack upon, and triumph over, Cleon, furnished a subject of self-congratulation and boasting for the remainder of the poet's life. In spite, however, of the beauties of this author, it may be doubted whether he will ever be a popular writer. The depth of learning and the thorough acquaintance with Athenian habits, requisite to have a keen zest for his allusions, must stand in the way of the many enjoying his exquisite scenes. The difficulty, too, of the construction in some places is a serious obstacle; and, to quote the words of an elegant writer in the *Quarterly Review*,—“To be consulting the scholiast when we ought to be carried away by the wit and spirit of the dialogue, to be searching in Bisetus or Geraldus whether we may laugh by authority, soon exhausts the patience and fatigues the imagination.”

To those, however, who are able to understand the language and object of this comedian, we heartily recommend this translation by Mr. Hamilton, as a fit companion to that upon “The Birds” by the same author, which has, doubtless, found its way into most of our classical libraries.

*Æschines in Ctesiphontem, et Demosthenis, de Coroniâ, Orationes duæ; in usum scholarum instructæ, ab S. H. Bremi.* London, 1837. Priestley.

THIS volume presents us with the two celebrated speeches of the rivals for the guidance of Athens, Æschines and Demosthenes; and, perhaps, no other two orations can be found of equal importance, as giving us a clear and comprehensive view of the nature of Athenian habits and prejudices, and, at the same time, affording a specimen of the resistless eloquence that

“Wielded at will that fierce democracy,  
Shook th' arsenal, and fulmin'd over Greece.”

The enmity that had so long been subsisting between these princes of their art came to a crisis in the delivery of the above masterpieces, though Æschines, from his reputation, might have been expected to have pressed his antagonist closer than, in reality, he has. The

result of the struggle, in the victory of Demosthenes, and the fine and consequent banishment of his rival, shews the immense effect produced by the sharp wit and caustic sarcasm employed by the conqueror upon his Athenian audience, who, from their natural disposition and mode of education, were so keenly alive to, and ready to sympathise with, the brilliant style of oratory adopted by Demosthenes. This edition is, we believe, a reprint of one published by Bremi, with the slight alteration of the German phrases made use of, in the original, for explanation, being translated into English. We wish, as this work professes to be for the use of schools, the editor had extended his translation to the whole of the notes; for, as they now stand, the Latinity, which, though in general correct, is occasionally somewhat obscure, must often deter a young beginner from attempting to gain the contained information. The matter, however, of the notes is good, and well adapted to their purpose; and we can recommend the book as a favourable specimen of the learning and acuteness of our German brethren in behalf of the rising generation.

*The Comedies of Aristophanes.* Translated into corresponding English Metres by Benjamin Walsh, M.A., &c. In 3 vols. Vol. I. 8vo. Pp. 420. London, 1837. Bailly.

“THE Comedies of Aristophanes,” says Mr. Walsh, “are the Pompeii of Athens;” and never was a more just observation written. It is only in the comedy of a nation, their manner-painting poetry (if we may use the term), that we can see themselves—that we can individualise—nay, even identify them. Pompeii itself, adopting the allusion quoted above, does not, with all its miscellaneous articles of cookery, toilet, luxury, &c., let us half so much into the secret of a Roman's life and feelings as the racy comedies of the jolly old Greek do into those of his fellow-countrymen. We are at once at home with them; we enter into all their sentiments, their politics, their lampoons, their pasquinades: we might almost say, their literary *H. B.'s* are familiar to us. In fact, Athens might say to England (that is, supposing Athens to quote Horace), “*Mutato nomine de te fabula narratur.*” Such was the structure of the older Athenian comedy: it would be a great mistake to judge of it as we should of its modern progeny. To the men of Athens, their comedy, which they enjoyed at most but twice a-year, instead of every night, as we do [*quare*, do we?], was their newspaper, their review—their morning newspaper, their weekly scandals. Hence we might expect exactly what we find—a concentration of scurrility, the very quintessence of abuse; and decency yielding the *pas* to a ribald joke. It is with no little pleasure that we perceive the attention of the public so pointedly directed to the study of Greek literature, and more particularly to Aristophanes—as is witnessed by the publication before us, and also the excellent editions of his “Acharnians” and “Wasps;” and, we hope to add, that of “The Knights,” by Mr. Mitchell, which we see advertised, but which is not yet before us. Of the present translation, which is the first of three volumes, and which contains “The Acharnians,” “The Knights,” and “The Clouds,” it behoves us to speak in terms of the highest praise. It is literal, and yet free, in more senses than one; and the metres are admirably imitated. The whole, in fact, is as fair a representation of the original as can possibly be expected; one which would do no discredit to a *Voss*,

a Schlegel, or a Mitchell. The original is broad—the translation is so likewise (perhaps, if we were not unwilling to cavil, here and there rather too much so); for, as Mr. Walsh, in his very entertaining Preface, observes, “Thus much it will perhaps be prudent and proper to add: *that those who keep an expurgated edition of Shakespeare for their own private reading, had better not venture upon the present translation of Aristophanes.*” And yet, as he previously says, no one “would ever maintain the expediency of making the Athenian wag talk exactly like the English editor of a Methodist magazine.” This is most true; and we think that, upon the whole, Mr. Walsh's is as fair a version as could be made—as tolerable a compromise between decency and fidelity as could be expected by the scholar; and no other class of readers is likely to be offended by such a production.

We shall now offer a specimen or two, and leave our classical readers to judge of Mr. Walsh's capabilities.

“*Dicaeopolis.* How many things have worried my poor heart!

I've had four puny, very puny, pleasures,  
While my vexations were sad-numerous.  
Let's see, what pleasure had I worth 'rejoicement'?  
I know what sight it was gladdened my soul!—  
The fifteen hundred pounds disgorged by Cleon.  
How this delighted me; and how I love  
The knights for causing it! 'Tis good for Greece.  
But then I had a tragical vexation!  
When I was waiting, with my mouth wide open,  
For one of Æschylus's tragedies,  
The crier bawled, ‘Commence your play, Theognis!’  
This made my heart quake—you can't think how much.  
I felt great pleasure, when Dexitheus,  
The harper, came on, after stupid Moschus,  
To play a piece in the Boeotian style;  
But then this year I was half killed with wrath,  
And my eyes squinted when I saw the piper,  
Chæris, start forth to play some lofty music.  
But never yet, since I began to bathe,  
Have my eyes smarted so much with the soap,....  
As now, when an assembly should be held  
By law at dawn, and yet the pnyx, you see,  
Is empty, and the citizens are prating  
I' the market-place, and running up and down,  
To get away from the vermin'd ropes.  
Even the committee-men are not yet here!  
They'll come behind their time, and, rushing down  
In a body, jostle one another strangely  
For the first bench. But as for making peace  
They do not care a straw. O Athens, Athens!  
Now I get always first to an assembly,  
And sit me down. Then, finding I'm alone,  
I groan, I gape, I stretch myself, I belch,  
I think, I scrawl, I pluck out hairs, I reckon,  
And, looking towards the country, sigh for peace,  
And hate the town, and long for my own parish,  
Which never said, ‘Buy vinegar! buy chascals!  
Buy oil!’ Nor did I know such words as ‘buy!’  
For it produced me every thing but *bug-words*.  
So now, I'm come fully prepared to bark,  
To interrupt, and to abuse the speakers.  
If they discourse of any thing but peace.”

The above is the introductory soliloquy of Dicaeopolis, in “The Acharnians.” Our next extract is from the same play, in which Mr. Walsh, ludicrously enough, makes modern broad Scotch represent the equally broad Boeotian dialect.

“*Boeotian.* ‘Fore Hércules! My shouter's sair for-jesket!

Pit down the penny-royal cannille,  
Lamdas! An' a' you croonin' pipers,  
Wha come frae Thebes, may hand aw to hell,  
An' blaw the droddum\* o' the mellic deil.

*Enter Dicaeopolis.*

Dic. Deuce take you, stop! Get from my doort, you wasps!

Where do these cursed humming-piper sons  
Of Chæris come from, who have down up here?

[*Drives them away unmercifully.*]

Boe. By Iolûs, ye're a sonsie chiel!  
Thae fellows ha been blawin' at my curpin'  
A' the bae gate frae Thebes, and dirn't the flowers  
O' my brow penny-royal on the groun'  
But, an ye like, buy ony o' the things  
I bring: I've baith how-toddies, fien', and locusts.

Dic. O how d'ye do, my little bonpock-eating  
Boeotian? What d'ye bring along with you?

Boe. A' the guid things Boeotia can produce:—  
There's marjoram, penny-royal, matresses,

\* We doubt these Scotticisms; and the rest is not quite the northern Boeotian.

Wicks, deaks, keas, daker-hens, lang-crestit pivers,  
Wrens, didappers —

*Die.* You've brought *fool-weather* with you!  
*Boro.* Forbye geese, maukins, tods, and mouldiworts,  
Hurchoons, cats, bracks, otters, Loch-Cope eels —  
*Die.* O thou that bring'st a fish most sweet to men,  
Let me address the eels, if eels thou bring'st!

*Boro.* Brewast o' fifty virgin Copeids!  
Gang out o' the creel to salr the sossie birkle!  
*Die.* Belov'd dummel, long desired by me,  
Thou com'st acceptable to comic actors,  
And dear to Morychus! What ho, attendants!  
Bring out the bradder and the bellows here!

*Enter Slaves.*

Behold, my boys, the admirable eel,  
Lost for six years to us, but come at last!  
Speak to her, children! I will furnish you  
With charcoal for the stranger-dummel's sake.  
O take her in! N'er may I, — when dead, —  
Be reft of thee, my friend, .... with best-root garnished.

*[Exeunt Slaves with the eel, in mock pomp.]*

*Boro.* But, ho! I've got naething for the fish!  
*Die.* You shall present it as the market-dues. —  
Will you sell any of your other goods?

*Boro.* Ay, I'll sell a' o' them.  
*Die.* For how much money?

Or will you take another cargo back?

*Boro.* I've just tak ony thing that you Athénians  
Hae got, an' we Boroians haena got.

*Die.* Then you will take some sprats from Port  
Phalerum,

Or else some crockery?

*Boro.* Sprats or crockery? Nae!  
We hae them baith at hame. I maun tak something  
That's vera scarce w' us, and routhie here.

*Die.* I have it! You shall pack up an informer,

Like crockery, and take him off to Thebes!

*Boro.* By the twa gods, I've do't! For, an I tak him,

I've got a pickle siller by the beastie.

By shawin' him like some wanchance ape.

*Die.* By Jove, here comes Nicarchus to inform!

*Boro.* He's sma'!

*Die.* But all there is of him is bad."

We shall conclude with the introductory  
soliloquy of Strepsiades, in "The Clouds."

"Strepsiades. Heigh-ho! heigh-ho!

King Jove, what long affairs the nights are now!

They're endless! Will the daylight never come?

I heard the cock crow long ago, and yet

My slaves are snoring still! But I'd have told them

A different tale of old, during the peace!

The devil take you, War, for many reasons!

I cannot even put in my own slaves!

Aye, and that good young gentleman out there

Won't wake before 'tis light, but slinks away

Snuggly be-nightcapped with his five warm cloaks—

Well, well! I'll cover up my head and snore! —

Wretch that I am, I cannot sleep! I'm bitten....

By my expenditure, my debts, my stables,

All through this son of mine. The long-haired rogue

Is riding rags, and driving curricles,

And dreaming of his horses, while poor I

Am tortured by the sight of that curst meon,

*[Pointing to it.]*

That's bringing on the 20th of the month!

For there's the interest coming. Light a lamp,

And fetch out my account-book, boy, that I

May take and read how many men I owe to,

And calculate the interest. Let me see;

*[A slave brings him a lamp and his account-book.]*

What do I owe? To Pástas sixty pounds.

How came that sixty pounds to Pástas?

Why did I borrow it, my dear? I purchased

My on the horse that's branded with the 'I'

'Confound it! Would to God that my own eye

Had been knocked out before I bought the beast!"

These, we think, are sufficient specimens of

Mr. Walsh's power as a translator. Did our

space allow it, we would have given some ex-

tracts from the choruses. We must, however,

leave these, perhaps, to a future opportunity;

and conclude by recommending those of our

readers who are not familiar with the original

to peruse Mr. Walsh, assuring them that, as

a representative, he fully redeems his pledges.

*Manchester; its Political, Social, and Commercial History, Ancient and Modern.* By James Wheeler. 12mo. pp. 538. London, 1836. Whittaker and Co.; Manchester, Love and Barton; Wheeler.

THE extraordinary rise of Manchester, illustrating so remarkably the rise and progress of most important staples in our manufactures and trade, would furnish materials for many volumes. Mr. Wheeler has very diligently and ably compressed them into one, sufficient for all the purposes of a guide-book and book of general information and reference. It does credit

to his talents and industry, and no discredit to the rich and flourishing town which it describes.

Commencing with Roman times, the ancient history of Manchester and its surrounding district is concisely told, and brought down to our day. Its commerce, factories, statistics, improvements, &c. &c. come next in regular order, and are clearly described, with plans, tables, and maps, to illustrate such subjects as require them. But the part which most interests us, as possessing claims for notice in a literary journal, is that which gives us the biography of natives of Manchester who have climbed the height of public celebrity; and which is divided into two sections: the first containing its bygone ornaments; the last, those who are living, or very recently lost. We shall not meddle with Lord de la Warre, the founder of the noble Collegiate Church; Hugh Oldham, bishop of Exeter; the martyr, John Bradford; the famous Dr. Dee; Dr. Byrom, the poet, a great improver of shorthand, and contributor to the *Spectator*; Dr. Thomas Percival; Dr. Thomas Henry, the chemist, and zealous friend to science and literature in Manchester; nor others: nor to Dr. William Henry, whose late melancholy death, after attending the British Association at Bristol, has brought his name, and the incidents of his career, a good deal under public observation. But a few particulars respecting Dr. Dalton will, we trust, be acceptable.

John Dalton was born at Eaglesfield, near Cocker-moath, in Cumberland, on the fifth of September, 1766. Little is known of his early history. His grandfather, Jonathan Dalton, owned a small copyhold estate, which descended to the elder of his two sons, who bore the name of his father. Joseph, therefore, the father of the great philosopher, was originally possessed of no property, although, on the death of his brother, the family estate descended to him. He had six children by his wife, Deborah Dalton; of whom, Jonathan, John, and Mary only grew up to years of maturity; and the first-named, on the death of the father, came to the estate. He, however, died a few years after, leaving the property to John Dalton, the subject of this memoir. Limited as were his means, Jonathan Dalton strove to give his children the best education he could obtain for them. John Dalton attended a school kept by a member of the Society of Friends, named John Fletcher, until he had attained his twelfth year. Though, probably, the instruction he there derived was only limited in its range, Dalton invariably spoke with respect of Mr. Fletcher to the period of his death, which occurred a short time ago; and he seems, ere he left the school, to have made very considerable progress in knowledge. This, however, was, no doubt, owing rather to his own energy and natural capability than to any great aid he derived from his tutor. At the age of twelve or thirteen, Dalton commenced a school in his native village, and persevered in it for two winters: his vacant time was filled up in assisting his father upon the farm, and he is also said to have taken part, at this early period of his life, the labour of altering, the farm-house, and to have had an early tendency to mathematical pursuits. It is related that, when about ten years old, his curiosity was excited by a dispute among some mowers, as to whether sixty square yards and sixty yards square were identical: at first he concluded that they were, but after reflection shewed him that they were not. When about ten years old, he was taken notice of by a Mr. Elihu Robinson, a gentleman of some property, in whose service was a young man named William Alderson, of double Dalton's standing in the world. Mr. Robinson, himself a gentleman of liberal education, had an accomplished wife; and, under their joint direction, Alderson being disposed to self-improvement, he and Dalton pursued their studies together. Mr. Robinson used to relate that, when any difficult question in mathematics was proposed, Dalton, with the resolute perseverance which has so strongly marked his character, far from being daunted, used to encourage his companion by remarking, in the dialect of his country, 'Yan might do it.' On one of these occasions Alderson proposed to settle a dispute with Dalton by a bet of sixpence; but Mr. Robinson put his veto upon the proposition, and suggested that, instead of risking money, the losing party should undertake to supply his companion with candles for the nights' studies during the winter. The suggestion was adopted, and Dalton won the wager. In the year 1781, he went to Kendal, where better opportunities were afforded for satisfactorily combining an indulgence to his own inclination with the necessary attention to the acquisition of an honourable livelihood. Having a cousin, named George Bewley, who taught a boarding-school in that town, and with whom his brother had lived as an assistant, Dalton succeeded him in his office; and, in the course of time, his avidity for mathematics and philosophical speculation procured him the

acquaintance, among others, of Mr. Gough, a gentleman of congenial habits, who possessed a good library, to which Dalton had access. During his residence in Kendal, he contributed largely to two works, called the 'Gentleman's and the Lady's Diary.' The volumes, extending from 1784 to 1794, contain the name of Dalton very frequently among the answers to queries of a mathematical, philosophical, or general character; but, strange to say, his mathematical answers do not seem to have been very generally received by the editor of the work. His contributions, when inserted, appear as from 'Mr. John Dalton, Teacher of the Mathematics, Kendal'; and he was so successful as to obtain two of the prizes awarded by the editors. In 1789, he commenced his 'Meteorological Observations,' which have been continued to the present time. In 1793, he published a volume of 'Meteorological Observations and Essays,' a work which displays much original thinking, and the germs of some of Dalton's after-discoveries. The first edition is dated at 'Manchester, September 21st, 1793.' Some time previous to the publication of this work, Dalton had serious thoughts of qualifying himself to practise either as a physician or a lawyer, and corresponded with a relative in London on the propriety of residing there for that purpose; but his views and determination were changed in consequence of the receipt of a letter by his friend, Mr. Gough, from Dr. Barnes, making inquiry for a gentleman to fill the situation of Professor of Mathematics and Natural Philosophy in the New College, Mosley Street, Manchester. Dalton accepted the proposal, and removed thither upon his appointment to that office. He resided for about six years within this institution, with which Dr. Barnes was contemporaneously connected as theological professor, and continued to hold his office until the college was finally removed to York. The volume of 'Meteorological Observations and Essays,' though dated at Manchester, apparently from the circumstance of its being ready for publication at the point of time at which the author removed, was written at Kendal, its original design being merely 'to explain the nature of the different instruments used in meteorology, particularly the barometer and thermometer,' and to add 'a few practical rules for judging of the weather, deduced from experience;' but the author's plan was afterwards enlarged, by having, 'soon after this,' discovered the relation of the aurora borealis to magnetism. In the preface to this volume, to which much greater value attaches than that merely appertaining to it as the first avowed publication of so great a man, Dalton remarks upon the difficulties which beset his early pursuit of knowledge. 'It will be sufficiently evident,' says he, 'that I have not had a superabundant assistance from books, in providing and digesting the matter contained in the following pages: by an attentive consideration of facts, I have drawn conclusions, in some instances, which so strongly impressed upon me, though unknown to me, at the time.' His removal from Kendal to Manchester both extended the sphere of Dalton's rising ability, and added greatly to his means of pursuing his favourite studies. The greatest of those discoveries of Dr. Dalton, to which a full reference will hereafter be made—the discovery, namely, of the atomic theory—first presented itself to the philosopher's mind in 1803 or 1804. In the latter year he made some general reference to it, and he also touched upon it in his lectures in this town. In 1807 he developed his views more fully, in lectures delivered at Edinburgh, and at Glasgow, before the members of the two universities. The merit, however, was not immediately awarded to him, other men claiming, at least, to participate the honour. Among these was Higgins, professor of chemistry at Dublin, who, in his lectures, boldly declared that Dalton was indebted to him for a discovery which he was claiming as his own. Several persons maintained the same position, and Sir H. Davy, visiting Dublin in 1808 or 1809, was so strongly possessed by him of their justice, that on his return to London, on the occasion of his reading before the Royal Society a paper on oxymuriatic acid, he appended to it a note asserting that, not Dalton, but Higgins was the discoverer of the atomic theory. In this case the world has now arrived at a correct conclusion: Dalton's merits are no longer in the balance; and Higgins is considered to have arrogated to the development of isolated facts praises that were due to the law whereon those facts were based. The injury which he had attempted, perhaps unwittingly, to inflict upon Dalton's fame, Sir Humphry Davy afterwards repaired. In the last course of lectures ever delivered by him at the Royal Institution, in 1813 or 1814, speaking of the discoveries of modern times, he stated that the greatest step in science was the application of mathematics to chemistry, for which the world was indebted to Mr. Dalton. In addition to the instruction privately afforded to pupils, Dalton has for many years, also, directed his great powers to the service of the public in lecturing. Dalton was elected a fellow of the Royal Society in the year 1821 or 1822. He himself never sought that honour, and it was eventually conferred upon him by the sole solicitation of his friends, who, as the forms of the society prescribe that a candidate must have expressed a desire to become a member, were compelled to exercise some skill in surmounting the difficulty. The society waived the usual attendance for admission, and that ceremony was not performed till some years subsequently. Other marks of distinction have been conferred upon him."

The French Institute particularly honoured him in Paris, and the first royal gold medal of the Royal Society was awarded to him. There

is a portrait of him by Allen; and Chantrey is employed on a statue to be placed in the Royal Manchester Institution. Many of his other distinctions, at the meetings of the British Association, his pension, &c. &c. have been recorded in the pages of the *Literary Gazette*. His biographer continues:

"It is only necessary to advert to one other topic in connexion with our illustrious townsman, and it is one to which it is fitting the inhabitants of this vast mercantile and manufacturing community should be fully alive. The merits of Dr. Dalton, as a man of science and a philosopher, resting as they do upon discoveries of the utmost value at all times and in every place, cannot be exalted by the considerations to which we are about to refer; but the respect with which his townsmen now regard him will certainly be much enhanced by a knowledge that, during his long connexion with us, he has ever evinced the utmost readiness to make the powers of his lofty mind subservient to the promotion of our welfare. In this way he has rendered the most essential services to bleachers, calico-printers, dyers, and others, who have found his chemical experiments of the greatest value in pursuing their several arts. Not a week passes in which Dr. Dalton is not thus consulted, and the most ordinary reader will at once perceive how substantial must be the benefits he hereby confers upon our commerce and manufactures."

His atomic theory is next described; and a list of his numerous publications and essays complete the interesting narrative.

Among other eminent natives of Manchester there are sketches of Henry Liversedge, the painter; C. Swain and T. K. Hervey, the poets; W. H. Ainsworth, the author of "Rookwood" and "Crichton;" and De Quincey, the opium-eater. Portions, or the whole of these, will, we hope, interest every class of readers. Poor Liversedge died in 1832, while deservedly rising into great reputation. The notice of T. K. Hervey is so brief that we copy it:—

"T. K. Hervey was born at Paisley or Glasgow. He is the oldest of his family by his father's second marriage, and was brought to Manchester by his parents whilst yet an infant. He resided in the town for many years, and served a clerkship to the law, in the office of Messrs. Sharp, Eccles, and Crieie; subsequently, he resided and studied two years at Cambridge. He entered at the bar, and has served the terms necessary to qualify him for that honourable profession; but he was never 'called.' He is author of the 'Poetical Sketch Book,' 'The Devil's Progress,' and 'The Book of Christmas,' besides other fugitive pieces, of which the most beautiful is his 'Convict Ship.' He has also written several tales and sketches, which have earned the approbation they have met with. The picture of the Dying Hebrew in 'The Devil's Progress,' is the most beautiful and sublime of all his poetical compositions. Mr. Hervey has not, for many years, resided in Manchester."

"William Harrison Ainsworth is another of the small phalanx of literary men destined to attain some permanent distinction, whom Manchester claims as her own by birth. His father was a respectable solicitor, and the son was articled in his office with a view to traversing the same fate. But law was too dry a study for the future writer of romances; he gave his energies, therefore, to the cultivation of a natural taste for literature, which his associations, his residence in London as a law student, and his subsequent connexion, by marriage, with the family of Mr. Ebers, tended to confirm and strengthen. His first production was a series of 'Winter Tales'; his next, the romance of 'Sir John Chiverton' (of which the scene is laid at Hulme Hall); his third, the novel of 'Rookwood'; and his fourth, which is announced, but has not yet appeared, 'Crichton.' The work which has most widely extended the author's name is his novel of 'Rookwood,' in which that portion descriptive of Turpin's ride from London to York is certainly the most graphic and lifelike delineation in our language. There are also a few poems interspersed through the book, which in themselves betoken a mind of very high order."

"De Quincey, the author of the celebrated 'Confessions of an English Opium Eater,' was born, it is said, in the house at present known by the name of the Princess Tavern, in Cross Street. He was of an original turn of mind even when a youth; and one of his earliest exploits was the running away from the public school in which he had been placed by his guardians, because he considered himself a better Grecian than his tutor. He was, in fact, an excellent classic, and, at the age of fifteen, 'not only composed Greek verses in lyric metres, but could converse in Greek fluently and without embarrassment,' so perfectly, that one of his own masters, who was himself a scholar, has said of him, 'That boy could harangue an Athenian mob better than I could address an English one.' After having repeatedly written to one of his guardians, requesting to be sent to college, without receiving any favourable reply, he resolved, so soon as his seventeenth birthday should arrive, to quit the school for ever, and no longer to rank as a boy. Accordingly, having borrowed ten guineas from a lady of rank who

had known him from childhood, he arose stealthily on a bright morning in July, with breathless silence stole away from the classic ground he had been treading for the last two years, and bent his steps towards Wales. For some time he wandered about, enduring the extremest hardships and privations, until, at length, a reconciliation took place between his friends and himself, and he proceeded to the university. In 1822, he finished his 'Confessions,' to which those who are not already acquainted with them may refer for such particulars as may be interesting in the life of this author. In *Tait's Magazine*, also, will be found several of his cleverest papers—amongst others, a 'Memoir of the Opium-eating Coleridge.' Mr. De Quincey has, for some time, resided abroad."

We shall conclude with Mr. Swain, whose poetical contributions have so frequently adorned the *Literary Gazette*:—

"Charles Swain is, by birth, education, association, and feeling, 'a Manchester man.' He was born in October 1803; his father being a native of Knutsford, or its neighbourhood, and his mother, of Amsterdam. He was sent in due time a pupil to the Rev. W. Johns, who conducted a well-supported school in George Street: under that gentleman his scholastic education began and ended. At the early age of fourteen, his father having been dead eight years, Swain was sent into the dyeworks of his uncle, Mr. Tavaré, under whom, with what philosophy he might, the aspiring young man pursued the unpoetical avocation of a dyer for fourteen years. But, not to say it jestingly, *dyeing* was, and ever had been, uncongenial to the taste of Charles Swain: he had caught a glimpse of Parnassus, and he longed to climb its dizzy height. Whilst yet so young, he may be said to have been an imitator of the swan; for as that fair bird sings itself to death, so Swain, whilst *dyeing*, was ever tuning his harp in praise of the muses. He first appeared in print in the pages of the *Manchester Iris*, in some verses dedicated to Thalia. Three years subsequently, namely, in March 1825, a poem bearing his initials, and entitled 'The Escaped Convict,' graced the pages of the *Literary Gazette*; and from that time he contributed liberally to several of the magazines and other periodicals of the day. In 1827, he brought together these fugitive performances in a volume—'Metrical Essays on subjects of History and Imagination.' About the year 1830, he published his 'Boutiques of the Mind,' which, in 1832, he republished in a revised and expanded form, under the title of 'The Mind, and other Poems.' In the same year, he also sent forth a little poem of great merit on the death of Sir Walter Scott, entitled 'Dryburgh Abbey.' This production may safely be said to have travelled over the world, the booksellers of the Continent and America having eagerly laid hold of and republished it. The 'Metrical Essays' elicited a warm and general eulogium from the metropolitan and provincial press; but 'The Mind' stamped Charles Swain's reputation in the literary world. Southey has said of it and of its author—'Swain's poetry is made of the right materials. If ever man were born to be a poet, he was; and if Manchester is not proud of him yet, the time will certainly come when it will be so. Charles Swain, it has already been remarked, was averse to dyeing. He hated logwood and turkey-red preparations; and it would seem the atmosphere of a dye-house (to him verily a 'lazar house of many woes') with its pestilent air inhaled during the day, in conjunction with the oil of a midnight lamp too closely adhered to, so shattered his health that he was necessitated to change his pursuits. His constitution was, in fact, seriously deranged, and, as a lighter and more genial occupation, he located himself in a bookseller's shop, in partnership with Mr. Dewhurst. After a two years' trial, however, this undertaking was abandoned; and Mr. Swain has latterly entered the world of trading-professionals as an engraver and lithographer, with success, we trust, commensurate to his wishes. Let us hope that the din of trade and the musical clangour of children's voices (for Mr. Swain is a husband and a father) may not stifle the voice of poetry within him; but that he may still live in his vocation long enough to wear the crown which fame is weaving for him."

It is with great pleasure that we conclude this sketch of Mr. Swain with two original poems from his pen, which we happened to have in store; they do justice to his feelings and genius.

#### KING FROST.

Air—B. Hume.

KING FROST galloped hard from his Palace of Snow  
[below;  
To the hills whence the floods dashed in thunder  
But he breathed on the waters, that swooned at his will,  
[stood still!  
And their clamour was o'er, for the torrents  
"Ho! ho!" thought the king, as he galloped along,  
"I have stopp'd those mad torrents awhile in their song."

With pennons high streaming, in gladness and pride,

A fair vessel moved o'er the billowy tide;

But whilst bold hearts were deeming their perils all past,  
[there fast!  
King Frost struck the billows, and bound them  
"Ho! ho!" cried the monarch, "their homes may long wait  
[fate!"  
Ere aught, my fine vessel, be heard of their  
Through the forest rode he, and the skeleton trees  
[breeze;  
Groaned, wither'd and wild, 'gainst the desolate  
And shook their hoar locks as the Frost King flew by,  
[high!  
Whilst the hail rattled round, like a volley from  
"Ho! ho!" shouted he, "my old sylvans, ye're bare,  
[wear!"

But my minister, Snow, shall find robes for your  
By the convent sped he, by the lone, ruin'd fane,  
[domain;  
Where the castle frown'd wild o'er its rocky  
And the warden grew pallid, and shook, as in fear,  
As the monarch swept by with his icicle spear!  
Whilst his herald, the Blast, breathed defiance below,  
[Snow!  
And hurrah'd for King Frost and his Palace of

#### THE SLUMBERERS.

GAZE thou upon this mental dome—

This mortal palace of the mind—

This spirit-dwelling—this soul's home—

To dreamy slumber now resigned:

The fringed and ivory doors are closed

Upon the azure world below;

The ruby hall, where Love reposed,

Hath lost its soft, its minstrel flow.

To the land of dreams hath fled

Music sweet as incense shed!

Tranquil rest the small white feet;

How unmoved the graceful hand!

Yet, in measured circles fleet

Dance they in the visioned land!

Calmly as the frozen snow,

O'er her arm of beauty rare,

Droops that pale enchanted brow

'Neath its long and shadowy hair;

Not a smile the lip surrounds,

Yet she laughs where mirth abounds!

Round the damask curtains fall,

Soft the silken pillow bends,

Nothing save the watcher's call

To the ear Time's echo lends;

Yet, beneath the living green

Of the ancient woods and hills,

Where the timid fawns are seen

Trooping by the forest rills;

Thousand flowers around her beaming,

Walks she in the land of dreaming!

Strange that the closed eye should see!—

That the *stirless* feet should dance

To a magic minstrelsy,

Heard but in the sleeper's trance!

Strange the voiceless lip should sing!

That the curtain fold on high,

With the branching leaves of spring,

Should delude the Dreamer's eye!

Mirthful—yet without a smile!

Mute—yet singing all the while.

To a darker couch we tread,

Where a maiden lowly lies;

Solemp light the tapers shed,

O'er the cold and shrouded eyes!

On her white, unheaving breast,

As the sculptor's marble fair,

One pale, wasted hand doth rest,

Half upcurved as still in prayer:

To the land of souls have flown

Feelings sweet as angels' own.

Mark how wan the sombre brow !  
Sadly dark the fallen cheeks ;  
Yes, she soars a seraph now,  
Where the morn of Heaven breaks.  
Silent in her virgin shroud,  
Silent on her funeral bed ;  
Like a lily crushed and bowed,  
Ere its brief spring-hour had fled :  
Silent—yet she sings—she hears  
The host of God's seraphic spheres !  
Strange the lifeless eye should know  
Glories hid from living gaze ;  
Strange that form of saddest wo  
Lifts to God rejoicing praise.  
Strange that hand so meekly laid  
On the sunk and wearied breast,  
Clasped by Christ—in Faith arrayed—  
Is guided to immortal rest.  
Lost—yet with Jehovah found !  
Dead—yet with the deathless crowned !

TEN POEMS. *Batch the Sixth.*

WHEN we look at the little pile of books upon which we are about to pass judgment in this batch, and consider the variety of feelings under which they must have been written, the anticipations of authors' friends, the circles to which they have been read in manuscript, and then turn back to all those which have passed in similar array before us during the last six months, we cannot help feeling thoughtful for the moment, and reflecting on those brilliant burnings of imaginary brightness which have set upon the chambers whence they sprung without even scaling the attic. What hundreds of pages have we read through what lovely epistles, penned by lovelier creatures, have we perused, suling for a few kind words in our columns ! but cold-browed Justice has bent over us, and, in spite of sundry favourable yearnings which we have felt, insisted upon our throwing even the lays of ladies into the balance of criticism. If we have ever tampered with the beam, ever pressed our finger in the scale when it has been equally poised, or thrust a crown under the cover, to outwit the blind goddess, the crime must be laid to the heart, and not to the head, which even then shook in sign of disapprobation while we perpetrated so gentle a deed. Alas, how easy it is to censure—to chastise the child that has done wrong (even with a good intent) ! Is it not possible to love those whom we chasten ? But we are growing sentimental, though we have not yet read the pile before us : was it not a poet who

"Drew iron tears down Pluto's cheek !"

Nay, the perusal of these maiden volumes might startle the statue of Achilles from his station, and drive him to the place "from whence he came." But we must begin :  
"Some mute inglorious Milton here may rest."

1. *Poems*, by Benjamin Street, Esq. Pp. 98. (London, Hookham.) Contains many pretty verses, with a sprinkling of thoughts which, although not original, are so far expressed in new forms as to become pleasing. Upon the whole, it is a very respectable little volume, made up of half serious and half descriptive poetry. There is also a sonnet containing seventeen lines, which we need not add, is at least original in quantity.

2. *Bethlehem*. By W. Bennett, Esq. (London, Rivingtons.)—If this be the same gentleman who furnished us, some little time ago, with the "Prodigal Son," we are sorry to see the poor progress he has made. The following couplet concludes his *Bethlehem* (might not his next work be entitled *Bethlem* ?)

"The faith he loved was hallowed, pure, and true ;  
O' such, I hope, am I, Bethlehem, adieu ! adieu !"

3. *The Outcast*. Pp. 146. (London, Simpkin and Marshall.)—A poem possessing great merit, and such deep interest pervading the whole as would furnish materials for any novelist. It is modelled after the dark productions of Byron, and contains all the fiery feeling of the "Laras," and "Glaours," teeming with raging revenge and wild adventure, and shewing how a great and honourable spirit may become vicious, from circumstances over which it has no control. *The Outcast* is a fine production ; and, whoever the author may be, we hesitate not (in spite of a few faults) to pronounce him a man of genius. It is long since we have read a poem so full of energy and soul-stirring interest : there is an earnestness about it, which all who peruse will acknowledge.

4. *The Departure of the Israelites*. By Nemo, author of "The Ocean Queen." (Etherington, Chatham ; Sherwood, Gilbert, and Co. London.)—We have so recently passed our opinion upon this author's works, that we shall wait a little longer, before entering at any length, upon his new performance. The present poem has increased our hopes ; and we have no doubt, but that, eventually, he may occupy a fair station in English literature.

5. *Thamnia, the Spirit of Death, and other Poems*. Pp. 144. (London, Fenn.)—We have been informed that this little volume is the production of a young lady, and had half guessed as much, from the spirit of gentleness diffused through its pages. It contains some very sweet poetry ; but our chief favourite is entitled, the "Mummy"—a subject which has been handled by many ;

but, we think, never better than by our fair authoress : it is full of beautiful thoughts and images, and alone worth the price of the volume. We quote a portion of it.

"Thy tale is on no earthly page, no earthly tongue can shew

The faded records of a life that passed so long ago.  
Thy name shall never more be heard, though once, to memory dear,

It breathed, perhaps, a hallowed sound on fond affection's  
There have been souls that loved to meet in unison with thine.

When youth's first fire had power, on earth, to waken  
There have been hands, in peace or love, that withering hand that pressed,

And words that wakened grief or joy in that unconscious  
But, hushed the voices, cold the hands, the parted spirits flown.

And thou art on a distant shore, unhonoured and un-  
Men sigh not, as they look on thee, in pity or in wo.  
For the traces of all mortal life have vanished from thy brow :

Joy's blessed dream, and anger's thrill, hope's fire, and  
Sorrow's sigh,  
Passed with the last descending chill of frail mortality.

Yet here hath Life's sweet spirit dwelt, she that hath  
never known  
The dreamy darkness of the grave, in silence and alone :

She, that in some mysterious world, unscathed by earthly  
ill,  
Beyond the regions of the grave, hath life and being :

Fast through that cold, that black'ning form, the vital  
current flowed :

Warm was that withered heart, when there her secret  
That lip hath worn an angel's smile, perhaps, while flow-  
ing honey,

Breathed the low tones of woman's voice, and woman's  
That knee has bowed in pious prayer, those hands to heav-  
en been raised,

When the glories of her idol shrines on Mizraim's altars  
And, amid her priestly trains of pride, while harp and  
sistrum rung,

Thou hast moved, perhaps, in youthful grace, those kingly  
All thoughts, all passions of the soul, in trouble or at  
rest,

Have ruled and moved, though long forgot, within that  
The transient riot of the heart, when youth and joy  
conblue

To bid the festal hall look bright, the festal tapers shine,  
And the secret glow of vivid mirth, which flashes to the  
eye,

When music, song, and dance conspire to raise the re-  
Fond hope, whose evening glory lights the scene of  
stormy care,

And whispers joy's returning morn shall rise, beauty  
All thoughts, that steal upon the soul in darkness and  
alone,

When the veil of wo a darker shade o'er midnight hours  
When the spirit, rising, in its grief, from that lone couch  
of tears,

Walks sadly through departed scenes, with the forms of  
Thou wert, perhaps, the faithful friend, the fond pro-  
tecting power,

Whose sunshine flung the bow of hope o'er sorrow's  
Fond children hung around thy knee, perhaps, in harme-  
less bliss,

Till thy spirit, in its joy, conceived no happier world than  
There have been hearts that wept for thee, when withering  
sickness shed

Cold influence o'er thy fainting form, dark horrors o'er  
And, when retiring life no more might struggle to be  
free,

There were, perhaps, whose only joys, expiring, died with  
The last departing pang of life, when death hung o'er  
thy brow,

When earth's receding visions fled, it hath been thine to  
The throbbing, lingering pulse of life, the fleetly passing  
breath,

The cold repulsive touch, the dread sublimity of death !"

6. *The Expatriated ; a Tale of Modern Poland*. By  
Leigh Cliffe, Esq. Pp. 107. (London, Ridgway.)—"Live  
and learn," says the old adage. This volume is inscribed  
to Colonel Leicester Stanhope, and we find afterwards  
each canto again inscribed to different individuals. Now  
all this may be very kindly meant, but to us it appears  
very absurd. Mr. Cliffe has won favourable opinions by  
his writings, and very deservedly ; but if he wishes to  
maintain that respect, he must leave off such a style of  
compliments. The present poem contains some stirring  
passages, but none of them great ; and there is a want of  
feeling for the subject. We cannot say that we have read  
it with so much pleasure as we experienced from his  
"Pilgrim of Avoû." It is not finished with the care  
bestowed on that work. Thus, though we still hold a  
very favourable opinion of Mr. Cliffe's talents from what  
he has done, we must recommend him to proceed with  
care and caution, for we believe him to possess that which  
in the end cannot fail of succeeding.

7. *Rural Rhymes*. By G. T. Manning. Pp. 75. (Lon-  
don, printed for the Author.)—Contains several very  
pleasantly written poems, with occasional dashes of de-  
scription which are refreshing enough. A redundancy of  
epithet (the fault of almost all young authors) renders  
the reading of several lines very heavy ; there are,  
however, some quaint conceits which have amused us  
mightily ; and allusions to a few rural superstitions, of  
which we were hitherto ignorant. Mr. Manning will, we  
hope, live to do better things. His faults are many, but  
we pass them, for the love we bear to buds of good  
promise.

8. *The Odes of Anacreon*. Translated by F. G. Man-  
ning. Pp. 94.—Nearly the same name, and, with the  
same address, these odes deserve much praise, not only  
for the very respectable manner in which they are done,  
but for the young author's attempt at purifying them  
from every thing immoral. It would be unfair to mea-  
sure them by other translations, considering that the  
present aspirant to fame is only sixteen. We have no  
doubt but these two brothers will do much to strengthen  
each other's minds in the pursuit of literature, which,  
although it produceth but little worldly wealth, faileth  
not to bring its own reward.

9. *The Caraguin, a Tale of the Antilles*. By the Author  
of "The Cruise" Pp. 160. (London, Macrone.)—This  
is really a beautiful poem ; it needs no half-praise, nor  
slender condemnation ; it abounds with rich thoughts  
and splendid imagery ; while stanza rolls into stanza, like  
sweetly-measured music. Here is a verse :

"The tropic moon looks calmly down  
On flowery vale and woody height ;  
And silent bay, and voiceless town,  
Are sleeping in its silver light,  
So white,—that all the scene below  
Seems covered with a veil of snow."

The poem is one that we can conscientiously recommend,  
as possessing uncommon merit. Pity ! that it was written  
in an age when the Muse is held in so little reverence.

10. *The Poetical Works of Richard Hatt*. Dedicated, by  
permission, to Her Royal Highness the Duchess of Kent.  
Pp. 185. (London, Effingham Wilson.)—These pages are  
deeply imbued with true poetic feeling ; they are evi-  
dently the production of one who has felt the storm and  
sunshine of this transient world, and all the heart-  
aches which in their hereditary course fall upon man. Some  
of them even with tenderness and beauty, others move  
along clothed in the darkness of the tempest, breathing  
terrible truths, and striking vice with the shock of  
thunder-bolts. They are a strange assemblage ! Many  
of the sonnets bear traces of a master-hand, others again  
are thrown off with carelessness ; but all shewing that  
the finger of genius fashioned them. Twenty years ago  
such a production would have placed its author in the  
high ranks of literary eminence ; and now we question  
if five hundred individuals will read the work !

*Abel Allnutt*. By James Morier, Esq. author  
of "Zohrab," "Hajji Baba," &c. 3 vols.  
12mo. London, 1837. Bentley.

WHAT next ? Is not the author of "Hajji  
Baba" satisfied with giving us the most perfect  
and entertaining picture of the East and Ori-  
ental feelings, customs, and manners ; that he  
must break into the preserves of the best de-  
scribers of our own national characters and  
society ? *Abel Allnutt* is more near to the  
"Vicar of Wakefield" than any novel we can  
call to mind since the epoch of *that*—the first  
of its class. We would be ashamed of uttering  
another word of praise ; and comparison (the  
odious) we are not going to institute. No, let  
Mr. Morier speak for himself.

The story is of a good and simple family, the  
Allnutts, brought to ruin by a speculative and  
projecting head, and the failure of a joint-stock  
bubble. The first volume paints them in a  
sweet country retreat ; the second in London,  
in jeopardy and wretchedness ; and the last,  
with some incidental notes of foreign travel,  
winds up the tangled web. In all there are  
original and well-conceived characters ; and  
sketches of circumstances sufficiently of the  
world to be likely and natural, and yet so  
wrought as to possess the interest we expect  
from imagination. For our illustrations, we  
must rely on the latter ; and we begin with  
the conversation of two girls of seventeen,  
Ellen Woodby and Mary Allnutt (the lovely  
heroine of the tale).

"Ellen, who, according to the received phrase,  
was not yet out, from not yet having quite  
opened in the book of life the chapter which  
explains its realities, was absorbed in senti-  
ment, and lived in the indulgence of that  
species of poetry, peculiar to the imagination of  
young ladies, which is so apt to turn young  
men into Edwins and themselves into Emmas.  
There was a sentimental cast in her counte-  
nance and manner : her hair was parted flat  
over her brow ; she had paleness as the first of  
blessings ; and she had not yet made up her  
mind whether she should look like a madonna,

a nun at her vigils, or the impassioned Eloisa. She very soon began to talk to Mary, and the subject which was nearest her heart very soon came to the surface on her lips. 'Do you know Edward Manby?' she said, with a deep sigh, and with her eyelashes slightly quivering over her pretty eyes. 'No,' said Mary, 'I have not that pleasure.' 'Ah, you may well call it pleasure,' said Ellen: 'I do. Anne may talk of her Captain Swaggle; but I should like you to compare him to Edward Manby. The one wears his beautiful uniform, 'tis true, and moustaches; but the other, for all he will persist in dressing like any common person, without either tuft or moustaches, is so very handsome that he beats Captain Swaggle all to atoms. He has beautiful auburn hair curling naturally, to begin with: and then, such eyes! you never saw the like, they positively pierce you through and through: his nose is a little aquiline—Anne says it has a turn too much, but I say it is perfect. She says, too, that Swaggle's teeth beat Edward's out and out; but there she is wrong again, for his are like pearls, and shew so pretty whenever he opens his mouth, whereas Swaggle's lips are always shut so tight that he might have charcoal for teeth and no one would be the wiser for it. Then he has such a brow, he looks like a colonel of dragoons at least: some say he looks quite as commanding as Bonaparte—some, like the royal family; but this I will say, that nobody can see him without loving him. I always feel a sort of involuntary tremor when he stands near me; and when he speaks, his voice thrills through and through me, it is so very heart-rending. Now, isn't he nice?' 'I dare say he is,' said Mary, not knowing exactly what to say; and not willing to extend the subject, she endeavoured to turn it off by remarking, 'Lady Thomson, too, appears to be very kind and amiable, from all your sister says of her.' 'Anne is her favourite, and she has a right to praise her,' said Ellen; 'but I cannot like her. She does all she can to keep Edward Manby out of our house, because she is afraid Anne will fall in love with him, and then she would not marry that old lord she is always carrying about with her. But I can tell her, Edward is not the man she takes him to be. Although he is poor—and why should he not?—yet he is above pitiful pelf: he is humble and unknown, yet he has all the pride of a marquess. I should not be at all surprised if he were a prince in disguise, although they say that he is only the son of a poor officer, and the nephew of a brewer. You know that does not signify, does it?' She made this inquiry with such real interest, as if her whole happiness depended upon it, that Mary could not refrain from catching some of her earnestness, and said, 'No, certainly; a brewer's nephew, provided he be good, is just as much entitled to one's esteem as any other man's nephew.' 'Well, that is so good of you!' said Ellen, squeezing her hand; 'that is what I always say, although I have all the family against me. I have inquired a great deal about brewers; and, from all I hear, they are excellent men—and, what's more, members of parliament. Besides, brewers' nephews may wear tufts and moustaches, and chains, and smart sticks and waistcoats, as well as other men: now, mayn't they?' 'I see no good reason against it,' said Mary, quite startled at the question. 'That is so very good of you!' repeated Ellen, as if Mary had done her a particular favour. 'I think I might in time persuade Edward Manby to wear them, for he is so very good-natured you can't think; he does

every thing to please every body: and then, although he has so little money allowed him, he is always buying us things, and gives all he has to any poor creature that asks him. If you ever see him, don't like him too much, Mary,' said Ellen, with a sort of playful emotion, shewing how deeply her affections were already engaged. 'I shall be jealous of you, do you know, if you do.' 'There is no fear of that,' said Mary, with a good-natured smile. 'I am afraid that there is, though,' said Ellen, 'for every body is sure to love him who knows him: there is one comfort, he is not to be at Belvedere this time, owing to that odious Lady Thomson, and so you can't love him yet.' And so terminated the *tête-à-tête*.

Our next is a bit of London. The landlady of the Fleece Inn has charged her raw country customers, set down by the coach, with punch twice.

"Having reached the Fleece, they ordered a hackney-coach, and then called for their bill. The waiter brought in that inevitable document with a self-sufficient smirk, and delivered it with a flourish into Abel's hand. The sum total amounted to a great deal more than he had expected. Casting his eye over the items, he discovered, the first day, 'To Punch, 1s.' and the second, the same charge. 'Barbara,' said he to his sister, 'did you take punch? I am sure I did not.' 'Punch!' exclaimed Bab; 'what punch? I have drunk nothing but water since I have been here.' 'They have charged punch twice,' said Abel; 'here must be some mistake.' Upon which he rang the bell for the waiter. 'We have had no punch,' said Abel, in a mild tone of voice; 'why is it charged?' 'I believe you have, sir,' said the waiter, 'but I'll inquire.' He went out and returned an instant after, and said, 'Yes, sir, you've had Punch twice: once yesterday morning, and once this.' 'This can never be,' said Abel; 'pray, tell me, where had we it?' 'Why, you had it at the window there,' said the waiter; 'I saw you.' 'At the window!' exclaimed Bab and Abel, both at the same time. 'This is a gross imposition; we cannot allow this. How can you prove it?' said Abel. 'The man outside saw you, as well as me,' said the waiter. 'Why, you wouldn't enjoy Punch without paying for it, would you?' 'What do you mean by Punch? you surely don't mean the puppet-show in the street?' said Abel. 'Yes, sir, that's the Punch I mean,' said the waiter, with the greatest effrontery. 'Blow me,' exclaimed Mark, 'if I ever heard the like of this! this is doing business with a vengeance. She is a good one at a pun, however; I will say that for her.' 'Call in your mistress,' said Abel to the waiter; 'we must settle the matter with her.' She soon appeared, and flung into the room with such an air of defiance, and with so red a face, that it was evident she was armed at all points for war. She stood with one hand on the door, and with the other on her hip, and begged to know if any thing was wrong. Abel soon told his griefs, in mild expostulation; asserted that what was done for the amusement of all in the street could not be brought as a specific charge to him in the house, and finished by announcing his determination not to pay such a bill. This declaration was answered by a burst of invective and abuse, expressed in language so totally new to the ears of Abel and Barbara, that they shrank from her presence like pigeons before the hawk. She had recourse to the same line of argument which low people invariably adopt—that is, in the first place, of giving a definition of the word 'gen-

tleman,' and then starting from that point to give large and varied views upon things in general. 'You call yourself a gentleman, I dare say now,' said she to Abel, her face and action bespeaking anger and brandy—'there's that (snapping her fingers at the same time) for such gentlemen! A pretty gentleman, indeed, as won't pay for what he's had! You've had Punch, and therefore you must pay for Punch—that's flat. I should like to see you—ay, and a great deal better than the like of you, try to leave my house without paying that bill—ay, and every doit of it too!—you'd find that we are not such nincompoops as you take us for! And I, a lone widow too, to be insulted by such as you!' She would have said much more, had not she been stopped by Mark, who—like one hearing a tune which is familiar to him, immediately falls to singing it himself—was so roused by the sounds of a language which formed part of his vocabulary, that, at length, unable to contain himself, he poured forth all the energies of his eloquence in such a manner that it startled the landlady, and tended, in a great measure, to check her violence. He soon gave her to understand that he was a lawyer—a circumstance which blanched her cheek, but fired her eye; for the effect which such a person produces upon one of the lower class is very much the same as spitting upon hot iron, causing it to hiss and to cool at one and the same time. She continued her violence, but it was violence on the defensive; until, at length, fairly beaten by the sounds of certain talismanic words which lawyers are apt to pronounce, she retreated under a volley of the most intense abuse. The charges of the bill were properly abated; and Abel and Barbara, conducted by their successful champion, having mounted the hackney-coach, left the Fleece Inn under the full conviction that that emblem had been adopted by some conscientious scoundrel of an innkeeper, who had determined to tell no lie, not even by sign. It need not be suggested that the landlady, having concluded, from Abel and Barbara's rustic appearance, and being confirmed in her judgment by what she heard from the waiter, that they were totally new to London and ignorant of its ways, had ingeniously contrived the trick of Punch to increase her charges."

When driven to adopt means for daily subsistence in London, the Allnutts try, among others, the forlorn hope of authorship, of which the following treats. Aunt Bab projects the turning of Mrs. Rundell's Cookery into verse—no bad idea—at least we have met with worse; and the annexed is a specimen.

"Several days elapsed, and not a single idea had crossed the four collected heads of the family, when Aunt Bab one morning came out all radiant with joy from her bed-room, asserting she had been visited by a happy inspiration during the night,—that by chance she had dreamed of roasted hare, and, as she awoke, she asked herself why she should not put into verse the whole of Mrs. Rundell's book upon cookery? She thought that such a work must be a desideratum in the world; for that it stood to reason it would be much easier for a cook to carry in mind the precepts which it contained in verse, than to retain them in prose. She said that she had been so much impelled by this thought that she could not refrain that very morning from trying her skill, and that she had selected Mrs. Rundell's recipe for making hare-soup (out of compliment to her dream) as her first essay. She had, however, found the truth of the saying, 'that dreams were to be interpreted by contraries,' for that, in exerting her wits to

the utmost, she could not get beyond the two first lines, do all she could. She had succeeded thus far :—

When hares are old, and fit for nothing else,  
Then is your time to make them into soup.

But where the rhymes for *else* and *soup* were to be found she, for one, could not tell; therefore it stood to reason that she must try something else. She had been more successful in her second essay,—it was on the subject of beef; the rhymes were easy, and almost spoke for themselves. She thought she had succeeded, and that she might give it as a specimen of the whole work. Upon which she produced a fragment of paper, from which she read as follows :—

To stew a rump of beef.

Wash it well, and season it hot,  
Bind it, cram it in a pot;  
Fry three onions, put them to it,  
Carrots, turnips, cloves, and suet;  
With broth or gravy cover it up;  
Put in your spoon and take a sup.  
Soft and gentle let it simmer,  
Then of port throw in a brimmer.  
With judgment let the ketchup flow,  
Of vinegar a glass bestow.  
Simmer again for half an hour;  
Serve at six, and then devour.

Various were the observations made, and all seemed to say that it was much better than any thing they could have expected from the sort of subject, which, to say the least, was not very poetic. Aunt Bab, in describing the process of composition, asserted that the book and its materials would be very much improved by being in verse; 'For,' said she, 'in this very receipt, I have increased the excellence of the dish to be dressed, by adding an ingredient which it did not possess before—namely, suet. I wanted a rhyme for 'to it,' and up came 'suet' as a matter of course; and, therefore, it stands to reason that I have added to its value.'"

Their joint incubations are ultimately and finally offered to a publisher; and thus described :—

"When Edward first knew him, he was all smiles and welcome; his appearance at that time was without pretensions, and there was a musty complexion on whatever surrounded him, very different from his looks at the present moment: for now every thing wore the appearance of gentility; he was dressed with the most scrupulous precision, and might have vied in appearance with the great of the land. Instead of wearing a soft and supplicating look, he now appeared to be on the defensive,—he was buttoned up and mysterious—he had adopted the manners of one given to protection. When Edward was introduced, he scarcely rose from his seat, and then formally offered him and Abel chairs. Scarcely acknowledging that he had known Edward before, when the business of the visit was explained, he immediately put on a doubting face, and, after considerable hesitation, turning over the papers which had been put into his hand, said, 'These sort of things did very well some time ago; but we do nothing now but what is high—quite tip-top.' 'Ah! I suppose that the world has been so accustomed to read the beauties of Byron,' said Edward, 'that it can bear nothing else. I am afraid, if that be the case, our productions can have but little chance.' 'It is not that I mean, said the publisher: 'pray, may I ask who is the author of these things?' 'This gentleman, Mr. Abel Allnutt, is one,' said Edward, pointing to his companion, 'and his sisters, the Miss Allnutts, are the others.' 'They will not do,' said the publisher: 'we deal entirely now with the nobility, and with persons whose names are known in the world. I never heard of

Allnutt before; it has never been before the public in any shape.' 'But why should not these productions stand upon their merit alone, and not upon the name of the author?' said Edward. 'Merit is all very well in its way,' said the publisher; 'but who waits now-a-days to find it out? The publications in which these sort of things appear, require no merit but that of names; and when my Lord This, or the Duchess That, condescends to write, it is taken for granted that there is merit. Why, sir, I make no doubt that if the chancellor of the exchequer would appear as the editor of a new edition of Cocker's Arithmetic, or if I could induce the lord chancellor to write a history of the great seal which is now exhibiting at Piddcock's, and put his name to it, I am confident that I could make a great deal of money by such a speculation.' 'Then, sir, am I to understand,' said Edward, 'that you publish nothing which has not got a great name attached to it?' 'We give money for nothing else,' said the publisher: 'we pay in proportion to the position of the author, and I fear that we can afford nothing in the present instance.' Upon which, regaining possession of their proffered productions, they took their leave."

These are but imperfect examples of the work, but we can do little else. We will, however, make room for a letter, with an account of the speculating John Allnutt's doings in Mexico, whither he had gone to superintend "The United Mexican and Jalapa Mines," which could not be found in the country :—

"I write in great haste to inform you that I have seen the master of a merchantman, an intelligent man, who only arrived yesterday from Vera Cruz, and who informs me that he had heard of your brother John, although he had not seen him, and that he was in good health and spirits, notwithstanding the failure of the expedition upon which he was sent, owing to the causes truly described by your banker. He reports he was well known to the inhabitants of that city, who never before had seen one so zealous, active, and enthusiastic, and so ready to devote himself to the interests of the republic. The fortress of San Juan de Ulloa, still in the hands of the Spaniards, he proposed to take by erecting one of Perkins' steam-guns against it, and talked of battering down the walls in an hour. The barren Island of Sacrificos, famous for being the burial-place of the ancient Indians, he promised to render eminently fertile, by ploughing it and using the old bones as manure, which he assured the people would make vegetation spring up where it had never before appeared. He objected to allowing the *sopilotes* (the carrion-vultures) to retain the situation of scavengers to the city; asserting that they ought to be shot by act of congress, and good wholesome sewers constructed instead. His first impression, upon seeing the naked Indians, was to encourage manufactures, in order to clothe them comfortably; and when he observed the sickly little children crawling about the streets, he immediately planned an infant school for them. In short, it seems that Vera Cruz was set quite alive by his presence. He made the authorities, civil and military, stare by the activity of his disposition; and, indeed, they were right glad when he left their city for Jalapa, at which place I hear he became more and more enthusiastic. Before he reached Mexico, he twice escaped being robbed and murdered, and, in consequence, determined to urge the government to establish a new police, precisely upon the plan of our own; and when he came in

sight of the Lake of Tezcuco, its ducks, and flat-bottomed boats, he became quite wild with the desire of turning such natural advantages to the greatest possible national benefit. My informant did not tell me what his ulterior plans were; but it does not appear that he is likely to quit Mexico for some time to come. I will keep you well informed whenever I hear more; in the meanwhile, let me congratulate you all (Miss Mary in particular) upon knowing him to be in good health."

We are tempted to add the letter of an enthusiast of another kind, Mr. Oldbourne, an antiquary, poking about Persepolis; but "time and space" forbid, and we can only conclude by most heartily recommending *Abel Allnutt* to the public.

*The Tour of the French Traveller, M. De La Boullaye Le Goux, in Ireland, A.D. 1844. With Notes and Illustrative Extracts.* Edited by T. Crofton Croker. London, 1837. T. and W. Boone.

"To treat of Ireland's toils,  
And tell the troubles now,  
And paint you out in prose or verse  
The Countries sorrowful throes.  
The grief so common is  
That each one bears a part,  
And God he knows who licks the fat  
And shears away the fete."

CHURCHYARD'S *Unquietness of Ireland*, 1579.

THIS curious and interesting volume is briefly, but gracefully, dedicated, and in the best tone of feeling, towards an admired labourer in the field of literature and literary research, Mr. I. D'Israeli, whose name should never be forgotten when matters of this kind are revived. The Frenchman's tour was short, for he was in Ireland only from May 16 to July 17; but it was a remarkable period, and he ran over a great part of the country. Landing at Dublin, after a voyage the particulars of which seem wonderful in our improved and peaceful days, he journeyed to Kilkenny, Cashel, Limerick, Kilmallock, Mallow, Cork, Kinsale, Youghal, Waterford, and Wexford. His notices of the state of parties, on his rapid *trajet*, are all very odd, and present quite a striking picture of Ireland now nearly two hundred years ago. The English pale, the Roman Catholic religious institutions, with their monks and friars, the royalists, and their opponents, &c. all figure on the canvass; and, though it is a long time ago, we cannot help admiring at the changes which have taken place, and regretting that the amelioration of the condition of the people has not been in proportion to the alteration in all things else. We select a passage to illustrate these few remarks :

"The seventeenth of July I went to the roads of Wachefort [Wexford] to embark on board a pinnace, which I was refused. I went on my knees to the skipper or master, to induce him to receive me on promise of remuneration; after much altercation he told me, that 'if he met with any Frenchmen he should take me to France, if with Biscayans, to Spain.' I answered him, that which way I went was indifferent to me, provided I could get out of Ireland. We sailed immediately; but, the wind having changed against us, we were obliged to make the mole, and to anchor in the same spot from which we had taken our departure. From thence he sent me ashore again, saying that he would not risk, for the passage of an individual, the loss of his cargo; that if he were taken by the French, and that I did not keep his secret, they would declare that his vessel was a lawful prize, having

smuggled goods on board. I entreated of him not to leave me in this island, which I had no means of quitting, since the natives were in such fear of the Parliamentarians that they dared not put to sea. He remained inexorable, and I was astonished at the ungraciousness of this Irishman, as his countrymen are in general so attentive to strangers. He obliged me to remain in this island, where civil warfare was raging on all sides, and from which the escape appeared to me very difficult, because there was no vessel at Dublin, at Limerick, and at Waterford. Scotland was out of the question, for there was no security there. On the same day I went to complain to my intimate friend, Mr. François Charlot, an inhabitant of Wacheffort, who was astonished at the conduct of the skipper, and begged me to have patience until he had seen Mr. Telin [Teeling], the owner of the cargo; who, upon Charlot telling him that I came from Avignon, a country by no means inimical to the Spaniards, promised him to allow me a passage, and gave him an order, which he carried to the roads, and made me re-embark. The next morning we sailed to the south, and the fourth day we arrived at Souling [Scilly] Isle, called by us Sourlingue, where three Salee vessels chased us, and obliged us to run for the coast near St. Yves [St. Ives] in the south of Cornwall. We met there a Parliamentary frigate of twenty-four guns, which was to windward of us, and came within cannon-shot of our pinnace, in which we had but six men. We should have preferred falling into the hands of the Turks than of the Parliamentarians; because with the first we should have been assured of life, and with the others were certain of being killed, on account of the massacre which the Irish had made in their country of the English colonists. We did on this occasion all that human power could effect, and doubled the Black head [Blackhead] fortunately without accident, thinking that we had escaped, as we kept creeping to windward of the Parliamentary frigate; but the tide being against us, we were brought pretty close together, and she neared us within musket-shot. Perceiving the English royal colours, we were in doubt whether this was a Parliamentary frigate, and to ascertain it we hoisted at the stern the English flag. The first cannon-shot which they fired at us, went through the middle of our flag. We recommended ourselves to God, and expected assistance only from heaven. We would willingly have run our vessel ashore, but the coast did not allow it. The wind fell, so that we fired several times a small piece of ordnance which we had on the stern; this made us advance with the least possible wind, and the Parliamentarians firing from their prow, retarded them. They chased us ten leagues, firing incessantly, and left us only under the fort of Falmouth [Falmouth], which fired upon them two volleys of cannon; where Lord Jermain [Jermain] and the greater part of the English court, who were waiting for a passage to France with her most Serene Majesty the Queen, witnessed this unequal engagement, from which we escaped by the providence of God, to whom be the glory, and to me the remembrance of his gracious mercy."

The French character is amusingly displayed throughout the narrative. Thus Le Gouz says,—

"We left Kilkinik [Kilkenny] and arrived at Kalon [Callan], six miles on the road. On our arrival, a gentleman named Edward Comerfort offered us his castle, where we rested, not being able to refuse so civil a request. The

next day we were drenched by extraordinary rain, which obliged us to seek shelter in a castle, where we were well received. The master of the house came to beg us to remain some days there; we could not excuse ourselves. This nobleman was called Lord Ikerin, and was general of the cavalry of the Irish Catholics. At supper, a friar from Spain brought the conversation from Spanish diet to the religion of that country, and, bearing a mortal dislike to the French, my countrymen, he could not refrain from giving vent to his antipathy in my presence, stating, that as we had no Inquisition in France, we were but a set of reprobates, and partial to heretics, whom, instead of tolerating as we do, we ought rather to exterminate, as the progress of the Catholic faith could not co-exist with this pestilent sect (the Calvinists), whose very name ought to be abhorred by the people: that Spain had the advantage of never having been infected with heresy, and hence their monarch was called the Catholic King, and hence also the great preponderance of that power in war. I felt it my duty thus to reply to this monk, whose zeal appeared to me to be most indiscreet:—"My reverend father, I am surprised that you, born in Ireland, a neutral country, should be so much under the influence of prejudice and womanish imbecility as to prefer Spain so unjustly to France, a land where religion and valour are equally found, if not in a higher degree. And whatever charms the Inquisition may have for you, and however useful you may think it, as a means of purging a country of impiety and preserving religion in its integrity, the French nation is too well informed that faith, which is the basis and foundation of Christianity, cannot be established by persecution. And as to Spain, although it may be true, as you assert, that Huguenots never could thrive there, still the Moors and Infidels of Granada are so mixed up with the population that you can hardly discriminate between them and real Catholics. Appearances often mislead us. The French, to outward semblance, seem free and careless, but are in reality excellent Christians; while your Spaniard, with the look of a devotee and an angel, is very often the reverse at heart. As to the prosperous career of His Catholic Majesty's arms, he never will encounter the Most Christian King in fair fight without discomfiture." From this castle we came in one day to Cachel [Cashel], a distance of ten miles. This town is an archbishop's see, founded by St. Patrick. There are two convents, [one of] Dominicans, and [one of] Franciscans."

The author's theological and philosophical controversy with the Dominicans at Cashel is highly entertaining, and an excellent sample of the scholastic endowments of the age. Witness his posers in theology.

"1. God in his capacity of Father hath begotten the Son. God in his capacity of God hath begotten naught. Now, as it is by the knowledge he hath of himself as the Father [*quatenus Pater*], that he has produced the Son, how comes it that, by the same knowledge which he has of himself as God [*quatenus Deus*], he has produced nothing? 2. The nature of the Godhead being infinite, how can it have become united with the finite nature of man in the Christ? 3. The attributes of God being each boundless and infinite, how can there be more than one attribute of that description? 4. As the knowledge and the will are the same thing in God, why is the production of the second person of the Trinity, the Son, ascribed more to the one than to the

other? 5. Why is not the Holy Ghost the second and not the third person, since the action of the Spirit precedes the engendering of the Son? To these questions I begged them to give a scientific and categorical answer. One of them attempted to reply, but soon got entangled in the meshes I had prepared for him; whereupon I observed, that perhaps theology was not the science in which he particularly excelled, as many and various are the gifts, and one hath prophecy, another the gift of tongues, &c., but, perhaps the department of philosophy was more familiar to him, and, as there are four distinct parts, viz. logic, metaphysics, ethics, and physics, he would, perhaps, allow me to put a few queries drawn from the first part, logic. 1. Why is their convertibility of propositions in the second process of syllogistic argumentation the touch-stone of truth? 2. Why, in the nineteen forms of syllogism, seven give an affirmative conclusion, and twelve a negative? 3. What is the difference between possibility and contingency in the mode of propositions? Here I found them as dumb-founded as before; on which I remarked that Spanish logic was a capital contrivance, since by saying nothing they were sure not to lay themselves open to their adversary. Passing to the second part, viz. metaphysics, I asked them how they could prove the spirituality of the soul, the existence of angelic beings, and whether such were created before the world, or after? If God has created the world from his knowledge, his knowledge being part of his essence, is not the world part of the essence of the Godhead? Is not chaos eternal as well as God? Here the same system of obstinate taciturnity was persevered in by my Spanish opponents; so I proceeded, passing by the science of ethics, where, on account of its facility, I supposed they might know something, to that of physics."

And so he goes on, puzzling and perplexing them, and lauding himself to the skies, in the finest vein of egotism. But we must give a sample of his general observations. Of Limerick, he says, "In this city there are great numbers of profligate women, which I could not have believed, on account of the climate."

We believe that Limerick, and, indeed, all Ireland, in this respect, are infinitely improved. Amid all their errors and vices, the want of chastity, in the lower classes of Irish women, is not one.

"The towns are built in the English fashion, but the houses in the country are in this manner:—Two stakes are fixed in the ground, across which is a transverse pole to support two rows of rafters on the two sides, which are covered with leaves and straw. The cabins are of another fashion. There are four walls the height of a man, supporting rafters over which they thatch with straw and leaves. They are without chimneys and make the fire in the middle of the hut, which greatly incommodes those who are not fond of smoke. The castles or houses of the nobility consist of four walls extremely high, thatched with straw; but, to tell the truth, they are nothing but square towers without windows, or, at least, having such small apertures as to give no more light than there is in a prison. They have little furniture, and cover their rooms with rushes, of which they make their beds in summer, and of straw in winter. They put the rushes a foot deep on their floors, and on their windows, and many of them ornament the ceilings with branches. They are fond of the harp, on which nearly all play, as the English do on the fiddle, the French on the lute, the Italians on the guitar,

the Spaniards on the castanets, the Scotch on the bagpipe, the Swiss on the fife, the Germans on the trumpet, the Dutch on the tambourine, and the Turks on the flageolet.

"The red-haired are considered the most handsome in Ireland. The women have hanging breasts, and those which are freckled like a trout are esteemed the most beautiful. The trade of Ireland consists in salmon and herrings, which they take in great numbers. You have one hundred and twenty herrings for an English penny, equal to a carolus of France, in the fishing time. They import wine and salt from France, and sell there strong frize cloths at good prices. The Irish are fond of strangers, and it costs little to travel amongst them. When a traveller of good address enters their houses with assurance, he has but to draw a box of sinisine or snuff, and offer it to them; then these people receive him with admiration, and give him the best they have to eat. They love the Spaniards as their brothers, the French as their friends, the Italians as their allies, the Germans as their relatives, the English and Scotch as their irreconcilable enemies. I was surrounded on my journey from Kilkenny [Kilkenny] to Cachel [Cashel] by a detachment of twenty Irish soldiers, and when they learned I was Frankard (it is thus they call us), they did not molest me in the least, but made me offers of service, seeing that I was neither Sazanach [Saxon] nor English. The Irish, whom the English call savages, have for their head-dress a little blue bonnet, raised two fingers breadth in front, and behind covering their head and ears. Their doublet has a long body and four skirts; and their breeches are a pantaloons of white frize which they call trowsers. Their shoes, which are pointed, they call brogues with a single sole. They often told me of a proverb in English, "Airische brogues for English dogness" [Irish brogues for English dogs], "the shoes of Ireland for the dogs of England," meaning that their shoes are worth more than the English. For cloaks they have five or six yards of frize drawn round the neck, the body, and over the head, and they never quit this mantle, either in sleeping, working, or eating. The generality of them have no shirts, and about as many lice as hairs on their heads, which they kill before each other without any ceremony."

We have now only to add, that the Notes and Appendix are full of curious illustrations — of which we select only a single specimen.

"XXI. Our traveller more than once hints, that if he fell into the hands of the Parliamentarians, by the capture of the Irish vessel he was in, certain death awaited him. 'It was rumoured,' he observes, 'that the Parliamentarians threw into the sea all the Irish, and those of their party, owing to the massacre the Irish had made in their country of English Protestants, by a zeal for religion.' And this appears to have had more than mere rumour for its foundation, from the following entry in the record of the proceedings of the Committee of the Admiralty, on the 17th December, 1646: 'Whereas by an ordinance of both Houses of Parliament, dated 24th October, 1644, it is declared that no quarter shall be hereafter given to any Irishman, nor to any Papist borne in Ireland, which shall be taken in hostility against the Parliament, either upon the sea or within this kingdom, and it is thereby ordained that all officers and commanders by sea and land shall, upon the taking of every such Irishman or Papist borne in Ireland, forthwith put every such person to death. For the execution of such ordinance instructions have been issued

by this Committee to the Commanders of the Fleete, according to the strict command therein given. Now upon consideration of what's presented in severall letters directed from severall persons in the West of England to Sir John Northcot, Sir Samuel Rolle, and Sir John Yong, members of the House of Commons, concerning the interruption of Trade by the Irish Frigats, being much increased in number and strength, and the suffringe and dangers of some English that have been by them taken prisoners at sea. In some of which letters was inclosed a letter from one of the said prisoners at Wexford, importing that the casting of some Irish over board that hath been taken at sea by Captain Gilson, hath deprived the said prisoners of hopes of mercy unless the said Ordinance be recalled; the number of the said prisoners at Wexford and thereabouts being informed to be about 150. Also the copie of a letter from Jasper Bolor the Maior of Wexford, conteyning severall scandalous expressions against the parliament, complaints of throwing Irish over bord by Captain Gilson and Captain Plunket, and threats that unless answers be given by the first of February next that no such course shall be hereafter used, and the said Captains sent over to receive punishment, 168 persons that are prisoners there and in other parts of Ireland shall suffer, and those that hereafter fall into their hands shall receive the same measure. Also a petition to both houses of Parliament from the wives and friends of some of the said prisoners praying the Parliament's compassion in procuring the said prisoners release in such way as they shall in their wisdom thinke fit. — Ordered. That the state of this busines be reported to both houses, with this Committee's desire that they will please to declare their pleasure therein, and to direct what instructions this Committee shall hereafter give to the Comanders of the Parliaments ships in reference to the said Ordinance.' C."

1. *Female Beauty, as preserved and improved by regimen, cleanliness, and dress; and especially by the adaptation, colour, and arrangement of dress, as variously influencing the forms, complexion, and expression of each individual; and rendering cosmetic impositions unnecessary.* By Mrs. A. Walker. Pp. 435. London. T. Hurst.
2. *Exercises for Ladies; calculated to preserve and improve beauty, and to prevent and correct personal defects, inseparable from constrained and careless habits: founded on Physiological Principles.* By Donald Walker. Pp. 220. Hurst.
3. *Games and Sports; being an Appendix to "Manly Exercises," and "Exercises for Ladies," &c. &c.* By Donald Walker. Pp. 369. Hurst.
4. *The Anatomy of Dress.* By a Modern Epicurean. Pp. 36. Glasgow, Stenart and Co.; Edinburgh, Bell and Bradfute; London, Baldwin and Cradock.

To Mr. and Mrs. Walker the sex are indebted for Nos. 1, 2, and 3, constituting, as it were, a code for the guidance of ladies in all that appertains to their physical and extrinsic powers and qualities. On opening No. 1 we could not help exclaiming, What a dangerous — what a shameful work is here! How injurious to the well-being and happiness of mankind! Are not women already sufficiently able to disturb the peace of the young, and agitate, agitate the hearts even of graybeards? Need they be taught further arts and arms, when no bachelor, except he be a dandy, and, conse-

quently, wrapt in self-love, can withstand, and scarcely a married man after the honey-moon is over (say two months); is it fit, we repeat, to prescribe for them the means of doing more mischief? The consideration is of the gravest kind: and, being overpowered by it, we beg leave to take another *Gazette* for the cool discussion of the questions at issue. Medal engraving is, on the score of importance, but a flea-bite in comparison.

No. 2 is an excellent work; every part of which deserves the best attention of the female world. Health, comfort, and enjoyment, depend on such exercises as are here recommended; and, on the contrary, disease, pain, and suffering are the sure consequences of the habits against which they are warned in these pages.

No. 3 is a valuable and meritorious addition to Mr. Walker's preceding publications. The outline engravings are very spirited, the advice throughout unexceptionable, and the description of some of the games and sports exceedingly amusing.

No. 4. It is a daring piece of impudence for an inhabitant of Glasgow to write on such a topic! What though Sir Robert Peel has enlightened these natives by his speeches; how should they (out of London!) know any thing of the cut or wear of clothes? Only think, for example, at page 28, that *checked muslin* neck-cloths are most becoming in *full dress*. Oh, dear! muslin for Glasgow!

#### FINE ARTS.

##### MEDALLIC ENGRAVING.

OUR attention having been very particularly challenged to this subject, in consequence of certain expressions which we employed in a favourable review of "*The great seals of England, and engraved by the process of Achilles Collas*" (see *Literary Gazette*, December 31, p. 842, col. 3), we were anxious to investigate it more minutely than we had hitherto done, in order to ascertain whether we were borne out in those expressions, or were mistaken in our information. In the one case we were prepared to abide by and justify it; in the other, to confess our error and yield the palm where it was due.

At the moment we undertook this, we confess we were not prepared either for the trouble or extent of the inquiry; but, having gone into, we have gone through it; and, as we have found it to involve questions not so much of individual interests as of pure justice, of usefulness in art, and of national importance, especially with reference to great works in contemplation, we trust that the pains and expense we have bestowed upon it will not be thought unworthy of public attention.

In the criticism alluded to, it was said, "If not one of the most useful (we might have said *generally* useful), this process of M. Collas is unquestionably one of the most ingenious inventions of these ingenious and inventive times. We understand, however, that the machine with which it is effected has been greatly improved by one of our countrymen. We then spoke in highly eulogistic terms of the volume; but, nevertheless, Mr. Hering, the publisher, having, on the part of Mr. Nolte, principal proprietor of the "*Tresor de Numismatique*," reclaimed against the statement that the machine had been improved by an English artist, we instituted the investigation, of which we have now, without partiality or favour, to give the results.

Our notice to correspondents, in No. 1043,

procured us communications from both parties; Mr. Nolte, as head of the French firm; and Mr. Bate, as patentee of the English machine. We also turned to the Report of the Select Committee of the House of Commons on the British Museum (occupying from page 463 to 499); and, wishing to be entirely free from personal prejudice, we declined any interviews with parties interested, till we had finally brought our mind to the best conclusion in its power on the whole of the question at issue, as presented by the various sources we have particularised.

And first we present our readers with Mr. Hering's reclamation on behalf of Mr. Nolte.

*To the Editor of the Literary Gazette.*

9 Newman Street, Oxford Street,  
5th January, 1837.

Sir,—In the last number of the *Literary Gazette* I find a critique on the "Great Seals of England, engraved by the process of Achilles Collas."

In that notice you were pleased to speak of the work in question in terms of high praise; but you also state, that the process by which the work was engraved, "has been improved upon by one of our countrymen;" a statement which, I think, I shall be able to convince you is founded upon error.

First, I would observe, that the engraving-machine of M. Collas has never been out of the establishment at Paris, wherein the plates of the Great Seals, and of the works published under the general title of "*Tresor de Numismatique et de Glyptique*," are engraved; it is, therefore, as far as regards the peculiarities which distinguish it from other engraving-machines, a secret confided solely to those who are concerned in the production of its works: if, then, the supposition be at all admissible, that an improvement can have been made upon that machine, it must have been obtained, in the first instance, by surreptitious means.

But, secondly, it is sufficiently notorious that the allusion is meant to be to the engraving-machine of Mr. John Bate, the pretensions of which were made a subject of examination before the Committee of the British Museum, to which was referred Mr. Charles Tilt's petition for assistance in the production of a series of British National Medals by the process of Collas: the evidence adduced has just been laid before the public.

On a perusal of this evidence, it will be apparent that the machine which Mr. Bate claims to have improved, has nothing at all to do with the machine of Collas; but it is one of much older date, said to have been suggested by a diagram, published some twenty years ago in the "*Manuel des Tourneurs*;" and it is stated, that the terms "old machine" and "French machine" are employed to designate it indifferently, and without any intention of confounding it with the new machine invented by Collas. I think, therefore, you will at once perceive, that whatever the pretensions of Mr. Bate's machine to be a better one than that of M. Collas, which have yet to be shewn, it can have none to be an improvement upon it; terms which, in relation to the present subject, have obviously an important difference, however carelessly they may be used in common parlance.

But, sir, permit me further to ask, by what standard the respective merits of two engraving-machines can be tried other than that of the works produced by them? Is it just that public opinion should be forestalled, and the mind of an influential public journalist prepossessed, which, judging a work actually

published, by a fine inflated description of works which are going to be published when they have been prepared, that is, by a certain improved machine? The value of the work on the Great Seals, which you have been pleased to speak so highly of, be it what it may, is appreciable, is tangible; but how are the public to appreciate the value of, for instance, another book on the Great Seals, which might be produced in case a certain machine should be brought into operation? yet, if it be not intended to suggest some such comparison as this, why are the performances of one so frequently (for this is not the first time) met by reference to the professions of another? Is this fair competition? The proprietors of Collas's machine have issued upwards of 700 folio plates of the medals, bas-reliefs, gems, carvings, terracottas, &c., which have been circulated all over Europe, while Mr. Bate has published, as far as I know,\* nothing but the small plate, containing four medals, which appeared in the *Mechanics' Magazine* for December. Fair and open competition we desire and court; but that we have yet to experience.—I remain, &c.

HENRY HERING.

As the following letter from Mr. Bate takes up the grounds here laid down, as well as every other point, we shall leave the personal combat in his hands.

*To the Editor of the Literary Gazette.*

Sir,—From a notice which appeared last week in the *Literary Gazette*, I presume that you are in search of information upon a subject in which I am much interested, but that you appear to wish to obtain it from those who have no interest whatever at stake in the question. It is upon the subject of engraving by machinery from medals, for which there is a French process, termed the *process de Collas*, and another which I have invented and patented—these are now at issue.

My antagonists have already told their tale, and fancied, perhaps, that they had it all their own way, because I have hitherto taken no notice of it. I have waited to refer, through some public medium, of high character and respectability, to the publication of the inquiry upon the subject before a committee of the House of Commons: there our separate claims to attention have been investigated, and I, with confidence, refer you to its Report, and ask you, with the disposition to do justice, which you have avowed, to find in that independent evidence you seek; and I particularly refer you to that given by Mr. Brockedon, because he has no interest at stake; and his was the only evidence which went directly to the question at issue, by explaining why the French process produces distortion, and why mine is free from it.

The ignorant assertion that mine cannot be an improvement upon the French instrument, because this has been kept secret, may do for people who boldly assert, but explain nothing. To every man of science, as a mathematician and mechanic, and who is acquainted with the process mentioned in the "*Manuel des Tourneurs*," it is known that it contains a source of error, that of distorting the image it produces by projecting every line it traces as far from its true position on the plate, as any point on such line is above the field of the relief; and that such a machine, however its arrangements and details may be varied, if it contain not a principle in its construction which will obviate this tendency to distort the image, is, in principle, the same as the old machine of the "*Ma-*

\* We are surprised at this statement, as we have seen fifty specimens.

nuel des Tourneurs;" and though, by an adjustment, the apparent relief may be lowered, to lessen the deformity, still the slightest trace of form contains error.

To avoid this, I invented and patented on the 9th of April, 1832, a machine, which contains in its structure a principle which leaves all the images it produces quite correct in the most minute measurement. Nearly at the same time, Mr. Saxton invented a machine to produce the same correctness; and very lately, Mr. William Froude, Engineer, has invented another: both these, though they differ much in detail from mine, contain the same principle, and will, consequently, produce correct representations of subjects in relief. No man of science will, therefore, see presumption in my asserting what can no more be disproved than a problem in Euclid, that 500 different machines for producing such works can only exhibit two actually different in principle—that which will produce a distorted image, and that which will produce a correct one; and when it is said by ignorance, that, because I have not been let into the grand secret by having seen the machine of Collas, mine cannot be an improvement upon it, I answer, not irreverently, but apologetically, "By their fruits ye shall know them." Every print in the "*Tresor de Numismatique*," the work of Collas, that I have examined and compared by myself and before others, is distorted more or less—and many most offensively so—especially those in high relief, though such subjects are avoided by them as much as possible: these have, therefore, been produced by a machine which is one of the class that does not contain the principle by which a perfectly correct image is obtained. In the plate, which I have the pleasure of offering to you for publication, among others will be found two heads, from the same gem of Ariadne; one engraved by the old machine, the other by the new; the measures of the outline of the heads will be found alike; the distorted one has all its errors within the contour. The correct head of Ariadne I offered as a challenge to the French party; this is denied: there can be no mistake in my now repeating that challenge.

In answer to question 5960, in the Report, a counter-challenge was given to me to engrave the Canterbury Pilgrimage. Of course, Mr. Nolte was not aware that his challenge was guarded by a copyright, for which, it is said, that Mr. Hering has paid Messrs. Hodgson and Graves a sum of money: now, if Mr. Nolte will give me a guarantee of freedom to engrave and publish another print of that work, I pledge my word, that, in less than a month, I will produce a more correct and beautiful copy, from the same relief, and give the public the benefit of it, by selling it with a handsome profit, at one-third of the price now charged for it.

But I now beg leave to refer you to Mr. Brockedon's evidence; and shall follow it by some other observations.

"William Brockedon, Esq., called in, and examined.

"Sir Philip Egerton.] You are a member of the Royal Society, and other scientific bodies, a painter of history, and a member of some foreign academies; and you have published many works, accompanied with beautiful illustrations and engravings?—I have. Consequently, you are well acquainted with many branches of engraving, and have employed engravers in the execution of your works?—I have. Have you any knowledge of the processes of engraving medals, cameos, and embossed surfaces, by

machinery?—I have, of different methods; by the old machine, and Bate's improved machine. Can you give the Committee your opinion upon the process?—Yes. I have now before me a medal which has been cut in sections, in order to explain the difference between the old and the new processes: it is a French medal of Napoleon and Marie Louise. The earliest process with which I became acquainted was that which we now term the old: that was four or five years since. Though I have not seen specimens, I know that a similar process had been employed at a much earlier period; for there is in a French work, called 'Manuel de Tourneur,' of which a second edition appeared in 1816, a process by which, in a very rough way, embossed surfaces can be drawn or laid down upon plane surfaces, with the effect of relief.

"Sir Robert Inglis.] Is that the invention to which Mr. Babbage has called the attention of his readers?—It is. I will now endeavour to explain the old machine. Having laid down the medal (A B, fig. 1) to be engraved, the ver-

Fig. 1.

tical tracing-point D of the instrument is made to pass over it, at right angles with the plane of the medal, and, consequently, as it passes it must be raised and lowered as it follows the variations of surface in the medal. In order, at the same time, to trace such varying lines upon a plane surface, imagine a plate of steel or copper, E F G H, upon which the image is to be traced for etching, placed at right angles with the plane of the medal; you will perceive that, as the tracing-point D is lifted, and passes through a vertical plane across the medal, it lifts also the etching-point I, attached at right angles to the tracing-point D, and marks upon the plate a curved line K, which agrees perfectly with the curved line described by D across the medal in lifting: a straight line across the field of the medal would be represented by a straight line also on the plate, but wherever there is relief or embossment this lifts the point which touches the medal, and the etching-point marks its course. Now, the fault to which that process was liable will be found in many of the examples which have been placed before the committee to-day, not only in those executed by the old English machine, as in the head of Cheselden, but in other examples from the French, which have been measured, and shewn to be distorted and erroneous; and the way in which that distortion is produced, I think I shall be able to explain.

Fig. 2.

Here are three pieces (A B C, fig. 2), which, united, make a complete cast, or impression, of the large Napoleon and Marie Louise medal; the pieces exhibit two sections across the medal, one is at right angles with the field at D, the other at an angle of  $45^\circ$  with it at E. I will

at present speak of the right-angled section only. The tracer, as in D, fig. 1, in passing over in the direction of the section D, fig. 2, would trace in rising over the curved surface from E to F a similar curved line on the plate, but which line would not be represented on the plate as at E, but at G, as far from it as each point touched by the tracer is above the base, and the error in the representation amounts to the whole of this difference. This error exists in all the old machines that I have seen, and must exist in all of which the productions exhibit this defect. These defective machines present, if the lines be horizontal, the appearance of the top of the head leaning towards the observer: thus, if the line A B be traced across the medal, fig. 3, touching the top of the ear,

Fig. 3.

the dotted line representing the curve of elevation of the head in relief, will represent the true position of the ear in the medal C, in the false position of the dotted ear d in the engraving. The outline of the engraving, when traced by either the old or the new machine, is correct; the distortion is in representing the relieved or embossed objects within it. A familiar illustration of this may be given.

Fig. 4.

Fig. 4, A B, is a table upon which is a piece of paper fixed at the opposite edges c and d, but so pressed together, that the paper rises in the curve; let the points c d represent the opposite points touching an outline, if a pressure in the direction of e e be made against the paper, it thrusts forward the point f in the curved line to g in the dotted curve, though the points c and d remain unchanged and equidistant. Perpendiculars from the curved line would on the dotted curve be wider apart from c to g, and closer from g to d. To this distortion the less offensive name of foreshortening has been given; but, as no change in the outline takes place, it is obviously distortion. This has relation to the old machine?—To the old machine entirely.

"Lord Sandon.] This creates false shadows?—Certainly, because of the undue crowding of the lines on the shadowed side. I will now describe the new machines, for I am acquainted with two: both of them obviate the distortions produced by the old machines. One is the invention of Mr. Bate, optician, in the Poultry, who has taken out a patent for the improvement, and spent large sums in bringing it to its present perfection. The other machine I have been allowed to bring with me, the better to enable the committee to understand its principle, which is the same as Mr. Bate's, but differently applied. This machine has been very recently invented, and made by Mr. William Froude, a son of Archdeacon Froude, a young engineer of great promise, who distinguished

himself as a first-class man at Oxford. As all the correct engravings of medals placed before you were, however, produced by Mr. Bate's machine, I shall refer to his, by which, three years ago, Mr. Bate engraved for me a head of Michael Angelo, for the card of the Graphic Society. Instead of the vertical section of the medal, as shewn at D fig. 2, Mr. Bate takes the section that is formed by a plane at the angle of  $45^\circ$  E E. The result is, that, instead of the tracer passing in a straight line across it, as at H I, you here get a curved line over the medal from H to K, which curved line actually represents (if the tracer pass over the medal at an angle of  $45^\circ$ ) a curved line on the plate, which is exactly equal to a line on the field of the medal, which is constantly perpendicular to the curve traced on its surface. In proof of this, I place the oblique section on its base, and trace with a pencil held perpendicularly to the base the curved line of the relief, which the obliquity of the section presents: the line thus traced on the base perpendicular to this curve is exactly the same as the line traced on the copper plate, by the etching point: thus both the tracing and the etching points coincide in their curves, instead of, as in the old machines, where the lines directed to the base by the tracer were straight, whilst the etcher represented the curve of elevation,—the whole amount of difference being error.

"Lord Sandon.] In fact, the tracing-line is constantly perpendicular to every portion of the field of the base?—Yes.

"Mr. Marshall.] Why is the elevation of  $45^\circ$  the most advisable?—Because at an angle of  $45^\circ$  the tracer extends laterally, exactly as far upon the surface of the medal as its perpendicular at that point is from the base or field of the medal. By the new process, as I have already stated, both the tracer and the etcher describe the same curve, and give at that angle an apparent equal relief in the print to the medal itself.

"Lord Sandon.] Are you obliged in that machine to adjust the instrument to every line?—No; the etching point and the tracing point move with the same adjustment for the spaces between each line. This you will perceive in the machine invented by Mr. William Froude; but his is not so readily adjusted as Mr. Bate's, though he obtains by his arrangements the angle of  $45^\circ$ , which is so necessary and valuable in making the tracer and the etcher perform exactly the same curve.

"Sir Philip Egerton.] Having stated that a great amount of error is consequent upon the operation of the old machine, and having explained the cause of that error, and having also explained to the committee the very ingenious method by which Mr. Bate and Mr. Froude have corrected that fault of the old machine, have you any engravings with you by which you can shew the committee the comparative merits of the productions of the two machines, the old and the new?—I think I have. Before Mr. Froude went out of town, he desired me to ask Mr. Bate to make a cone, the height of which should be equal to the radius of its base. He said, 'If you get such a cone, the old machine will throw the point of its engraved representation upon the periphery, whilst with the new machine you will have it in the centre.' This example [producing one] was the result of the first experiment; subsequently, another was made, half the radius.

Lord Stanley.] In one case it is half way between the centre and the periphery, and in the other it is correct?—Yes. As another

illustration beyond the mere cone, I have here an example of a production by the new machine; it has been recently executed expressly to place before the committee: it is evidence not only of the accuracy of the new machine, but also of the rapidity with which such a work as this can be executed. This large medal of Henry IV., about four inches in diameter, was begun last evening at four o'clock, and finished at two o'clock this morning, that is, finished in the tracing upon the etching ground; it then went into the hands of an inferior artist, who bit the lines traced through the ground with an acid, and it is now a proof that if an artist had superintended it, it would have united all the beauties of such a work of art: its accuracy you will see by comparison. Even this is a faithful representation of the medal?—It is, under all the disadvantages of haste, and wanting the aid of an artist.

“*Lord Sandon.*] In these two heads, the one of the new machine looks you in the face, the one of the old machine looks askance?—Yes, that is the distortion consequent on the use of the old machine, though there is a mode of rendering that error less offensive, and I understand that it has been adopted by the French artists. It is by an adjustment of the etching point upon the plate to be engraved, so as not to give the full height of the relief. In subjects which are in very high relief the distortion is so obvious, and has been felt so strongly by those who use the imperfect machinery, that, to prevent its being too offensive, they have only allowed an elevation of one-third of the relief in some instances; but the whole amount of that third is error. It is very true, that two-thirds have been spared, but then you have produced another error, which grows out of the correction, by falsely representing the height of the actual relief of the medal; because, if the height of the relief be three-fourths of an inch above the base, at its greatest height, and the relief be reduced to one quarter of an inch, it is not a representation of the amount of the true relief, though it is less offensive, because there appears to be less distortion.

“*Sir Philip Egerton.*] Are the committee to collect from your evidence, that, under the superintendence of an artist, the machines which have been invented by Mr. Bate and Mr. William Froude are calculated to represent, with great accuracy, and with good effect, such a series of medals as that to be found in our national collection of the British Museum?—Yes; I believe that the principle of their construction affords the only way in which medals can be accurately engraved; because, if any engravers of skill are employed to execute the imitation of such work in the ordinary way, by line engraving, they do not represent a metallic surface; a print is, in fact, only a conventional resemblance of a face in black and white, and line engravers have a conventional mode of touching by dots and crosses, so as to represent the texture of flesh. The engraving by Mr. Freebairn, from Sir John Soane's medal before you, is a good example. But it may be an engraving of a painted portrait; there is nothing hard, nothing metallic, in its appearance, to represent a medal; and these are characteristic qualities, which can only be represented by the process of engraving by these machines. The ordinary modes of engraving are not only very costly, but, for this purpose, every way inferior; and you have to trust for accuracy of resemblance to the skill of the individual artist employed. There are, however, certain very small and

delicate works, which it is extremely difficult to give well by this machinery; and in such cases, touching a little with the graver will often be necessary to aid the details of the work. Have you any doubt but that the machinery used for this purpose is still capable of considerable improvement, and that such improvement is likely to take place within a limited period of time?—No; my opinion is, that the new machine is incapable of improvement in principle, though in some details improvements may be suggested; accuracy is now obtained. You may have different machines to obtain such accuracy, but you cannot go beyond accuracy; and, therefore, it is incapable of important improvement. The difference between such things as have been produced by Mr. Bate and the French works is, that the French works have been under the superintendence of skilful persons, while Mr. Bate has been unaided by the judgment of artists. When a medal is to be engraved, an artist should point out in what direction the light should fall: Mr. Bate has generally thrown his light upon the front of the face; while the French, on the other hand, have skilfully thrown the light upon the back of the head, and if they had had an accurate machine for their work they would have approached perfection. It is also after the tracing by the machine that the skill of the artist is required; and it is not necessary that he should be a first-rate artist. I would venture to say, that in Messrs. Finden's establishment, out of fifty pupils and assistants, forty of them could be put at an hour's notice on this work, so as to produce it as perfect, with the artist's skill, as any examples that have been shewn to-day. It also requires some little judgment to decide in what direction the tracing point should traverse the line of the medal? That is what I mean by the direction of the light, as it always falls at right-angles to the line traced; and the artist is required beyond this, because, when it goes into the hands of a person to etch it, he must observe the progress of the acid, and know its effects in the depth and colour of the lines. These are advantages which the French possess, but which have not yet been required in this country, though hundreds may be had the moment they are wanted. Here is a specimen of the skill of the artists employed on the “*Treſor de Numismatique*,” a work now publishing in France; I venture to say that, as far as the skill of the artist can go, nothing can exceed the perfect beauty of this specimen plate of their work; but that is due to the artist, not to the machine. This is specimen No. 2, produced by Collas's establishment: from the taste and judgment with which it has been etched up to a beautiful tint of colour, it is one of the finest specimens I ever saw.

“*Mr. Hawes.*] Do you think that the French machine possesses any advantages in medals of very low relief and small size?—None whatever; because, however low the relief may be, the instrument by which it is traced is still erroneous; not a line out of the straight line can be drawn by that machine which is not erroneous, nor by any known, unless the diagonal tracer be employed. This is capable of mathematical demonstration. There is hardly a stronger evidence than in the two engravings of Ariadne, by the old and new machines, and in that which has just been produced, already mentioned, that of Henry the Fourth, a front face. Those who use the old machine avoid a front face as much as possible. I have been informed that the Ariadne has been sent to

France, with a request that they would produce a specimen of engraving from that gem; it was sent as a challenge to Messrs. Collas's establishment in France, but it has not been accepted.

“*Mr. R. Colborne.*] Have you ever considered the question, whether, if a work of this kind was undertaken under the patronage of the trustees of the British Museum, it would pay its expenses without parliamentary aid?—I think it would; I have no doubt it would pay its expenses after a short time; but many expenses would be necessary before the work could be known. Expenses would be incurred before any return, which, perhaps, might be alarming; but I think money advanced in aid of such a work would be repaid by its proceeds. If a sufficient number of subscribers were found at first, it might be published without aid; especially looking at the price at which it could be executed, which I have the means of knowing. Here is an example of the Athenæum head: the original head was charged forty guineas by Mr. Lane; it is the head of Minerva, the seal of the club. I inquired of Mr. Bate at what price it could be executed by the machine: the answer was, that they would be very glad to do such an obverse, even as a single commission, for one pound; but that if a number were to be done, one half of that expense would be sufficient, taking the average of medals two inches in diameter; if the whole number gave an average of two inches, they might be executed for one pound a medal—that is, both the obverse and the reverse—this would be the cost of ruling or tracing. There would be, in addition, the incidental expenses of the plate, etching, &c. Have you a specimen of that Athenæum head?—I have. [*The witness delivered in the same.*] You are quite of opinion that if a work of that kind is ever undertaken it must be by machinery?—Certainly; because it not only is by far the cheapest, but it is the only way in which a series could be executed. It is the only way in which a plate from a medal could be executed accurately; because if you go to a line engraver, you have to trust to his skill in drawing as well as engraving, so that you have by the new machine the advantage of both the cheapest, the most ready, and the only accurate mode.

“*Mr. Hawes.*] You have not the remotest interest in this question beyond that interest which you have in any thing connected with the arts?—In no way whatever. It is only a few days since that I heard that this committee was sitting, and was told that I was to be summoned to give evidence upon it. I certainly feel great interest, not only as an artist, in the publication of such a collection of medals as that in the British Museum, but I have been from my childhood (my father was a watch-maker) initiated in mechanical structures. This gave me early an insight into the subject, and created a taste for such inquiries as led to my going to see the machine for engraving the moment I heard of it, and making myself master of its principles.”

I think it is impossible, sir, to misunderstand the above evidence; but I beg leave to add the opinions expressed by some other witnesses upon the distortion of the French works: the skill with which many of them have been got up, by their artists, is most creditable to them; and it is to be regretted, that their characters so often suffer for the bad company they keep, as a distorted work must be a heartless thing to touch upon.

Among those who gave evidence, the name

of Sir Francis Chantrey had deserved weight; it is most unfortunate that he had not been made acquainted with the structure of the machines before his evidence was called. I have selected only that portion of the answers given by him, and some of the other witnesses, which bear upon the question of distortion, and justify my statement. The following were answered by Sir F. Chantrey:—

5859.\* Upon measuring from the extreme of one side of the medal produced to the extreme point of the other, do you find any difference between it and the engraving which is submitted to you?—Answer: Taking the extreme outline, I find no difference; but I perceive, taking it from the centre, that on the light side it is larger than on the shadow side; and I am not prepared to account for that, it never occurred to me before.

5793. Have you had an opportunity of comparing any of them [*i. e.* the Collas engravings laid before him, and the published volume] with the originals?—No; except the one of Sir Walter Scott, which was shewn to me to-day.

5794. That you consider a close representation?—It is a bold relief, and I see, that, in proportion as the relief increases, those deviations must necessarily increase also.

5795. Which do so far affect the precise accuracy?—Which do so far affect the precise accuracy as not to allow the measurements from the centre to agree.

These are the answers of an artist, and a sensible man, who sees the defect, but does not (as he is unacquainted with the machines) attempt, heedlessly, to explain the cause. But what says Mr. Benedetto Pistrucci? “5090. Should you be satisfied to place a medal of yours in the hands of the proprietors of the French machine, with a view to its being engraved, the engraving to be considered as an accurate representation of your work?—Yes, I should; but the public at large, not those accustomed to look at such things, should be made to understand, that it gives a foreshortened or perspective view of the original.”

If Mr. Pistrucci understood the terms of art which he employs, he must have known, that no foreshortened or perspective view of a medal can be given, that does not, whilst it foreshortens the relief, foreshorten the disk also; and it would have been shewn on an oval field, and not a circular one.

5092. Take the front face, should you be satisfied with an engraving, the product of the French machine?—If I had no better I should; but, if the relief is high, the appearance of the foreshortening would be still stronger.

6000. Supposing you were to place one of your own works in the hands of an artist, to engrave by hand, should you instruct him to give you a correct copy of the medal, or give you a perspective view of it?—A correct copy of the medal.

Since distortion exists in the *procès de Collas*, and foreshortening does not explain it, the shrinking of the casts may; let us see: Mr. Robert Faraday is examined to prove that metal casts shrink in cooling, but he only proves that such casts shrink *equally* in every part; this would only make the engravings less in size, not distorted.

But such excuse is unworthy of notice, since engraving from medals struck in dies, and not casts made from them, cannot help this evasion; as in the head of Sir Walter Scott, adverted to by Sir F. Chantrey, he finds the outline right (therefore there was no shrinking), but all within it wrong. Only one word in

our language will justly express this fault, “distortion.”

What says Mr. Wilson, the successor of the late Mr. Tassie, in reply to the question 6008, requiring his opinion of the engraving from the medal of Henry IV.? “The English engraving appears to me to give an exact representation of the medal, which the other does not.”\*

Mr. Henning’s evidence also proves, in the engraving, the inaccuracy of the French process. In answer to question 5049, speaking of an engraving from one of his own works, Mr. Henning says: “When I first saw the French work, from my intimate knowledge of my own work, I was surprised at the monstrosity of the faces which are done in front; some which are done looking up, in these engravings are looking down and distorted; I attributed this to the bad ones from which they must have worked; but finding this error the same in all the front faces, this assured me there must be something wrong in the machine: the evidence of Mr. Brockedon has put this in the clearest light to-day.”

The whole of the evidence of Mr. Wyon, Chief Engraver to the Mint, goes to establish the imperfections of the *procès de Collas*; but one practical answer is enough: he is questioned, 5860, upon the French engraving from his medal of Sir John Soane.

“Are you satisfied with the correctness of this engraving, executed by the French machine?—I find it inaccurate in several of its parts, which may be observed by measuring it. For my own eye I do not require compasses, it is sufficiently obvious; but, on measuring the great disproportion between the medal and the engraving, it becomes very apparent. I now place my compasses from the lobe of the ear to the point of the nose most projecting in the outline, and on applying the compasses to the medal itself, I find a difference of nearly an eighth of an inch greater in the medal than in the engraving.”

The whole of this width on the medal scarcely exceeds half an inch! nearly one-fourth error!!

But, enough of the proofs of distortion, or, as Mr. Nolte calls it in his evidence, 5957, “a *voluntary departure* from that mathematical accuracy which we might have maintained if we had thought fit to do so.” Thus, after a denial of distortion, we come to an admitted voluntary departure from accuracy; after attributing it to *shrinking of the casts*, which was certainly involuntary; to *foreshortening*, to which it bears no resemblance; we are told that “it should be further insisted upon that this ‘inaccuracy’ with which the works of the French machine have been charged, is not necessary to it, but has been merely sanctioned, for the sake of effect, by the presiding artists on the principle (!) just laid down.” Thus, *inaccuracy* is avowedly *sanctioned as necessary to the effect*. What arrant trumpery this is which has been printed and foisted upon the public about the *procès de Collas*, a name which I hope it will retain with all the honours (!). That the distortion proved, is a matter of choice and not necessity, is too gross to have been written by any honest man who was acquainted with the real state of this art. No man tries to prove that wrong is preferable to right who is not a deceiver, or who has not been humbugged.

Will Collas and Co. now assert that the gross faults of their engraving of the Henry IV. medal was necessary to its beauty? Beauty and accuracy are so far from being incompatible

\* The rest of the answer qualifying this, as he had not seen the medal, is omitted.—*Ed. L. G.*

in this art, that their union is essential to the perfection of its productions. Yet, if no other process than that of Collas were known, what has issued from the French press is, thanks to their artists, sufficiently beautiful to make one wish that such works should be produced in even greater numbers, if there were no means of making them better, if there were no machines by which perfect accuracy could be obtained, and if we had no artists in England\* with skill enough—God help the mark! to do them at least as well; but these united advantages are ours since my union with Mr. A. R. Freebairn, an eminent engraver, and the public shall not be long without proofs which will destroy all controversy.

The question, however, at this moment, is not what these *voluntary errors* might have done, but what they have done? I answer, produced a series of incorrect representations. I assert, and I shall be supported in this assertion by every mathematician, that the French machine which produced the Henry IV. and made thick heads of the Greeks in the representation of the Phrygian friezes, could not have produced them accurately; and the proprietors, finding themselves unequal to this, have now turned round, like the fox in the fable, who had lost his tail, and then swore that the loss was a matter of choice, and that he was much handsomer without one.

To this defence of myself I have been roused. English artists and talent were spoken of by this foreign party with contempt,—my invention with a sneer,—and all that I had done, as never heard of before. It may be my misfortune that I have not so much assumption as my opponents. Now, however, because I have dared to stir in my own defence, I am reproached with not having stirred earlier; now my opponents say, When we had nearly run the game down, you step in to seize it; now that we have called the attention of the trustees of the British Museum to the engraving of the medals which illustrate British history; now that we have got a committee of the House of Commons to examine our pretensions; now, after spending months in England to attain our object, we are to be thrust out by one who never stirred before.

Who told them so? More than four years ago, when I invented the correct machine, my first object was the medals of the British Museum. I applied there, without success; my applications were repeated, but I could not force my case upon their attention: I was too modest; perhaps, and I had not the advantage of being a foreigner. That I had spent thousands of pounds in machines, experiments, time, and a patent, was nothing!

The subject, however, has been, at length, brought into notice by the exertions of those who are not yet privileged to condemn me for taking advantage of it: my pretensions, also, have been fairly examined with theirs by a committee of intelligent English gentlemen; their Report of this examination is before a British public, and I have no fear for the result.—I am, &c.

JOHN BATE.

21 Poultry, January 1837.

The accompanying plate contains—  
Nos. 1 and 2. Parts of the Panatheniac Procession, from the Elgin marbles.  
3. Head of Henry IV.

\* I was fully aware that the boasted advantages of the French productions were due to the superintendence of artists; but it has been asserted by the French party, that we had none in England who could superintend such works: this would be, indeed, strange, since many of the engravers in metal, and nearly all in wood, now employed in Paris, are English artists; and yet we have not missed one of any celebrity.

4. The Ariadne gem, } by the old machine.  
 5. A cone,  
 6. The same gem of Ariadne, } by Bate's patent machine.  
 7. The same cone, }  
*See the Evidence.*

All these are engraved in full relief.

P.S. Since the above was written, I have seen another notice of the parties, promising amendment: now, we shall see whether the distortion was *necessary* to the beauty of the effect of the French works, or whether the means to which they must resort by different machinery will confirm their public statements that correctness could only be obtained at the expense of effect.

I must add one remark: the Ariadnes, correct and incorrect, were engraved by me to shew my improvements in the machine, and are printed on the specification of my patent deposited above four and a half years ago. So much for the truth of the statement that it has been done expressly to represent the *procès de Collas*, as contrasted with my own; they were printed a year at least before any works from that machine appeared in this country.

It has also been asserted (see 5956 of the Evidence), that I took my engravings from casts in enamel: this is only true of some; most of those which I have engraved have been like those of my opponents, from medals and metal casts.

All I ask, is to be fairly heard; as my opponents have already been. There is room enough in the world for two such establishments, unless the French party insist upon monopolising the whole of Europe, and depriving an Englishman, with a *proved* superior process, of the support of his countrymen.

JOHN BATE.

A regard to truth impels us to say, that, previous to reading this statement, we had been forced by the weight of evidence, and the occurrence of circumstances, to very accordant conclusions.

Mr. Tilt petitions the legislature to give him public aid in publishing a splendid national work—"A Medallist Illustration of British History"—and through the medium of a French company, existing in Paris, and working a machine invented by M. A. Collas.

Upon this an inquiry is founded, and the petitioner, in support of his application, calls Mr. Vincent Nolte (an American gentleman, who, by his spirit of enterprise and speculation, has become the principal of that trading company);† Sir Francis Chantrey, the eminent sculptor; and Mr. Edward Hawkins, the keeper of the antiquities in the British Museum, who, in the event of success, was to write the literary portion of the work.

Without being unduly imbued with nationality, there is certainly something repugnant to our feelings in the first blush and opening of this scheme. Except Sir F. Chantrey, every one of the witnesses has a large direct interest in the design, if not to lead him into wilful partiality, which we would not even insinuate, at least to warp his judgment, as human nature is too apt to be unconsciously biassed by such a cause. Mr. Nolte had the means of a fortune at stake; Mr. Tilt the profits of an immense publication; and Mr. Hawkins a literary and antiquarian engagement, to which he would have done honour, and for which he would have deserved rich and honourable remuneration. The work was proposed to be executed in Paris, from engravings done in London, and the steel plates sent over to be printed

\* It was necessary, in order to have a sufficient supply, to have a second plate engraved; in which the positions of the subjects have been purposely altered, but they are identical, and referred to by the same numbers.—*Ed.*

† I am, he said, the founder of it, and have embarked a great deal of money in it.

there. Mr. Tilt accounted for the inferiority of some of the French plates already published, "from imperfections in the instrument; in other cases, from deficiencies in the medals themselves; and, sometimes, from neglect in the person working the machine:" but he would guard against any such in his projected history. He had never seen any satisfactory engraving by Mr. Bate's machine; understood it required "the superintendence of a species of artist" (?) and must work very slowly: while in Collas's machine the process was mechanical. All this is sadly at war with Mr. Nolte and the other witnesses.

Sir F. Chantrey characterised the word "distortion" as too severe when applied to the Collas engravings. For very bold relief the machine was unfit, but, for a flat medal, the most satisfactory thing he had seen.

Mr. Hawkins was much in favour of the French *procès*: there might be deficiencies, not inaccuracies, (a curious distinction!) and he deemed it necessary that the engravings should be retouched by artists (refer to Mr. Tilt above), and engravers employed to assist the inscriptions.

Mr. Nolte fixed Collas's invention at the end of the year 1831, when he constructed his machine, upon very different principles, from an outline he had seen in the "*Manuel des Tourneurs*," published some twenty years before. It was taken up by several distinguished Frenchmen, and was soon effectively patronised by the government. Mr. Nolte having referred us to his second examination, in explanation, we, with pleasure, add the two queries and answers which he specifies.

"5954. Will you state in what particulars the evidence is defective?—I wish first to satisfy the Committee that the machine can produce a correct engraving, by laying one before them. The Soane medal has been produced, and has been measured. When I found that some objections were taken to the correctness of our engraving of that medal, to satisfy all views of the matter, I had another engraving taken of it, which I have now produced, and which shews to the Committee, if it be measured in the same comparative way in which the other was measured, that is to say, from the lobe of the ear to the point of the nose, or from the lobe back to the head, or from the lobe to the frontal sinus, and so on, that it answers all the exigencies of that mathematical accuracy which some are disposed to require. It corresponds, in fact, and most accurately, with all the proportions of the medal.

"5955. Is that specimen which you have now produced, in your opinion, mathematically correct?—Yes: however, I must observe, that we have found latterly, that, as our engravings are executed from casts in brass, which are taken of these medals, the shrinking of the cast always diminishes a little the size to the eye; wherefore our engravings from medals generally give an idea of their being a little smaller than the medals from which they are engraved. This, I can easily prove, arises from the shrinking of the cast.

"5956. And so far, the engraving is not accurate?—Certainly not: our casts cost but a trifle. Mr. Bate has taken his engravings from casts in enamel, which may have cost from one to two guineas a-piece, and the engravings taken from these casts in enamel are apt to be (where a pair of compasses is applied) a little more accurate than ours. It has been stated in evidence, with doubt by one witness, but positively by another, that there was not a

corresponding movement between our tracing and our cutting points, the one moving in a straight line, the other producing a curve. This is a mistake; the difference that may be found merely arises from the view taken by our artists of the manner in which the medal is to be engraved. We usually take a perspective view of it, which is invariably found to answer all purposes, particularly that of giving the effect of relief, better than one taken from the top. It has also been stated, that in order to conceal a distortion (which I cannot admit), we have contrived to lessen the relief of the medal, and that therefore we resorted to another incorrectness to hide the first. This, again, is an error. We have always given the height of the relief clearly, as may be seen in all our engravings of medals and others. Mr. Bate, in his machine, has got over the difficulty, by giving no relief at all, as I will shew to the Committee in the following instance. Here is an engraving, which has been already before the Committee, of a medal with the head of Henry IV. by our machine, and another engraving of the same medal by Mr. Bate. [*The witness delivered in the same.*] In our engraving, the height of the relief is perceptible by the shelving of the bust towards the plane of the medal, by the collar, &c. Mr. Bates's medal shews nothing of the kind: it gives shadow, but no light. I have further to state, that an account of a comparative measurement has been given by one of the witnesses of the large medal of Pierre Jeannin. Although his geometrical eye could discover a difference of one-third of an inch in the head, it has not been able to see within the whole of an inch the width of the diameter of the medal. Mr. Hawkins, now in the room, has it in his hands, and its diameter measures exactly seven inches and a half. Here is our engraving of this very medal, which we consider one of our best productions, and in which there is a relative difference in the diameter from the medal. The diameter of that engraving is less by three lines than that of the medal. We consider this engraving, as I have already stated, one of our best productions, from the very circumstance of the medal being in the highest possible relief, and one of difficult execution."

On the other hand, besides Mr. Brockedon, whose talents and intelligence need no allusion, beyond the display in the evidence quoted by Mr. Bate, Mr. Wyon, the chief engraver of our royal mint, and a medallist unsurpassed in Europe; Mr. Doubleday, whose labours at the British Museum are highly appreciated by every English artist; Mr. Henning, the artist; Mr. R. Faraday, an experienced brass-founder; Mr. Pistrucci, of the mint; Mr. John Wilson, gem engraver; and Mr. Bate himself (the latter, like Mr. Nolte, deeply interested); have all, more or less, impeached the assertions in favour of Collas's process, and sustained the claims, both as to priority and merit, of the English mechanist.

Mr. Wyon mentioned Mr. Bate's attempts about 1828, to construct a machine, in union with Mr. Bawtree of the Bank of England: this was what is called the old machine. Mr. Bawtree died before Mr. Bate invented and made the machine which he patented. By the former was produced the Cheselden Medal for St. Thomas's Hospital in 1830, which was greatly improved in 1831-32, and made it capable of "a perfectly accurate representation." His objections to the Soane Medal, by the French machine, are very strong; while that by Bate's machine was "quite accurate."

At our request, Mr. Nolte has been obliging

enough to send us other specimens of the Collas machine; one a large head of Louis Philippe, and a very showy production. Not having seen the original medal, we cannot decide upon its fidelity; but it does strike us that the nose is very disproportionately narrow. If this be the fault of the medallist, or if his majesty's head is really so mis-shapen, the machine, of course, has nothing to answer for. But, if the error is in the machine, it would be a striking confirmation of Mr. Wyon's objection to the Soane medal, viz. that it was out of proportion no less than a fourth part. In the other specimen sheet, some of the subjects are admirably ruled, and justify the compliments paid, in Mr. Brockedon's evidence, to the skill of the artists. Mr. Nolte particularly directs our attention to the engravings of a key and a shell, beautifully ruled and ingeniously bitten; but these for the question at issue—*accuracy*—are hardly sufficient proofs; since we cannot so readily detect "distortions" in such subjects as in faces, where the originals can be seen, or where frequent observation of medals or gems furnish adequate grounds for comparison.

Having considered both sides of the case, we must say, it affords us a certain gratification to be called on, by a sense of right, to stand forward on behalf of native ingenuity, talent, and invention. As for priority in time, if Mr. Collas, the Paris mechanic, in 1830, took the hint from a publication twenty years old,—the "*Manuel des Tourneurs*;" surely he can possess no superior claim to Mr. Bate, the London mechanic, who, no matter where he got the first suggestion, commenced similar operations in 1828.

While his competitors produce misrepresentations of the medals they engrave, Mr. Bate need not have any fear for the value of his invention: their machines are clearly not, in principle, like his. It will be time enough for him to protect his patent right when correct images are produced by his opponents, whether Collas and Co., or others. The former have promised accuracy, which, of course, is capable of instant proof. This Mr. Bate has shewn can only be obtained by the adoption of the principle which he has patented; and in the privileged use of which he is protected by the laws of his country.

Then, with regard to present execution, the whole mass of testimony is prodigiously in favour of the English machine. As for the challenges between the parties, we would not give a rush for them; but we cannot peruse the evidence of such disinterested individuals as Messrs. Brockedon and Wyon, without being powerfully impressed with the truth of their facts, and the correctness of their opinions.

We are not surprised that the Parisian company of Lachevardiere and Co. should be much annoyed, when they were endeavouring to carry a great English national work by a *coup*, to find a sturdy opposition start up in English art; but they could not have been unaware of the progress made in perfecting machines of the same kind in England (Mr. Bate's patent, sealed before Collas's was published at all, Mr. Lacy's, and published engravings, were too notorious), and they ought to have been prepared for a fair trial of skill and comparative merits. This they have now had; and we think it will be difficult for them to induce a belief, that we are so deficient in art, artists, and machinery, as to be unable to cope with them in the production of a series of medallic engravings; and still less so, on the pretence that the *eye* is better than the *compasses* for ascertaining the accuracy of such engravings.

On one hand, they cannot be allowed this boast, for it is not an apology; while on the other, they assume the credit of being geometrically correct. This is the hot and cold blowing of the satyr.

With respect to Mr. Bate and his friends using the term, "French Machine," thus misleading persons to infer that it was Collas's, the only French machine in existence, instead of being, as Mr. Nolte says, Bate's own old machine: if disingenuously done, we would heartily disapprove of it; but this is denied and explained in the P.S. to Mr. Bate's letter. It cannot, however, in any way affect the real merits of the discussion. All that the public has to ascertain is, if there be at home honest and successful mechanical invention, coupled with native talent, competent to produce the national work described; or whether we should be compelled to apply to a French company, with a foreign head, to execute it for us. The parties are in court. Mr. Nolte has had the start, and almost put down and silenced opposition; which, under any circumstances, is to be deprecated. If we are right in thinking, it would have been manifest injustice if he had achieved this object; that, with Mr. Bate's plates before the world, it is obvious that his labours to bring the art as near as possible to perfection, and to excel Collas, have deserved an opposite result; and that honour, as well as *amor patriæ*, entitle him to support. If we are right in these opinions, we are, nevertheless, open to reply, and the French company (the first assailants, though they complain of opposition) are welcome to the rejoinder, if they can controvert or disprove a single point, as we have felt it to be our impartial duty to trace upon our *Literary Machine*.\*

#### BRITISH GALLERY. (Second notice.)

421. *The Legend of St. Dorothy*. H. L. Smith.—We know nothing of the legend, but it has afforded the artist an opportunity of exhibiting his talents in a department of art that calls for their utmost and most persevering efforts; and in which, we think, he has been eminently successful. In a variety of instances, we have traced Mr. Smith's progress in subjects of an elevated class, and have found in him qualities commensurate to the undertaking.

420. *Celesto, Ovid's Metamorphoses*. R. Rothwell, R.H.A.—This is rather a preparation than the completion of a study. It seems the statue of Pygmalion, or one of Baily's beautiful figures of repose, warming into life. As a preparation, the pearly tints, in the body of the female, are some of the purest we ever saw. As a specimen of the artist's powers, in their full effect, we have only to point the attention of the visitor to No. 239. *Study from Nature*.

391. *Riensi, the Last of the Tribunes*. S. Bendixon.—Without pointing to any particular passage in which this heroic figure appears, the artist has given a space in the scene, and a form both striking and attractive. It is one of

\* Since preparing our remarks on this subject, we have seen the *Mechanics' Magazine* of February 4th, which has warmly espoused the cause of native art, in respect to this invention. It contains, also, a very strong letter from Mr. John Henning, charging the Paris company with the most unworthy conduct towards his labours works from the Parthenon and Phrygian marbles, pirating them and suppressing his name. These accusations Mr. Nolte and Mr. Lachevardiere deny, or explain away; and we only notice the fact, as one not to be overlooked in this controversy. As we are mentioning our contemporary, we take the opportunity of saying, that the *Mechanics' Magazine* contains some very excellent scientific articles.—Ed. L. G.

the best examples of Mr. Bendixon's pencil; and is carefully, as well as skilfully, painted.

397. *Interior of the Abbey Mill at Reading*, E. Havell,—is, with all its intricacies of wheels and machinery, so true to nature, and so admirable in its effect of light and character, that, were it painted the size of life, or panorama fashion, one would almost be persuaded to step into it.

244. *Lovers*. C. W. Cope.—From "Love" to Lovers is a very natural transition, and, from the artist's beautiful allegory, we come to a scene of real life. In the yielding looks of the female, we read the successful suit of the lover, which has, no doubt, been aided by the harmony of sweet sounds. But it is rather with the solid and masterly character of the painting that we are most pleased: and its character as a work of art is, perhaps, its best recommendation.

(To be continued.)

#### GRAPHIC SOCIETY.

ON Wednesday the second conversazione of this Society took place at the Thatched House; and, *malgré* the weather and the influenza, the meeting was an agreeable one. Many beautiful drawings, sketches, engravings, and pictures, were placed on the tables. Folios were furnished by several of the members and contributors; and, among others, by Mr. Evans, Mr. Cope, Mr. Griffith, Mr. Cowan, and Mr. A. Glennie. Among the company we observed Professor Babbage, Mr. Greenough, Mr. Rogers, and Mr. Morier. It is a peculiar feature in this society of artists, that such men, distinguished in science and eminent in literature, are found among its visitors.

#### ORIGINAL CORRESPONDENCE. THE EUPHRATES EXPEDITION.

[Latest Accounts.]

Bagdad, September 20th, 1836.

MY DEAR —, I write to you a few words to announce our arrival at the city of the caliphs. My last was from Erane, or Quait, on the Arabian side of the Gulf. The detention which we experienced at Bushire brought us to the period of nearly the lowest season, with, unfortunately, only the larger steamer on our hands. The first Indian mail arrived by the Hon. E. I. Company's schooner, Shannon, on the 13th inst. with intelligence of the transmission of another mail, *per* Hugh Lindsay, at the end of the month. The Shannon joined us at Mohammra, a town which is rapidly rivaling Bussora, and already beats it in trade. It is on the Persian side of the Shat el Arab, below Bussora. There did not remain time to proceed up the Euphrates with the mail, and return again for that expected by the Hugh Lindsay; so that, on our arrival at Korna, we received the unexpected orders to proceed up the Tigris to Bagdad. This was also, in part, in consequence of private intelligence, received by Colonel Chesney, of the state of parties in the upper river. Our navigation here was unattended by any accidents, and only a short detention on a bank, a few miles below the city, said by the pilot, who is a quizz, to be newly formed! The evening of our arrival, the bridge of boats having been unslung, we were enabled, after taking on board, and saluting, Colonel Taylor, the company's political resident in Turkish Arabia, to sail up the left bank, to beyond the pasha's serail, returning by the right bank to anchor opposite to the residency. The whole population had turned out, and seemed to think that days more brilliant, and equally wonderful with those of

Haroun al Raschid (may his memory be revered! as worthy Ibn Hankal would say) had once more come back. Ali Pacha is returning from a short campaign with Rawandus, a Kurd chief, who, from having one eye, professed himself to be the Tamerlane of the day; but he is now a prisoner of Reschid Pacha, the general commanding the sultan's forces, which occupy the northern countries as an army of observation upon the swarthy Egyptian at Antioch. In allusion to this modern Cadmus, I cannot help remarking, that, whatever may be the opinion of parties concerning the ultimate success of this enterprise, it was surely in very bad taste, to put the statements of a person called Waghorn, and well known in the East, in opposition to the direct representations of Colonel Chesney, and every one of the officers under him. The liberty of averring from remote Egypt that Mohammed Ali was doing everything in his power to assist the expedition, every one has the full license, as far as his conscience will permit him, to exercise; but every feeling of love of justice and truth is revolted, when such asseverations are brought as evidence against the united statements of officers, who would soon become chary of giving information, if the return to be met with was the contradictory evidence of discreditable witnesses, brought forward in a discussion which they have never sought, and are only anxious to leave to the neglect which it deserves.

Our able astronomer, Lieutenant Murphy, perished, as you know, in the midst of his pursuits, at Bussora. With that, and a few other exceptions, the state of the health of the crew is highly satisfactory; more especially in a case of unusually high inundations, and the gales of the year. There are, also, the most confident anticipations of a continuation of good understanding with the Arabs: the Sheikh of the Ben Hachem tribe, with whom we had a slight affair, as noticed in a previous letter, has refused to take the part of the quarrellers, whom he acknowledges to have been in the wrong. The Tigris steamer has made its appearance with the low waters; she was found at some distance from where she went down, with her bottom turned upwards. There is an officer on the spot, to work at her recovery. A line of levels is about to be carried from the Tigris to the Euphrates, in order to ascertain the difference of level between the two, and also, more particularly, to establish a line for a canal between the rivers, which the Pasha of Bagdad is anxious to set about immediately, and which, with all antiquity to vouch for its utility, offers a hitherto inappreciable value to commercial communications on the introduction of steam into this land of great rivers: for I forgot to mention that, while at Mohammra, we took a trip of no less than seventy-five miles up another splendid stream, the Karoon, whose waters bathe the walls of Shuster, the present capital of Kustistan; a province which is rich in all the productions of the best countries of Western Asia.

With regard to botanical labours, I can only say that we have been disappointed with the vegetation, as far as regards the variety of plants; but reconciled by determining the geographical distribution of the same forms over tracts of similar characters. While, as might have been anticipated, the waters of the great river present some forms of animal life, more particularly among the birds, which are peculiar to it,—they also present forms that are common to it and the Tigris; to it and the rivers of Hindoostan; and to it and the Indus, the Ganges, and the Nile. But the Tigris, which

has forms of animal life in unison with the Euphrates, can boast, also, of its distinctive features in zoology, which, in their enumeration, will be of much interest to naturalists.

Geology has, however, been most fruitful in the results presented to an anxious inquirer. The banks of the Euphrates were the acknowledged country of the deluge. It remained to seek for the evidence of this catastrophe, and to compare this evidence with that which has been supposed to be characteristic of the Noachian deluge in European countries: it remained, also, to sift the uncertain evidence furnished by geological monuments from the certainties of the sacred text. It was a delicate labour; and, I hope, that it has been accomplished without injury to the cause of science, as it is impossible it can be to that of religion—which is undisguised truth. There have existed, in the basin of the Euphrates and Tigris, and in the Delta of Susiana, the evidences of some of the latest and most remarkable changes that have occurred within the periods of traditionary and documentary history. The manner in which I approached the subject was to study the structural limitation of the alluvial basin, for which great additional opportunities were given by the visits to Erane and Bushire, and by the ascent of the Karoon; then, by a reference to the frequently discussed records of the voyage of Nearchus, the testimonies of Herodotus, Pliny, and other historians, and the direct study of the comparative geography of existing positions and ancient sites, data were obtained which could be brought, with a certain degree of validity, into discussions which concerned the increase of land which has taken place in modern times in these countries, and the general result of which have been, that this increase is much less than is argued by some modern writers.

The barometrical levelling of the Euphrates has not yet been put in order, as there are hopes of giving greater accuracy to the results, by obtaining a second set on our ascent, and in a different season of the year.

But these researches must yield the palm, however valuable, to general knowledge; to the advantages which will be gained to civilisation by the accurate mapping of countries so renowned of old, and the already satisfactorily determined navigability of the three great rivers, the Euphrates, the Tigris, and the Karoon, against the current, and at any season of the year, with boats constructed for the purpose.

Geneva, Jan. 28, 1837.

WE have been peculiarly favoured in these wilder regions: no cholera, no influenza, no hurricanes; nay, not even snow enough to impede the passage of the high roads. On Christmas-day we had, like all the rest of the world, a fall of snow, but merely enough to allow the use of sledges; which, from their varied fashions, and merry jingling bells, made an agreeable variety. The cold has been much less than what I have often experienced in England, in my dressing-room, without fire, and with a single window exposed to *la bise*. Not even my sponge has frozen; this says more than the thermometer for the comfort of our rooms; which, with the aid of double windows, quite answer to our English word, comfortable. On Tuesday night, or rather about two on Wednesday morning, we had two shocks of an earthquake, which were felt for some distance round the city: though slight, they were sufficiently strong to shake this immense building from bottom to top. My curiosity does not lead

me to wish for a repetition; but, as it was but a little one, I do regret that, if I felt it at all, it only rocked me to sleep. In many parts of Italy the cold has been intense; at Nice, not only the oranges, but orange-trees, are destroyed; and on Christmas-day there was a fall of snow one foot deep. Last year the fruit was frozen, but the trees escaped, owing to the dryness of the atmosphere, though there was often ice an inch thick.

#### ARTS AND SCIENCES. ENTOMOLOGICAL SOCIETY.

(Anniversary.)

JAN. 23d. The Rev. F. W. Hope, president, in the chair.—The auditors of the treasurer's accounts presented a report upon the state of the Society's affairs, exhibiting a considerable balance in hand; which report was unanimously adopted. The following officers for the ensuing year were elected: president, J. F. Stephens, Esq.; treasurer, W. Yarrell, Esq.; secretary, J. O. Westwood, Esq.; curators, Messrs. Shuckard and Westwood. The president delivered an address, in which he congratulated the Society upon its rapid advance and favourable prospects. He dwelt at considerable length upon the loss which science had sustained by the death of Dr. Leach; and deprecated the indiscriminate felling of the trees in Kensington Gardens, which it would take so many years to replace. The secretary gave notice, that the council had resolved that the larvae of *Athalia centifolia*, or blacks, as they are ordinarily termed, and which have latterly been so destructive to turnips, should be the subject of the prize essays for 1838.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, Feb. 3.—The following degrees were conferred:—  
*Bachelor in Divinity*.—Rev. R. Bird, late Fellow of Magdalen College.

*Masters of Arts*.—T. W. Allis, Fellow of Wadham College; Rev. R. J. Dunn, Exeter College; Rev. T. B. H. Thompson, Taberard; Rev. J. Duffus, Queen's College; J. E. Bright, Student of Christ Church; Rev. A. S. Genn, Magdalen Hall; Rev. R. Walker, Chaplain of New College.

*Bachelors of Arts*.—A. Slocock, Trinity College; C. H. Borrer, Oriel College; J. W. Nicholl, Jesus College; W. Miller, New College.

CAMBRIDGE, Dr. Smith's Prizes.—These annual prizes of 25*l.* each to the two best proficient in mathematics and natural philosophy among the commencing Bachelors of Arts, have been adjudged to Dr. Griffin and Dr. Brummell, both of St. John's College, the first and third Wranglers.

Feb. 1.—The following degrees were conferred:  
*Honorary Masters of Arts*.—Earl Compton, eldest son of the Marquess of Northampton; Lord Haddo, eldest son of the Earl of Aberdeen, Hon. F. G. B. Ponsonby, second son of Lord Duncannon, Trinity College; R. Neville, Magdalen College, eldest son of the Hon. and Rev. the Master of Magdalen College.

*Bachelors of Arts*.—T. H. M. Bartlett, A. C. Frazer, C. S. M. Phillips, V. Clementi, Trinity College; W. J. Kennedy, J. H. Mills, St. John's College.

#### ROYAL ASIATIC SOCIETY.

SATURDAY, Sir Gore Ouseley, V.P., in the chair.—Donations to the library were laid upon the table. A paper, by G. W. Earl, Esq., on the subject of Borneo, was read to the meeting. This great island, which, from its magnitude, the fineness of its soil, and practicability of its rich mines of the precious metals and diamonds, would seem to deserve the attention of Europeans, is, in fact, very little known beyond its coasts. The notices communicated by Mr. Earl were partly gathered in a visit to the western coast, and partly from the notes of a gentleman who visited the interior from the opposite side of the island. Some information was also procured from several Europeans and natives who have visited other

quarters. The writer observes, that the Dyaks, who are supposed to be the aboriginal possessors of the island, are driven into the interior by Chinese and Malay colonists, who have settled on the western coasts for a very long time: the former employed in working the mines, and cultivating the soil; while the latter are more generally engaged in piracy. The Chinese are principally settled between the Pontianak and Sambas rivers, both streams of considerable depth, and penetrating far into the interior. The Sambas has been ascended by the Dutch eighty or ninety miles; and the Malays are said to have reached, in their canoes, a place within two days' journey of the town of Borneo. The Pontianak is not so large as the Sambas, but is rendered of more importance by the settlement, at its embouchure, of the principal Dutch factory, and by another establishment on one of its smaller branches seventy miles from the sea, near the chief diamond mines. This river has been ascended 230 miles, by an expedition from the settlement at its mouth; but no account has been made public. Mr. Earl was informed, by a gentleman of Sambas who was well acquainted with the conductor of the expedition, that the river was found to open into a lake, twenty-five miles long, and three fathoms in depth. By the Dutch settlement at the mouths of these two rivers, the Chinese inhabitants of the intervening country are kept in a sort of prison. Dutch gun-boats constantly cruise on the coast, and prevent any arrival or departure except through their own factories, where enormous duties are levied on all goods passing, and a tax of sixty guilders imposed on every man quitting the country; a system which has almost ruined the commerce of the coast, and proved a source of loss to the revenue of the Dutch themselves. The Bugis of Celebes are settled on the eastern coast of Borneo, where they carry on a considerable trade. In 1827, Mr. Dalton of Singapore went to Coti, a town sixty miles up a river of that name, in a Bugia prahu, and ascended that river 600 miles; he was treated well, and adopted as a brother by one of the chiefs of the interior. This gentleman is unfortunately dead, and his papers contain little or no geographical information; he has, however, left many curious details on the manners of the Dyaks, who seem to be a ferocious race, much engaged in expeditions of indiscriminate slaughter against other tribes, for the sole object of obtaining human skulls, to ornament their dwellings, and give them a claim to the title of man. Without at least one of these skulls, a man is not allowed to marry; and the possession of many constitutes a nobleman. It is consolatory to find, that the Dyaks are not irreclaimable. Mr. Earl found that those residing near the Chinese settlement had totally abandoned their horrid customs, and were milder than any of the inhabitants of the archipelago that he had seen. It is impossible to estimate the number of these people; but it is stated by Mr. Dalton, that those under the dominion of the chiefs near the river Coti, amount to 270,000 persons. All these people are easily kept in awe by a few Bugis; such is their dread of fire-arms, that the report of a gun is said to make them run for miles. The Bugis are also established in considerable numbers on the south side of Borneo, from whence they export diamonds, gold, pepper, and rattans to Java. There are many little towns on this coast inhabited by these people, which, since the establishment by England of the port of Singapore, are fast rising in importance. Mr. Earl is inclined to doubt the existence of the

chain of mountains which figure in our maps as extending from N.E. to S.W. through Borneo; and thinks that, when the island is better known, it will be found that their place is occupied by a chain of lakes. He grounds his opinion chiefly upon the fact that, with the exception of those of volcanic origin, all the mountains of the Indian Archipelago take a direction from N.W. to S.E.; and Mr. Dalton, who must have crossed the line laid down, says not a word about mountains. The writer concludes, by hoping that the geography of Borneo will not be much longer neglected; observing, that the numerous rivers afford a very easy communication with the interior, and that the timidity of the natives obviates any apprehension of obstruction on their parts; while the rich mines and fertile soil of the country would afford a valuable return for any articles of British merchandise it might be thought proper to introduce.

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Mr. Charles Roach Smith exhibited a die and counter die for a half-crown of Charles I., found in the excavations at Lothbury. Mr. Carlos exhibited nine drawings of ancient paintings in St. Mary's church, Guildford, and a plan of the chancel. Sir Henry Ellis communicated an account, from the Lansdowne MSS., of an attempted assassination of William, prince of Orange, in 1583; written by one William Hurtle to Lord Burleigh. A pistol was fired at the prince, and the bullet entered at one cheek, and passed through the other, without materially injuring the mouth. The pistol burst and injured the assassin, a Biscayan; but he was killed on the spot by the swords and daggers of the bystanders. The prince survived only to fall by a pistol-shot in the following year.

## LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Royal Geographical, 9 P.M.; British Architects, 8 P.M.; Marylebone Literary, 8½ P.M. (Dr. Grant on Radiated Classes of Animals; and on the 20th); Belgrave Literary (Conversation).  
*Tuesday*.—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8. (The Secretary on the Metallic History of Iron, Part III.); Belgrave Literary, 8 P.M. (C. Johnston, Esq. on Conchology; and on the 21st).  
*Wednesday*.—Society of Arts, 7½ P.M.  
*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Islington Literary, 8 P.M. (Dr. Trueman on Digestion; and on the 23d).  
*Friday*.—Geological, 1 P.M. (Anniversary); Royal Institution, 8½ P.M.  
*Saturday*.—Royal Asiatic, 2 P.M.

## BIOGRAPHY.

JOSEPH SABINE, ESQ.

WE have to record the death of this amiable man, aged 66, which took place at his residence, No. 15 Mill Street, Hanover Square, on Tuesday, the 24th of last month. He was educated for, and early called to, the bar, where, indeed, he began to practise. In 1808 he was appointed inspector-general of taxes, which office he held for twenty-six years, and when that office was abolished, in 1835, the present government allowed him a compensation pension of only 350*l.* per annum, seven of his colleagues having retired eighteen years before on 400*l.* Mr. Sabine was honorary secretary (we may say founder) of the Horticultural Society; treasurer and vice-president of the Zoological Society; and one of the council of the Royal and Linnæan Societies; and a member of many other scientific institutions. His remains were interred, on the 1st instant, in the cemetery in the Harrow Road, attended by his nephew,

Captain Browne, Captain Bowles, R.N., Dr. Beattie, Edward Barnard, Robert Brown, Edward S. Hardisty, and Thomas Goode, Esqrs. During his latter years he was much annoyed by dissensions in the Horticultural and Zoological Societies, in which he was much assailed. We enter not into such disputes, and they can affect him no more.

We have to record, also, the death of Dr. Latham, a very distinguished naturalist, and author of several works connected with natural science, as well as works of reputation on medical subjects.

## DRAMA.

*St. James's*.—*Pedrito* was produced to a crowded house on Thursday, cast in a manner to afford the highest musical gratification, and will, in consequence, now alternate most successfully with the excellent Lenten entertainments of Wednesday and Friday.

*Adelphi*.—On Monday, Mr. Rice appeared in a new character (and was as successful as ever), in a farce by Mr. Parry, and entitled *The Peacock and Crow*; which is a series of scenes, mainly depending on the powers of Mr. Rice, who introduced several "nigger" melodies with great applause. The piece has little merit, but was successful; being capably acted by Messrs. Buckstone, Wilkinson, and Rice, and Mrs. and Miss Daly.

The *Adelphi* is repeating on these Lent days the various entertainments which we had occasion to commend so cordially in our first notice of them.

*Queen's Theatre*.—On Thursday, we had two new and successful pieces at this pleasant little theatre: the first, a translation from the French, entitled *The Abduction, or the Farmer's Daughter*, being nearly the same as the *Adelphi Duchess de la Vaubalière*; and the latter, an original two-act comedy, called *Fairly taken in, or the Portrait*, of which we shall only say, at present, that it was well acted, and that it will amply repay a visit. The house was well filled.

*Olympic*.—*The Two Queens* was revived on Monday, and has been repeated during the week. The return of Mr. Liston and Madame Vestris has drawn bumper houses.

## VARIETIES.

*The Booksellers' Provident Institution*.—We are glad to see a meeting of the booksellers of London, and the friends and subscribers to the Institution, is to be held at Stationers' Hall, next Wednesday, to receive the report of the provisional committee, and for general purposes. The Lord Mayor has consented to take the chair, and we have reason to believe that this excellent Institution will commence under such auspicious circumstances as will give entire satisfaction to its well-wishers and supporters. We have read over the rules and regulations about to be proposed; and they appear to us to be drawn up with great prudence and judgment, so as to insure the permanent endurance and prosperity of the design.

*Astronomy*.—Mr. Adams began his course of popular lectures on astronomy last night; in which Halley's comet will shine again.

*Wellington Statue*.—At a numerous meeting of the committee appointed to carry this design into execution, which took place at the Mansion House, on Thursday, it was unanimously resolved that the statue should be erected in the heart of the city of London, on a convenient site between the Bank and the Mansion House. Mr. Simpson, with whom the idea of this tribute originated, and the

gentlemen of Southwark who united with him in setting it on foot, most handsomely sacrificed their feeling of preference for the Surrey side of the bridge, and cordially joined the city gentlemen in voting for the admirable situation now fixed upon. A vote of thanks was given to Mr. Simpson for his conduct on the occasion.

*Mosse's Parliamentary Guide*, corrected to 24th January, 1837 (Baily and Co.), appears very opportunely, and is a very complete performance. It is worthy of remark, as a proof of the uncertainty of human life and the fluctuation of circumstances, that, even in the list of the two houses of parliament (peers, 430; commoners, 658—total, 1088), notwithstanding this manual is brought down to so late a date, there were, at the meeting, changes by death, amounting to nearly one per cent! There is one grave objection to this Guide, viz. that it occasionally tries to guide political opinions, as well as afford parliamentary information. This is out of place.

*Comic Quadrille Conversation Cards*, by Alfred Crowquill. (London, Ackermann.)—A pack of cards, pictured on one side, and *poetized* on the other. They would be the best things in the world for the side couples, who generally twiddle their thumbs during the salutations of the top and bottom, and *vice versa*. We recommend all our dancing friends to procure this whimsical illustration of quadrilling. The ladies and gentlemen are cleverly and ludicrously drawn; and the verses have many laughable points and puns.

*Weather Wisdom*.—Again the predictions for the week have failed, except that about Wednesday there was a frost: all the rest in error. Again, to-morrow is to be "cloudy; the middle of the week turbulent, gloomy, and frequent rains; 18th and 19th, milder.

Yesterday, at the anniversary of the Astronomical Society, the gold medal was awarded to Professor Rosenberger of Halle.

## LITERARY NOVELTIES.

### LIST OF NEW BOOKS.

The Surgical Works of John Hunter, F.R.S., with Notes by James F. Palmer, Vol. 1. 8vo. 17s. 6d.—*Instinct and Reason Philosophically Investigated*, by Thomas Jarrold, M.D. 8vo.—*Lectures on Popular Education*, by George Combe, 3d edition, cr. 8vo. 2s.—*Rabbi Kimah's Commentary upon the Principles of Zohar*, by the Rev. A. McCaul, 8vo. 7s.—*Indian Reminiscences*, by the late G. A. Cauldon, 8vo. 14s.—*The Gambler's Dream*, 3 vols. post 8vo. 11s. 6d.—*Rev. W. Greenhill's Exposition of Ezekiel*, edited by J. Sherman, royal 8vo. 1l. 5s.—*Donnegan's Greek and English Lexicon*, 3d edition, 8vo. 2l. 2s.—*Works of the Rev. D. M'Nicoll*, with Life, by the Rev. J. Dixon, 8vo. 12s.—*The Hope of Glory*, by the Rev. J. Brown, 18mo. 2s.—*Sacred Songs for British Seamen*, by the Lady J. W. St. Maur, 18mo. 1s.—*Supplement to Bent's London Catalogue*, 8vo. 3s. 6d.—*Sixteen Lectures upon the History of Elijah*, by the Rev. R. Simpson, 12mo. 6s.—*Life and Correspondence of the late Rev. H. Beltrage, D.D.*, by the Rev. J. M'Kerrow and the Rev. J. M'Farlane, 8vo. 8s.—*The Letters of E. Macdonnell to the Editor of "The Times,"* 12mo. 6s.—*The Child's Sacred Year*, royal 32mo. 1s. 6d.—*Tales in Prose*, by Mary Howitt, 12mo. 5s. 6d.—*The Pharmacopoeia*, translated by Dr. D. Spillan, 18mo. 6s.—*Woolrych's Inclosure Act*, with Note, 12mo. 3s.

## TO CORRESPONDENTS.

A Constant Reader wishes us to state, for general information, that all the Parliamentary Reports, such as those on the Record Commission, on the British Museum, on Prisons, on Poor Laws, &c., are published, and to be purchased at moderate prices. On the subject of the British Museum our opinions do not coincide with his: If they had, we should have treated the subject in the same manner we have applied to the state of the Records.

Our department of "Fine Arts" this week is a little out of its place; but the convenience of "making up," and its own interest, will, we hope, excuse it.

ERRATUM.—Article "Music," in our last, p. 75, l. 3, for "nuisance," read "misnomer."

## ADVERTISEMENTS, Connected with Literature and the Arts.

### BRITISH INSTITUTION, PAUL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.  
Admittance, 1s.—Catalogue, 1s.  
WILLIAM BARNARD, Keeper.

### BOOKSELLERS' PROVIDENT INSTITUTION.

A Meeting of the Booksellers of London, and the Friends and Subscribers to the Institution, will be held at Stationers' Hall, Ludgate Hill, on Wednesday, the 15th of February, at 11 for 12 o'clock precisely, to receive the Report of a Provisional Committee appointed on the 16th December, and to proceed to the formation of the Institution and the Election of Officers, and other business.

The Right Honourable the LORD MAYOR  
Has kindly consented to take the Chair.  
W. MEYRICK, Hon. Sec. 6 Falcon Square.  
\* \* \* Copies of the Rules may be had at Messrs. Longman and Co.'s Paternoster Row; Mr. Greenland's, Poultry; Mr. Lawford's, Saville Passage, Piccadilly; Messrs. Golding and Co.'s, New Bond Street.

### WELLINGTON STATUE.

At a Meeting held in the Mansion-House, on Thursday, the 9th of February, present,  
Sir C. S. HUNTER, in the Chair,  
In the absence of the Lord Mayor, who was presiding at Guildhall.

Lord Viscount Beresford  
Lord Hill  
Sir F. Trench, M.P.  
Sir F. Laurie  
Mr. Alderman Winchester  
Mr. Alderman Wood  
Mr. Alderman Farebrother  
Mr. Alderman Lucas  
Mr. Alderman Thompson  
Mr. Sheriff Johnson  
Mr. Sheriff Dugdale  
John Masterman, Esq.  
Charles Francis, Esq.  
R. L. Jones, Esq.  
W. Richardson, Esq.  
Thomas Poynder, Jun. Esq.  
William Jordan, Esq.  
D. Salomons, Esq.  
Thomas Farncomb, Esq.  
E. Silva, Esq.  
F. B. Burbridge, Esq.  
A. K. Barclay, Esq.  
T. B. Simpson, Esq.  
W. Chadwick, Esq.  
Rev. G. Croly, D.D.  
W. Tickers, Esq.  
W. Skidmore, Esq.  
Rev. V. K. Child  
W. Routh, Esq.  
Charles Pott, Esq.  
J. M. Rainbow, Esq.

The following Resolutions were unanimously agreed to:—  
Moved by Mr. Alderman Wood, seconded by Sir F. Laurie.  
That the site of the statue, proposed to be erected in honour of his Grace the Duke of Wellington, be in the space between the Bank and the Mansion House.  
Moved by Sir F. Trench, M.P. and seconded by Mr. Alderman Wood.

That the thanks of the Committee be given to T. B. Simpson, Esq. for the personal exertions used by him in originating and promoting the erection of the proposed statue.  
Moved by Alderman Lucas, and seconded by Thomas Poynder, Esq.

That the thanks of this Meeting are due, and are hereby given, to Sir C. S. Hunter, Bart. for his courteous and able conduct in the chair this day.

The amount of subscriptions announced was 7000l. and they continue to be received at the Mansion House, and by all Bankers in London.  
J. N. RAINBOW, Hon. Sec.

### LIVERPOOL MECHANICS' INSTITUTION.

THE Directors are desirous of entering into arrangements with Gentlemen qualified to conduct the following Departments of Education, in the Schools about to be established at this Institution, viz.—

*High School.*  
English Master.—English Language and Literature—Elements of Metaphysics and Logic.  
Assistant English and Elementary Master.—English Language and Literature—Derivatives—Lessons on Objects and Forms.  
Classical Master.—Latin and Greek.  
Mathematical Master.—Arithmetic—Book-keeping—Algebra—Trigonometry—Conic Sections—Surveying—Astronomy—Navigation.  
Philosophical Master.—Mechanics—Hydrostatics—Pneumatics—Acoustics—Optics—Chemistry—Electricity—Geology—Natural History.  
French Master.—French Language and Literature.  
N.B.—He must be a Native of France.  
Writing Master.—Plain and Ornamental Writing—Stenography.  
Drawing Master.—Landscape—Figure—Perspective.

*Lower School.*  
1st Master.—English Language and Literature—Lessons on Objects—Mechanical Arts—Natural History.  
2d Master.—Arithmetic—Geometry—Astronomy—Use of the Globes.

Writing Master.—Plain and Ornamental Writing.  
N.B.—The Masters to whose department asterisks are prefixed must devote a portion of their time to the Lower or Evening School, or both.

A Plan of the Daily routine of Education, and of the Salaries and Duties of the Masters, lies for inspection at Deacon's Coffee-house, Walbrook, and Mr. Taylor, Bookseller, Upper Gower Street; and it will be forwarded, by post, to any Gentleman applying (post-paid) to the Secretary.

As the Directors will think it their duty to scrutinise minutely into the merits of the Masters, Gentlemen desirous of filling any of the Departments are requested to send Testimonials signed by those persons only who are personally and intimately acquainted with them: they must be sent (post-paid) before the 1st of March to

JAMES HARVEY, Jun. Esq. Hon. Sec.  
18 Catherine Street, Liverpool.  
The Schools will be opened after the Midsummer Holidays.

## INVITATION CARDS.

La Riviere's Unique Perforated Invitation Cards, which form Transparent Writing, with Envelopes, performed and embossed, are now ready, and, together, form the most elegant mode of sending Invitations, ever presented to the Nobility and Gentry.

The Trade may be supplied at the Agents, Riddle and Meymott, 25 Paternoster Row, London.

## COMPLETION OF VALPY'S EDITION

OF THE

**PLAYS OF SHAKSPEARE, AND POEMS,**

With a Life, Glossarial Notes, and 170 Illustrations from the Plates in Boydell's Edition.

In 15 vols. 8s. each, uniformly with Byron, and Valpy's History of England.

This edition, which has experienced the most favourable reception during the course of publication, may now be had complete, in fifteen volumes, price 3l. 15s. The Plates may be purchased in one volume handsomely bound, price 11. 11s. 6d.

The distinguishing features of this edition are, the text of Malone; Glossarial Notes on all obsolete words; and a Historical Digest and Argument prefixed to each Play.

The work is embellished with 170 Illustrations, executed on steel in the first style of outline engraving, from the Plates in Boydell's Shakspeare, originally published at 93s. and large paper at 194s.

The attention of the reader is directed to the most striking and brilliant passages by the Index, which forms a complete reference to the Beauties of Shakspeare.

This work may be purchased periodically, commencing at any time with Vol. I.

"We pronounce this edition, for execution and cheapness, to be unparalleled in the annals of literature."—*John Bull*.

Printed and published by Valpy; and sold by all Booksellers.

John Murray, Albemarle Street.

8vo. 12s.

**BUTTMAN'S LEXICOLOGUS;**

or, a Critical Examination of the Meaning and Etymology of various Greek Words, and Passages in Homer, Hesiod, and other Greek Writers, tracing them from the early Epic Poetry, through all the Authors in which they occur.

By the late Professor BUTTMAN, of Berlin.

Translated and Edited, with Notes and copious Indexes,

By the Rev. J. R. FISHLAKE, A.M.

Late Fellow of Wadham College, Oxford.

"It contains a deeper and more critical knowledge of Greek, more extensive research, and more sound judgment, than we remember to have seen in any work before, with a talent and with a memory surpassed (if surpassed) only in Porson himself."—*Quarterly Review*.

John Murray, Albemarle Street.

2 vols. post 8vo.

**THE HIGHLANDERS OF SCOTLAND;**

their Origin, History, and Antiquities, with a Sketch of their Manners and Customs, and an Account of the Clans into which they were divided, and of the State of Society which existed among them.

By WILLIAM F. SKENE.

John Murray, Albemarle Street.

Crabbe's Poetical Works, in Eight Volumes, similar to Scott's and

Byron's.

In 8 vols. fcap 8vo. 5s. each,

**THE POETICAL WORKS OF THE REV.**

GEORGE CRABBE, with his Letters and Journals,

and his Life. By his SON.

Sir Walter Scott says of Crabbe's poems, "I have a set for my cabin at Abbotford as well as at sea." The clearness and accuracy of his painting, whether natural or moral, renders, I have often remarked, his poetry generally delightful to those whose youth might make them insensible to the other beauties with which it abounds."—*Sir Walter Scott*.

John Murray, Albemarle Street.

In 17 vols. uniform with the Works of Scott and Crabbe,

price 8s. each,

**THE COMPLETE WORKS OF LORD**

BYRON; comprising his Poetry, Letters, and Journals,

and his Life. By THOMAS MOORE, Esq.

Now first collected and arranged, and illustrated with Notes, from

Sir Walter Scott,

Francis Jeffrey,

Professor Wilson,

Bishop Heber,

J. G. Lockhart,

John Murray, Albemarle Street.

**THE CARTHUSIAN. No. I.** was published on the 1st of February.

Contents:—Introductory Letters—Brooke Hall—Tales of Charterhouse—The Merchant's Bark—Chrysanthemum—Protestant Martyr's Hymn—Hints for Novice—Advice to a Bachelor—Stray Fendell—Theophrastus Redivivus—Nytholm—Stimulant—Bogal Steved—The Telemachus, &c. &c.

Published by W. Walker and Sonneton; sold by Simpkin, Marshall, and Co.; Sherrwood and Co.; and all Bookstallers.

**MAGAZINE OF ZOOLOGY and**

BOTANY. February. Price 3s. 6d. with 3 Plates.

By Sir WILLIAM JARDINE, P. J. SELBY, Esq., and

Dr. JOHNSON.

In this Number there are Original Papers, by P. J. Selby, H. Catterall Watson, W. Swainson, P. C. Eytton, Dr. Johnston, Henry Doubleday, W. Thomson, J. Duncan, and Professor Henslow.  
London: S. Highley, 32 Fleet Street; W. H. Lizars, Edinburgh; and all Booksellers.

## POPULAR WORKS JUST PUBLISHED.

In a large volume, containing nearly Ninety Plates, price 10s. cloth,

**THE NAPOLEON GALLERY;** or, Illustrations of the Life and Times of the Emperor of France. Engraved from all the most celebrated Pictures produced in France, during the last Forty Years. With Descriptions, Chronologically Arranged; forming a complete Pictorial History of this celebrated man.

II.

Dale's Poetical Works.

Price 2s. fcap. 8vo. neatly bound in cloth; or 12s. Morocco, The Widow of Nain; the Daughter of

Jairus; the Outlaw of Taurus; Irad and Adah; and other Poetical Works of the Rev. Thomas Dale, M.A. New first collected.

III.

Tilt's Splendidly Illustrated Edition.

In a handsome fcap. 8vo. vol. price 9s. cloth; or 12s. Morocco, The Lay of the Last Minstrel. By Sir

Walter Scott, Bart. Beautifully printed, and illustrated with Thirteen Line Engravings, by eminent Artists.

IV.

Tilt's Illustrated Edition.

This day is published, in crown 8vo. 1 vol. bound in cloth, price 12s.

Shakspeare's Dramatic Works, printed from the Text of the corrected copies of Steevens and Malone; with a Life of the Poet, by Dr. Symonds, and a complete Glossary; embellished with Sixty Engravings, after Harvey, Stoddard, &amp;c. &amp;c.

This edition is accurately printed, in a bold legible type, and forms the most elegant and useful, and, at the same time, cheapest edition of Shakspeare ever published in a single volume. It is also kept handsomely bound in Morocco, price 16s.

Charles Tilt, Fleet Street.

**BLACKWOOD'S EDINBURGH**

MAGAZINE, No. CCLVI. for February.

Contents.

1. Whig-Radical Prosperity—2. The World we Live in—3. Historical Painting—4. Despatches of the Duke of Wellington, No. II. Armistice at Trincomalee—5. The Page—6. Translation from the Greek Anthology, by William Hay—7. A Word in Season to the Conservatives of Scotland—8. A Affairs of Rome, by Mons. de la Menais—9. The Metaphysician, No. VIII. Reasoning—10. Here and There—11. Foreign Policy—12. Mont Blanc—13. Sonnets by the Sketcher.

Printed for William Blackwood and Sons, Edinburgh; and T. Cadell, Strand, London.

In embossed Wrapper, price 1s. 6d.

**THE DEPARTURE OF THE ISRAELITES;**

a Poem.

By NEMO.

Also, by the same Author,

In embossed cloth, with Engraving,

The Ocean Queen, and other Poems, price 6s. 6d.

London: Sherrwood, Gilbert, and Piper. Chatham:

A. Edgington, and W. M. Barton.

Price 2s. 6d.

**THE COMIC ALMANACK for 1837,**

Illustrated with Twelve humorous Plates of the Month, by George Cruikshank; an Etymological, and other Embellished Poem; and a great Variety of amusing matter.

\* \* \* Copies of the Almanacks for 1835 and 1836 may still be had. Charles Tilt, Fleet Street.

Of whom may be had,

Cruikshank's Comic Alphabet: Twenty-four amusing Sketches, done upon a novel and ingenious Plan. 2s. 6d. plain; 4s. coloured.

## NEW WORKS,

PRINTED FOR

LONGMAN, REES, ORME, BROWN, GREEN, AND LONGMAN.

*Just published.*

I.

## THE SPIRIT OF THE WOODS.

Royal 8vo. with 26 beautifully coloured Engravings, 30s. half-bound.

"These trees shall be my books, and in their barks my thoughts I'll character."

By the same Author,

## THE MORAL OF FLOWERS.

With 23 beautifully coloured Plates. 3d edition, royal 8vo. 30s. half-bd.

II.

## EDUCATION REFORM;

Or, the Necessity of a National System of Education.

Vol. I. 8vo. 15s.

By THOMAS WYSE, Esq. M.P.

"Less than thorough will not do it."—*Lord Stafford.*

III.

## LIFE AND TIMES OF WILLIAM III.

King of England, and Statholder of Holland.

By the Hon. ARTHUR TREVOR, M.P. F.A.S. &amp;c.

LITERATURE,

Critical, Philosophical, and Biographical.

By J. D'ISRAELI, Esq.

## REVIEW OF NEW BOOKS.

*Report from the Select Committee on the Record Commission; together with the Minutes of Evidence, &c.*

Our last article went far to prove that all the false steps of the commission were owing to the unlimited powers intrusted by the board to the secretary, an officer who accepted place only on the condition of making his official duties subordinate to his professional engagements, which, as he "never lacked clients," must have been sufficiently engrossing. We cannot applaud the liberality or delicacy of the commissioners in so thrusting their favours upon an unwilling individual; but Mr. Cooper stated a fact, in extenuation of their conduct, which we give, in order that they and the public may enjoy the full benefit of it. "I believe it was the circumstance that I did not possess a knowledge of the ancient records, that induced the board to force upon me (for Lord Brougham forced upon me) the office of secretary, rather than upon a record man: I was appointed for the purpose of checking the zeal of those lovers of ancient records." Capital! the zeal of parliament for the preservation of the Records was productive of an annual grant of ten thousand pounds for the support of a Record Commission, the members of which were so far from responding to the wishes of their superiors, that they thought it necessary to check "the zeal of those lovers of ancient records," by selecting, as their active deputy, one who knew nothing of the ancient muniments of his country, and who, it would appear, was already borne down by the momentous cares of an extensive practice. As far as records are concerned, the plan has succeeded: they have remained to this day in the same stalactitiferous vaults, unlighted dungeons, and wooden sheds, subjected to the same ravages, whether of damp, dirt, rats, or labourers; and none of our fair friends can have perceived the slightest deterioration in the flavour of the pastry-cook's jellies, since not one impediment has arisen to save the patent or close writs of the middle ages from the confection stew-pan or the pot of the glue-maker: the Record Commission effectually checked all zeal for their better preservation. Nevertheless, the annual grants of the last five years have been spent partly in the foreign collections, and partly in printing a few works, which have turned out well only when they were not selected for the sake of the editors. Although the secretary knew nothing of ancient records, he appears, like many other eminent men, to have snatched a few hours from the hurry and excitement of business, for the cultivation of elegant and general literature. To this disposition we may attribute the collections described in our last article, which were, probably, suggested by the historical branch of the learned gentleman's studies: that they proved useless is to be regretted as much as their excessive cost. Another result of his studies appears to have been a desire to collect materials illustrative of the literary history of England; and, in following it up, he compiled a *catalogue raisonné* of MSS. relating to the subject, preserved in foreign libraries, and examined more than 2000 volumes, prin-

cipally folio volumes, in Latin, French, German, Italian, Portuguese, Swedish, Danish, and other European languages." Such unprecedented labour was not without its reward: an accidental discovery in a record office enabled him to fill up the blank in the *Materia Medica* between Galen and Paracelsus; and, singularly enough, the most valuable consequence of his polyglott reading has been an addition of the names of four treatises to the already long list of works on medical diagnostics: they were written by Englishmen, and would, doubtless, throw much light upon the practice of the middle ages.\* We dwell more particularly on this fact for the benefit of the profession and of Mr. Hallam, who, as a commissioner, does not appear to be acquainted with the secretary's valuable discoveries, although they might be very serviceable to him in his literary history. We pass over Mr. Cooper's anxiety to vindicate the characters and illustrate the history of St. Ursula and the 11,000 virgins, his persevering inquiries after treatises on precious stones, the efficacy of holy water, Greek prepositions, and elocution; which are natural enough, perhaps, in a hard, but desultory, student, though scarcely allied to the preservation of records: but we are compelled to add, that the expense of these researches, amounting, together with the collections for the "*Fœdera*" and "*Materials for British History*," to almost seven thousand pounds, was defrayed from the funds voted to the Record Commission for different purposes. Had Mr. Cooper produced the work at his own risk and cost, a feeling of delicacy, and respect for his motives and labour, might have induced us to suppress an opinion delivered by an experienced witness upon the literary merit and value of Appendix A. As the case stands, it is imperative that the public should be informed of the equivalent it has received for so large an expenditure. Mr. Garnier says (*Ev.* 4093), "The work has no title; and, from the variety, or rather confusion, of things it contains, it would scarcely be possible to find a title for it. The work has no plan. The notices it contains are either inaccurate, or not to be relied upon, or of no use. I am sorry to feel myself obliged to say that I cannot imagine any use which the work might answer." *Chairman to Mr. Garnier.*—"Is not information given in the Appendix of several libraries that are not existing at the places under which they are given? I think two-thirds of the libraries are no longer existing; the book contains a great many monasteries and libraries that are gone long ago—gone in the time of Napoleon. It is even doubtful if all the books are still existing."

To Mr. Garnier's observations we may add the following extracts from an able pamphlet, which has just reached us; premising, however, that the writer does not appear to have discovered, and, consequently, has not at all appreciated, what we take Mr. Cooper's design to have been—viz. a collection illustrative of the literary, as well as the political, history of

England. It will be allowed that, in the former respect, his efforts have been eminently successful.

"In the first place, whole sheets are filled with extracts from the catalogues named above: some of them obsolete; some exceedingly inaccurate and imperfect; nearly all of them perfectly accessible without the cumbrous and expensive machinery of Mr. Cooper's book. And of what do these extracts consist? Of materials for the history of England, Mr. C. will say. We deny it; there is a very large proportion of matter which has absolutely nothing to do with the history of England in any way whatever. In Mr. Cooper's comprehensive views of English history, it was enough that a book mentioned even the name of an Englishman, to earn at once for it a place in Appendix A. One work gains that distinction from having been dedicated to Sir P. Sidney. The Earl of Rochester's poems are reported among the materials for English history in the Dresden Library. Lord Baltimore's poems are gravely cited in the library at Lindau.

Whether Lord Baltimore's '*Gaudia*,' which were any thing but '*Gaudia Poetica*,' give additional value to his poems in Mr. Cooper's eyes, we will not venture to say. St. Ursula and her virgins are admirable materials for English history, and for German history, and for Italian, Spanish, and Portuguese history too. In short, wherever a good number of reliques might happen to be wanted at a pinch, St. Ursula, with her army of maidens, was brought; for, among eleven thousand, it was impossible but what there should be some one who had a skull, thigh, or jaw-bone, to spare. \* \* \* The bones of this holy lady were of no use to Mr. Cooper; but, as the legend says she was a daughter of a king of Cornwall, her name was; and she thus, with her company, makes up eleven thousand and one materials for the History of England."—*Management of the Public Archives*, p. 33.

Thus, one consequence of having a secretary who knew nothing about records, upon the check-zeal system of the commissioners, has been the production of such works as Appendixes A and C, the "*Rotuli Selecti*," the "*Chancellor's Roll*," &c.: let us take another.

The secretary, being conscious, we suppose, of the absence of common information in several editors in the service of the board, formed, or says he formed, a school of transcribers, in imitation of the *Ecole des Chartes* at Paris. Many creditable witnesses concur in asserting that no such school does, or ever did, exist. However, a few hundreds were expended in purchasing a library of learned works, for the use of the pupils, if any there were, or are; and the committee is gravely informed, that an individual named Black intended to deliver a course of lectures on palæography, for their instruction; facsimiles have been made for them to trace; and, again, the indefatigable Mr. Black intended to compile a diplomatic manual for their use. Yet, notwithstanding that his good intentions have produced no good fruit, and his disciples "have scarcely attempted to trace," Mr. Cooper can assert, that "the palæographical department of the library has

\* Their titles are, "*Tractatus Egidii de Urinis*—Gylbertus Regula de Coloribus et Contentis Urinarum—Carmen Johannis Egidii de Urinis, cum Glossis—*Tractatus de Phlebotomia, Urinis, et Pulsibus*."

been already found of great utility to the school of young transcribers: which is somewhat curious; since, in one place, we are told, that the pupils are at the Museum, where there is no want of books; and, in another, we learn, that the library they have already found so useful is in New Boswell Court. The writer of the pamphlet, before quoted, suggests, that these young gentlemen were sent to the Museum, to spare the palaeographical library. The idea is a happy one: Mr. Cooper was, doubtless, afraid they would thumb and dog's-ear the valuable works; and the same fear for the Museum MSS. induced him to have facsimiles made of several. The only solution of this mystery at which we can arrive is, that two or three youths, whom we have observed strutting about the reading-room of the British Museum, like *Cupidons déchainés*, are supposed, by the secretary, to be copying the worthless "Collectanea of Rymer," under the superintendence of Mr. Black; while, in reality, their only visible employment, during the continued absence of the schoolmaster, is an assiduous habit of walking about the room, to the annoyance of the readers, of whose various styles of dress they appear to be accurate and attentive observers. It is laughable to read the different accounts of them. "Ten young men have been in this school. Only four, at present, in Mr. Black's establishment" (i. e. the Museum). "Very steady, teachable, well-conducted young men." "At the small salary of 40l. a-year." "Mr. Emperor left for a different employment." "Mr. Slack suddenly left his work." "Mr. Black thought it his duty to use all proper means of instructing these young men;" yet, strange to tell, when one of them, who, we suppose, had been so happy as to enjoy the benefit of Mr. Black's tuition and the palaeographical library, was transferred to Mr. Stevenson, a sub-commissioner, that gentleman was obliged to teach him Latin, together with the rudiments of his business. "I experienced great difficulty with one young gentleman who was sent to me; for, after employing about three months in teaching him something more than even the reading of the records, I was compelled to tell Mr. Cooper, that he was not qualified for the work which I was carrying on; and he was removed from the Tower. I taught him Latin." (Ev. 3849.) Even the small salary of 40l. a-year was thrown away upon such pupils, and such work: but the farce of the school of young transcribers, Mr. Black, the library, and the facsimiles, is another unfortunate consequence of having a secretary ignorant of records, and whose time is too much occupied, by professional avocations, to make the business of the commission any more than a secondary matter of consideration. We could fill several Numbers with details of the absurd blunders that have arisen from this system; but, suffice it to say, that the intentions of government, in appointing the commission, have never been attended to: the *sic volumus* of "the secretary, and the commissioners with whom he was in the habit of communicating," superseded, in every respect, the directions contained in their patent.

We have a few words to say concerning the plan adopted by the secretary and the commissioners to procure evidence in their favour; which was, to send a set of the works published by the board to almost every one of the witnesses they desired to bring forward. A list is given, in the Appendix, of the works, and the parties to whom they were conveyed, with the compliments of the king's printer. The value of the books thus given away for a tem-

porary purpose, is, according to the report, more than 1000l. Very little judgment appears to have been exercised in selecting the individuals upon whom this honour was to be conferred. In the same list, we find the Duke of Wellington, Lord Lyndhurst, his majesty's ministers, and other eminent persons of the day, associated with the illustrious obscure; the English college at Rome, walking hand in hand with a Benson; Sir Robert Peel, in company with a Baker; and the Grand Duke of Darmstadt, elbowed by Mr. Bruce. That individuals of rank and station should be presented with these works, is but right; but not for the sake of obtaining a prejudiced and crude opinion in favour of the acts and designs of the donors. But, much as we reprobate the conduct of the commissioners in this particular, we cannot but express our surprise, that they should have gone out of their way to secure the favourable reports of several persons without the slightest pretensions to any one of the qualifications required to give a due weight to their evidence. It was a fortunate circumstance that the committee discovered the trick, and were thereby enabled to estimate as they deserved the flippant and self-sufficient dicta of record students of ten days standing.

It is not without regret that we now feel ourselves obliged to occupy the time of our readers in replying to the abusive and calumnious language used by the *Gentleman's Magazine* of this month towards our journal. It is an unfortunate result of the mismanagement of the Record Commission, that, in commenting upon deeds, we are obliged, likewise, to speak of their perpetrators in equal terms of reprobation. Under these circumstances,—having shewn that the "Chancellor's Roll," and the "Rotuli Selecti," two works edited by Mr. Hunter, were exceedingly incorrect, and unworthy of the commission under whose sanction they appeared,—we ventured to hint, at the same time, that the abilities of the editor were not commensurate with the tasks intrusted to him. This is the point at issue between the *Gentleman's Magazine* and ourselves. Were our remarks founded on facts or not? We answer, they were; and appeal for a confirmation of them to Mr. Hunter himself. In the course of his examination with respect to the "Chancellor's Roll," the following questions and answers occur:—"Were you employed to collate Mr. Devon's edition of the 'Chancellor's Roll?' Yes; I was.—Was it not very inaccurate? I will state the impression upon my mind with fairness; and it appears to me, there had not been a reasonable amount of attention bestowed upon it.—Was it very inaccurate? There were a great number of inaccuracies; but I ought to state—and it is but right to state—that, at that time, I was new to the matter of record editing, and I was not so sensible as I have since become of the difficulty of the operation." (Ev. 3258-3263.) This evidence is conclusive as to Mr. Hunter's qualifications at the time to which we referred. Now comes the question, Who is responsible for these works? The two cases are exactly similar. A is intrusted with a certain work to edit; his employer discovers that he is incompetent to perform his duty; and B, who pretends to be a better scholar, is commissioned to supersede him, to correct his blunders, and to usher forth the book: is it not clear that B becomes responsible to his employer for any inaccuracies that may be discovered after publication? No rational being can refuse his assent to this proposition. The responsibility thus entailed upon B is the penalty he pays for his presumption,

in asserting himself to be a proficient when he knew that he was only a "new" man, a tyro in record scholarship. It is now necessary to shew that our opinion of the works in question agrees with that of the committee. "The volume of the 'Rotuli Selecti' appears to have been intrusted to an incompetent editor, and, even after revision, to have been published in an unsatisfactory state. The same observations apply to the 'Chancellor's Roll.'" (Report, p. 20.) If Mr. Hunter be not responsible for the unsatisfactory state of these works, we beg our worthy contemporary to inform us who is. We repeat that, at the time we wrote the offensive articles, we knew nothing of Mr. H. but that he had produced two or three useless and incorrect books for the Record board; and have no hesitation in saying, whatever the degree of shame we ought to feel at such a confession, that until his connexion with the commission we never even heard of him. We were challenged to an examination of his topographical works, and accepted it. The inaccuracies in the Furnival charter, in his "History of Sheffield," we have already alluded to; and can only add, that if, in the long range of topographical literature, we know but two or three works in which the natural heaviness of the subject is not surpassed by the congenial dullness of the authors, those exceptions are not the bantlings of Mr. Hunter, for which the *Gentleman's Magazine* stands so fond and lenient a sponsor. The learned gentleman told the committee that, from the number and character of his works, the country was interested in his reputation; or, in other words, that, as it was more or less questioned, so the nation would gain or lose by the inquiry: renouncing all claim to any share in the treasure, we wish our contemporaries joy of their acquisition. It is but justice to observe that Mr. Hunter would seem to have advanced in record learning, and, consequently, in usefulness to the commission, since the secretary, of his own will, *mero motu suo*, has materially increased his salary. (Evidence, 1601, 2.) We trust this explanation may prove satisfactory to the *Gentleman's Magazine*: how far our statements were infamous is for the public to decide. We shall say nothing of the *animus* displayed by our opponent, who, perhaps, has seen an analysis only of the evidence, prepared by some friend to the commission and the existing state of things. If not, we are by no means surprised that he has shut his eyes to the truth of the matter, but are at a loss to account for the particular motives to such conduct. We cannot suppose that Mr. Hunter trumpets forth his own praises and defence in the pages to which he has so long contributed, nor can we venture to assert that the articles were written by any one of the illustrious obscure who were gratified with the Record publications as a bonus for their favourable suffrages.

The report of the committee proposes some remedial measures: we insert the following as a specimen; the remainder we shall give on another occasion.

"The superintendence of the business of arranging, classifying, and calendaring, the Records, and the regulation of the offices and the fees, appears to be of such a nature as cannot be safely intrusted to any one to whom it is not assigned as a duty, and who is not paid for performing it. It appears to your committee that this business should be intrusted to one person, or, at any rate, to a very small number; that these persons should be paid, and should be not subordinate to, but members of, the commission. The payment of

adequate salaries to one, two, or even three commissioners, might be speedily saved out of the salaries now given to the keepers of various offices. At any rate, if the business intrusted to a Record Commission be worth the doing, it is worth the paying for, in order that it may be well done. Gratuitous neglect in the management of public business is the result of a most unwise economy. To such paid commissioner, or commissioners, the general superintendence of the affairs of the commission, the management of its finances, the care of its funds, and the appointment of sub-commissioners, and others in its employ, might properly be intrusted. Under such circumstances, a further saving might be effected in the salary of the secretary, who receives at present 500*l.* a-year, besides allowances, which Mr. Protheroe says (incorrectly, according to the secretary) raise the whole annual expense of the office to 1200*l.*, or 1300*l.* A clerk, or secretary, at little more than a clerk's salary, would suffice for the business which, under such salaried commissioners, such subordinate officer would be required to perform. It appears, however, to your committee, that the selection of certain of the more valuable and complete Records for publication, is a work which, though it should be kept subordinate to the proper care of the whole mass of the Records, ought not to be abandoned or neglected, and might, under proper precautions, proceed simultaneously with it. This, however, is a business which does not, in the opinion of your committee, appear to require to be conducted by one or two persons alone: on the contrary, as it is a matter very much dependent on taste, and on an ampler acquaintance with various branches of learning, and with the wants and opinions of different classes of inquirers, than is generally possessed by any very small number of persons, it is probable that it would be better managed if a number of persons, possessing peculiar qualifications in different branches of legal or historical learning, were constituted into a board, under whose sanction some of the more valuable Records might be selected and prepared for publication. It appears to your committee, that a new commission might be so framed as to combine the advantage of leaving to one, or a few, such portion of the business as a small number can do better than a large; and of deriving advantage from the counsels of a larger number, in that department in which it is advisable to have the result and sanction of many opinions. It would, perhaps, not be unadvisable, in accordance with some precedents among our public institutions, to combine some paid with a large number of unpaid commissioners. To the paid commissioners should be intrusted the whole and undivided administration of all the business, and all the powers, of the commission; with a provision, that no publication should be undertaken without the whole of the commission being summoned, and the contemplated work sanctioned and directed by their order, upon a plan to be laid before them by the paid commissioners. It might, perhaps, not be considered prudent to intrust the whole of so large a business to one paid commissioner; and it might, also, be thought advisable that it should be intrusted to persons, each possessing an acquaintance with some particular class of Records, or being in the habit of using them either for legal or historical purposes. With this view the whole of this portion of the business might be intrusted to as many as three paid commissioners."

*A Comparative Account of the Works produced, and Money received, by the Commissioners on the Public Records, during Two Periods,—of Five Years before, and Five Years after, the 12th March, 1831.* 8vo. pp. 39. London, 1837. Baldwin and Cradock.

THIS appears to be an attempt to mislead the public on the subject of the productions and expenditure of the Record Commission. We find enumerated as productions and equivalents for money received, the secretary's report on the "Fredera," which is well known to be not yet written, and the celebrated Appendixes to it, extending from A to E. It is essential to be clearly understood, that of the latter works so small a number has been printed, that no persons beyond those immediately connected with the Commission can obtain them, and then by particular favour only. From the account of Appendix A, given in our preceding review, it is clear that, while no literary information worth having is given, the nation suffers a great pecuniary loss, say 7000*l.*, for which it never can receive an equivalent. We have, also, nine MS. compilations pompously put forth as productions of the Commission. What benefit has been, or ever can be, derived from them, we cannot tell, since, as they are principally catalogues of documents relating to English history preserved in this and foreign countries, if we estimate their value by the standard of Appendix A, it will be found to be *nil*. In short, the whole matter is very ably mystified, including, of course, the statement of monies received and expended! We should like to discover whether this pamphlet is not, also, a production of the Commission at the public expense?

*A History of British Fishes.* By W. Yarrell, F.L.S. Parts VII. to XIX. inclusive. Van Voorst.

THIS beautiful and admirable work is completed, and in a manner to reflect infinite honour on Mr. Yarrell, and do great credit to his publisher. Above four hundred wood-cuts, of delightful execution, illustrate it, and the text will be prized almost in the same degree by the naturalist and the general reader. We have already had occasion, at its commencement and during its progress, to eulogise this publication in the strongest terms; and it affords us great pleasure to notice the good faith and intelligence, every way, with which it has been finished and made a standard work in English literature. The two volumes will be in every good library.

*A History of British Quadrupeds.* By Thomas Bell, F.R.S. &c. Parts III. to VII. inclusive. Van Voorst.

ANOTHER performance of a similar order and character, which is honourably proceeding to its completion, in one volume. In our last notice of its preceding parts we made several extracts relative to the mole, &c. and are again tempted to a similar illustration.

"During the month of June, or longer, it is in the habit of leaving its runs, and wandering, during great part of the night, on the surface of the land, in search of its food. My friend, Mr. Yarrell, informs me that he has, now and then, when shooting, surprised a mole above ground, which his pointers have stood as if it were fair game. In addition to all the accomplishments and arts which we have assigned to our mole, it possesses that of being an expert swimmer; an action for which the structure both of the hands and of the hinder feet are well adapted. Surprised in its encampment by the floods of autumn, it seeks its safety by this

means; and a friend of mine, residing at Waltham Abbey, assures me that he has seen moles swimming very featly, when the marshes of that neighbourhood have been inundated. But it is not only when driven to it as a means of escape from danger that it employs this mode of travelling: it will not hesitate to cross a brook, or even a broad river, in order to change its hunting-ground, or to emigrate from a district which has ceased to yield it sufficient nourishment; and, occasionally, it would appear to take the water merely for the purpose of enjoying the luxury of a bath. The mole, like all other voracious animal-feeders, requires to drink frequently. Hence, where there is a colony of moles using the same high road, a run is always made towards the nearest ditch or pond: and when this cannot conveniently be reached, we have Mr. Jackson's authority for stating, that the animal sinks deep, perpendicular shafts, at the bottom of which water is always found, to which the mole has easy access. Sometimes, according, also, to the observations of Mr. Jackson, these wells are full to the brim.

"The mole is not found in the northern extremity of Scotland, nor in the islands of Orkney and Zetland. It has never been seen in any part of Ireland;—a circumstance which has been attempted to be accounted for, by some, by the nature of the climate and the soil. This, however, is not an equivalent cause; as it is found in every kind of soil throughout England and the Continent of Europe. It is, perhaps, rather dependent upon its extreme intolerance of fasting, and the slight degree of violence which is sufficient to destroy its life; circumstances which would render its casual migration to that country next to impossible."

The shrews (mice, not ladies!) are well described; and the badger (certainly not a gentleman), and the otter, and the weasel. Then we have the martin, the wild cat, the domestic cat, and the dog, in all its varieties. The fox and the seals follow, and the last page concludes with the hare.

*A History of British Birds.* Complete in three Monthly Parts. By T. C. Eyton. London, Longman and Co.

A FIT companion for the preceding, and a needful supplement to Bewick's History.

*The Naturalist.* Conducted by B. Maund. Nos. I. to V. London, Groombridge; Edinburgh, Whyte and Co.; Paris, Galignani; Brussels, Haumann; New York, Jackson.

THIS embraces the animal, vegetable, and mineral kingdoms; and is very miscellaneous, but, at the same time, very instructive and entertaining.

*Manual of Entomology, from the German of Burmeister.* By W. E. Shuckhard, M.S.S. Churton.

DOUBLE Numbers of XV. and XVI., XVII. and XVIII., have also brought this excellent publication to a close. It concludes with a just reprehension of the follies and evils in nomenclature. Altogether it is a most meritorious performance; and the talents and information the translator has brought to it, entitle him to our warmest thanks.

*The Naturalist's Library*, conducted by Sir W. Jardine, Bart., &c. Vol. VI. Edinburgh, Lizars; London, Highley; Dublin, Curry. THIS volume is addressed to the mammalia, and treats of the ordinary cetacea, or whales; with a memoir of *Lacépède* prefixed; and an able, though short introduction. The scientific, narrative, and anecdotal portions of the volume are extremely attractive; and the plates are as fine as they are numerous. Science, interest,

and embellishment, could hardly be more pleasantly and satisfactorily mingled.

*Profusiones Historica; or, Essays illustrative of the Halle of John Halle, Citizen and Merchant of Salisbury in the Reigns of Henry VI. and Edward IV., with Notes illustrative and explanatory, by the Rev. Edward Duke, M.A. F.S.A. &c. &c. Vol. I. 8vo. Pp. 622. Salisbury, Brodie and Co. London, Nichols and Son; Pickering; Arch.*

FROM time immemorial the remains of an ancient mansion, forming a portion of certain premises situate on the new canal in the city of Salisbury, were known to exist, and they were ever and anon visited by the antiquary or the virtuoso; a large hall was developed to the curious investigator of antiquities, but its origin and owner were veiled in the mists of time. Its richly stained windows, its antique chimney-piece, its massive and elegant roof, framed of oak or chestnut, did suggest that this was an ancient refectory; but whether that of a religious or mercantile fraternity, or of an affluent citizen of the olden time, was utterly unknown. Generations had passed away, the building remained, but the memory of its master was lost. Many of the armorial shields which adorn it were recognised by the heraldist; yet one coat of arms, impaled with a merchant's mark, remained, as a puzzle to all inquirers.

The arms displayed on this shield, and the merchant's mark, but on separate scutcheons, were again seen to ornament the transom-stone of the chimney-piece, shewing, thereby, that their honoured owner was also the builder of this interesting ancient hall. After much research, the author, by chance, discovered that the arms alluded to were those of Halle of Salisbury. On inspecting Aubrey's MSS. in the Ashmolean Museum, his information advanced to the fact that John Halle was once an eminent merchant of Salisbury, having his dwelling on the town-ditch or canal.

A deed of purchase of this his domicile, bearing date 7 Edw. IV. 1467, was found among the civic muniments of Salisbury, by which William Hore, marchaunt, conveyed to Halle "totum messuagium suum cum shopis et pertinentis suis qui sita erant conjunctim in civitate Nove Sarum, exposito fori ubi lane [lanes] venduntur," plainly indicating the site of the said messuage to be near the wool-market: other coincident circumstances demonstrate that John Halle was a merchant of the wool-staple: and here, in ordinary hands, might have ended, perhaps, his history, but the well-trained, thorough-paced antiquary, who has his note-book stored with "saws and instances" from Cowel or Du Cange, and scraps

"From many a tome,  
Imprinted at the antique dome  
Of Caxton or De Worde,"

is not so easily silenced; the driest subject becomes a treat, if served by him with proper sauce, and the material which gives name to the dish is but the point d'appui for the literary cayenne and curry-powder by which it is recommended to the palate of the reader. It is in this way that the author of this work has started a new "Encyclopedia of Antiquities," which bids fair to run against vehicles for the same sort of knowledge, established on the road at an earlier period. And we confess that, well-mounted on a lofty seat, he whirls his reader along in his archaeological omnibus, regardless of the dust of ages. Nor are we disposed to refuse to take a trip with him, seeing that we esteem him an experienced whip not likely to abandon sure ground: such license

of aberration as Horace of old conceded to painters and poets must surely, however, be allowed to antiquarian biographers.

"Pictoribus atque poetis  
Quidlibet audendi semper fuit æqua potestas,  
Scimus, et hanc veniam petimusque damusque vicissim."

A skillful essayist in antique lore considers, indeed, the heads of his subject but as a row of pegs to hang his notes on; and of all the dexterous garnishers in this way, perhaps none exceeded old Thomas Hearne, though the elaborate annotator of Hudibras, Dr. Zachary Grey, might dispute the palm of skillfully seizing digressive opportunity. Let us adduce one example of the dexterity of Hearne: in the Glossary to Peter Langtoft's Chronicle, the word *croice* is defined the cross, the rood; the rood naturally leads to definition of the rood-loft, whereon stood the image of the crucified Saviour, the Virgin Mary, and St. John. Could the fair occasion to mention the destruction of superstitious images, on the reformation, be scorned? Not so; the annotator recites, at full length, verbatim, the act of parliament, 3d of Edward VI., "for abolishing bookes and images." This, of course, leads to particular mention of the images which were destroyed, and especially one at Sandford, of the Virgin, made of Barrington stone, and painted, which, by a delicate flattery, the sculptor had made after the likeness of Philippa of Hainault, queen of Edward III. Could a fairer plea be suggested for incorporating the life of Philippa with the note, which is, accordingly, done. This brings on a conjecture that the said image was brought to Sandford church, from a suppressed religious house; and the said suppression naturally introduces anecdotes of Henry VIII., Cardinal Wolsey, Thomas Cranmer, Ann of Bullen, Herod, and St. John the Baptist, Lord Cromwell, the Countess of Richmond and Derby, the King's Grandmother, Nero, the Grand Turk, Sir Anthony Denny, the great black dog that licked up the dead King Henry's blood, accidentally spilled, and would not be driven away by the yeomen of the guard. The defunct's admiration of painting, particularly of wanton ladies, readily suggests a portrait of fair Rosamond, the colour of her hair, and notice of Hearne's friend, Dr. Samuel Gale, as the possessor. This is something like glossarial definition of a word. Somewhat in accordance with this Hearnian model, our author has compiled a very amusing and often instructive book; and, if he has amplified occasionally on points of which there needed "no ghost" to instruct us, on others he has rendered us new or more correct information. Let us run over a few of the commodities suspended on the pegs in his hall. The mercantile use of the word *stapel* had its origin from the Saxon *stapel*, a loop, haap, or padlock; goods were bonded until the duties were paid in warehouses under the royal staple; the towns where they were brought were staple towns; the word, therefore, soon became synonymous with a mart.

*Merchants' Marks.*—John Halle impaled his merchant's mark with his own arms; our author thinks he had married a relative who was entitled to the same coat as himself, or he would not have been ungallant enough to dismiss his wife's armorial badge for that of the warehouse. The marks were generally monograms of the party adopting them, blended with the cross, emblems at once of his faith and social appellative. The ✕ "on the labarum" of Constantine was, the author considers, the prototype of these devices. An old

book of heraldry rules that a man may take a mark such as merchants use, but not arms, without authority of herald or pursuivant—a good hint for those who, in modern days, would evade the armorial impost; a tax, by the by, which we, the reviewers, lineally descended from the Dry-as-dusts, bearing three wheels, proper, in a field pulverinous; a blazon which, though not strictly heraldic, was accorded to us in the Court of Pye Powder; a tax, we say, which we have ever regarded as iniquitous, being one on honour. We trust a reform parliament will speedily repeal it. Reform times have taught us a man may lose every thing but his honour.

*The Dress of John Halle.*—He wears a hat, covering his *324*; therefore, hints our author, the first hat was a night-cap, a mere cover for the hair. Hat is Saxon, and synonymous with hut, a diminutive of house. We see the force of this, and allow that, when a man (particularly a bachelor in search of lodgings) puts on his hat, he puts his house upon his head. The *fellen hat* is spoken of by Saxon writers. Hats of beaver seem to have been used in the fourteenth century, temp. Edward III. And here pardon us, gentle reader, if, our guide having put up a beaver, we follow him, with Giraldus Cambrensis, through Nant yr Afangcwn,\* accompanied by Baldwin, archbishop of Canterbury, who, in the year 1188, travelled through Wales; and who, if he had a hat on, our author thinks it must have been made of native beaver. We were about to suggest that the British beaver was nothing more than the otter, not yet entirely extinct in our pools and rivers, particularly those flowing through tracts of wild country; but we retreated, seeing old Michael Drayton come up to his support with a beaver from the Teivi.

"More famous, long agoe, then for the salmons leap,  
For bever, Tivy was, in her strong banks that bred,  
Which else no other brook of Brittain nourished,  
Where nature, in the shape of this now perib't beast,  
His people did seeme to have wondrously exprest,  
Being bodied like a boat, with such a mightie taile,  
As served him for a bridge, a helme, or for a sail."

And, examining the further evidence on the subject, we find, by the laws of Howel Dha, that, while the skin of the *otter* was valued at 8d., that of the *beaver* was rated at 120d. The *kastor* of the Greeks, the writer shews, is the legitimate parent of the slang *castor* (hat) of the Tom and Jerry school. Chaucer's merchant wore on his head

"A Flaundrish bever hat."

Leaving this matter to Repton,† our space compels us to pass to other articles of John Halle's attire, or we could have inserted the popular song, "All round my hat." The broche, brooch, or broach, whether used for transfixing a rump of beef, or keeping down a wimple, is nothing more than the Norman French word for spit, *Saxonice*, speet. Of course, this chapter on brooches would fairly lead us to the history of the pretender, Lambert Simnel, who was thought sufficiently punished for his royal aspirations by being appointed *tourne-broche—Anglice*, turn-spit—in Henry VII.'s kitchen. Our author does not allude to that near relative of the brooch, the *fermail*, *fermeilletum*, or clasp of the middle age, often so richly adorned, and which derived its name from its keeping the mantle firmly or closely together: thus, in an old romance, we are told, as we remember, of a lady who placed a chaplet of roses on her head, and a *fermail*, richly set with jewels, in her vest. The hair and beard of John Halle furnishes matter for much ani-

\* Afan (avon) cwn, the dog of the river.  
† See Repton in Archaeologia on Hats.

madversion, from the time of King David to Charles II., or of the Commonwealth, when, we know, that the beards of some eminent patriots, *alias* radical reformers,

"Were monastic, and did grow,  
In holy orders, by strict vow."

An attempt was made by Queen Elizabeth to regulate the growth of beards; but, being a *femme-sole*, she might not have that control over them which matrimony could have given her: however, it was ordered, in her time, that no fellow of Lincoln's Inn should wear a beard above a fortnight's growth! John Halle wears a *partielet*. We thought this meant a ruff, and was an article of dress of later date—indeed, it is so defined by Johnson;\* the author, however, thinks it to be the tippet which covers the neck and shoulders of his hero. Perhaps he is right. In Kempe's Loseley MSS, we observe the following passage, in an inventory of masking dresses, *temp.* Henry VIII., among garments for *froues*, or women, "two partielets of crymsin satten, rewed with silver, and guarded with green vellett." Now, we think these could scarcely be ruffs; in common acceptance, an article of plaited linen.† We had almost forgotten that our author glances at wigs; but whether in compliment, or otherwise, to his majesty's present government, he does not say: he has not, however, entered deeply into this *capital* subject, and contents himself with some generalities about the *blue* hair and beards of our Saxon forefathers. He thinks this was no achievement of wiggism, but was effected by a blue powder. The *furus crinium* of the twelfth century is noticed; and he says, that perriwigs were imported from France, *temp.* Carol. II. The authority we have just quoted shews, that perriwigs of hair, at any rate, as players' garments, were known in the time of the eighth Henry: *e. g.* "five coiffs of Venice gold, with peruks of here;" also, that they were sometimes made of human hair, horse-hair, and flax, according to the sex, quality, and character of the wearer. A mermaid was accommodated with a perruque of flax, dyed sea-green; while a demon capered in one dipped in rouge incarnadine.‡

John Halle wore a doublet. This short trussed garment, it would appear, had its rise from the gamboised gipon, worn under the armour, and was termed doublet from being doubled (*vestis duplicata*) or quilted throughout. The word is not, we believe, to be found in Chaucer, but it occurs in inventories, and testamentary papers, in the fourteenth century.

The girdle encircled the waist, and braced the doublet, of John Halle. The Romans used the girdle at once as a cincture and as a purse. It is a Saxon word, and had its root in the Greek *ζώνη*. The Hebrews wore girdles—so did St. Paul. We question, however, that the girdle, which performed its gyration round the tunic of John Halle, and which is not visible to any ordinary eye in his illuminated portrait, p. 89, was the legitimate state girdle, the distinctive of gentle rank or knighthood, which was borne in the middle ages on the hips. Several fine examples of the girdle occur in Stothard's "Monumental Effigies;" as the effigy of Sir Thomas Cawne, of William of Windsor, of Robert, Lord Hungerford. See, also, notes on the military and civil girdle in Kempe's descriptions for that work.

The anelace, dagger, and sword, were the

appendages of the military girdle; the anelace and gipgiere of the civil: the last-named appendage was so called from its having originally been a bag for game (*gibier*): the hinges of these wallets were often inscribed with those talismanic words, *Ave Maria*. The whittle was but a vulgar anelace. No forks were used in the middle ages; Godwin, earl of Kent, *temp.* St. Edward, and Chaucer's prioress, picked the morsels up, as genteelly as might be, from their plates with their fingers. This proves that the old proverb "hands were made before knives," may, with truth, be extended to forks also. Halle wore *hosen mi parti*, one leg red, the other yellow, vide portrait; a pretty and untried variety we would suggest for gentlemen's Wellingtons. The Saxon hose, the author thinks, were simply stockings, the Norman hose a consolidation of stockings and breeches. John Halle wore not the sandal, the *caliga*, the *soccus*, or *cothurnus* of antiquity; and he had better means, it appears, of shoeing himself than Alexander Selkirk, who was discovered, in 1709, on Juan Fernandez, vide p. 241; where this *abandoned* character—we use the word advisedly, in an unfortunate, not a vicious sense—is very naturally introduced. Halle fitted himself with a pair of *gigacæ*, *calcei cum arcuatis aculeis*, a kind of *moccasins*, which maintained their post (spite of sumptuary laws), whether chained to the knee, or otherwise, from the twelfth to the fourteenth century. Hence, John Halle's shoon would make a very respectable double canoe for a Sandwich islander, and their rostrated forms bear no small analogy to certain specimens of naval architecture produced by savage nations. This topic, of course, draws the attention of the editor towards the two Crispins and the battle of Agincourt. These Christian saints preached at Soissons, *circa* A.D. 303; and, in order to promote their cure of souls (not to speak it profanely) were obliged to patch soles for bodily subsistence. They suffered martyrdom, and afterwards naturally became the patron saints of all the useful race of *sutlers* and cobblers. The throw of an old shoe, on the departure of a friend, propitiates *bona fortuna*, says our author. We confirm this assertion by the recollection of our boyish days, when one of the sprightliest and best of grandams thus distinguished our parting steps. With this anecdote on an old shoe, he winds up his notes on the dress of John Halle; having travelled, he says, from the crown of his head to the sole of his foot (we do not altogether like the simile, which might have been misconstrued if spoken of a native of Spain or Portugal). However, let us conclude with the reverend antiquary, "in sober seriousness,"—for we have been far, all along, from thinking lightly of his labours,—and if we have run through his pages in a jocose and cheerful vein, it is purely because, in addressing his readers, he has set us the example; nay, adopts as the motto of his book, "*Ridentem dicere verum quid vetat*." [His work will be esteemed by those who like to make the history of manners auxilial to the history of events and persons: most heartily, indeed, do we "throw our old shoe" after it. Did our space allow, we might examine how far the editor has been able to dilate the Memorials of John Halle, which form the subject of the latter section of his volume; and when the second volume (promised) shall appear, we suggest that the utility of both, as a dictionary of antiquities, will be much enhanced by a copious index.]

*Recreations in Retirement.* By an old Tradesman. 12mo. pp. 348. London, 1837. Simpkin and Marshall.

THIS is a volume which we might say is peculiar to England. We have no doubt it is written by a retired tradesman, as intimated in the title-page; and it affords pregnant proof of the information, good sense, and good feeling, which pervade, at least, a certain portion of that valuable class of men and citizens. These are the persons who make a right use of the press; and who, by their intelligence and worth, and often by their quiet devotedness to some branch or other of scientific and improving inquiry, form a striking contrast to the superficial and noisy impertinents of the same rank in life. Having noticed what the diffusion of knowledge, through the medium of printing, has done for our author, we will quote, as a specimen of his abilities, the very complimentary tribute he pays to "the press" in return.

"The utility and influence of the press, in the world of our moral being, is strikingly and beautifully analogous to that property of the atmosphere of our physical universe which we call 'reflection.' For, as by this simple, yet wonderful, contrivance of nature, not only is light from the great luminaries transmitted to us, but every visible particle of matter is made by radiations, in turn, to contribute to the general stock of light and glory, by which we are surrounded, until earth is filled with beauty and heaven with splendour; so the press not only transmits to us, from their rich and elevated sources, the world-enlightening rays of genius and science, but even the smallest radiations of mind, the feeblest scintillations of intellect, are enabled, by its aid, to render their minute beauties visible; tending by their infinite number, rather than by their individual importance, to promote the general spread of knowledge, and the consequent improvement of society. Genius dazzles and delights us; but it is the multitudinous radiations from inferior minds which make us acquainted with those ten thousand proximate objects upon which our happiness and well-being in a great degree depend, yet which, but for the 'press,' would, perhaps, entirely, and for ever, have escaped our notice. Who can feel himself to be thus standing amidst the hundreds of millions of intellectual radiations, which this agent of light is continually diffusing in profuse splendour around him,—filling the once dark and gloomy region of our moral world with a flood of light,—and not rejoice in the consideration that such a medium for communicating knowledge has been discovered; not adore the beneficent wisdom which has provided such a means for the delight and improvement of his rational creatures? As without the property of 'reflection' in the atmosphere, though the glorious luminaries of heaven might still walk in brightness the paths of their magnificent orbits, rejoicing in their undiminished lustres, or repose themselves in solemn grandeur on their everlasting thrones, cheering and delighting the worlds of creatures by which they are immediately surrounded, yet we should derive no advantage from their existence, no delight from their career of glory: deprived of its aid, even the world of light itself would communicate no light to us; nor the canopy from which ten thousand lesser brilliants now shed their streams of radiance upon our path, be other than a starless void, a dark and gloomy waste. So, were the vivifying labours of the press suspended, though those mighty master spirits of our common nature—those worlds of intellectual energy which, as it were, of themselves, create the light in which 'they live and move'—might continue, though withdrawn from their influence over meaner minds, to solace their own spirits in the unborrowed wealth of native genius; might still pursue in solitude their godlike course, reveling and rejoicing in all the delights of refined and elevated intellectual existence—we, who walk but by the reflection of their light, who shine but by reason of their brightness, and are mentally visible to each other but as we radiate the scattered beams of their profuse effulgence, should soon present, in our degradation and debasement, the appalling spectacle of a dark moral chaos, where every thing which now instructs, and charms, and ennobles, would speedily be buried beneath an ever gathering, ever deepening cloud of cheerless, undistinguishing barbarism."

The following is a true and touching example of the good feeling to which we have alluded. It occurs in a paper, entitled, "The Grave, whither thou goest;" and nothing more natural was ever penned.

"In my early manhood I lost a little girl, by a sudden attack of a malignant disease; she was a lovely, interesting child, and, for a few days, I was quite inconsolable. I had before heard of death; I had seen death; I had been accustomed to think upon death; but, for the first time, I now, as it were, felt sensibly the hand of death. This child was a part of myself, lately beautiful, laughing, prattling in all the innocence and loveliness of childhood; it died caressing me: the words, 'My Father,'

\* Vide Johnson's Dict. by Todd, in voce.

† MSS. and other rare documents, preserved at Loseley, in Surrey. Edited, with notes, by A. J. Kempe, Esq. F.S.A. P. 77.

‡ Ibid. p. 92. et passim.

which it expired in uttering, seemed still, with a smile, to dwell upon its lips: now it lay cold, motionless; and, in a few hours, hastening to decomposition. I could no longer escape the conviction, that I was a mortal—a dying creature: I had given being to one upon whom death had passed; for whom the grave was gaping: I felt, as it were, the ground sliding from under my feet; the chill of death was on my flesh; and the feeling came over me, with a thrilling, convulsive emotion, of which time can never eradicate the remembrance, nor any subsequent instance of mortality renew. I have since wept beside many deathbeds; I have followed parents, wife, and friends, to the grave; I appear to myself as daily falling, piece-meal, into its dark chambers; no event, of this sort, seems, therefore, to come unexpected to my mind; but the death of my beloved child was the first blast that dispersed the illusion of my fancied security—was the first stroke which startled me from the dream of life; yet so severe and so unexpected was the shock to my feelings, that I was tempted, for a while, to indulge in repinings against Providence for the deprivation of my comforts, and thus manifest a resistance to the beneficial lesson, designed to be taught me by this conviction of my own mortality."

There is some poetry, of no great merit; and, upon the whole, we would say, that the writer is more reflective than logical. Had he defined what "knowledge" was in his essay, "Knowledge is power," he would not have fallen into the error of considering the commonplace ideas and names for knowledge as the actual representatives of that desirable possession.

*Philosophy and Religion, with their mutual Bearings comprehensively considered and satisfactorily determined, on clear and scientific Principles.* By William Brown Galloway, A.M. Pp. 544. London, 1837. Smith, Elder, and Co.

THE eye of the mind looks through a concave glass: when this is inverted, all is magnified and brought out to perfection; but when it is turned the other way, things then begin to look very small indeed. Hence is it that the philosopher's own theory so gloriously expands, while those of his predecessors or contemporaries dwindle into littleness. The title-page of Mr. Galloway's book informs us that the measureless bearings of philosophy and religion are "comprehensively considered, and satisfactorily determined." Criticism upon a work so announced must be superfluous; our occupation for once, at least, is gone. Experience, however, even from a quarter whence we never thought to learn any thing, comes to our aid. Play-bills have not left us untaught, that "rounds of enthusiastic applause" have sometimes proclaimed "the unprecedented success" of a tragedy all but damned, "in a manner equally creditable to the talented author and the true admirers of the drama." And who is there that has not, some time or other, fallen a prey to the advertised allurements of "great bargains!" "great discoveries!" or, "great coats, at two pounds each!" and received for their "ready money only" some twopenny trash. If, like ourselves, they are wise folks, they will have, at least, purchased the hint not to take either things, books, or persons, precisely at their own valuation. Upon this principle we advance beyond our author's title-page.

To say that Mr. Galloway's work is likely to supplant all other endeavours

"To lead, through Nature, up to Nature's God,"

or satisfactorily to supply all deficiencies, and solve all difficulties, as he professes, would snap the most elastic conscience. And, on the other hand, we should do him great injustice not to assure our readers that he has directed great research and considerable acuteness to a praiseworthy and benevolent purpose. He has grappled arduously with systems and subjects which few minds seek to understand, and but few are capable of comprehending. We feel, with Coleridge, little disposed to argue with

any one who insists upon our accounting for the origin of evil; and we, furthermore, distrust the assurance of any one who volunteers to do it himself. On this point Mr. Galloway's metaphysics are unusually hazy. We give a much fairer specimen of the style and tendencies of his book by quoting the following chapter:

"All the varieties of motion in animals are produced by muscular contraction; and, according to the kind of motion which each member is destined to perform, the arrangement, figure, and size of the muscles, are adapted in a very admirable manner, as well as the shape and construction of the bones and joints which form the frame-work on which the muscles operate. Every muscle contracts upon the application of a certain stimulus: and there is observable in them all a tendency to alternate contraction and relaxation, which is, however, in some of them more striking, in others more obscure, but most strongly exemplified in the action of the heart. This very complex machinery is further wonderful, from the arrangement and order of contraction of different muscles in complex actions; in which the whole muscles concerned do not act simultaneously, but according to a certain requisite succession; the stimulus reaching each muscle at the precise time when its action is necessary, and this being determined by the state of contraction of the preceding muscle in the train. The action of swallowing affords a striking illustration of this, but the same arrangement is observable in all other cases. Without such a provision, indeed, the muscular system would be useless; for we never could exert the necessary volitions, for the contraction of all the particular muscles in the requisite order, if it depended upon us. But the system is arranged so that the muscles act harmoniously in the performance of the most complex and important actions, quite independently of our knowledge and our will. All the actions of children are at first automatic and involuntary. The first effect of the air upon the lungs and body stimulates the muscles of respiration to their proper action, which they retain through life. The same sudden effect produces crying, which long continues involuntarily to accompany every violent emotion of surprise. The lips and tongue, often even prior to the application of the nipple, perform automatically the alternate contractions and relaxations necessary to the action of sucking; and the sensation of any thing between them, as a finger or even a smooth stick, excites that agreeable, important, and involuntary motion. The reception of the milk into the mouth stimulates the action of swallowing. This originates the action of the digestive organs. The peristaltic motion of the bowels, which never ceases during life, conveys it slowly along the alimentary canal. The expulsion of the feces and urine are also at first entirely automatic. All these actions in very young infants are involuntary; and, though mental consciousness and emotion accompany them, they ought to be regarded as functions of a living, sentient, and organised body, rather than of a knowing and intelligent mind. Of the same nature are vomiting, sneezing, coughing, hiccupping, yawning, and stretching; which last may be placed among the earliest actions of the limbs. The functions of the muscles of the eyes are at first equally automatic, being determined by the action of the light. Voluntary power is acquired by the observation of automatic motions. The connected series of sensations and muscular feelings, in various complicated actions automatically performed, is known to the mind,

and becomes associated with the perception of motion. Desire directed towards a particular motion, and its accompanying series of muscular feelings, stimulates the reproduction of the motion; and, by repeated experiments of this nature, the child acquires the power of directing its motions with intention. This knowing and voluntary power is not, however, attained over all the automatic motions; but those of the heart, and of the bowels, continue through life involuntary. The action of breathing in infancy is quite automatic; but the power of controlling it is certainly attainable, to a considerable degree, by long-repeated trials. The action of sucking soon becomes subject to the will; and gradually, also, to a considerable extent, the expulsion of the feces and urine. Vomiting, yawning, sneezing, coughing, and hiccupping, become, in like manner, partially subject to the mind, so as often to be controlled, and by many persons performed at pleasure. In all these cases the action is at first automatic, and the voluntary power is gradually acquired by the knowledge and observation of the former. The acting mind knows nothing of the osseous, muscular, and nervous machinery; it knows only the motions to be performed, and the series of feelings which accompany the performance; nor can it know the latter, till the action has been first automatically performed. The motions of the fingers, hand, and arm, are of the same nature, and the preceding observations apply equally to them. The first action of the hand is to close when any object touches the palm. This it does involuntarily, from the stimulus of the sensation and pressure of the object. The stimulus then reaches, in due order, a series of different muscles; the arm is bent according to its easiest and most natural action, and the object is conveyed to the mouth, where the lips and tongue immediately begin their usual operation of sucking. The conscious mind, observant of these automatic states, acquires the power of directing them with intention, and the action then becomes voluntary. The use of the lower extremities, and the equilibrium of the whole body, are more slowly acquired, by repeated experiments, in which the first actions are partly automatic, partly stimulated by involuntary emotion, and partly accidental, or caused by the operation of external laws, as gravitation and the position of the body. By such gradual advances does man attain to the full and perfect command of his body, which is capable of being ultimately brought to those prodigious manifestations of activity, strength, and equilibrium. In the lower animals, the progress is more rapid; because the range of their acquirements is destined to be more limited. Equilibrium, also, is more easily attained with four legs than with two; requiring, in some quadrupeds, little more than a certain natural firmness and tension of the muscles. But the slow progress of man towards the full use of his body, is chiefly caused by the exquisite and complicated nature of his talents, requiring slow and gradual cultivation: for the maturity of his nature consists not in the use of his limbs, which might be sooner attained, but in the well-proportioned development of all his powers, and chiefly those of his mind. This object would not be aided, but rather prevented, by the quick attainment of corporeal maturity. Parental care would thus be lessened, and the individual soon so engaged in providing for his mere animal wants, as to check the progress of intellect and knowledge. It was necessary, therefore, in the case of a man—a being destined for more than mere animal enjoyment or utility—to

retard the developement of the body, so as to favour that of the moral and rational soul. In the lower animals the automatic arrangement of the muscular motions of the limbs is generally more perfect and decided, but, at the same time, more circumscribed, being destined to operate with a less degree of intellect. The body, in them, is of greater relative importance, and less is left to be supplied by the actuating soul. Their actions are all more automatic, and confined within a narrower range. Instinct is, in them, predominant; in man it is subservient to reason. And, having spoken of instinct, I may observe, that there are two classes of phenomena generally confounded under that name, even by those who use it with most accuracy. As for the common practice of applying it indiscriminately to all the actions of the lower animals, many of which bear manifest signs of thought and passion analogous to ours, nothing need be said of it. But even among those who use the word with more philosophical discrimination, there are two classes of actions which are included and confounded under the name of instincts. These are—I. Instincts referable to the mere impulse of bodily sensation and organic structure; II. Those which do not appear to be explicable in this manner. I. Under the first of these heads I distinguish these two elements,—1. Bodily sensations giving rise to mental associations and desires. The cerebral functions, which are alleged by phrenologists must partake of this nature. The appetites, however, do so most markedly. The mental desire cannot be said to have definite object but the removal of the uneasy, or the gratification of the pleasant sensation, till the experience or imagination of what removes or gratifies it has given a more special direction to the pursuit of the mind. 2. Automatic bodily arrangements guiding the requisite motions, in subserviency to the bodily sensation, and consequent mental desire. Some of these have already been specified. There are others of equal importance, which have not been mentioned. Both these elements of instinct man possesses in common with the lower animals. But in them it is the regulating principle, an impulse to which the mind is blindly subject. In man it is subordinate to a higher principle, which is capable of controlling, modifying, combining, distinguishing, and which the classifying functions of the brain may aid, but cannot create. The instincts of the more important animals may, perhaps, be restricted to these two elements. Such are the horse, dog, cat, ox, sheep, goat, elephant, camel, ass, and others. But there are kinds of instinct in some animals which I cannot in candour bring under these two descriptions, and which I therefore class by themselves under the remaining head. II. Some phenomena of instinct seem to imply an imparted knowledge of the best mode of performing certain actions, not attributable either to the creature's own sagacity, or to the impulse of bodily sensation and automatic arrangement; or, if not an imparted knowledge, a blind impulse, not referable to the body, to perform certain laborious actions, and in the best manner. I refer to the instinct of nidification in birds; that of migration in certain species; the building of the beaver; the operations of the bee, wasp, and other insect tribes; and a great variety of analogous phenomena. To these instincts I know nothing similar in the history of the human race, unless it be the alleged facts of inspiration and spiritual impulse, and that these are analogous I cannot

affirm. The subject of instinct has hitherto baffled explanation, and has probably received less attention than its importance demands. Instincts of this last kind are not instead of the former, but are superadded to them in certain species of animals, where they are necessary. If, however, notwithstanding their striking apparent difference, it can be shown that they are of the same nature, and resolvable into the same elements with the former, then I willingly give up this head; but, till then, it is right to class them separately. Man, as we have seen, at first an automatic or instinctive animal, becomes a voluntary agent in the knowledge and intelligent direction of his organic and automatic motions. The soul's only immediate and primary knowledge is the knowledge of the sensations of the body. From this the progress of the mind begins; first simply knowing, then comparing and distinguishing the simple conceptions thus acquired, and discerning their relations, until it comes to understand its first simple and absolute knowledge. The knowledge of sensation thus compared, distinguished, and understood, is equivalent to perception, and opens up the wonders of the external world. This second kind of knowledge, which we call perception, is therefore a function of the knowledge of sensation, containing no information of what objects are in themselves, but only of how they affect our bodily senses. But in this secondary knowledge, comprehending the external world, our sphere of thought is enlarged, and a variety of complicated phenomena presented to be compared, distinguished, and reasoned upon. The mind, advancing in this second progress, proceeds to science; in attempting which, the necessity of a more accurate and abstract comparison of our primary conceptions is soon discovered. Thus, the nature and properties of figure, quantity, and motion, are by degrees separately attended to, as instruments for the furtherance of natural knowledge. In this manner the mind proceeds in understanding its perceptions, or its secondary and relative knowledge. The further we advance in this progress, the more does reflection on our acquired ideas become necessary, and the mind, which at first operates without considering how, has its attention at length called to its own inward operations. As sciences are multiplied and perfected, the range of human thought is still extended, and the enlarged comparison of them requires more and more attention to ascertain the true laws and principles of sound thinking. The aim and tendency of this progress is towards a general and ultimate philosophy of the universe. Thus, all the natural, scientific, and philosophical knowledge of man, is truly a function of the knowledge of his bodily sensations; a function obtained by diligent reflection and comparison, together with attention to the operations of his own mind. As man advances in knowledge he advances in power, and, if his knowledge and his power be well directed, he advances also in happiness. Every discovery in science enables him to employ the powers of nature more for his own service, and he does so by conforming himself in obedience to the laws of Nature. Scientific knowledge is not a mere matter of curious speculation. The powers of man for the promotion of happiness, will, therefore, receive their highest advancement in that highest and universal philosophy. But here, as every where else, his power towards good consists in obeying the laws which have been established by the Author and God of Nature."

Neither our limits nor our inclination dispose us to puzzle our readers with an elaborate treatise on the intricacies of philosophy, and their bearings on the more remote mysteries of religion. We have chosen, therefore, to speak of this work generally. And we have been led mainly to lend it our recommendation, because an unshaken and earnest piety pervades the whole book. We freely hold it forth to the attentive consideration of the philosophic Christian; and we doubt not that all such will think with us, that the study of its pages may lead on to stability many an unanchored mind. The title-page, on which we have animadverted, is but the confidence of youth—we find it in every profession; and it is due to our author to say, that few youths could have distinguished themselves as he has done by this volume.

*Sermons, preached at the British Episcopal Church, Rotterdam.* By the Rev. C. R. Muston, M.A., Assistant Chaplain, and author of "Recognition in the World to come." 8vo. pp. 503. London, 1837. Hatchard and Son.; Rotterdam, Meer and Verbruggen.

WE do not generally notice Sermons, but the volume before us claims our attention. They not only display talent of a high order, but it is so guided by a correct judgment, and influenced by a truly Christian spirit, that, while the understanding is convinced, the heart is warmed, and the finest feelings of our nature are called into willing exercise in favour of religion and virtue. In our view, these Sermons are what public addresses from the pulpit ought to be. The homage of the intellect is first obtained, and then an effectual appeal is made to the heart. Religion is here divested of gloom and ascetic austerity, and made to appear, what it undoubtedly is, a real blessing to man. Here we have a perpetual repetition of those glad tidings which the celestial messengers first proclaimed on the plains of Judea: Peace on earth, and good-will towards men.

"Every human creature feels that he is encompassed by innumerable dangers. He sees elements of evil at work around him which he cannot control, and prevent from acting against himself. It is true that the pleasures or busy occupations of life must frequently divert his thoughts from his real situation, and, in the buoyancy of health, in the pride of manhood, or in the excitement of the angry passions, he may have more or less of worldly courage. But still there lurks in the heart of man the feeling of uneasiness and fear, ready to be called out into action, at any moment, by a change in his views and circumstances. There is the dread of certain evils which are unavoidable, and of others, which, in his apprehension, may befall him either in this world or in the future. He is not, therefore, in the possession of peace; and how often is he held by his own feelings in bitter and degrading bondage! But what have we to fear? Not the accidents and sufferings to which we are exposed in the present world,—not the loss of property, health, or human friendship,—not the wrath of man, whose power is derived, limited, and incapable of pursuing its victim beyond the narrow confines of a mortal life,—not the approach of death, which, with regard to its immediate effect, is but the dislodgment of the soul from its earthly tabernacle, the separation of the spirit from its material appendage,—not any of the created elements and agencies with which we may come into contact in other spheres, and in the evolutions of eternal ages. But the primary and only proper object of fear to man, and to every other intelligent creature, is the displeasure of God; or, what amounts to the same thing, it is sin, which, by occasioning the loss of His friendship, becomes the source and root of all evil. It is this, and nothing but this, that induces uneasiness, dread, or solemn forebodings of judgment to come. Operating by means of conscience—the vicegerent of Deity—it constrains us to flee from His presence, as in the case of the first pair, when, overcome by the tempter, their innocence had departed from them. It drives its victims from the guardian wings of the Supreme Parent, and sends them forth, without any effectual shelter or refuge, from the evils and perils of their alienated condition. And, since every one has sinned, and carries about, within his own bosom, the consciousness of delinquency, so the bondage of fear is more or less felt over all the world, and discovers itself in those various artifices, those cherished delusions, or superstitious

tious usages, by which man vainly attempts to hide from himself the realities of his condition, and throw off the burden of guilt from his misgiving spirit."

A fine passage on the true liberty of man:—

"Every man, by the constitution of his nature, possesses the high prerogative of free agency. Next to the righteous use of this precious gift, it is his noblest and most distinguishing attribute. The whole order of inanimate things unconsciously follows the impulse of those laws which the Creator has impressed upon the works of his hand. The sun rises and sets, the planets revolve in their accustomed orbits, the moon walks forth in her beauty through the starry heavens, the ocean ebbs and flows, the earth yields her increase, and time, pursuing with undeviating exactness his appointed course, brings round the successive seasons of the year. But these things are conducted to the ends of their existence by irresistible laws. They are nothing more than unconscious and passive instruments in the hands of Deity. And even the irrational tribes, which come nearest in resemblance to man, are made to fulfil the designs of their creation by a kind of necessity resulting from instinctive tendencies—those wonderful impulses of animal nature which they appear blindly to follow. But, what a beautiful production is the human soul! What a noble and dignified creature is man! Governed by motives, possessed of self-determining power, he is formed for dominion over himself. With respect to the greatest proportion of his actions, and to all, indeed, that are most important, he is left to pursue his own course. Whatever may be his conduct, and however much he may disturb the goodly order of things, the Creator will not invade or destroy this sacred prerogative. He is free to do evil or good—to destroy or cherish his life—to disobey the truth or surrender himself to its authority and influence. But is he, therefore, irresponsible? Is true liberty lawlessness? Is it something which necessarily attends mere freedom of will, when no external restraints interpose to prevent the execution of its purposes? To entertain such an idea is to confound the distinctions of nature, and to overlook the highest duties and privileges of a rational creature. The liberty of the Gospel is moral freedom; it consists in the right use and direction of that precious prerogative which, while it is the noblest distinction of our nature, renders us accountable beings, and is the principal source of our obligations, dangers, and motives to obedience. What is civil or political freedom? We need not inform you, that it is not a release from those social laws or regulations under which men are placed to each other and to their rightful sovereign. The unrestrained license with which the thoughtless multitude are disposed to confound it is, in fact, the worst slavery under the mask of liberty; since it tends to dissolve all the bonds of society, and to render men the victims of lawless passion and universal injustice. There are certain limits within which alone happiness can be found—lines of moral propriety—boundaries for the regulation of the will prescribed by the authority of the Creator, and determined by the very nature of things. In like manner, spiritual liberty is loyalty to the Sovereign of the universe. It is conformity to the order which He has established—the order of truth, equity, and godliness. It is only to be found in His service, which is accordingly declared to be "perfect freedom;" and opposition of spirit or practice to His will is moral bondage—tyranny of the worst description, because it is the enslavement of the soul, the thralldom of its noblest powers. "Verily, verily, whosoever committeth sin is the servant of sin."

*Education Reform; or, The Necessity of a National System of Education.* By Thomas Wyse, Esq. M.P. Vol. I. 8vo. pp. 553. London, 1837. Longman and Co.

THAT a national system of education should be matured and established, we cordially agree with Mr. Wyse; and we, also, acknowledge with him, regretting it, that England lags behind civilised Europe in this respect, as she does in many other instances, in which long-tolerated evils are permitted to remain, and neither government, nor combination, nor individual energy, direct a thought to their remedy. Every Monday the populous streets of London are filled with over-driven and dangerous animals; and every day accidents happen from the abuse of public vehicles. The front of the Mansion House, the residence of the chief magistrate of London, who sits there, day after day, dispensing police regulations, is decidedly the most villanous spot in the metropolis for cab and omnibus confusion and peril. During the late frost, the worst slides in town were close to the police-offices; and legs and arms were broken, accordingly, near persons who could carry the sufferers to the hospitals. These, and a hundred such matters, are, indeed, only minor and trifling concerns, when compared

with the great subject discussed by Mr. Wyse; but they equally shew how slowly amelioration is adopted, and how many objects stand in the way of even the most obvious and ready improvements.

In the volume before us, the author has entered very clearly and very fully into many of the prominent principles, and the details, which that subject involves; and displays much reading and research in his views. But it will occur to our readers, that such a work defies analysis, or even adequate illustration, in the pages of a review: and, therefore, that we must be content to name it with approbation, as honestly and ably directed to a high national object. We do not agree with the author on several points, but we willingly give him credit for pure and conscientious intentions. These, and the fund of various information he supplies, must recommend him to the attention due both to his labours and to the essential interest of the inquiry. We are not sure that we can recognise the connexion between the main discussion and the church or tithe questions, or prædial agitations, in Ireland; and we are still further from adopting Mr. Wyse's conclusions in reference to their relation. Mr. Wyse says that Toryism and Churchism are entirely to blame for the Radicalism and Sectarianism in Ireland. We are not going to offer an opinion, but we agree with this—employ the people as a first step, and educate them as a congenial sequel, likely to give permanency to the industry and comparative prosperity you have planted.

*The Fallacy of the Art of Physic, as Taught in the Schools; with the Developement of new and important Principles of Practice.* By Samuel Dickson, M.D. 8vo. pp. 180. Edinburgh, 1837. Black; London, Longman and Co.; Cheltenham, Lovesey.

THE old medical story, "you have all been all wrong till I found out the way to set you all right," has here the authority of a regular practitioner, and an experienced staff officer. Dr. Dickson contends, that so far from being subject to many maladies, "man, properly speaking, is the victim only of ONE, and that this one, in the first instance, has no relation to organic change as a cause." His sequent reasoning is addressed to demonstrate that this malady is "FEVER-REMITTENT, or INTERMITTENT; which comprehends every shape and shade which disorder can assume!" "Whatever will prevent the recurrence of a change of temperature" is set down, if not as means of a complete cure, at least as a recipe, which "will improve the state of the patient in the whole;" but other remedies are not rejected. On the contrary, quinine, credulity, calomel, terror, colchicum, prussic acid, &c. &c. &c.; in short, "all remedies, to whatever kingdom they belong," are recommended, because, "every disease being merely a variation of FEVER," they "must be capable of producing, aggravating, and curing fever, throughout the whole of its complications." They all (including passions and pregnancy) act by the changes they produce in the patient's temperature! Dr. D. is a most determined enemy to blood-letting, and accuses the practice, in every case, of injuring, if not destroying, the patient; there is much good sense in his remarks on this subject, even if we are not disposed to go the whole way with him to his conclusions. Cholera Dr. D. asserts to be ague; and ague, a disease purely of the nervous system, the symptoms varying according to the number of nerves affected. But all these matters we,

the uninitiated, must leave to the doctor's book, and to the other doctors who may think fit and proper to consult it.

*The History of Party: from the Rise of the Whig and Tory Factions, in the Reign of Charles II. to the Passing of the Reform Bill.* By G. W. Cooke, Esq., Author of "Memoirs of Lord Bolingbroke," &c. &c. Vol. II. 8vo. pp. 489. London, 1837. Macrone.

THIS is one of the works which, however important they may be, we are compelled to pass slightly over. The range of the volume is from 1714 to 1762; and we have only to notice, that, in the author's opinion, from a review of the period, the greatest national prosperity is to be found when the Whigs were in power.

*The Gambler's Dream.* 3 vols. 12mo. London, 1837. Bull.

THE name results from the framework with which it has pleased the author to encompass his Tales. A ruined gambler falls asleep in his chair, and dreams that he is in Crockford's wine-cellar, where Old Nick, Sophia, and a party of friends, assemble for a carouse, and relate their adventures. The party consists of Hans, Pol, Obi, Mephisto, and Mouvement, who tell of the North of Europe, Italy, Africa, Germany, and France; whilst Sophia treats of Turkey, and Nick himself gives them a story of England. These seven narrations are of various merit, but most of them entertaining, and evincing considerable acquaintance with life and manners. In a few instances they border on bad taste, if not indecorum; from which the talent of the writer, and his knowledge of what the feeling of good society now demands from the novelist, ought to have warned him. The character of the production is such, that any extract to illustrate any one of the Tales is impracticable; and we must, therefore, content ourselves with saying, that the whole is not only amusing, but bears evidence of observation, smartness, and ability.

*Evils of the Factory System Demonstrated by Parliamentary Evidence.* By Charles Wing, Surgeon of the Royal Metropolitan Hospital for Children. 8vo. pp. 498. London, 1837, Saunders and Otley.

FROM a vast mass of valuable information, and a mass not less of various and conflicting opinion—in fact, from such a cloud of witnesses, and a consequent cloud of matter, as always attends a parliamentary inquiry—Mr. Wing has produced a treatise deserving of the deepest public attention. It is out of our power, however, to enter fully into the details of the subject; and we are not inclined to garble them, which would be more injurious than passing them over with a general character. We have, indeed, but a few words to say. The question of combination seems to us to resolve itself into questions of combinations—each applicable to its own trade, locality, and peculiar circumstances; so that no common rule of reasoning, or legislation, can be addressed to all. Respecting children in factories, we are among the warmest partisans of those whose humanity is interested in the arrangement that they shall not be overlaboured; but we would point out a strong and inseparable consequence, if the welfare of the young be contemplated, namely, that idleness should not be allowed to occupy the time taken from employment. Let it be devoted to moral and useful instruction, and save them from the contamination of bad habits and worthless companions. Without this, they had better toil from sunrise to midnight.

*Rosette and Miriam; or the Twin Sisters.*  
Pp. 336. London, Tilt.

THIS touching story, by the author of "Emma de Lissau," illustrates a Jewish conversion to the Christian faith, and interests us by its development of Jewish feelings, habits, and ceremonies. In our last Number we expressed our general opinion of fictions meant to stand in the place of polemics; and have, therefore, nothing further to say now.

## MISCELLANEOUS.

*The Poetical Works of W. Wordsworth, Vol. IV.* (London, Moxon.)—This volume contains "The River Duddon," "The White Doe of Rylstone," "The Tour on the Continent," and three Parts of "Ecclesiastical Sonnets;" and is, accordingly, one of high poetical beauty and interest.

*Impressions of Poetry, and other Poems*, by the Lady E. Stuart Wortley. Pp. 318. (London, Saunders and Otley.)—This dear lady is a devoted poetess; so devoted that it is to be feared she writes too much. Of the cultivation of all the kindly, tender, and fine feelings which all her productions display, it is impossible to speak except in terms of praise. The execution is not, however, always equal to the design; and even in some of these pieces which are of a pathetic character, certain expressions occur, or curious rhyme or rhythm is adopted, which gives them an air of the ludicrous and grotesque. Three hundred and eighteen pages of really superior poetry are not to be thrown off like ladies' familiar correspondence.

*Genus of Poetry*, Pp. 240. (London, H. T. Warren; Edinburgh, Mensies.) A good selection from eminent and pious authors.

*The Monk of Cimiez*, by Mrs. Sherwood, author of "The Nun." 12mo. pp. 428. (London, Darton and Son.)—A novel, in which the Protestant is contrasted with the Roman Catholic religion, entirely to the advantage of the former. There is much incident, chiefly to display the evils of monastic life, and a good deal of argument, in the volume; but we are not sure that this is the best way of discussing polemical questions.

*Le Petit Précepteur*. By F. Grandineau. (London, Hailes.)—A second edition of a nice little book for young beginners in French conversation.

*A correct Report of Sir R. Peel's Speeches at Glasgow*. Pp. 100. (London, J. Murray.)—A fifth edition testifies the extensive sale of these speeches, which are not undeserving of their popularity as compositions worthy of study. Free from violence, and couched in choice language, they are, in the abstract—for we speak not of their politics—deserving of the attention of Whigs and Radicals, as well as of the Conservatives, whose cause they espouse.

*Southey's Edition of Cooper. Vol. X.* (London, Baldwin and Cradock.)—This beautifully embellished volume finishes the posthumous poems, with other additions; and we shall now come to the *Iliad* and *Odyssey*, which are promised in four volumes, and complete the work.

*The Cheltenham Annuaire for 1837*, &c. &c. (Cheltenham, H. Davies.)—An almanac for the year, but otherwise filled with information peculiar to this fashionable place of resort. Some original essays on local, but useful, and scientific subjects, are particularly deserving of approbation; and the *Annuaire* will, no doubt, be a perennial.

*A Family History of England*. By the Rev. G. R. Gleig, M.A. Part I. (London, J. W. Parker.)—Designed neither for a school-book nor an enlarged general history. Mr. Gleig is here essaying a medium or *juste milieu* work, adapted for family reading—the young and the old—and, at all events, the innocent and moral. The first specimen does credit to his taste; and we shall look forward to its successors to enable us to confirm its favourable impression. The author seems to rely for the tenor of events on the best received historians; and not to seek from learned and less common sources for critical and antiquarian corrections. Perhaps this labour would be too great for a publication of the kind, though published under the direction of the Society for promoting Christian Knowledge.

*Some Observations on the present State of Ireland*. Pp. 79. —A pamphlet on this interesting subject by Sir F. J. Macnaughten, who displays great practical acquaintance with most of the questions which distract this factious country.

*The Manner of Proceeding on Bills in the House of Commons, with a Supplement, comprising 200 pages, mostly on Points which have recently occurred in Practice*. By G. Bannell, Parliamentary Agent. 4to. (London, Clarke; Peterworth; Payne and Foss; Cadell.)—So long ago as May 1833 (*Literary Gazette*, No. 852, p. 312), we noticed the essential service Mr. Bannell had rendered members of parliament, parliamentary agents, and parties having interest in parliamentary business, by his preceding work, to which the present is a most necessary supplement, with more recent practices and precedents has made indispensable. We must repeat our words, "it is at once an excellent guide, and a perfect authority."

*The Anti-Sectarian, with brief Memoirs of the Life of a Wanderer from the Fold of Christ*. Written by himself. 8vo. p. 141. (London, Simpkin and Marshall.)—This strange book has been published some time. It is the wildest jumble we ever saw, and may well be classed among the curiosities of literature.

*Two Lectures on Taste, read before the Philosophical Society of Liverpool*, by James Carter. Pp. 138. (Colchester, G. Dennis; London, Simpkin and Marshall.)—These discourses do much credit to the lecturer and to the institution where they were delivered. Good taste pervades them throughout.

## ARTS AND SCIENCES.

## LINNEAN SOCIETY.

MR. LAMBERT in the chair.—He exhibited specimens of the manna, from the Valley of Moses, near the foot of Mount Sinai, and now ascertained to be secreted by a species of tamarisk (*Tamarix mannifera*). It is a gummy substance, resembling, in colour and flavour, an inferior kind of honey, which it also resembles in consistence, when recent, but it soon hardens and dries up on exposure to the sun. The specimens were collected by Lieutenant Wellsted, so well known by his interesting survey of the province of Oman, and of the coasts of the Red Sea, which has been, from time to time, noticed in our columns. Lieutenant Wellsted was present at the meeting. Specimens of *Polygonum dumetorum*, and *Epipactis purpurata*, collected in the neighbourhood of Reigate, Surrey, during the past year, by Mr. George Luxford, were also exhibited: as were, likewise, specimens of a singular variety of the dwarf pine (*Pinus pumilio*), from the collection of his Grace the Duke of Bedford, at Woburn Abbey; having the apices of the scales of the cones elongated and recurved. Dr. Hugo Mohl of Tübingen, Dr. Müller of Berlin, and others, were proposed to fill the vacancies in the list of foreign members. Read, a continuation of Mr. Westwood's paper on the relationships existing amongst natural objects, termed affinity and analogy, selected from the class of insects.

## ROYAL INSTITUTION.

ON Friday evening Dr. Ritchie delivered a lecture on the velocity of sound through elastic fluids, and endeavoured to account for the remarkable discrepancy between theory and observation; of the difficulty attending the investigation of which the audience might judge, when he informed them, that it had engaged the attention of the greatest philosophers, from Newton to Laplace. He remarked, that he had ranged against the views which he was now to lay before them, the names of Lagrange, Laplace, Biot, Poisson, Herschel; but he had Newton standing at his right hand. Though all these philosophers had differed from the views of Newton, yet they had all arrived, by different modes of reasoning, at the same theoretical result: viz.—That the velocity of sound in the atmosphere is the same as that which a heavy body acquires in falling through half the height of a homogeneous atmosphere. He then illustrated, by experiment, the nature of a wave or undulation in a series of particles mutually repelling each other. This was done by having a number of magnetic needles, turning freely on fine pivots, arranged with similar poles in the same direction; each needle having a small ball on the end, to represent a particle of air. When a magnet was brought near one extremity of this arrangement, the nearest was first repelled, which gave motion to the next, and so on, in succession, till the motion reached the most remote. When the magnet was withdrawn, they returned to their state of stable equilibrium. He then examined one of the steps in the mathematical investigation of the velocity of sound by the differential and integral calculus, and pointed out an assumption which all these authors had made, which could not be admitted except on the suppo-

sition that the atoms of air were mathematical points, having weight, and mutually repelling each other; a supposition altogether at variance with our notion of matter. He then shewed that a rarefied wave ought, according to the theory of Laplace, to move slower than a condensed wave; which did not seem to be the fact. Laplace, as is well known, endeavoured to account for the remarkable difference between theory and observation, by supposing the condensed wave to generate heat; and, consequently, that sound moved in a much hotter atmosphere than was indicated by the thermometer. He shewed that all philosophers, with the exception of Newton, and some of his commentators, had entirely overlooked the effect which must result from supposing the particles of air to lose in magnitude. He clearly shewed, by experiment and reasoning, that if they do possess any magnitude, sound must move quicker in such an atmosphere than in one composed of mere mathematical points. By applying this correction to the vapours formed from water, alcohol, &c., he shewed that theory and observation are perfectly reconciled; whereas they cannot be by the celebrated theory of Laplace.

## GEOGRAPHICAL SOCIETY.

SIR JOHN BARROW, Bart. in the chair.—The first report of the Society during the second expedition in the interior of British Guiana, by Mr. Schomburgk, was read. Agreeably to a plan laid before his Excellency Sir James Carmichael Smith, lieutenant-governor of British Guiana, the river Corentyne was selected as the field of Mr. Schomburgk's investigations, during the seasons of 1836-7. The little knowledge which the colonists had of this river, and the reports of those who had visited its lower regions occasionally, pointed its fitness for colonisation in such favourable colours, that a further examination appeared a desirable object. Lieutenant Losack, of the 69th regiment, and Messrs. Cameron and Reiss, offered to accompany the author as volunteers, in order that he might be the better able to dedicate his attention uninterruptedly to the chief object of the expedition. Mr. Weith, as ornithologist, and Mr. Heraut, as draughtsman, also accompanied him. The party left Demerara on the 2d September, in the schooner the Lady D'Urban, which had been chartered to take the expedition to Berbice. So little is the navigation of the Corentyne known, that our adventurers found it impossible to get a conveyance direct for the river. They were, therefore, obliged to charter another vessel to convey them to plantation Skeldon, on the river's western bank, where they arrived on the 9th, and were received with every mark of kindness and hospitality by the proprietor, Mr. Ross. The banks of the Corentyne are generally low, but uncommonly fertile, and well suited for the cultivation of the staple commodities. At present they are almost uninhabited, with the exception of two wood-cutting establishments. On the British side of the river no inhabitants are to be traced for a great distance; whole tracts of the most fertile land are left uncultivated, and are the sole and undisputed haunt of the jaguar and the fleet deer. It is not only the fertility of the soil that recommends this tract for cultivation; the easy communication which might be established between the river and Canje is an object of great consideration. After some remarks on the current of the river, and on the geological features which presented themselves along its banks, and which extend to Berbice, Mr. Schomburgk again notices the

luxuriant vegetation of the place, which appeared to increase the further the party advanced: they readily recognised all the useful timber-trees for which Guiana is so much famed; the soil is equal, if not superior, to that of the Essequibo, and rests upon a clayey substratum. The old maps represent, generally, a connexion between the river Corentyne and Nickerie, by the river Maratica: the author was not able to receive the slightest information on the subject; and as the Caribbees, who visit the settlements on the Corentyne, use always that river as high road, it proves that they are not acquainted with any other, or they would have chosen the shortest. At Tomatai the party found three Macoosie women, kept in bondage by the Caribbees; and it was only a short time ago that one had attempted to make her escape: swearing revenge, they had pursued her, and the unfortunate woman was recaptured, but it was beyond the author's power to ascertain her fate: on inquiry, he was told that she had been sent to Caperania. The nefarious trade of slave-dealing is, therefore, still carried on, and, from several observations which fell from the people, the parties suspected that a new expedition to the Macoosie was in contemplation, suspicions which turned out to be too well founded. The latitude and longitude of Tomatai is  $4^{\circ} 59' 23''$  N., and  $57^{\circ} 15' 46''$  W. On the 11th of October, Mr. Schomburgk and his companions left it and proceeded up the river, the appearances of which are described. Amongst the most striking features which presented themselves to the explorers, was what might be termed a forest of lilacs: these beautiful aquatic plants were in full blossom, the light brownish *scoops*, the thickly set flower, naked and of lilac colour, formed a strong contrast to the otherwise barren granitic rocks: thousands were in flower, and their luxuriance shewed how much they were delighted with the spot. One of the leaves measured 3 feet 2 inches in length, and 2 feet in width. The romantic scenery of the cataracts are then described. In prosecuting their researches, the Caribbee Indians who accompanied the travellers demanded provisions, like the other Indians, though their Cassava fields might have afforded them sustenance for six months: good policy directed Mr. Schomburgk not to quarrel with them; he was obliged, therefore, to give them allowances in rice, &c., and the in-road which was consequently made in the stores caused a well-founded apprehension that they would fail in less than three weeks. This alarmed the party. The fruits of the prolonged survey were not only a knowledge of the country above the cataracts, but likewise the discovery of several new *Orchideæ*, and some *Caoti*, the knowledge of the river, the fitness of its banks for colonisation, the peculiar formations in its vicinity with regard to mineralogy, and the hope that Guiana may possess coal, must be considered of much importance. Another paper, entitled Observations on the unexplored parts of the north and north-western coasts of Australia, by Mr. G. W. Earl, was likewise read. We cannot well present an abstract of this clever paper. It treats chiefly of the currents along the coast and the author's theories thereon, which, he trusts, do not involve any improbabilities. As a specimen, we give the following: Drift-wood is never seen in large quantities in the gulf of Carpentaria, a gulf which resembles that of Siam; but this does not prove the non-existence of rivers, as the Australian timber is of so heavy a nature that it almost invariably sinks. During the numberless times that Mr.

Earl ascended the Swan and the Blackwood rivers (two principal streams in Western Australia), the progress of the boat was never obstructed by a piece of drifting timber, as the trees always sink where they fall. Neither did he ever see any on about fifty miles of sea-beach which he had traversed, with the exception of an occasional pine-spar which had come over from the opposite islands.

## ENTOMOLOGICAL SOCIETY.

FEB. 5. Mr. Stephens in the chair.—An extensive list of donations of entomological works to the library was announced, and thanks ordered to be returned to the donors thereof. Mr. Bohn presented a copy of the "Historia Tripartita," printed in 1472, which had been completely destroyed by the book-worm, or larvæ of *Anobium striatum*. Various remedies were suggested for the destruction of this troublesome insect; amongst which, the sprinkling of a few drops of prussic acid on various parts of the book, and inclosing it in an air-tight box, which would have the effect of immediately destroying the insects, was considered especially serviceable. The application of heat to  $170^{\circ}$ , which would also kill the insects; and the dipping of the books in a solution of corrosive sublimate and alcohol, were also recommended. The memoirs read were, 1. Catalogue, with notes, of the coleopterous insects found in the neighbourhood of Penzance, by Frederick Holme, Esq.; and, 2d, Inquiries into the grounds for the opinion that ants lay up stores of food, by the Rev. F. W. Hope.

## BOTANICAL SOCIETY.

ON Thursday, J. E. Gray, Esq. F.R.S. president, in the chair, the minutes of the last meeting were read and confirmed. Some members were elected, and others proposed. Mr. W. A. Lewis read a paper on the order *Ranunculaceæ*, in which there were 29 genera, and 632 species of plants, and the numerical distribution is as follows: the largest proportion are found in Europe, which contains more than one-fifth of the whole; North America, about one-seventh; India, about one-twenty-fifth; South America, one-seventeenth. Very few are found in Africa, except upon the shores of the Mediterranean: and 18 species have been discovered in New Holland. A discussion ensued upon this paper between the president, Mr. Cooper, the curator, and Mr. Mason, after which the meeting adjourned.

## METEOROLOGICAL SOCIETY.

ON Tuesday, the absence of the president, Dr. Birkbeck, from indisposition, as well as of several leading members, caused the reading of the laws of the Society, in the revised state, to be postponed till the anniversary in March. Donations were, however, received. The communications laid before the Society were the following:—1st. On the balance of nature, by the late Dr. James Sims, of Bath. This paper was presented by Dr. Clutterbuck, at the preceding meeting, and contains many points of great interest to meteorologists. 2d. Remarks on the formation and colour of such clouds as are caused by the agency of mountains, by John Ruskin, Esq. These remarks are founded upon actual observations made in Switzerland. 3d. Observations of the gale of November 29th, shewing its commencement, velocity, progress, and termination, at Ham-burgh, by the Rev. W. B. Clarke, A.M. Also, by the same gentleman, observations on the gale of Christmas-day, with an account of con-

trary winds at various places. 4th. Observations on the weather at the Isle of Guernsey, on Christmas-day, and subsequently, by F. C. Lukis, Esq. We sincerely hope this Society will continue its exertions, till the laws of meteoric and atmospheric phenomena are not only well understood, but rendered of practical utility to the army, the navy, the agriculturists, &c.

## LITERARY AND LEARNED.

## UNIVERSITY INTELLIGENCE.

OXFORD, 9th February.—The following degrees were conferred:

*Masters of Arts*.—W. Grice, University College; C. W. Moffat, Merton College; Rev. J. S. Pinkerton, Fellow of St. John's College.

*Bachelors of Arts*.—H. W. O. Polhill, Scholar of University College; J. R. Cornish, Student, W. Mott, Commoner, Christ Church.

## ROYAL SOCIETY OF LITERATURE.

MR. HALLAM in the chair.—A paper was read by Mr. Cullimore, "On the Epoch of Amon-me-Ramess the Great, as determined by the astronomical sculptures on the ceiling of his palace at Thebes." The writer commences by referring to his memoir relating to the period of Thothmos Mera, read March 10th, 1836 (for an analysis of which see our review of "Rosellini," *Literary Gazette*, No. 943), in which arguments were adduced from an alabaster scarabæan calendar, bearing the prefix of Mera, which he discovered in the collection of Mr. Sams, to prove that Mæris, or Menophres, the author of the "Canicular Cycle of 1461 years," who, according to Herodotus, reigned 900 years before that historian visited Egypt, and according to Theon, 1605 years before Diocletian, was one and the same with the Mera of the monuments. Mr. Cullimore's present object was to draw the attention of the Society to data of the reign of Amon-me-Ramess, or Ramess II. the seventh successor of Mera, leading to analogous chronological results. If the monumental Mera, and the historical Mæris or Menophres be admitted, on the former proofs, to be identical, it will be necessary to depress the great eighteenth dynasty of Diospolites represented in the hieroglyphic tablet of Abydos, on the right disposition of which the chronology of the best ages of Egyptian art and history depend, four centuries below the age supposed by Champollion and Rosellini, and a century below that inferred by Mr. Wilkinson, —a proceeding which will be justified, if we find the results regarding the time of Mera, confirmed by similar results of that of Amon-me-Ramess, whose son and successor was the last king of the eighteenth dynasty. That such is the case, and that the desiderated chronological interval which separated the brightest period of the Pharaohs from the known age of their Greek successors, is strictly deducible from the monuments. Mr. Cullimore shews this from two important astronomical representations which he recently met with in the "Recherches sur l'année vague des Egyptiens," by the learned M. Biot, in which the whole series of the erratic Egyptian months, in connexion with the fixed characters of physical astronomy, is depicted at widely different eras; exhibiting a displacement of seven signs or months, i. e. from Gemini to Scorpio in *antecedentia*, in reference to the commencement of the erratic year, between the reign of Amon-me-Ramess, the builder of the Memnonium and the Layid founders or restorers of the temple of Apollinopolis Magna, the modern Edfon:—this interval, at 125½ years to each sign, through which the Thoth, or first day and month of the Egyptian year had receded, being 878 years in

ascent from the year B. C. 260, the date fixed by the Ptolemaic sculptures. The era of those of Ramses II. thus becomes astronomically determined to the year B. C. 1138, in full agreement with the epoch of Mera previously determined to B. C. 1325; and in further confirmation, the writer adduced the testimony of Isaacus Monachus, to the effect that the canicular cycle, in use among the astronomers of Persia, took its date from the year B. C. 1136, differing two years only from the era of Amon-me-Ramses, whose invasion of the Persian dominions is attested by history and confirmed by the monumental sculptures—facts which, in combination with the undoubted Egyptian origin of the Persian cycle, seem to establish the identity of the epochs in question beyond refutation. The learned Biot failed to profit by the clear elements of the displacement of the year, which were before him, in consequence of his preconceived opinion of the validity of Champollion's elevated chronology of the dynasties, which caused him to attempt the conciliation of the phenomena with Champollion's age of Ramses—the commencement of the fifteenth century B. C.—rather than to deduce the true epoch from the phenomena. Mr. Cullimore then adverts to a similar proceeding of Mr. Wilkinson, grounded on isolated symbols in the same sculptures, whereby the canicular era of Mera, B. C. 1322, rather than that of Ramses the Second, was obtained; and he shews that the combination which gives this result—being the names of the month Thoth and of the dog-star in connexion—is common to every age of Egyptian history, so that no fixed date could result from it. In conclusion, the writer impressed on the Society his conviction that the present results, compared with those developed in his former paper, admitted of no other inference, than that the great eighteenth dynasty of Diopolites ruled Egypt from the commencement of the fifteenth century B. C. until that of the eleventh, or from about the time of the departure of the Israelites from that country, until the establishment of the Jewish monarchy, as Josephus and every other original authority have stated it.

## SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Mr. Kempe exhibited an etching, by a Dutch artist, of the attack by the Dutch fleet under Admiral De Ruyter on Sheerness, and the destruction of the ships of war in the Medway, in the reign of Charles II. The Dutch had hoped to get up to London, but were repulsed before they got so far up the Thames; they afterwards tried several of the English out-ports, but the alarm had then been generally raised, and the whole coast was effectually guarded.—Mr. Carlos communicated a description of the church of St. Mary, at Guildford, and the ancient paintings, of which copies had been exhibited at the last meeting, with some additional observations by Mr. J. G. Nichols.—Sir Henry Ellis read a copy of a statement by Sir Michael Hilke, secretary to Lord Burleigh, relative to the state of Ireland, and particularly the province of Ulster, at that time in a state of troublesome rebellion.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

*Monday*.—Statistical, 8 P.M.  
*Tuesday*.—Linnæan, 8 P.M.; Horticultural, 2 P.M.; Civil Engineers, 8 P.M.  
*Wednesday*.—Society of Arts, 7½ P.M.; Geological, 8 P.M.; London Institution, 7 P.M.; Medico-Botanical, 8 P.M.  
*Thursday*.—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.  
*Friday*.—Royal Institution, 8½ P.M.

FINE ARTS.  
BRITISH GALLERY.  
(Third notice.)

141. *Part of the Crypt of Canterbury Cathedral, with Parliamentary Troopers Gambling*. C. Landseer.—There is here little of that spirit-stirring character which the artist has before displayed on a similar subject; but there is enough of clever art to render the work desirable in every other respect. It is powerful in its contrast of forms, excellent in its effect of *chiaro scuro*, and admirable in its harmonious colouring.

10. *Cromer, Norfolk*. J. Stark.—The works of this artist have long and frequently come under our favourable notice, but in few instances with more desert than in this performance, on which every quality of art connected with the subject is brought to bear. From foreground to distance it is in admirable keeping; and in effect would do credit to some of the best examples of Flemish art.

9. *Flowers from Nature*. J. Holland.—A very beautiful study, and an example, in style of execution, such as would do credit to the first names in flower-painting, whether ancient or modern.

109. *A Venetian Gentleman*; 127. *Reposing after a Walk*; 128. *Polish Banker*. S. A. Hart, A.R.A.—In these three subjects Mr. Hart seems to have concentrated his efforts; and he has certainly produced some of the brightest examples of his pencil. *The Venetian Gentleman* is full of spirit and animation, and the female reposing offers a striking contrast to the close and sordid expression of the money-dealing wight.

36. *Expostulation*. S. J. E. Jones.—A widowed mother remonstrating with a pedantic old coxcomb of a country schoolmaster on the cruel treatment of her poor boy, whose naked shoulders exhibit but too distinctly the severe treatment to which he has been exposed. It is, in every respect, a clever and well-executed performance.

By way of variety, in which quality the English school of landscape is well known to excel, we shall point out some examples with which we have been struck, in different styles and character of execution, viz.:

147. *Western Pier at Calais*. J. Wilson. A very gem of its class.—12. *Scene on the Lynn, North Devon*. J. B. Pyne. Full of the picturesque.—10. *View in the Neighbourhood of Flarding, near Rotterdam: Moonlight*. J. B. Crome. Bold and free in its execution, and, in effect, worthy the pencil of Vandermeer.—17. *View on the Giudecca, Venice*. C. Stanfield, R.A. A pleasing and still varied composition in the exhaustless character of Venetian scenery.—25. *Tivoli, on the Cascatelle*. A. Geddes, A.R.A. Seen through a warm and mellow mist, it reminds us strongly of Wilson's effect and colouring; an effect which leaves play for the imagination, while it gratifies the sight.—53. *Cobham Woods*. G. Arbuthnot. The artist in this performance has assumed a bold and fluent style of pencilling, such as we frequently find in the works of Gainsborough, with something, also, of Salvator's manner. This is happily contrasted by 58, *Glen Talloch, near the head of Loch Lomond, with Ben Vorlich in the distance*. T. C. Hoffland. This sweet and beautifully coloured scene has before come under our view; though much gratified by the opportunity of again admiring it, our best wish, as well as hope, is, that we may not see it on the walls of any other exhibition-room. To these we may add 202, *Atrani and the Convent of Almalfi, in the Bay of Salerno*.

W. Linton. A very favourable example of this artist's truly classic pencil.

(To be continued.)

## NEW PUBLICATIONS.

*George, Earl of Dalhousie, &c. G. C. B., Captain-General of the Royal Company of Archers, the King's Body-Guard for Scotland*. Painted by John Watson Gordon, S.A.; engraved by Thomas Lupton. Edinburgh, Hill.

A FINE whole-length, full of character and effect; representing the noble earl, "as he appeared on the 23d of July, 1832, when he received for the Royal Company two Standards, the gift of his Majesty King William the Fourth." Mr. Gordon and Mr. Lupton have both done their best, and the result is highly creditable to all parties.

*Fighting for the Standard at the Battle of Marston Moor*. Painted by A. Cooper, R.A.; engraved by W. Giller. Hodgson and Graves. The talents of Mr. Cooper, in the execution of subjects of this description, have been too frequently the admiration of the public to render it necessary for us to say more than that it is one of his most spirited conflicts. It has been admirably engraved by Mr. Giller.

*Pauline Duvernay*. J. F. Lewis. London, M'Lean.

In the Spanish costume, and an admirable likeness of this popular *danseuse*. She has been fortunate in getting an artist, not only so able, but so familiar with the dress and forms of that country, to preserve her in the public recollection by so pleasing and clever a whole-length.

## MUSIC.

## QUARTET CONCERTS.

THE first of these concerts for the season took place at the Hanover Square rooms on Thursday evening, and was fully and fashionably attended. A quartet in F major, by Weiss, first time of performance in this country, amply maintained the credit the composer has acquired in his own. The third movement, scherzo-allegro, was remarkable for its peculiar articulation and general effect. The aria, "Deh' per questo istante," by Madame Caradori Allan, was beautifully given; at the general desire, she repeated Beethoven's cantata, "Der Wachelschlag," a paraphrase on

"Ye birds  
That, singing, up to Heaven's gate ascend,  
Bear on your wings and in your notes His praise."

Sir George Smart and Mrs. Anderson were, as usual, excellent; and the whole went off with great *éclat*.

## DRAMA.

REAPPEARANCES and new pieces have made the drama flourish during the week. At the large houses, tragedy has revived, supported at Drury by Mr. Forrest, and at Covent Garden by Mr. Hamblin, who, after an absence of sixteen years, made his *début* on Monday, in *Hamlet*. Few may remember this gentleman, but those who do must acknowledge him to be much improved, and his *Hamlet* a fair specimen of acting, into which he throws many fine conceptions. A Mr. Barrett, from the American theatres, has likewise appeared, but his reception was far from flattering. Barnett's beautiful *Mountain Sylph* has been produced at Drury Lane, with great magnificence, and almost the same good cast it had at the Lyceum, including H. Phillips, Wilson, and Miss E. Romer. Mr. T. P. Cooke has been playing *Long Tom Coffin*, in the *Pilot*, at Covent

Garden, and is announced in a new nautical drama, of which we shall report in due time. Mr. Cooke is as entertaining as ever, and, consequently, as great a favourite.

**Adelphi.**—A clever travesty of the principal scenes in Home's tragedy of *Douglas* has been greeted with great merriment during the week; it was produced on Monday, and we have no doubt will last to the end of the season. John Reeve was the *Norval*, "a mysteriously interesting youth,—a peer at the plough, native nobility defying high-lows; generous, brave, seldom fighting less than four, always being conqueror." His song of "My name is Norval," was excellent, as were all the others he had to sing; and he was perfect in his part on the first night. Mrs. Sterling's *Lady Randolph* was as capital a burlesque as we ever witnessed; and O. Smith, S. Smith, and Sanders, were most clever personators of *Glenalvon* ("a stock villain, with black wig and heart to match"), *Lord Randolph*, and *Old Norval*. The audience laughed through the piece, which is so utterly ridiculous that it is impossible to find fault. The Lenten entertainments are very attractive at this house. Mr. Yates's views of himself and others, Mrs. Yates's beautiful delineations of the passions, Mrs. Fitzwilliam's *Widow Wiggins*, the Bedouin Arabs, John Reeve and Rice with songs, &c. &c. form such a medley of amusement, that no other theatre in London can, in such matters, hope to vie with the little Adelphi.

**Queen's.**—*Fairly taken in, or the Portrait*, slightly noticed in our last, may rank among the happier efforts of dramatic authorship of late years; although in three acts, it is almost a comedy, and is performed in a style which would do credit to much larger establishments than the Queen's. Miss Clifford is a very pleasing actress at any time, but is quite a treat in this piece, and will, we predict, be a favourite of the London boards wherever she may appear. Altogether, the company at this house in "the far west" is of a very superior order to the more easterly minor theatres.

**St. James's.**—Sacred music, and other amusements, on the Lent days, and excellent operas, burlettas, &c. on the others, continue their unabated attraction at Mr. Braham's beautiful little theatre. The revival of *Pedrillo*, alias, *The Castle of Andalusia*, has been attended with great success; and the nightly overflow of the house is a sure sign that the St. James's is taking its rank as one of the leading theatres. The drama announced for Monday, under the title of *The Refugee*, is, we hear, the production of Mrs. S. C. Hall, who, however successful in novel-writing and Irish stories, has not before tried her powers upon the stage.

**Lyceum: Opera Buffa.**—The season has drawn to a close, and, we hope, with sufficient success to induce the speculators to continue it next winter. It has been a pleasant variety, and richly deserves the support of all lovers of good music. Signor Puzzi took a benefit on Tuesday, *Le Nozze di Figaro* being the opera, and Mr. Mitchell, on Thursday, with *Scaramuccia*. The house was quite full on both evenings; and we hope Signor Puzzi and Mr. Mitchell will benefit as much in their pockets as the public have in their ears.

**Olympic.**—In recurring to the revival of the *Two Figaros*, which fills the Olympic to overflowing, we are about to notice the play, as published "under the auspices of the Dramatic Author's Society," and edited by the clever comedian, Mr. B. Webster. This is the first of a series, and is got up in a very neat and praiseworthy manner; with a sketch of Liston's life, by Mr. Webster, and a dedication to Ma-

dame Vestris, by Mr. Planché; to which we refer our readers. After a complimentary notice to Madame Vestris, Mr. Planché gives the following reasons for the great success of the Olympic:—

"In the first place, you have never suffered a temporary decline of attraction to scare you into the destructive system of filling your boxes with orders. Secondly, You have never suffered your play-bill to be disgraced by a puff; but rigidly restricted it to the simple announcement of the performances. Thirdly, In the production of every drama, without regard to its comparative importance, the most scrupulous attention has been paid to all those accessories which form the peculiar charm of theatrical representations, by perfecting the illusion of the scene, and, consequently, at the same time, every possible chance of success has been afforded to the author. Fourthly, That if, notwithstanding such aid, a drama has occasionally failed, it has been as soon as possible withdrawn, in deference to the opinion of the public. Fifthly, That the advantage of early hours was first perceived by the audiences of the Olympic; the performances having been generally so regulated as to enable families to reach their homes before midnight. It is to these few 'Golden Rules,' which you have had the good taste and sound policy to adopt and persevere in, more, even, than to your deserved popularity as an actress, that you owe your unequalled success; and when, by the adoption of similar measures, similar prosperity shall attend other theatrical speculations, and the benefit of that prosperity be felt throughout the various branches of the dramatic profession, I trust it will not be forgotten, that the laudable experiment was first made by Madame Vestris."

**King's Theatre: Mr. C. H. Adams' Lecture on Astronomy.**—Of all the varied entertainments which are, in the present day, provided for the season of Lent, a lecture on the sublimest works of the great Creator seems the most fitting. Mr. Adams, as a lecturer, is too well known to need any further commendation from us; but much of the Apparatus which he this year places before the public is new, and deserves especial notice. His remarks upon gravitation, in the first part of the lecture, and his explanation of the theories of eclipses and the tides, in the second part, were calculated to impress these facts upon the minds of his auditors, and received well-merited applause. The systematic arrangement, which forms the third part of the lecture, is one series of brilliant display of transparent apparatus, closing with a magnificent Planetarium, which shews every planet moving around the sun, and each in apparent obedience to the grand centre of attraction. We cordially recommend all who can, during Mr. Adams' short Lenten season, to profit by the opportunities now offered for their improvement.

#### VARIETIES.

**Ashmolean Society, Oxford.**—Mr. Holme, of Corpus Christi College, read a paper on the formation and habits of British aquatic *Coleoptera*, which are comprehended in the sections *Hydraulephaga* and *Philhidrida* of Macleay; and exhibited specimens, shewing the voracity of the species of the genus *Dytiscus*, and concluded by drawing the attention of the Society to the question, whether the mole cricket is able to swim, which Mr. Curtis thinks probable, from the resistance which the thorax and elytra offer to water. A paper was read

by P. B. Duncan, Esq. on animal transformations; in the course of which he treated of the development of the mammalia of insects, of birds, of crustacea, and of reptiles, more particularly of the genus *Rana*. A very large tadpole, from South America (that of the *Rana paradoxa*), was exhibited. This species in the tadpole state has so large a tail as to deceive unscientific observers, and lead them to conceive, when nearly transformed, that it is a mixed animal, between a fish and a frog. Dr. Shaw, who alludes to this error, has given a very good plate and description of the animal.

**Frogs.**—When the animal is about six weeks old, the hind legs appear, and, in about a fortnight, these are succeeded by the fore legs. Not long after the form is completed, and then it ventures upon land. They now change their vegetable for animal food, of worms and slugs. The structure of the tongue is admirably adapted for seizing and securing their prey. The root is attached to the fore part of the mouth, so that when unemployed it lies with the tip towards the throat. The animal by this contrivance is enabled to bend it a considerable distance out of the mouth, and swallows larger animals than could be conceived. They appear in immense numbers. Ray states that acres are covered with them. Hearne says, in Hudson's Bay they are frozen, and the limbs may be broken like a stick without any apparent sensation in the animal: they soon, however, revive with heat; but, if frozen again, they die. Their organs of respiration are curious; their two nostrils are in the upper part of the head; they are always seen with the mouth shut. The mouth seems to form a sort of bellows, of which the nostrils are the air-holes. Frogs live on land the greater part of the year, and do not retire to the water till the cold nights of October, when they retreat, for the winter, to the bottom of stagnant pools. They arrive at full age in about five years, and are supposed to live about twelve or fifteen. They are so tenacious of life, that they will continue to live, and will even jump about, several hours after their heads have been cut off. The hind legs of frogs are fricasseed, and their fore legs and livers put in soup, on the Continent. The edible frog is considerably larger than the common frog, and, though rare in England, is common in Italy, France, and Germany. They are brought from the country to Vienna, 3000 or 4000 at a time, and sold to the great dealers, who have conservatories for them. There are only three great dealers in them at Vienna. They are caught at night, by means of lights and nets, or hooks baited with worms: in Switzerland, by long rakes, with close-set teeth, which are thrown into the water, and drawn suddenly out again.

**Bull-Frogs.**—They make a loud noise. When alarmed, they leap to a surprising distance; when full grown, three yards, which, in proportion to their size, is about four times as far again as a man can leap. A cruel wager was laid by the American Indians, to prove that a bull-frog, having the advantage of two leaps, would beat their swiftest runner. This was effected by having the race in the direction of a pond, and burning the poor frog's tail.

**Tree-Frogs.**—Some persons have kept frogs as pets. Dr. Townson kept one he called Musidora, to guard his dessert from flies. This frog is found in France, Italy, Germany, and other parts of Europe; and also in America, but not in Great Britain. Stedman tells a story of the snake and tree-frog, in which, after a long resistance, each holding by the botlegs

of a tree, the frog was at last swallowed by the snake.

A discussion then took place, in which Dr. Buckland and other members took a part. Dr. Daubeny exhibited to the meeting some specimens of *Lycopodium pallescens*, which has the property of reviving and expanding when placed in water.—*Oxford Herald*.

**Booksellers' Benevolent Institution.**—The meeting at Stationers' Hall, which we mentioned in our last, took place on Wednesday, and was fully attended—the Lord Mayor in the chair. The rules and regulations were read and agreed to; and, in addition to above 5000*l.* previously subscribed, at least another 1000*l.* was liberally contributed at the table. The resolutions were moved, with appropriate addresses, by Mr. C. Knight, the Rev. Mr. Dale, Mr. Lawford, Mr. Duncan, Mr. Reader, and others. Thanks were voted to the Lord Mayor, who acknowledged the compliment; also to the donors of sums of money who are not members of the fund; and to Mr. Cosmo Orme, for his great services in promoting its formation.

Mr. Love has recommenced his amusing table-entertainment at the City of London Tavern. He is a host in himself; and, since the days of Alexandre, with the sole exception of poor Mathews, is the best acting ventriloquist we have seen. Some of his imitations are very good—for example, a saw, a knife grinding, the creaking of a door, &c. &c.; and he keeps his audience in good-humour during the evening. Mr. Love is deservedly popular, and his entertainments are always crowded. There is a pleasant sound in Mr. Love's titles, *e.g.* "Love's Labour Lost," "Love's Lenten Lucubrations," &c. &c.

**Egyptian Antiquities.**—Mr. Pettigrew, on Monday, commenced, and on Thursday continued, a course of eight lectures on Egyptian antiquities, at Exeter Hall. After fully expounding the subject, with which he is so well acquainted, the lecturer will unroll a mummy for the edification of his numerous auditors.

**Surgeons' Hall.**—On Tuesday the ceremony of opening the new College of Surgeons, in Lincoln's Inn Fields, was observed; on which occasion Sir B. Brodie delivered a discourse, and the Hall (we are informed) was filled by a numerous company of distinguished persons.

**Institute of British Architects.**—At a recent meeting, the noble president, Earl de Grey, presented the royal charter of incorporation to this valuable Society.

**The Pugnacious Robin.**—A correspondent writes, "In a review in the *Gazette* you extract some particulars relative to the fighting propensities of the robin. A friend of mine succeeded in rendering two of these birds so tame that they used to feed on her hand. One day they came together, and commenced quarrelling, on her hand, pecking each other with great fury. She let them fight it out; and they did so till one killed the other, but the survivor lost his eye in the bitter contest."

**Jour à gauche.**—A Sunday paper, in mentioning the works of art exhibited at the last meeting of the Graphic Society, speaks of one of them as "*Jour à gauche*, by Chalon, a lovely female figure!" The able artist little anticipated that his instructions to hang his drawing in such a manner that the light might fall upon it from the left, would be thus ludicrously mistaken for the title of the subject.

**Curious Phenomenon.**—A female of Kent, about sixty years of age, who was last season employed in hop-gathering, having, about a year previously, lost her hair from a severe illness,

has now had a new growth with quite the appearance of youth. The most singular part of the occurrence is, that, when lost, her hair was mixed with gray, and had always been perfectly straight; but, on its return, it is a fine nut-brown, and so curled as more to resemble the head of a doll than that usual to persons at any period of life. We have the account from a friend, who was taken to see this curiosity in a fellow-passenger in the Gravesend boat of Thursday, where she was being brought from the wilds of Kent as a witness on an approaching trial.

**Law of Copyright.**—The committee in Paris, to investigate the question of the infringement of French copyrights in foreign countries, has made its report to the government, through its president, M. Villemain; and the following are the leading points:—1. To prohibit (with slight exceptions) the publication, in France, of foreign works, without the consent of their authors: a similar protection of French works to be given by the countries whose authors are so protected in France. 2. Copies of foreign editions of books so pirated to be forbidden entry into France; and French books, exported from France, not to be allowed to be reimported within five years, as noted by the law of 27th March, 1817. These regulations would certainly be good, as far as they go; if they do not altogether remedy the existing mass of wrongs and evils.

The British Museum is henceforward to be opened every lawful day, all the year through, except Saturdays. 9000 persons visited it in one day last year; and the number in the year was 383,000.—*Lord Stanley, in the Commons, on Wednesday.*

**The British and Foreign Review** (No. VII., just published), in, as we think, a more severe than strictly just review of the Report on the British Museum, notices that, owing to the catalogue not being sufficiently explanatory, "Von Raumer, in his 'Contributions towards a History of Queen Elizabeth,' has printed, from the Museum, a series of letters upon the affairs of Scotland," as new to our history; whereas nine-tenths of them have been printed in Keith's History of Scotland!

**Junius.**—The *Inverness Courier* says, "that Sir D. Brewster has discovered papers belonging to Lady Brewster's family, which go far to prove Mr. Lachlan Maclean to be the author of 'Junius's Letters.'"

**The Casket, Part I.** (Pigot and Co.)—We have to acknowledge and thank the publishers for this *mélange* of weekly and monthly appearance. It relies much on its brethren to fill its belly; but the selection of viands is various and amusing; and its own "originals" not unworthy of a place among the rest. All such productions are good, when not of a corrupting tendency; for they generate a taste for reading and harmless recreation.

**Literary Pensions.**—The *Observer* states, that the widows of Mr. Pond, the late astronomer royal, and of Dr. McCrie, have each had a pension of 100*l.* a-year bestowed upon them.

#### LITERARY NOVELTIES.

**Manuscript of Abbé Fleury.**—The Abbé Fleury, who, at the instance of Bossuet, wrote (or rather compiled from the original authors) "The History of Christianity," brought it down to the year 184, in twenty volumes. The Père Fabre continued it to the year 1582, where the sixteenth volume of the continuation, the last that has appeared, ends. Thus, Fleury has comprised the history of fourteen centuries in twenty volumes, one of which, too, is filled with eight general discourses, which Voltaire declared to be master-pieces; whereas, Père Fabre made

sixteen volumes for less than two centuries. But an important discovery has just been made. Among a great number of other MSS. of Fleury, which are of very little importance, the twenty-first volume of the Ecclesiastical History has been found, and the authenticity of the MS. is unquestionable. It contains books 101, 102, 103, and 104, of the Ecclesiastical History, evidently the sequel of the 100 books contained in the twenty volumes. It begins at 1415, where they end, and proceeds, without interruption, to the last session of the council of Lateran, in 1517; thus embracing a whole century. This discovery renders a great part of Fabre's continuation useless, which comes down only seventy-eight years later, viz. to 1495. The new edition of Fleury has this additional volume, and includes the latter part of Fabre's continuation. A new supplement is given, which is the work of one of the most enlightened and learned ecclesiastics of the age.—*French Paper.*

#### In the Press.

First Impressions and Studies from Nature in Hindostan, by Lieut. Thomas Bacon.—Piso and the Prefect, or, the Ancients off their Stilts.—Pretension, a third volume of "Pictures of Private Life," by Miss Stickney.—The Progress of Creation considered with reference to the Present Condition of the Earth, by the Author of "The Annals of my Village," &c.—A Dream of Life, by the Rev. W. G. Moore.—Doveton, or the Man of many Impulses, a Metaphysical Romance, by the Author of "Jerningham."—The Felony of New South Wales, a picture of the Romance of Life in Botany Bay, &c. by James Mudie, Esq.

#### LIST OF NEW BOOKS.

A Dictionary of Commerce, and Commercial Navigation, by J. R. McCulloch, Esq. new edition, corrected to December 1836, 8vo. 2*l.* 10*s.*—The Greek Testament, with English Notes, for the use of Schools, by the Rev. S. T. Bloomfield, D.D. 12mo. 12*s.*—The Works of John Hunter, by J. E. Palmer, 4 vols. 8vo. and 4to. vol. of Plates, Vol. 1. 17*s.* 6*d.*—The Surgical Works of Ditto, 3 vols. 8vo. Harrison, Printer, Portsmouth; and Messrs Smith and Weir, Solicitors, Coopers' Hall, London.

The Sale is ordered to take place at the Auction Mart, London, on Tuesday the 18th of April.

## TO the MEMORY of the DEPARTED

GENIUS, and much lamented late MADAME MALLBRAN. The peculiar style, extreme neatness, and accuracy, of the Portrait (originally engraved for the "Little Bijou," of that poor lady, have induced the Publisher of the English Bijou Almanac to have a limited number of Impressions taken on extra plate paper.

Price, plain (size, one-eighth of an inch by half an inch) 1s. India Paper. . . . . 1s. 6d.  
London: A. Schless, 43 Great Russell Street, opposite the British Museum; and to be had of all Book and Printersellers.

## A PORTRAIT of LADY ANNE COKE,

and a Landscape View of Steep Hill, Isle of Wight, will form the Embellishments of

## THE COURT MAGAZINE for MARCH.

The Court Magazine has not hitherto extended beyond the brilliant, though confessedly large circle of Fashionable Society. There, indeed, the rank of its contributors, and the general excellence of its contents, aided by the various and superior character of its Embellishments, have continued it in the enjoyment of the reputation and celebrity which it so early established.

Already exhibiting in its pages articles which entitle it to rank, independent of its fashionable character, with the leading monthly magazines, the Proprietor is anxious to place it upon the same level of general reading; and, in order to give complete effect to this design, he has arranged, under the superintendence of a new Editor, with many of the first writers of the day, so as to receive a continuance of contributions of a high order of talent.

A Critical History of the Literature of the Month, Music, Fine Arts, the Opera, Theatres, &c. is given.  
Published by E. Churton, 36 Holles Street.

## CHURTON (late Bull and Churton's),

British and Foreign Subscription Library, 36 Holles Street, Cavendish Square.

Terms:	£	s.	d.
First Class—The Year	5	0	0
Second Class—The Year	4	0	0
Extra Class—The Year	10	0	0

The Catalogue, containing more than 20,000 volumes of Standard Works, in the English, French, German, and Spanish Languages may be had on application to the Librarian.

\* \* \* The Duplicates from this Library are offered annually to Subscribers at less than half-price.

## COUNTRY BOOK CLUBS are Supplied,

at the following Terms, with Books from Churton's Public Subscription Library, 36 Holles Street, Cavendish Square.

- Class I.—Clubs paying 6s. 6s. the Year, are entitled to 20 vols. at one time, including 15 vols. of the newest Works.  
Class II.—Clubs paying 8s. 8s. the Year, are entitled to 20 vols. at one time, including 15 vols. of the newest Works.  
Class III.—Clubs paying 10s. 10s. the Year, are entitled to 20 vols. at one time, two-thirds of which may be of the newest Works.  
Class IV.—Clubs paying 12s. 12s. the Year, are entitled to 20 vols. at one time, including 15 vols. of the newest Works.  
Class V.—Clubs paying 14s. 14s. the Year, are entitled to 20 vols. at one time, of the newest Works.  
And so on, adding 2s. 2s. for every additional 5 vols. required.

## The Five following Plates:—

**DJOURNI, Lady Hester Stanhope's**  
Romantic Residence: Remains of the Port of Seleucia; Beirut and Mount Lebanon; Court of a Turkish Country House at Salahyeh; Convent of St. Antonio, near Edessa,—are published this day, in Part No. of "Fisher's Views in Syria, the Holy Land, Asia Minor," &c. Demy 4to.

N.B. An entirely new edition of Part I. (the original Plates having been worn out) will be published March 1st, and be continued monthly.

To be completed in Ten Monthly Parts, Part I. price 3s. 6s. Evening throughout the Year; with Additional Prayers for special occasions. By John Morrison, D.D.

## March 1st will be published,

**Memoir of the Rev. Rowland Hill, M.A.**  
By William Jones, author of "Testamentary Counsel," with a Preface, by the Rev. James Sherman.

8s. 6s. particular in ordering "Rowland Hill's Memoir," with Mr. Sherman's Preface.  
London: Fisher, Son, and Co.; Cumming, Dublin; and Oliphant, Edinburgh.

**Select Works of the British Poets, from**  
 Chaucer to Jonson: with Biographical Sketches. By Robert  
 Southey, Esq. LL.D.  
 London: Longman, Rees, Orme, Brown, Green, and Longman.

The 15th edition, 2s. 6d. bound,  
**THE ACCENTED ETION LATIN**  
**GRAMMAR,** with the Addition of many useful Notes  
 and Observations; and also of the Accents and Quantity: together  
 with an entirely New Version of all the Latin Rules and Ex-  
 amples.  
 By T. W. C. EDWARDS, M.A.  
 The Accidence, with the Stress and Quantities correctly  
 Marked, may be had separately, 1s. bound.  
 This Grammar is Accented throughout. The Notes are en-  
 tirely Original, very copious, and most lucid; the Construing is  
 altogether new, and novel, but clear, and more, and more  
 intelligible, than in any other edition of the Eton Grammar.

By the same Author,  
**1. Latin Delectus; or, First Lessons in**  
 Construing, adapted throughout to the Rules of Syntax of the  
 Eton Latin Grammar, Rule by Rule, with a Directrix, a Clavis  
 Verborum, and Clavis of Proper Names. Sixth edition, 2s. 6d.  
 bound.  
**A Key to Do. 4s. boards.**  
 In this work all the Accents and Quantities are Marked, pre-  
 cisely as in Edwards's Eton Latin Grammar. The Examples are  
 always pointed to the Rule, extremely appropriate, agreeably  
 divided, and without any admixture of extraneous matter.  
**2. Sententiae Selectae; or, Select Latin Sen-**  
 tences for Progressive Lessons in Latin Construing: being a  
 Sequel to Edwards's Latin Delectus, and a convenient Class-book  
 for the middle Forms of Schools. 2s. 6d. bound.  
**A Key to Do. 4s. boards.**  
 In this work, the Quantity of the Penult, of every Word of  
 more than Two Syllables, is marked throughout, without excep-  
 tion, to regulate the Pronunciation; but the Quantity of the  
 other Syllables, and the Accents of the Words, are not marked.  
 London: Simpkin, Marshall, and Co. Stationers' Hall Court.

In royal 4to. price 6s. 6d. and imperial 4to. price 12s. 6d.  
**ILLUSTRATIONS OF ORNITHOLOGY,**  
 No. 1.  
 By Sir W. JARDINE, Bart. and P. J. SELBY, Esq.  
 The above work, having for its object the delineation of new  
 and interesting Species of the Feathered Tribe, will contain in  
 each Number six beautifully coloured Plates, accompanied by  
 copious Letter-press Descriptions.  
 The subjects in the present Number are engraved from draw-  
 ings by Sir W. Jardine, Mr. Selby, and Mr. Lear.  
 London: S. Highly, 22 Fleet Street; W. H. Lizars, Edinburgh;  
 and all Booksellers.

**RECORD COMMISSION.**  
 In 8vo. price 2s. 6d.  
**REPORT, RESOLUTIONS, AND**  
**PROCEEDINGS OF THE SELECT COMMITTEE OF**  
**THE HOUSE OF COMMONS APPOINTED TO INQUIRE INTO THE**  
**MANAGEMENT AND AFFAIRS OF THE RECORD COM-**  
**MISSION, AND THE PRESENT STATE OF THE RECORDS OF THE**  
**UNITED KINGDOM:** with Illustrative Notes, selected from the  
 Evidence taken before the Committee, and Documents printed by  
 the Record Commission.  
 "The subject matter of the inquiry involves the character and  
 the fortune of individuals, as well as the reputation of a public  
 body, and the interests of the country in a large expenditure of  
 public money."—*Sir Robert Peel's Report*.  
 "Above all, he must not depend upon the edition of the Re-  
 port recently published by Ridgway, as a pamphlet, with notes.  
 These notes are evident emanations from the same, not spirit,  
 but spite."—*Gentleman's Magazine*.  
 London: James Ridgway and Sons, Piccadilly.

**SOUTHEY'S ADMIRALS.**  
 In fcap 8vo. price 6s. each, Vols. I. to IV. of  
**LIVES OF THE BRITISH ADMIRALS.**  
 By ROBERT SOUTHEY, LL.D. Poet Laureate.  
 Forming Vols. 40, 46, 57, & 57, of Dr. Lardner's Cyclopædia.

By Clement Heare.  
8vo. new edition, with Additions.  
London: Longman, Rees, Orme, and Co.

NEW EDITION OF LINGARD'S ENGLAND,  
*12s. Monthly Five Shilling Volumes.*  
Preparing for publication, in monthly volumes, of the size and appearance of Southey's Cowper's Works, and other similar publications, beautifully printed, and richly illustrated with Engravings, price 5s. each volume, bound in fancy cloth extra.  
**HISTORY OF ENGLAND,**  
from the First Invasion of the Romans to the Commencement of the Reign of William the Third.  
By JOHN LINGARD, DD.  
4th edition.

\*\*\* This beautiful edition will be completed in the moderate compass of Twelve Volumes, and need only 12. It has undergone a thorough revision by the Author. All passages have been examined which have been the subject of animadversion in Histories, Reviews, &c., and, where faulty, corrected; but, when otherwise, the passages are fortified with additional authorities, and important observations. The Author has also introduced, at the proper places, all new interesting matter which he has been able to collect since the first publication of the work, from many of the National Records, several recent Histories, and some foreign works, bearing on the subject; besides these, some most valuable and hitherto unknown MSS. have been consulted with great advantage. The work will, indeed, be, in many of its important passages, almost rewritten.

A superb Portrait of the Author will be given in the first volume, from an original Painting by Lover, and a richly engraved Vignette by Goodall.  
London: Baldwin and Cradock, Paternoster Row.

BONAPARTE.  
Nearly ready, in post 8vo.  
**NAPOLÉON IN COUNCIL; being the Opinions of Napoleon derived in the Council of State.**  
By the MARSHAL FOUCHÉ (de La Rochelle).  
Late Minister of Public Instruction in France.  
Translated by Captain BASIL HALL, R.N.  
Assisted by the Author, who has contributed numerous Explanatory Notes.  
Robert Cadell, Edinburgh; Whittaker and Co. London.

Early in March will be published,  
In 2 vols. crown 8vo. cloth boards, price 11. 1s. with 6 fine Portraits, and an extensive Correspondence,  
**EARLY RECOLLECTIONS,** chiefly relating to the late Samuel Taylor Coleridge, during his long Residence in Bristol.  
By JOSEPH COTTLE.  
Printed for T. Cadell, Strand; and W. Blackwood and Sons, Edinburgh.

Shortly will be published, in 2 vols. 8vo. with illustrations from Drawings by the Author,  
**FIRST IMPRESSIONS AND STUDIES** from NATURE, in HINDOSTAN, embracing an Outline of the Voyages to Calcutta and Five Years' Residence in Bengal and the Deccan, from 1821 to 1826.  
By THOMAS BACON,  
Lieutenant of the Bengal Horse Artillery.  
"Pluris est oculatus testis unus quam auriti decem."—Plautus.  
London: Wm. H. Allen and Co. 7 Leadenhall Street.

Author of "Haji Baba," "Zohrab," "Ajasha," &c.  
3 vols. New ready.

II.  
**Narrative of an Expedition into the Interior of Africa,**  
By the River Niger.  
In the Steam-vessels Quorra and Alburkah, in 1833, 1834, and 1835.  
By Macgregor Laird and R. A. K. Oldfield, Surviving Officers of the Expedition. 2 vols. 8vo. with Plates.

III.  
**Crichton.**  
By W. Harrison Ainsworth, Esq. Author of "Rookwood," &c.  
3 vols.

IV.  
**Adventures in Algiers, and other Parts of Africa.**  
By Prince Pückler Muskau. 2 vols. post 8vo.

V.  
**The Arethusa; a Naval Story.**  
By Captain Chamier, R.N.  
Author of "Ben Brace," "Life of a Sailor," &c. 3 vols.

VI.  
**An Account of an Expedition into the Interior of New Holland.**  
Edited by the Lady Mary Fox. 1 vol. post 8vo.

VII.  
**The Bivouac;**  
Or, Stories of the Peninsular War.  
By W. H. Maxwell, Esq.  
Author of "Stories of Waterloo," &c. 3 vols.

VIII.  
On the 28th instant, complete in 1 vol. neatly bound, and embellished with Engravings by Greatbatch, Mr Peacock's Three Stories,  
**Headlong Hall, Nightmare Abbey, and Maid Marian.**

Forming the New Volume of  
**The Standard Novels and Romances.**

The following are now ready:—

I.  
In 3 vols. 8vo. with numerous fine Portraits, from original Paintings,  
**THE CORRESPONDENCE OF Lady Mary Wortley Montagu.**  
Edited by Lord Wharfedale.

Including upwards of 150 Letters, never before published; a Memoir of the Count of George I. by Lady Montagu, and a Life of the Authoress. Illustrative Anecdotes and Notes are also added, and the Suppressed Passages restored.

II.  
In 3 vols. post 8vo. with Illustrations,  
**Manuela; the Executioner's Daughter.**  
A Romance of Madrid.

III.  
**Companion to D'Israeli's "Curiosities of Literature."**  
In 2 vols. 8vo.  
**Curiosities of Medical Experience.**  
By Dr. Millingen.

IV.  
**Recollections of Europe.**

By J. Fenimore Cooper, Esq.  
Author of "The Pilot," "The Spy," &c.  
In 3 vols. post 8vo.

V.  
In 2 vols. 8vo. with Portraits of Don Carlos and Donna Maria Francisca,  
**The Revolutions of Spain,**  
From 1808 to 1836.

With Biographical Sketches of the most Distinguished Personages, and a Narrative of the War in the Peninsula, down to the present time, derived from the most authentic Sources.  
By W. Walton, Esq.

VI.  
2d edition, in 2 vols. post 8vo. with Portrait of the Author, &c.  
**Adventures during a Journey Overland to India.**

By way of Egypt, Syria, the Holy Land, and Mesopotamia.  
By Major Skinner, 31st Regiment.  
Author of "Excursions in India," &c.  
Richard Bentley, 8 New Burlington Street,  
(Publisher in Ordinary to His Majesty).

Printed by JAMES MOYES, of Brook Green, Hammermith, in the County of Middlesex, Printer, at his Printing Office, Number 24, Great Street, Leicester Square, in the said County, and published by WILLIAM ARNIGER SCRIPPS, of Number 18 South Molton Street, in the Parish of Saint George, Hanover Square, in the County aforesaid, at the LITERARY GAZETTE OFFICE, Number 7 Wellington Street, Waterloo Bridge, Strand, in the said County, on Saturday, February 18th, 1837.  
Agent for Paris, G. W. M. Reynolds, Librairie des Etrangers, 45 Rue Neuve, St. Augustin.

### REVIEW OF NEW BOOKS.

*Prison Discipline and Secondary Punishments. Remarks on the First Report of the Inspectors of Prisons; with some Observations on the Reformation of Criminals.* By P. Laurie, Junior, a Magistrate of the County of Middlesex. 8vo. pp. 64. London, 1837. Whitaker and Co.

MR. LAURIE'S preceding pamphlet, in which he demonstrated the absurdities perpetrated under the Grand Jury System, displayed so much practical acquaintance with subjects of the kind, and so much sound judgment and ability in appreciating and discussing them, that we were disposed to give our earnest attention to any remarks of his, on any matter connected with the administration of the laws. Nor have we been disappointed in our expectations by the perusal of these pages; which seem, to us, to carry conviction with them on the most important points involved in the inquiry, and to designate the right paths for escape from a considerable number and amount of errors—some of them not the less injurious from the purely benevolent feelings and good intentions of their patrons. We are not among those who cry, "Humbug!" "Cant!" "Tom-foolery!" &c. &c. &c. at every mistaken pursuit or project we see started in our world of curious bustle; because we believe that, out of the sphere of selfish time-servers and hypocrites, there are many of the best-hearted persons living, who enter into such and worse schemes with the most disinterested and benevolent views: but we are not unaware that they are too often the tools of wretched rogues and knaves do their own work, and that weak good men are, when misled into enthusiasm, the most mischievous and efficient agents for evil. A folio *Tartuffe* would not be too much to expose the vast extent and ramifications of the state of things thus produced: Mr. Laurie has taken up a single feature, and to that we will, for the present, confine ourselves. In his opinion, the main errors of the Prison Inspectors "are, supposing that crime is to be put down inside instead of outside a prison; that thieves carry on their operations singly, instead of in a necessary combination; and, above all, that after a reformation, real or simulated, has been effected by their discipline, that nothing is required, beyond a prisoner's own exertions, to return to a course of honest industry."\* Before turning over the pages before us, it may be both just and expedient to say that there is not a political sentiment or bias to be found in them; and that they are entirely directed to the investigation of the interesting matter at issue—interesting alike to statistic policy, and to human sympathy. The desideratum appears to be, to adopt such a system of prison discipline as will, so far as it can operate, deter from crime; but do not, in attempting this, rely too much on it for cure, when infinitely so much more may be done by prevention; nor introduce a

spurious humanity, cruel and abhorrent, whilst pretending to wisdom and kind consideration. To rot in gaol was a phrase importing much of misery—it was, and is yet (though not so generally), literally truth; but to rot in gaol, as far as we can gather from Reports and descriptions, would be happiness to the new plans for reclaiming prisoners by silence and solitude. Heaven! that men, after the milder horrors of thumbscrews, bootkins, and racks, have yielded to the indignation of the world, should dare or think to doom their fellow-creatures to these lingering torments—and under the name of reform and philanthropy, too—is a proof how grossly we may be deluded by a favourite theory. We believe, on the authority of every experienced medical practitioner, that mere confinement, with its daily hours of exercise, produces such an effect upon the frame, that the wretch subjected to it for two years (and often for less time) is never fit for laborious occupation again or industrious habits. And, to this terrible calamity, the voiceless tongue, and the soundless cell, are, in *mercy*, proposed to be superadded! It is true, the majority of criminals are not of fine feelings nor sensitive nerves, but they are human; and, to resist such appalling infliction, without the utter extinction of reason and sense, they must be of iron—monsters. Then we come, with Mr. Laurie, to ask the result. Even suppose them not to perish, but to survive, and, instead of torpor, idiocy, or distraction, to be reduced to a salutary dread of future offence and punishment, how do you provide for the beneficial change? What do you do with them? You send them stupified, branded, penniless, friendless, into the struggling social throng; and you wonder if they relapse into crime. God help them! what can they do? even beggary is against the law. Let them be honest, and lie down, and die of starvation!

The modern course to these ends is well painted by our author:—

"The act (that for investigating the state of prisons), was founded on the views of the select committee of the House of Lords appointed to inquire into the state of gaols, &c., who took great pains to examine a host of witnesses; and their reports are, certainly, not altogether uninteresting of examination, were it only to shew, that their lordships have been, in general, as fortunate in their witnesses as parliamentary committees and commissioners generally are; when the examiner leads and the witness follows with a degree of boldness and faith extremely edifying—their unanimity is wonderful—and opposition or argument is almost unknown: unless, by some strange chance, some sturdy witness is examined, who inclines rather to a practical than a philosophical view of the subject at issue; but when this does take place, though he may not exactly be 'quoted down,' he is generally relieved from any lengthened audience, and not more courteously than expeditiously dismissed."

Similar proceedings make a farce and a tribunal of wrong of almost every parliamentary committee, and loudly does their constitution call for reform. But we must not digress. Mr. Laurie goes on to shew, that

"Any extended system of prison discipline cannot be carried into effect on prisoners before trial. That the penitentiary system has failed in America, and will be equally unsuccessful in this country, when applied to convicts. That the main cause of crime in this country is not to be attributed to the contamination of gaols, but the numerous chances of escaping conviction, and the uncertainty of punishment. That solitary confinement is too inhuman and dangerous a punishment to be tolerated in a Christian country. That the schemes recommended in the inspectors' report involve an outlay of many

thousands annually; and the results of this outlay must be, if not happily abortive, most mischievous. And that transportation, both in a moral and political point of view, is the most efficacious, rational, and cheap mode of punishment, and should be more extensively enforced."

Into his reasoning on these heads, we have not space to follow him: we will, however, quote some striking passages. Thus, on the reformation of convicts, he observes:—

"America seems, by universal consent, to be the only country where the science of prison discipline is understood; and their not having any colour to which they can transport convicts has, perhaps, been the means of compelling greater attention to the management of their prisons: but it is remarkable that, in a country where there are so many outlets for the population, where labour is so valuable, that crime should not decrease; that, at the very fountain-head of the penitentiary system, the lauded reformation, which, we are told, is so extensive, should not have effected some visible diminution in the number of criminals. But it is notorious that the thing has failed; that, where a man can earn as much for his labour in a day as he could here in a week, he braves the terrors of the penitentiaries; and that crime is daily increasing.

This evidence (evidence quoted in preceding pages) of stubborn facts and callous experience, must shake the hopes of the present system of reformation of juvenile offenders. Institutions like the Philanthropic and Refuge for the Destitute, pure and excellent as the intentions of their supporters are, would do more good if they could come earlier to the rescue; if they were more of a preventive than a curative description; if, in short, they could meet the causes of juvenile crime pointed out in the evidence of Mr. Wontner: but, in the present shape, whether the result of private benevolence, or the creation of government extravagance, to anticipate any substantial benefit from them is like neglecting the leak, and expecting to keep the ship free by bailing. And it may be doubted whether there is not often more chance of reclaiming a man of thirty or forty than a boy from ten to eighteen years of age.

The science which will confer the greatest benefit on society is not that which teaches us how to reform a prisoner, but that which shews us how to prevent his becoming a prisoner at all. The main-spring of a criminal's conduct is Hope, and the counterbalance must, therefore, be Fear; and his ruling principle, Chance, must be shaken by Certainty. It is in vain to attribute the commission of crime to a nicely weighed consideration of the consequences awaiting those crimes, while those consequences are allowed to remain so uncertain.

"From the parliamentary returns, it is ascertained, that of the whole number of persons committed for trial, in England and Wales, one-third are acquitted;" so that, in addition to the chance of not being detected—the chance of there not being any prosecution—the chance of not being finally committed—the chance of the prosecutor not appearing—there is the chance, for every prisoner, of his being the third person to be acquitted; and even, if he has such 'bad luck' as to be convicted, there is the chance of indulgence in prison, and the chance of mitigation of punishment. This is the root of the mischief: the Old Bailey is the great criminal lottery-office, where is one acquittal prize for every two conviction blanks; and, until this is remedied, all the prison inspectors in Europe may rest assured, that the hope of escape will baffle all their ingenious plans for deterring. The facilities for concealment in large towns, and the chances of non-detection, from the total inefficiency of the provincial police, are the great encouragements to crime; and a good constabulary force, which would allot one resident constable in every parish throughout the kingdom, under the control of the magistrates of each division, would secure lines of communication of competent and vigilant officers, which would greatly facilitate the apprehension of offenders, and, by the greater certainty of detection, conduce to the suppression of crime. The next improvement would be to diminish the number of acquittals, and this, not by increasing the number of convictions, but by lessening the numbers brought to trial; and this can only be done effectually by the abolition of the grand jury, and the establishment of a public prosecutor, or some other permanent tribunal, like the *Chambre du Conseil* in France, to review the commitments of the magistrates, and discharge those immediately, of whose conviction

\* Number of persons committed for trial, from 1826 to 1832 (England and Wales).

Committed for trial	127,910
Acquitted	37,670
Similar return (London and Middlesex)	
Committed for trial	24,584
Acquitted	8,197

(Parl. Pap. No. 9, 1833.)

\* Mr. Laurie justifies himself in these statements by quoting the evidence of Mr. Russell, Mr. Crawford, and others; but it is only justice to the body of Prison Inspectors, to notice that their individual reports and opinions are widely different from each other. They have all gathered much information from their inspection of gaols; but they certainly come to very dissimilar conclusions, both as to practice and remedies.—Ed. L. G.

there could be no probability, from defective evidence. This is no visionary experiment, for the system has been in full operation in France, since the promulgation of the Code Napoleon, and in Scotland for nearly two centuries; and the result in that country is, that from the careful investigation of the cases of the prisoners before trial, only one in twenty-three is acquitted on the final trial, and a large number, instead of being kept in gaol on an average three months, as they are in the counties in England, who would have been acquitted from defective evidence, were at once discharged; and thus, avoided contamination without the clumsy and cruel expedient of solitary cells. The last improvement would be, to make the execution of the sentence more certain. Any one who has had an opportunity of witnessing the hateful mode of sentencing batches of prisoners, at the Old Bailey, will have noticed the indifference of those sentenced to seven years' transportation, which arises solely from the knowledge, that this is, of all the sentences past, the least likely to be carried into effect: there is, however, one exception to this, and it deserves notice, were it only to express a hope, that it will not be allowed much longer to disgrace the metropolitan court, and offend the feelings of every one who has any regard for morality, or the forms of justice; and that is the hideous mockery of passing the awful sentence of death upon masses of prisoners, twelve times a year.—It being all the while perfectly understood, that not one will ever suffer the penalty. This scene, which takes place on the last day of every Session, if it were not serious from the injurious effects it produces on that class it is intended to alarm, would be ludicrous. Mr. Cope marches his troop of ten or fifteen 'captives' to the front of the dock, where they are made to file and dress with all the precision of a crack regiment, and having been asked a question which they are not expected to answer (for arrest of judgment), the sheriff's yeoman makes proclamation for silence. The court and galleries are always crowded with the friends and associates of the various convicts, who have come to hear the sentences of their companions, and take a lesson for their own imitation when it comes to their turn to figure at the bar. Few others are present, unless it be some country-cousins of some of the numerous officials attending on the court, and if so, they are, in all probability, the only persons who evince any concern or agitation on the occasion: the old gentleman may, perhaps, breathe a little harder and quicker than usual, and the daughters may unfurl their pocket-handkerchiefs and make arrangements for fainting,—but every one else is calm and composed. The Recorder then addresses the convicts, who employ the time in exchanging signals with their friends in the galleries; and, it is to do the present learned officer but justice to say, that his observations on such occasions are always judicious and impressive, unaccompanied by those 'windy aspirations and dejected behaviour of the visage' which are sometimes thrown away on such occasions. The address concluded, sentence is passed in the usual way; and the silence, which had hitherto been broken only by the measured cadences of the judge, or perhaps the chinking of gold chains and the rustling of newspapers, is terminated by the sonorous 'Amen' of the ordinary; and the exhibition concludes to the complete satisfaction of all parties concerned, and the great edification of the under-graduate thieves in the galleries, who think it a very fine thing to be made of such importance."

We are sorry that we cannot go more at length into this important and able exposition. Mr. Laurie's arguments in favour of transportation are unanswerable, both on the score of economy and humanity; and we trust his pamphlet will receive that consideration, from government and the country, to which it is so eminently entitled.

*Picciola; or, Captivity Captive.* By M. de Saintine. 2 vols. 12mo. London, 1837. Colburn.

THIS is a very original and imaginative tale; a strain or two too metaphysical, perhaps, for novel writing, with an extra spice of botany (unavoidable, however, from the nature of the design), and a turn of French sentiment rather beyond, or unlike, the English style; but certainly not carried to a pitch to offend good taste. Such, in few words, are the general characteristics of M. de Saintine's work; a work which throws great interest over the incidents of a very slight and simple plot,—developing almost a single idea with much feeling and felicity; and possesses the rare merit of being altogether different from the prevailing Parisian school of our day. M. de Saintine gives us neither exaggeration, impiety, obscenity, nor morbid anatomy; though romantic, he is natural; and there is no action in the human mind outraged by his tracery, though

refined upon to the furthest limits. With such recommendations, and only four prominent characters (Count Charney, Girardi, Teresa, and Ludovico—but we should make a fifth of the *Picciola*, albeit but a little flower), the story unfolds scenes of varied attractions; and the leading event in which the heroine distinguishes herself, nearly as it resembles the exploit of Elizabeth in "the Exiles of Siberia," is rendered one of the most memorable in the book by the picture it draws of Bonaparte presiding at the mimic battle of Marengo, after he had received the iron crown of Italy.

We shall not injure the interest of the narrative by telling more than that Count Charney, a French nobleman sated with pleasures, is condemned to imprisonment for a conspiracy against the first consul, and incarcerated in Fenestrella, an ancient fortress among the mountains of Piedmont. Here his sympathies are re-awakened, and his scepticism cured by the upspringing of a flower in the court-yard of his prison. Girardi is another prisoner, and Teresa his daughter; and Ludovico is a gaoler—a whole-length portrait very skilfully represented. Rough outside, and stern, and devoted to his prescribed duties, he is yet good-humoured and humane; and his attendance on Charney, when so ill that "the doctors have decided that the sick man has taken an eternal lease of the flat of his back," is, among his other kind offices, a touching sketch. The cause of his success is also a capital thought, and contributes admirably to work out the main story. Before we proceed, we will just introduce an example of the author's sentiment. The flower is, like its master, threatened with its close.

"Charney drew near to the feeble invalid, whose bloom was already withering; and with what grief did he now contemplate her fading hues! The happiness, the poetry of his life seemed vanishing before him. The fragrance of *Picciola* already indicated a mistaken hour, like a watch whose movements are out of order. Every blossom, drooping on its stem, had renounced the power of turning towards the sun; as a dying girl closes her eyes that she may not behold the lover, the sight of whom might attach her anew to a world from which she is departing."

Not to infringe on our rule of abstinence from disturbing the mysteries of productions of this class, we shall conclude with a portion of the Marengo description, to which we have already alluded.

"At dawn of day, the city of Alexandria was arrayed in all its attributes of festivity. An immense population circulated in its streets, festooned with tapestry; garlands of flowers, and glossy foliage. The crowd pressed chiefly from the Town Hall, inhabited by Napoleon and Josephine, towards the triumphal arch erected at the extremity of the suburb through which they were to pass on their way to the memorable plains of Marengo. The whole way from Alexandria to Marengo, the same populace, the same cries, the same braying of trumpets. Never had the pilgrimage to the shrine of our Lady of Loretto—never had even the Holy Jubilee of Rome, attracted such multitudes as were proceeding towards the field of that tremendous battle, whose ashes were scarcely yet cold in the earth. On the plain of Marengo, the emperor has promised to preside over a sham-fight, a mimic representation given in honour of the signal victory obtained five years before upon the spot, by the Consul Bonaparte. Tables, raised on tressels, appear to line the road. The people, in innumerable masses, are eating, drinking,

singing, shouting, and acting plays in the open air. Even preaching is not neglected; for more than one pulpit has been improvised between the theatres and wine-shops; from which hosts of greasy monks, not satisfied with giving their benediction to the passengers, and exhorting them to temperance and sobriety, gratify their avarice by the sale of consecrated ciphers, and little virgins carved in ivory. In the long and only street of the village of Marengo, every house, transformed into an inn, presents a scene of noise and confusion. To every window, the eyes of the spectator are attracted by strings of smoked hams or sausages; of quails or red partridges; or pyramids of gingerbread and cakes. People are pushing in, or pushing out, at every door,—Italians and French, soldiers or peasants; heaps of macaroni, of marchpane, and other dainties, are beginning to disappear. In the dark and narrow staircases, people rub quarrels against each other; some even compelled, by the rapacity of their neighbours, to raise over their heads the food they are carrying; while a cleverer hand and longer arm than their own makes off, unperceived, with the savoury burden; whether a buttered loaf, figs, grapes, oranges, a Turin ham, a larded quail, a forcemeat pie, or an excellent *stufato* in its tureen; when cries of indignation, or shrieks of distress, accompanied by muckeries and loud laughter, resound on every side. The thief, in the ascending line upon the staircase, satisfied with his plunder, tries to turn back and run away. The victim, in the descending line, robbed of his dinner, attempts to return and furnish himself with new provisions; and the flux and reflux of the crowd, disorganised by these irregular movements, is pushed partly into the street, and partly into the warehouse on the second story, amid oaths, imprecations, and peals of laughter; while their discomfiture is hailed, with added uproar, by the drinkers already established in the wine-shops of the ground-floor, in defiance of the sage counsels of the monks. From one room to another, among tables covered with dishes and surrounded with guests, are seen circulating the hostess and *giannina*, or waitresses of the house; some with gay coloured aprons, powdered hair, and the coquettish little poniard, which forms part of their holiday costume; others with short petticoats, long braids of hair, naked feet, and a thousand glittering ornaments of tinsel or gold. But to these animated scenes, in the village or the road, the chamber or the street—to these cries, songs, exclamations, the noise of music, dancing, talking, and the jingling of plates and glasses, other sounds of a different nature are about to succeed. In an hour the thundering noise of cannon will be heard—cannon almost harmless, indeed, and likely only to break the windows of the houses. The little street will echo with the word of command, and every house be eclipsed by the smoke of volleys of musketry—charged with powder. Then beware of pillage, unless every remnant of provision has been placed in safety; nay, let the gay *giannina* look to herself; for mimic war is apt, in such particulars, to imitate its prototype. In great particulars, however, no less; for nothing can exceed the majesty of the preparations for the sham-fight upon the plain of Marengo. A magnificent throne, planted round with tri-coloured standards, is raised upon one of the few hillocks which diversify the field. Already, the troops, in every variety of uniform, are drilling towards the spot. The trumpet appeals to the cavalry; the rolling of drums

seems to cover the whole surface of the plain, which trembles under the heavy progress of the artillery and ammunition-waggons. The aides-de-camp, in their glittering uniforms, are galloping hither and thither; the banners waving to the wind, which causes, at the same time, a pleasing undulation of the feathers, aigrettes, and tri-coloured plumes; while the sun, that ever-present guest at the fêtes of Napoleon—that radiant illustrator of the pomp and vanities of the empire, casts its vivid reflections upon the golden embroideries, the brass and bronze of the cannon, helmets, cuirasses, and the sixty thousand bayonets bristling the tumultuous field. By degrees, the troops, arriving with hurried march at the appointed spot, continue to force backward, in a wide semi-circle of retreat, the crowds of curious spectators, broken up like the rippling billows of the ocean by the progress of one enormous wave; while a few horsemen, charging along the line, proceeded to clear the field for action. The village is now deserted; the gay tents are struck, the tressels removed, the songs and clamours reduced to silence. On all sides are to be seen, scattered along the vast circuit of the plain, men interrupted in their sport or repasts, and women dragging away their children, terrified by the flashing sabres, or loud neighing of the chargers."

The picture of the sham-fight is equally vivid; but we must leave it, with the volumes to which it belongs, to the readers to whom we cordially recommend them. Not having seen the French copy, we can only surmise, that the translator has done his duty, both faithfully as regards the author, and judiciously as regards the English public.

*Weeds of Wischery.* By T. H. Bayly, Esq. 46s. pp. 32. London, 1837. Ackermann and Co.

THIS is a very agreeable *jeu-d'esprit*, suggested by the "Flowers of Loveliness" and other publications of that order. It is but justice to Mr. Bayly to say, that his *Weeds* are really very gay and pretty flowers; but what could be expected from a poet of his talent, when allowed to rank water-lilies, jonquills, hearts-ease, &c. with poppies, and chickweed, and corn-flowers, &c. as weeds? There is no name appended to the illustrations; but whoever has conceived and executed them must soon make a name, and a high one too, for they are among the most successful efforts we have seen in this lively and engaging style of art.

"Water-Lilies" are represented by a pleasure-boat party in rough weather: it is very clever and humorous; but we can only give the verse, not the engraving.

"Water-Lilies.

A boat, a boat, an open boat,  
On 'the sea, the sea, the open sea!'  
If e'er ye have been afloat,  
There's naught could match your misery!  
Pale water-lilies, you'd suppose,  
Poor ladies, when such boats they enter;  
The cheek, the pallid leaf; the nose,  
The spot of yellow in the centre!  
Such lilies, 'pining on the stem,'  
Or on the stem are more or less ill;  
The smell of tar is bad to them,  
And worse the pitching of the vessel.  
The spray, alas! no jasmine spray!  
Is weighing down each best new bonnet;  
The hair is out of curl; to-day  
The sea has all the curl upon it.  
Old Ocean! thou art much too old,  
To be so rough and so unsteady;  
Is this now—may I make so bold—  
A fit reception for a lady?  
Shallow thou'rt not; then recollect,  
All this may seem more deep than clever;  
Be calm awhile, and thou'lt reflect;  
Don't play at pitch and toss for ever!"

Our next illustration is of "John Quill," a peak-nosed lawyer's-clerk, perched on a very high desk, and full of character.

"John Quill.

John Quill was clerk to Robert Shark, a legal man was he,  
As dull, obscure, and technical, as legal man could be;  
And, perch'd before his legal desk, Quill learnt the legal rules

That give high principles to all who sit upon high stools!  
John Quill with skill could doubt disul where all before was clear.

One would suppose that he was born with a pen behind  
Though merely clerk to Robert Shark, so great was his address,

That many really thought J. Q. as knowing as R. S.

John Quill, however small the job, huge drafts of deeds could draw,

A puzzle quite to common sense, according to the law;  
With vulgar, vile tautology to indicate his skill,  
He did 'enlarge, prolong, extend, and add unto' the bill!  
And thus he did 'possess, obtain, get, have, hold, and enjoy'

The confidence of Robert Shark, who called him worthy  
Birds of a feather were the pair, the aim of both their breasts

To pluck all others, plume themselves, and feather their  
But 'tis a theme too dark for jest; oh! let him who embarks

Upon the troubled waters of the law—beware of Sharks;  
And such my dread of legal Quills, I readily confess  
That Quills of 'fretful porcupine' would terrify me less.  
When poor men seek a legal friend, the truth the fable tells,

The lawyer eats the oyster up, the client has the shells;  
And could the shells be pounded to a palatable dinner,  
The legal friend would swallow that, and clients might grow thinner."

Our last, to use the language of the conundrumists, is on what we all want—"Heart's-ease," typified by a jolly John Bull feasting at home after a continental tour. The latter verses run thus:—

"My bootmaker yearly enlarges

His bill, with the growth of my calf!

And my tailor increases his charges,

And books me 'a coat and a half'

He can't raise my small-clothes, how can he?

Small clothes! why, I never wear any!

My friend, Doctor Camomile, offered

To cure my rheumatic attack;

But he laughed when I said that I suffered

A pain in the small of my back!

Ah me! he did nothing but quiz it!

'The small of your back! pray, where is it?'

If ever they put me in fetters,

My bondage eternal must be;

For if they enlarge other debtors,

I'm sure they will not enlarge me!

They'll make light of my claims if they will,

Yet I shall look big at them still.

Young Cupid will never undertake me,

No, no, I must pine on the shelf;

If ever I'm match'd, he must make me

A Fatima fat as myself!

But never again will I roam,

I'm content with my Heart's-ease at home.

I'm sure I don't envy the lovers

Of sport, though inactive and lame;

I've not far to go for the cooers

Under which the cook places my game:

Three courses I manage myself,

And I've got my preserves on a shelf!

In France, for this exquisite dinner,

A nap they would charge me at least;

But here, after all, I'm a winner,

A nap I secure by the feast.

And of the past dreaming, at last,

Recollection becomes a repeat!

My dogs either beg a titbit,

Or curl themselves up on the rug;

And I in my easy chair sit,

Luxurious, silken, and snug;

And my Heart's-ease I trust is secure,

For I have not forgotten the poor."

Altogether, we are sure this volume will be, as it ought to be, very popular.

*Charlemagne; an Anglo-Norman Poem of the Twelfth Century.* Now first published. By F. Michel. 12mo. London, Pickering.

*La Chanson de Roland, ou de Roncevaux, du XII<sup>e</sup>. Siècle.* Publiée pour la première fois. Par François Michel. 8vo. Paris, 1837. Silvestre; London, Pickering.

WE have much pleasure in calling the attention of our readers to these two interesting and curious works, the most recent fruits of

M. Michel's indefatigable researches amongst the early poetry of France and Normandy. They are the two most ancient poems now extant, written in the Anglo-Norman language; the French dialect which was spoken by the Norman settlers in our island.

The first of these volumes is a beautiful specimen of the care and elegance with which Pickering always pleases our eyes. The preface and glossary, both long, complete, and useful, are written in English, which will, perhaps, be a recommendation to many of our countrymen. The original manuscript from which it is printed is preserved among the royal MSS. in the British Museum. Its subject is nominally a journey of Charlemagne to Jerusalem and Constantinople. It is, however, neither a religious legend nor yet a story of chivalrous warfare; but it belongs to the livelier class of romance whose object was, above all things, to produce that merriment in the old baronial halls which made the "beards to wag all," as the old distich has it. Besides their value to the antiquarian and the historian in illustrating the manners and feelings of feudal times, these two books are important in another point of view: they contain nearly all we have of the Anglo-Norman language at a particular, and that an early, period; and thus their glossaries furnish the scholar with a dictionary of the language at that period.

Of the volume so beautifully got up by Silvestre, of Paris, we must say something more. The story of Ganelon's treachery, and the disaster of Roncevaux, has been more or less popular throughout Europe ever since the twelfth century. The noble poem which forms the text of this volume had long been buried in the dust of the Bodleian library, and been the object of the sighs of the learned, until M. Michel, during his residence in England, paid a visit to Oxford, on purpose to obtain a transcript of it. It, however, only forms a part of the book; for the learned and interesting prefaces and appendices contain such a mass of curious information, and materials relating to the history of this legend, and its various forms in different languages, as has never before been collected together on any similar subject. It is, indeed, a book which we heartily recommend to the shelves of every library.

*The Origin of the Germanic and Scandinavian Languages and Nations; with a sketch of their Literature.* By the Rev. J. Bosworth, &c. 8vo. London, 1836. Longman.

IT has been long known, that Dr. Bosworth has in the press a new Dictionary of the Anglo-Saxon Language, which we are glad to hear may be expected to appear in the spring of the present year. The book whose title we have given above was originally intended for the introduction to his Saxon Dictionary; but, having outgrown the space to which he would have confined it, he has, it appears, cancelled it with regard to the dictionary, and has only printed a few copies separately for sale. As a judicious, concise, and comprehensive view of all the Teutonic dialects, and the chief works written in them, we can safely recommend this sketch to our readers; they will find in it things brought together under one view, which are elsewhere spread over some scores of volumes, and many of them are not to be found in any other work. The sketch of our different English provincial dialects, and of the steps which have been taken, at different times, to illustrate them, is the first attempt of a similar nature that we have seen, and is much to our satisfaction; while it shews

us how much this subject has been hitherto neglected,—how few are the districts whose dialects have been examined with any care,—and how many there are, and those the most important, whose dialects have been totally overlooked. The comparison of the Friesic and Anglo-Saxon languages, by Mr. Halbertsma, is also very curious and very interesting; though we must confess, that there are in it here and there a few instances of false philology. Is Mr. Halbertsma aware that the Kentish men are believed to be, by origin, Frieslanders? It is a circumstance which makes the Kentish dialect, than which none is less known, one of very great interest. We are glad to hear that there is some prospect of having a complete edition of the early work in the Kentish dialect which is preserved in manuscript in the British Museum, and which, we think, will throw some light on this subject. The languages and literature, of which Dr. Bosworth has given a view in this volume, are the Anglo-Saxon, with the English provincial dialects; the Friesic; the Old-Saxon; and the Low-German, or Platt-Deutsch; the Dutch; the Gothic; the High-German, at its different periods; and the languages of Iceland, Denmark, Norway, and Sweden.

*The Divorced.* By Lady Charlotte Bury, Authoress of "Flirtation," &c. &c. 12mo. 2 vols. London, 1837. Colburn.

WE do not remember so perfectly as the seeming peculiarity and importance of such an affair might, in the eyes of some of our readers, demand, the actual case of fashionable intrigue and delinquency on which this tale is said to be founded; and if we had not been referred to it in the postscript, always the main point in a lady's writing, we should have given the authoress credit for as much invention as could be grafted on so common a series of circumstances as an amour with a married dame, a divorce, a consequent marriage of the adulterous pair, and the inconveniences, vexations, and miseries, which too probably result from such a connexion. Taking *The Divorced*, however, as we find it, we may truly say that, as a whole, it possesses considerable interest, and is well meant to afford a salutary lesson and point a moral. The characters are cleverly, if they are not all naturally, drawn—for we think Lord Howard and Miss Agar exaggerated; while, on the other hand, the events, take place in the natural way, though they are sometimes brought about too artificially. That is, they are in themselves likely effects, but produced by unlikely causes: take an instance in Miss Agar's communication in a ball-room of the misfortune of her birth to Alice (the lovely heroine, at the age of eighteen or nineteen,\* and the daughter of the divorced woman, Lady Howard.)

"Miss Agar addressed Lady Alice,—'Know then, since it is your determination to know, that your mother was first married to Lord Vernon: he was a good husband to her, and loved her; she lacked nothing that his affection and his means could give her. He was very proud of her, poor man! Ah! pride often comes before a fall. Well, she took to him at first, and conducted herself discreetly till she fell in love with your father, Lord Howard. Lord Vernon and he were, as is the rule in such cases, you know, my dear, or perhaps do

not know, sworn friends; it was quite *en règle*. Lord Vernon was the last person to see what the town was talking about and familiar with, as a settled *liaison*, for months previously. Well, Lord Stuart was born; Lord Vernon was fonder than ever of Lady Howard. She had a long dangerous illness after her confinement; he nursed her for three months consecutively, scarcely taking sufficient rest for his own health's sake. Lord Howard played the part of second, or rather first nurse. Lord Vernon was in person a plain man, though I am one of those who think he has great charms. The gossiping world, you know, my dear, has amused itself at different times, when there was a dearth of news, by inventing stories about him and me; it's all nonsense though, except in the way of friendship, except—' (and Miss Agar's looks belied what she uttered—she wished they should). 'But your father, Lord Howard, was, and is, a beautiful man. Oh! but *nem. con.* beautiful. Poor Lau! as I used to call her, could not resist him, and no sooner did she recover her health than she ran off with him. She was always noble, whether acting right or wrong. I do not meddle with that question at present, but noble she was, for she could not bear to go on living in a state of duplicity under her husband's eyes. I know some folks have made it a question whether it was not better to do so, especially where there was a child in the case, rather than publicly take their *partie*, and make up their mind to run off. Be that as it may, I leave it to others to decide; Lady Vernon adopted that mode.'"

And, at the close of the conversation, which causes perturbation even to this evil-spirited old fashionable spinster:—

"'I had not the slightest idea you were ignorant of the story, Lady Alice,' she continued, muttering indistinctly as she moved away, 'or I never should have told it to you.' 'Oh, no! I am sure you would not.—Shall I ask for your carriage?' 'Thanks, thanks; I am better now. A few more drops of laudanum than usual when I go home, and I shall be all right again; these rooms are hot.' 'Yes, very; but will you not go home, Miss Agar?' 'Home—no; I hate home!' and she laughed an unnatural laugh. Nothing so melancholy as an unnatural laugh! 'It will not do,' she resumed, 'its a dull ending to an evening till sleep is ready to shut up shop and thought together. Oh no, I am quite well now—quite awake; I must go on yet awhile,' and, opening a small ivory box she took out of her pocket, added, 'a little of this will varnish the outside of the platter, and as for the in, laudanum will do that. It is a duty to look as well as we can to the last.'

This appears to us to be such language as such a person would never utter. Alice's distress upon the occasion is also described in bad taste and language.

"'So, then,' she thought, with that aching throb of anguish which has no name, 'my first sorrow was caused by my mother's guilt! She, who has so coaxed and doated upon me, is, in fact, my worst enemy; so there is an end of my reverence for my parent. I no longer can consider our home as the abode of virtuous love; no, all the ties which bind us together as a family—which make them my parents—which makes Henry and me brother and sister,—are sinful. We ought never to have existed!—poor, poor mamma!'"

Before we offer any further illustration, we may as well notice that the best grammar is not always observed; "was" for "were," "I am her" for "I am she," and other lady-like

slip-shods, occurring throughout. There are also some rather curious positions in these volumes, which mingle with the mass of their social and pathetic reflections: thus, for example, we are told, "*every body* knows how inexpressibly melancholy it is to sit down to a *sumptuous feast*, surrounded by attendants, the only one to be waited upon:" we should, on the contrary, imagine that hardly any body knows this; and, for ourselves, and 999 out of 1000 of the population of England, we think we may assert, that such a treat, occasionally, would be exceedingly pleasant. The following is a singular congeries of mistakes:—

"Wherever there is no love of, or care about, those who have gone before us, there is little emulation, or excitement to virtue or heroic action, left; little dread of what is evil, or admiration of what is good. It is a flippant vulgarity, in the character of '*Charles*,' in '*The Rivals*,' to make it appear as if it were an admirable trait in him to sell his ancestor's portrait at an auction; as though this were the characteristic of a gay, high-spirited fellow, rather than of a vicious fool: but *Sheridan* had no ancestors, I believe—he was himself his own ancestor, as an Irish body may say."

This is a fling, à l'Agar, at the living descendants of the author of '*The School for Scandal*;' and the annexed is a specimen of platitudes in fine language, and not very intelligible.

"If there is an inexpressible charm in the glow which a warm nature sheds over intercourse, there is, perhaps, a greater security of the permanency of affection in that of less demonstrative natures. Persons who are either naturally colder, or who have learned, by fatal experience of treachery, or unworthiness in those to whom they have given up their souls without reserve, to become more chary of their professions, more slow in forming attachments, are of much safer kind, and generally in the end, confer the most lasting happiness. The one is an aroma that inebriates, and passes off as though it had never existed; the other is a staff and stay in trouble—a refuge, 'what time the storm beats heavy on you.'"

At the close of one of Lord and Lady Howard's recriminations (which, be it remarked, are, on the part of the lord, far too brutal, since, with all his ill-temper, he is a gentleman, and really loves his wife), we find the following:—

"Lady Howard heard this cruel taunting, as she had done a thousand times before, in meek silence, and in inward prayer she had again laid her weary head on the pillow, and even tried, in the midst of the storm, to lull herself into the temporary forgetfulness, by falling into such sleep as those alone know who, like her, endure, it may be, merited suffering for past crimes, but unmerited from the being by whom it is inflicted. 'What, madam, you are sleeping, are you?—by heaven, that is too bad! but I will teach you what it is to be indifferent to your husband's wretchedness, to your children's misery and dishonour. You have occasioned the death of one, perhaps you may also that of the other; and you sleep, do you, when I place these truths before you?' Charming innocent! you pretend to be composed and serene, do you, while you see me raving like a madman?' 'I am any thing but composed, any thing but serene: I feel as if my life was fleeting fast away—would to God it was gone!' 'Mighty fine all this high-flown language, truly!—very romantic and interesting, I doubt not—quite suited to the *Minerva* press: but, madam, at your age, and in your circumstances, something

\* This interesting portion of our heroine's history is not quite clear. Vol. i. p. 1 tells us it is sixteen years since Lady Howard eloped: p. 17, that it was eighteen years.

she is called for than the affected sentiment of a girl of fifteen." "Good heaven! Howard, how can I pacify you? what can I say? where find words or meaning that will soothe you? You may trample me under your feet—you may bestow every dreadful name upon me, and I will not turn and defend myself. I plead guilty—guilty from my very soul; but not guilty of want of love for you: with my dying breath I will testify that no truer devotion was ever felt for mortal man than that with which I have served you, and sacrificed myself to you. If I did not speak to you before, it was because I hoped my silence might allay your wrath; and now that I have spoken, it is only to repeat what you know so well already. I am your true and faithful wife, whatever I have been to others." Lord Howard made no reply. He could not make any that would have justified his own violence and brutality, and so he went to bed, and to sleep directly, as men can do, though they have caused all sleep to fly from their wretched partners. Are such scenes true to nature or not? Alas!"

We should answer, they are not true to nature; but Lady Bury speaks for her sex; and we have, indeed, a most undue proportion of prayers and supplications in all her afflicted female characters. Thus, vol. i. p. 28, "Lady Howard hesitated whether or not to awake her, but Alice again fell into her child-like slumber, and she sat down by her bed-side, wishing those wishes for her peace and happiness, which, in a mother's breast, are prayers." Vol. ii. p. 135, "Lady Howard saw all, felt all; but this time she bowed low before the chastening rod; she prayed not for the life which contained her own: her prayers were voiceless, speechless; her agony was her prayers."

We believe there are a hundred similar passages; and it is the defect of the moral, that, with all this praying, suffering, and repenting, it never occurs to any body to leave off their sinning. We must now, however, go towards the conclusion, where Lady Howard is childless, widowed, and reduced to poverty.

"Lady Howard had, during the last portion of her existence, exhausted the resources of her jewel-box. From time to time she had placed some token of past love in that wretched, yet sometimes blessed, receptacle of the miserable, a pawnbroker's, till all was gone, and she owed the last month of her lodging. She had eaten her last crust; she had no clothes but the rags on her back. This is the romance of real life, a thousand times more touching than all that fiction can devise. In mute hopelessness she opened her jewel-box—she lifted up tray after tray—in vain;—for not one of the precious gems, with which it had been filled, was left. Not one of the gems, with which Lord Howard had taken such pride and pleasure in decking out the beautiful form of his wife, remained to procure her bread, in the hour of destitution;—not one of the tokens of that love, which had led to her undoing; not one of the gifts from him, for whose sake she now endured actual want, was left. It seemed as though it was her punishment to be bereft of every thing connected with the man, for whom she had been guilty."

Now, as her ladyship had only been a few months in lodgings, this state of destitution is one of the effects for which there could be no probable cause: her lavish *jewel-box* must have been a *poor-box*, if it could not support her for years in that situation. But the close is the best written portion of the work; and we will quote it, as a tribute due to the talents of the authoress, though it is directly at variance with

the earlier part of her picture. At p. 166, vol. i., it is proclaimed:—

"There is a feeling excited in the breast of a mother at the birth of her first-born, which is as unlike every other in its nature, as it is permanent and engrossing; and however much after-circumstances may estrange the parties, the exulting pleasure with which the first-born was hailed by its mother, can never be entirely effaced from the memory; and great as was Lady Howard's affection for the two children of the man she loved, nevertheless, when she beheld Lord Stuart, she remembered he was her first-born—she had forsaken him—she had injured him, and a long repressed flood of overwhelming tenderness, such as can be felt alone for one that is most dear and most injured, now burst forth, and nature claimed her right."

As we never had the felicity of maternity, we believed this as we went along: but, lo! at the touching, though inconsistent, conclusion, with which we now conclude, the story runs thus:—This son, now Lord Vernon, rescues her from penury, and—

"'Poor Vernon!' she exclaimed. 'Yes, you are my child. I feel a yearning toward you; but love you as I loved them, never!—it is impossible! Yet this kindness on your part is far more than I deserve, and it must not be cast aside as worthless. I will receive you—I will love you as much as I can love anything; and Fanny Harcourt, too,—she loved Henry.' Once, the first dreadful interview over, Lord and Lady Vernon visited their unhappy relative daily. They did not leave one kind office undone, not a mark of respectful affection was wanting, on their parts, towards Lady Howard. Lord Vernon's first and last waking thought was of his parent. He remembered only, that his was now the privilege of ministering to her comfort—that it was his blessed calling to make her latter days, days of comparative pleasantness and peace. His wish had been granted—his mother became an inmate in his family."

"At last, Lady Howard was grateful for her children's kindness. She thanked them, and said she had not deserved their affection. It was evident to Lady Vernon, that Lady Howard had exhausted all the powerful feelings of her heart; that with Lord Howard and his children she had buried all deep-rooted and ardent love; that her only wish now was to rest by them in the tomb. In Lady Howard's youth, in the days even when she forsook the path of duty, and, subsequently, through all the years of humiliation and sorrow she had endured, religion had not altogether been a stranger to her. In her most trying hours, she had found refuge in prayer—she had sued for forgiveness—she had bowed down to the punishment of sin; but now it seemed as if that consolation was denied her. A melancholy hardness had crept over all her feelings, and she avoided making any mention of her sorrows. She never would allude to her children, or allow any one to do so in her presence; she had succeeded in casing herself in adamant; she would sit for hours with her eyes fixed on the same page; then, forgetting Lady Vernon's presence, she would clasp her hands suddenly together, and shake her head with that peculiar significance of inward grief, which denote so much speechless misery;—at another, the low groan of a recollected moment of horror or of sorrow burst from her, and told more forcibly than words, of that anguish which has its own peculiar language. And so her days went by. Thus they are passed by the wretched and the dying. No posture was easy to her; every gleam of sun-

shine rendered the invalid (for such she was now become) too hot or too cold. The food which tempted the appetite yesterday, was distasteful to-day. The favourite exotic was placed before her; its sweet odour was now turned from, with disgust. Nothing could give pleasure, or afford rest; and still Lady Howard seemed insensible to the only source of comfort; still she turned from the consolations of heavenly things; gradually her bodily strength forsook her, till, at last, she was confined to her bed. Yet no disease, properly so called, ate away her strength. It was the unseen hand that worked its sure slow work. Lady Vernon tried to prepare her husband for his mother's death. She endeavoured to interpose a softening medium through which to view the decree of heaven; but he would not receive the warning: he could not endure to think that one so lately given, would be so abruptly snatched away. And he turned aside from his wife, displeased when she touched upon the subject. The house to which Lord Vernon had removed his mother, at the time when he became acquainted with her miserable condition, was one of those villas which are so thickly strudded on the banks of the Thames. Beauchamp Villa was in the neighbourhood of Twickenham, that beautiful country, which is so fertile and so gentle in its sylvan scenery, that on a cursory glance it seems an unfit residence for the sick and the dying. But there is a melancholy impressed in the interior of the outwardly gay looking villas, which tells of the sad scenes that have taken place within them. One almost might fancy, in their gloomy apartments, that one heard the moan of the sufferer, and the careful footfall of the attendant; neither is the view from their windows calculated to dissipate such imaginations. The velvet lawn is sometimes decorated with a splendid cedar or a luxuriant willow leading down to the Thames. The myrtles and ilexes, that grow in those mild sites to an unusual height in England, and remind those who have been in Italy of its never-to-be-forgotten beauties,—all these beauties do not lessen the superstitious feeling of gloom which pervades those dwellings; but the persons who have sojourned in such a villa, witnessing the decay of those dear to them, will recognise the reflection of their own feelings, at that time, in this remark. \* \* When some person in Hyde Park, leaning over the door of the carriage of the courted beauty of the day, announced, to those within, 'So Lady Howard is dead, Vernon's mother;' the persons who heard the news (as such intelligence is called) asked, 'What! is she dead? She has resided with her son of late, has she not? Monstrous good-natured in him!' 'Yes, ever since that madman, her last husband, Howard, shot himself.' 'How rapidly in succession all that family have gone off—quite like Tom Thumb, one after the other. First, there was poor foolish Talbot, a maudlin sort of fellow, went moping about with a face as long as my arm, because, forsooth, his mother was divorced; and then that pretty creature, Alice—she was the next that died—it was consumption carried them off. The father, you know, shot himself; and, last of all, Lady Howard.' 'She was a beautiful woman,' said an elderly man, who remembered her as Laura de Lacy. 'How can I get at the present man's—the miser's vote for —shire, Willoughby? You, who know every thing, tell me that.' 'I cannot, was the reply.' Mr. Willoughby remembered, at that moment, the drive in his cab seven years ago, in that same scene—the young man was dead—he verging

to age was left. Mr. Willoughby remembered Lord Talbot's anger, when he alluded to his mother's disgrace—he remembered his admiration of Fanny Harcourt—the same pantomime was before him—now he himself was still one of the old beaux of the drive—he still sat in judgment on the women, and still led the same trivial life—but Mr. Willoughby was not altogether a bad-hearted man; and he felt sorry, at the moment, as he heard these idle, harsh remarks on the Howard family. For a few moments—a very few—he was reflective. The gay, facetious Willoughby thought upon the vanity and the briefness of life; but the famous gastronome of his time dissipated such unusual thoughts, by inviting him to dine with him that day. Mr. Willoughby turned round, with a vivacity of expression, and answered, 'Yes,' and looked forward to the hour of eight with eager expectation. The Howards, and their unhappy history, was forgotten. Each went his way out of Hyde Park—that scene where once Laura de Lacy had attracted every eye; where the courted Lady Vernon had commanded attention; where the divorced Lady Howard had drawn down remarks; where the poor heart-broken widow hurried along on her way to the pawnbroker's, and where now her death was thus unfeelingly announced. It mattered not to the Howards what was said of them—they were all dead—every trace of their existence was done away. The miser had sold Howard House—the roof under which they lived and suffered. He had shut up the greater part of Howard Castle, living only in two rooms. Beauchamp Villa was, soon after Lady Howard's death, pulled down to make room for the erection of a brewhouse. The cedar, with one or two myrtles and ilexes, alone remain by which its site can be remembered. Never were the words of Scripture more fearfully, more fully realised, than in the complete uprooting of the Howard family. Well might those terrific words be applied to them, and to their dwelling, 'The place thereof shall know it no more.'

Such are the faults and the redeeming features of this tale; which, as a whole, does not diminish the literary reputation of Lady Charlotte Bury.

#### MISCELLANEOUS.

*Tithe Commutation Tables, for ascertaining, at sight, the amount of Corn-rent in bushels, (as directed by the act of 6 and 7 William IV. cap. 71), equivalent to the Tithe-rent, fixed as the basis in the draft of apportionment; also, shewing the amount of Tithe Rent-charge payable for the year 1837, according to the average prices of Wheat, Barley, and Oats, for the seven preceding years, to Christmas 1836, as declared in the London Gazette of 13th January, 1837.* By Charles M. Willich, Secretary and Actuary to the University Life Assurance Society. (London, Longman and Co.)

We never saw aught which displayed the value of tabular forms more admirably than this pamphlet of only twelve pages.

"By the Tithe Commutation Act (says the Preface), all tithes will be converted into a corn-rent of so many bushels of wheat, barley, and oats; but, instead of the party paying such corn-rent in kind, it directs that the respective quantities shall be annually valued at the average prices for the seven preceding years, and the amount thereof shall be the tithe rent-charge for the following year. The object in view has been to arrange the Tithe Commutation Tables in such a manner as may enable any individual to ascertain with ease the quantity of wheat, barley, and oats, which is to be inserted in the draft of apportionment, or schedule, against each amount of tithe-rent; and to shew, at the same time, the amount of tithe rent-charge he is to receive or to pay for the current year."

We have only to add that the object is perfectly accomplished; and that not a tithe-owner or tithe-payer in the country should be without these most plain, ready, and useful tables.

*Meteorology, considered in its connexion with Astronomy, Climata, &c.* By Patrick Murphy, Esq. pp. 377. (London, Baillière.)—The science of meteorology is still so little understood, that any man may start any hypothesis he pleases upon it, and support at least portions of it by plausible argument. Mr. Murphy has fully persuaded

himself that he has developed the arcana of all its mysteries, and speaks most confidently of his having established facts, which, in truth, he has only suggested, as well as of overturning existing opinions (such as Newton's gravitation), which, in reality, he has not touched. Inclining to the French opponents of our mighty name, the author sets up a theory of his own—that planetary action is potent on the earth's meteorology, and that Jupiter, Saturn, and Uranus (especially the latter), exercise the greatest influence upon our wind and weather. If we understand him rightly, they and other external objects, the sun, moon, comets, &c. effect electricity, with which the earth's magnetism, crossing always at right angles, makes what he calls an "union of opposite progression," and thus produces all the changes we see. He endeavours to reconcile the phenomena of rain, fog, dew, &c. to these principles, but seems to forget preceding satisfactory explanations, and to assume a great deal more than he proves. Our readers will recollect how unfortunate he was in his prognostics about the weather at the beginning of the year. (See *L. G.* pp. 12, 28). So easy is it to speculate; so difficult to know!

*Judgment and Mercy for Afflicted Souls, &c.*, by Francis Quarles. 12mo. pp. 132. (London, Simpkin and Co.)—A reprint of a religious tract of Francis Quarles (the celebrated author of the "Emblems"), with a brief biography of him prefixed. It is a curiously quaint and pious production.

*Vacher's Parliamentary Companion for the Session 1837.* (London, Vacher and Sons.)—Corrected to the latest period, this is a most useful and convenient guide to all persons engaged in parliamentary affairs. A facsimile of a return of an election writ forms a very appropriate embellishment to it.

*A Key to the Almanack; or, the Calendar Explained; containing the History of the Year, with Astronomical and Chronological Notices, &c. &c.*, edited by D. Annot. Pp. 66. (London, Macdonald.)—Neatness and cheapness are the characteristics of this little book, which contains much useful matter; and (unlike many larger works) may be consulted from one end of the year to the other for matters of daily interest.

*Union Liturgy; containing Forms of Prayers for the Public Services of Religion, and also for Family Worship and Private Devotion.* Pp. 280. (London, Nisbet and Co.)—A body of prayers, hymns, &c. &c., suited to every occasion, and breathing every pious and religious sentiment.

*The Spelling-Book of Utility, &c. &c.*, by R. Chambers, F.L.S., author of "Geographic Exercises." Pp. 111. (London, Sherwood and Co.; Gosling and Egley.)—A very prettily arranged and good spelling-book.

*On the Sonnets of Shakespeare*, by James Boden, Esq. Pp. 62. (London, Rodd.)—An essay amplified from a congenial contribution to the *Gentleman's Magazine*, on which Mr. Boden produces strong evidence to induce a belief that Shakespeare's sonnets (or the first 126 of them) were addressed to William Herbert, third Earl of Pembroke, and not to Queen Elizabeth, or Lord Southampton, as has been hitherto conjectured. It is a very able and interesting literary production.

*A Guide for Invalids to the Continental Watering Places*, by Dr. A. G. Home. Pp. 236. (Smith, Elder, and Co.)—A copious and useful guide to several hundred more watering-places than ever we heard of, alphabetically arranged, and with an account of their mineral properties and virtues.

*Sacred Philosophy of the Seasons; illustrating the Perfections of God in the Phenomena of the Year.* By the Rev. H. Duncan, D.D. (Pp. 407. Edinburgh, Oliphant and Son; Glasgow, Collins; Dublin, Curry; London, Hamilton and Adams.)—In this excellent volume Dr. Duncan has applied the doctrines of natural theology to particular subjects connected with the seasons, and obvious to every eye and mind. Its whole tendency is to improve the human feelings and character, and raise the aspirations of the soul through nature to the great First Cause. It is an instructive book both for old and young.

#### ARTS AND SCIENCES.

##### LINNEAN SOCIETY.

MR. LAMBERT in the chair.—Mr. Iliff exhibited a portion of the trunk of an oak which was blown down in Windsor Park during the late hurricane, which, upon being split, was found to have the letters W. B. and the year 1670 carved on it. The Marquess of Bute and others were elected fellows of the Society. Read, some observations on the manna of Mount Sinai, and the dragon's blood-tree, and aloes-plant of Socotra, by Lieutenant Wellsted. The manna exudes from wounds made in the branches of a shrub belonging to the genus *Tamarix*, a species of *Coccus*, named by the Prussian travellers, Ehrenberg and Hemprich, *C. manipularis*. It is in Wady Hebron that the manna is collected by the Bedouins: the quantity obtained in the most favourable seasons does not exceed 700lbs. A considerable part is consumed by the Bedouins themselves; but a por-

tion is sent to Cairo, and some is disposed of to the monks of Mount Sinai, who retail it to the Russian pilgrims, by whom it is received with great veneration, as an incontestable proof of the event in reference to it, recorded in Holy Writ. The substance is only collected in seasons after heavy rains, for it has been known to be wanting for a period of seven years. The dragon's blood-tree of Socotra appears to be identical with the *dracena draco* of Linn. which is likewise indigenous to the Canary Islands. In Socotra the tree is frequently seen growing on the granite peaks, at an elevation of 4 or 5000 feet above the level of the sea. The gum exudes spontaneously, or from artificial incisions in the trunk. The Island of Socotra has been famous from the earliest period for its aloes; but that article of export has of late years fallen into neglect, so that not more than two tons were exported in 1833. The plant abounds all over the island, and is, most probably, identical with the *Aloe officinalis* of Forskal.

##### ROYAL INSTITUTION.

ON Friday week, Mr. Faraday delivered a lecture on Dr. Marshall Hall's views of the function of the spinal marrow, as distinguished from the brain, of which the following are the leading points. The brain is the seat of sensation and volition with the other mental faculties. If the head of an animal be removed, as in the ordinary manner of killing a turtle by cooks, sensation and volition are destroyed; the limbs never move spontaneously. If the head of a snake be removed, the animal moves about for a time, then remains still, and never moves again unless it be disturbed. But, although spontaneous motion be destroyed, another form of motion remains. If the decapitated animal be excited by a puncture or laceration, it moves with energy. What is the nature of these movements? This is the question which Dr. Marshall Hall has investigated. All preceding physiologists have referred these movements to sensation. In their numbers rank Mr. Whytt, Mr. Legalliois, Mr. Mayo, and Professor Müller. Dr. Hall adduces many experiments which seem to prove that it is not to sensation, but to another property, which he denominates excitomology, that these movements are owing. The head of a snake was removed: it moved about until one-third of its body hung over the outer edge of the table on which it was placed; in that situation it remained and died. Now he considers it impossible to imagine a situation more painful, admitting that sensation remained. Dr. Hall concludes, therefore, that when the head is removed, sensibility is annihilated. A similar conclusion is drawn from the following case:—A boy, aged 19, fell from a tree, and injured the spinal marrow, so as completely to paralyse the lower limbs both to sensation and voluntary motion; yet, on tickling the sole of the foot, or pinching the skin, the limb was moved with energy. It seems certain, therefore, that this motory effect was independent of sensation. There seems, therefore, to exist a source of motion in the animal economy distinct from sensation and volition. This source of motion resides in the spinal marrow, and certain excitator and motor nerves. The subject was illustrated by diagrams. If a motor nerve—if the spinal marrow be excited by the touches of a needle, or the compression of the forceps, or if a slight galvanic shock be passed across its fibres, the muscle or muscles to which it goes are excited to contraction. The nerve and the spinal marrow possess, therefore, an excitomotory power. In an experiment performed by Professor Müller, this motor agency pursued

a retrograde course. Dr. Hall particularly insists upon an experiment, in which the intercostal nerve of the decapitated turtle is excited; movements took place in the anterior and posterior fins, and the tail. The excitomotor influence pursued, therefore, an incident, retrograde, direct, and reflected course. This last experiment is important, from being the type of many physiological phenomena and pathological conditions. Of these a large table was displayed. All the acts of ingestion and egestion, the condition of the orifices and of the sphincters of the animal body, all depend upon this power. The diseases of dentition, and other sources of irritation, infantile convulsion, epilepsy, tetanus, and hydrophobia, &c., are all morbid forms of it. Respiration is excited through appropriate motor nerves, and effused through appropriate motor nerves; the latter being the respiratory of Sir Charles Bell. A plan of the excitomotor system was shown; the excitator nerves being arranged on the left, the motor nerves on the right hand, and the medulla oblongata, and medulla spinalis, occupying the centre. Mr. Faraday observed, thus to distinguish different parts of the nervous system, as to their specific action, might perhaps be the first step in an investigation into the nature of their functions. Electricity may be the agent in the excitomotor, or true spinal system and its phenomena; and the separation of this system from the cerebral, the system of sensation and volition, may suggest experiment.

#### GEOLOGICAL SOCIETY.

On Friday week, the anniversary of this Society was held in Somerset House. The president, Mr. Lyell, took the chair at one o'clock; and the secretaries proceeded to read the reports from the council, and the museum and library committee, as well as from the auditors, on the flourishing state of the accounts for the past year. The president then communicated to the meeting, that the council had awarded two Wollaston medals; one to Captain Cautley, of the Bengal artillery, and the other to Dr. Hugh Falconer, of the Bengal Medical Service, for their geological researches and discoveries in fossil zoology, in the Sivalik or Sub-Himalayan range of mountains. On presenting the medals to Dr. Boyle to transmit to his friends in India, the president expressed his conviction, how gratifying it must be to him to be the medium of communicating to Captain Cautley and Dr. Falconer the high sense entertained of their services to science by the Geological Society of London, who award these medals as a token of the sympathy they feel for those so zealously labouring in a distant land for the promotion of a common cause. The president further stated, that in his address he would treat more fully of the extent of their labours, and bear testimony to the zeal and industry with which these gentlemen had investigated the structure of the range extending along the southern base of the Himalayan mountains, between the Ganges and Satledge rivers, as well as to the talent they had displayed in unravelling the anatomical peculiarities of the extinct genus *Strotherium*, and of new species of other genera; and concluded by requesting, that in forwarding these medals, the first sent by the Geological Society to India, that Captain Cautley and Dr. Falconer should be assured of the unabated interest which the Society take in their researches, together with ardent hopes for their future welfare and success. Dr. Boyle, in reply, said, he did feel high gratification at

being made the medium of transmitting to India the distinguished honours conferred by the Geological Society on his friends, Captain Cautley and Dr. Falconer; as he could himself bear testimony to the zeal which animated those gentlemen in the prosecution of geological researches. Having had opened to their investigation one of the most extensive deposits of fossil remains, and being without books, without museum, or the aid of skilful naturalists, they had, undeterred by difficulties, proceeded to the examination of extinct forms, by making a museum of the skeletons of the animals existing in the forests, the rivers, and the mountains, of northern India. By these means they had come to decisions which had been approved of by anatomists, both of London and Paris. He expressed, also, his assurance, that the approbation of the Geological Society would not only stimulate them to fresh exertions, but excite others to follow their example. Thanks were then voted to the retiring president, Mr. Lyell, and members of the council, Sir Alexander Crichton, M.D.; W. T. Hamilton, Esq.; Viscount Oxmantown; and Lieut.-Colonel Sykes. On proposing the thanks of the Society to Sir Philip Egerton, retiring from the office of vice-president, Mr. Whewell alluded to the loss just sustained by the Society in the lamented decease of Dr. Turner, who had also been one of the vice-presidents. He could not trust himself, so recent had been the event, to express his feelings; but he was convinced that it was not necessary to allude to the high scientific attainments of their deceased vice-president and friend, or to remind the Society of the high moral excellences of Dr. Turner. The scrutineers having examined the balloting-glances, then reported, that the following gentlemen had been elected the officers and council for the ensuing year:—President, Rev. William Whewell. Vice-presidents, Rev. William Buckland, D.D.; Wm. Henry Fitton, M.D.; George Bellas Greenough, Esq.; Roderick Impey Murchison, Esq. Secretaries, Robert Hutton, Esq.; Professor Royle, M.D. Foreign Secretary, H. T. De la Beche, Esq. Treasurer, John Taylor, Esq. Council, F. Baily, Esq.; W. J. Broderick, Esq.; W. Clift, Esq.; Viscount Cole, M.P.; Charles Darwin, Esq.; Professor Daubeny, M.D.; Sir P. Grey Egerton, Bart. M.P.; H. Hallam, Esq.; Leonard Horner, Esq.; C. Lyell, Jun. Esq.; Marquess of Northampton; W. Parish, Jun. Esq.; Rev. Professor Sedgwick; Henry Warburton, Esq. M.P. During the meeting in the morning, and at that in the evening, Mr. Lyell delivered the annual address, in which he took notice of the labours of those fellows which the Society had lost during the year 1836, as well as of the memoirs which had been read, and of the progress which the science has made since the last anniversary.

#### STATISTICAL SOCIETY.

SIR C. LEMON in the chair.—A valuable paper, furnished by Lord Glenelg, being the report for 1835 of the committee of correspondence, appointed at a general meeting of the inhabitants of the colony of Western Australia, on the present state of that settlement, was read. The committee sat in the church of Perth on the 16th of January, 1836, and these are notes of their proceedings, forwarded to England as a correct and concentrated view of the actual statistics of the colony to the present time. The report may be said to be divided into fifteen heads: the first embraces Mr. Bland's report on sheep, cattle, and horses, in York

district. The number of sheep at present is about 5000, much the greater proportion of which are ewes and ewe-lambs, all in excellent condition as to carcass, and tolerably free from scab, with the exception of a few lately arrived from the Swan River, which are infected by intermixing with flocks imported during the last season from Van Diemen's Land. The sheep from this district are of a very coarse-woollen large-framed description; but, as they have been crossed entirely with pure Merino rams, their wool will, of course, improve every year. The number of pure Merinos is about 800 or 900 ewes and ewe-lambs of last year, constituting all or nearly all the unmixed and genuine descendants of thirty-six ewes and rams imported into England by his majesty George the Third in the year 1791, and kept pure ever since. They were a present from the King of Spain to that monarch. The extent of good land in the York district it is impossible at present to ascertain; it is known, however, to extend about forty-eight miles in a straight line, and, in width, about two or three miles on either side. 2d. Messrs. Bull, Dermott, and Yule's report on the agriculture of district of the Swan and Canning. The number of acres under cultivation in barley, oats, and potatoes, in 1834, was 918; in 1835, the number of acres was 1671, shewing an increase of 661. The increase on sheep and horned cattle was in a corresponding ratio. Next follows No. 3. Report on horticultural produce; embracing the vine, the olive, the brown-fig, from the Cape of Good Hope, the peach, the banana, melon, cucumber, potatoe, &c., by Mr. Drummond. No. 4. Report on vegetation and fruit, continuation, as it were, of the foregoing, by Mr. Cook. Of vegetables, are all those found in the English kitchen-garden. The apple, pear, plum, orange, lemon, and other trees, have been introduced, and are in a healthy and thriving state. The price of vegetables, at the time of their first production after the settlement of the colony, was very high; the first cabbages were sold at 2s 6d. each; they are now sold for one penny, or a penny-halfpenny each; are of large size, full-hearted, and of excellent quality; and the same decrease in price is noted of the other vegetables and fruits. The large vine in the government garden has been in its present situation about four years. Two years ago it made shoots upwards of thirty feet in length, in different directions, and covered an area of more than sixty feet: it has borne, in one season, as much as one cwt. of grapes; but not having been cultivated with a view of producing fruit, but of cuttings for propagation, it has been cut down very close every year. Had it been trained for fruit, it is supposed it would have yielded upwards of 3 cwt. yearly. There can be no doubt that this will prove a fine country for the growth of the vine, — soil and climate being both in its favour. Fruit-trees, of most kinds, are of much more rapid growth than in England. 5. On the supply and price of provisions, chiefly meat and bread, by Mr. Smith. From this gentleman's report we gather, that the supply of butcher's meat, in 1829, 1830, 1831, and, indeed, nearly up to 1834, was but indifferent. In that year a considerable number of horned cattle were imported by Captain Taylor, and sold at 15s. per head. In 1835, the retail price was from 1s. to 1s. 6d. per pound, the market being principally supplied with colonial stock. The contract price for the last quarter, for the troops, was 1s. 2d. per pound. Colonial bred meat is of excellent quality and flavour. Beef and mut-

ton, especially the former, is abundant. The price of meat was frequently 1s. 8d. per lb.; sometimes 2s. At one period of severe privation, such was the want of food, that condemned salt beef, which had been buried as unfit for food, was disinterred and sold for 1s. per lb.; this was in the year 1831. A tolerably well-organised party of hunters, with several excellent dogs, established themselves in 1834, within a few miles of Fremantle, and furnished a good, although not a constant, supply of kangaroos, ducks, and teal; the price of the former gradually diminishing, as the supply of mutton and beef increased. The supply of fish is generally good, as well at Perth as at Fremantle; a shilling or eighteen pence being sufficient for the purchase of a large fish. The supply of bread or flour has been equally precarious with that of butcher's meat. At times the market is overstocked with imported flour, selling at 2d.—at other times, difficult to be bought at 1s. per lb. At one period, a substitute for bread was sold at 1s. per lb. composed of a small quantity of bad flour, rice, and potatoes. For the last fifteen months, however, the supply has been abundant, and the price steady; generally from 3d. to 4d. per lb. No. 6. Account of shipping, exports, and imports at Fremantle, by Captain Scott, harbour-master. During the last seven years, the total number of ships, arriving at Fremantle, was 163; tonnage, 32,200; value of cargo left at Fremantle, 394,095*l*.; number of passengers, 2,231; and on this head there is a remarkable variation, in point of numbers, in some years: for example, the number of passengers arriving in 1830, was no fewer than 1125; while, in 1832, they were only 14; horses landed, 133; cattle, 562; sheep, 10,641; goats, 69; pigs, 105; dogs, 69. The exports, in 1834, were 37 bales of wool; in 1835, 50 do. No. 7 is the report on the number and condition of mechanics, artisans, and value of houses and buildings, by Mr. Trig: from which we learn, that the number of artisans at present in the colony is about 95; one-third of whom are engaged, though not constantly, in their respective trades; the remaining two-thirds are variously employed. The value of buildings at Fremantle, and at Perth, may fairly be estimated at 30,000*l*. This amount does not much exceed one-half of the actual cost. 8. Census of Western Australia in 1826. The total amount of population in Australia, exclusive of the districts of King George's Sound, Augusta, and the Murray district, at the census, on the 1st of January, 1836, was 1549. The 9th head embraces the rather anomalous subjects, on the state of crime, places of worship, and schools, by W. H. Mackie, Esq. chairman of the quarter sessions. On the return of crimes, for which we have not space (not that it is either very frightful in extent or character), Mr. Mackie observes, that the great excess in the number of felonies over that of misdemeanours is chiefly to be ascribed to the following cause:—"the expenses of all public prosecutions fall entirely on the colonial revenue, and are considerable, in consequence of prosecutors and witnesses being allowed for loss of time and travelling expenses, according to colonial rates, which has been found necessary to secure their attendance in court." There is but one clergyman of the established church in the colony, namely, the colonial chaplain. Divine service, even on Sundays, is confined to Perth. There is also a chapel at Perth, built by a small association, consisting chiefly of Wesleyan Methodists. Next follows No. 10. Report on climate, meteorology, and diseases,

by Joseph Harris, Esq. colonial surgeon, from which we need make no extract. Nos. 11, 12, 13, 14, and 15, embrace, respectively, the list of the government officers, with their salaries; account of land granted by government to settlers up to 1834 (1,529,721 acres); tabular exhibitions of the nature and value of property, and sundry particulars concerning the establishment of a bank, the available security offered for which by the colonists, after deducting all incumbrances, amounts to 219,739*l*.—A short conversation followed the reading of the paper, and four members were elected into the Society: after which the meeting adjourned.

*Society of Arts.*—On Wednesday week, Mr. R. Twining in the chair, the Secretary delivered the third part of his interesting discourses on the metallurgical history of iron.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

OXFORD, 16th February.—The following degrees were conferred:

*Bachelors of Arts.*—A. Capel, Balliol College; T. Fortescue, Exeter College; Grand Compounders.

February 18.—Mr. George Marshall, of Christ Church, was elected a Scholar on the foundation of Lord Craven. This scholarship is open to all independent members of the University who have not proceeded to their B.A. degree.

##### ROYAL SOCIETY.

THE Earl of Burlington in the chair.—A portion of a paper by Dr. Marshall Hall, On the functions of the medulla oblongata, and the medulla spinalis, and the excito-motory system of the nerves, was read. The author proves by experiment that sensibility is destroyed by the division of the spinal marrow; and that motory power remains after sensation, and even the functions of the brain, are destroyed. The author holds this opinion in opposition to the preconceived notions of some of the chief continental physiologists. But we trust that our report of Mr. Faraday's admirable development of the subject under the head of The Royal Institution, will be found so satisfactory as to supersede the necessity of following our notes of Dr. Marshall Hall's paper in this place.

##### SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Mr. C. R. Smith exhibited a collection of very curious remains of Roman pottery and glass. Mr. Kempe communicated some observations on the mass of the Roman road from Silchester to Staines, made by the students of the Military College at Sandhurst, and recently exhibited to the Society, as proving Staines to be the Pontes of Anthoninus, and Silchester the ancient Calleva Atrebatum. He was of opinion that Silchester, or Slechester, as it was formerly written, was a mere *Saxonising* of Silicis Castrum, and that both the appellations had their root in the Greek *χαλίσ*, a flint. He exhibited plans, from the King's Library, in the British Museum, of the Roman city of Silchester, and of baths found there. Sir Henry Ellis communicated some historical remarks on horsemanship, and a scheme for an academy of horsemanship in the reign of Elizabeth.

##### ROYAL ASIATIC SOCIETY.

FEB. 18th. Sir Alexander Johnston in the chair.—Various donations were presented. The reading of a paper, commenced at the last meeting, on the practice of medicine amongst the Chinese, written by the Rev. C. Gutzlaff, was concluded. This paper affords a curious view

of the attachment of that extraordinary people to ancient habits. According to them the science was invented by Shin-nong, one of the most ancient emperors, who may be reckoned, perhaps, as a mythological personage. This beneficent monarch studied the properties of plants, and made many useful discoveries of their value in curing diseases: his successors in the science have added to his probably useful observations a great number of theoretical rules. They have divided all the diseases which human nature is heir to, into certain classes, each of which is under the dominion of one of the cardinal points; and they prevail in their turns, as each cardinal point is in the ascendant. There is another and equally important division of diseases into the five elements: when all the elements are in a proper degree of equilibrium, the body is in a healthy state; but when any one of the five has an undue predominancy, the part of the body which is under its especial influence suffers accordingly. There are, also, a great number of rules to be observed, on the colour of the face, the state of the pulse, &c. &c.; and in all this the physician is not allowed to improve by his own experience, but he must follow the rules laid down by the ancients. It seems there is considerable danger in departing from this regulation, not to the patient, but to the physician; for, if a patient dies under the care of a medical attendant who treats according to classic rule, the inference is that every care was taken on the part of the physician to insure success, but that the case was, in fact, desperate. If, on the other hand, the same event should ensue when the ancient mode of treatment has been departed from, the physician would risk being proceeded against for manslaughter. It appears, on the whole, that the character of a physician in China is not very respectable, and that the profession is taken up by any one who is unsuccessful in literary or other pursuits; while that of a surgeon is, from the great objection of the Chinese to operations, almost unknown. We may except, however, the practise of acupuncture and the moxa, which have both been in use among the Chinese for an indefinite period, and were, without doubt, learned by Europeans from them. The paper concluded with the observations of a Chinese author on medicine, that, by a proper attention to diet and conduct, all medicine would be unnecessary; but that the bad propensities of mankind had entailed so many evils upon them, that the use of it had become a necessary evil.—The next paper read was by J. R. Stuart, Esq. on a series of ancient coins, engravings of which were laid on the table. These coins, and many others of a similar type, are found in the district from Oujein to Cutch, in the N.W. of India, and are distinguished by several peculiarities. The execution shews a familiarity with Greek art; and the legends on the obverse, though not quite Greek, approach very nearly to the forms of the Greek alphabets. On the reverse, the legends are in a character evidently derived from the Devanagari, and approximating to that form of it which is used by the Thibetans. The heads which are stamped on almost all the coins found, appear to have a Tartar air and costume. The profile is well defined; the chin smooth, and the upper lip decorated with a curled mustachio. The head is covered with a flat-crowned hat, or helmet, under which the hair appears in three long formal curls. The ear is decorated with an oblong earring, and the neck is surrounded with an ornamented collar. The author of the paper attributes these coins to

the Yue-chi, or race of the Moon; a tribe of Tartars who, according to the Chinese annals, aided materially in overturning the Greek Bactrian empire. These Yue-chi, also, extended their dominion over great part of India, particularly along the course of the Indus, as far as Baruch, and the temple of Somnath, in Cattywar; precisely the line in which these coins are found. This sufficiently accounts for the apparent incongruous character of the coins in question. The new rulers of the Greek provinces would probably feel the superiority of the arts practised by the people now under their sway, and would not be insensible to the advantages of continuing a coinage so much better than any thing they could themselves produce; while they would naturally be desirous of representing their own features, and the characters of their own language, on one side, at least, of their new money. They would also, naturally be inclined to transport into India a practice of which they had experienced the utility. It is not ascertained how long the empire of the Yue-chi subsisted in India: the latest date ascertained by De Guignes is, A.D. 266, which would give a duration of 400 years from the subversion of the Bactrian empire.—The next paper read was, an account by two officers of the Indian Navy, who were on the southern coast of Arabia in the early part of the year 1835. Those gentlemen started from Gossyrh, seven degrees from the Straits of Babul Mandeb, and made their way a few miles into the interior of the country. By the help of a Bedouin whom they found there, they were enabled to reach a place called Jebel Aaledma, where they found a large cavern, covered with inscriptions executed in red paint. Some of these inscriptions retained the brightness of newly done work; but the colour was more generally faded. The inscriptions bore, at first sight, a considerable resemblance to the Ethiopic character; and, on a closer examination, several of the letters were found to be identical. The others bore no resemblance whatever to Ethiopic, but rather resembled many of the forms of the older Greek alphabets, as found in inscriptions. About a fortnight after, the same gentlemen, accompanied by another officer, made an excursion about forty miles to the eastward of their former discovery; and were rewarded by the view of another spacious cavern, on which inscriptions in a similar character, and executed with a similar material, were found. Copies of these inscriptions were laid upon the table; but it does not appear that any acquaintance with their purport has yet been made. The thanks of the society were returned for these communications; and the meeting adjourned.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Royal Geographical, 9 P.M.; British Architects, 8 P.M.; Russell Institution, 8 P.M. (R. Bond on Physical Geography; and evening Monday); Marylebone Literary, 8 P.M. (Dr. Ritchie on Hydrodynamics; and March 6); Russell Institution, 8 P.M. (Mr. Serle on the Drama.)

*Tuesday*.—Royal Medical and Chirurgical, 8 P.M.; Zoological, 8 P.M.; Civil Engineers, 8 P.M.; Lambeth Literary, 8 P.M. (Mr. Nuttall on Roman Literature); Belgrave Literary, 8 P.M. (Dr. Lardner on Astronomy; and succeeding Tuesday.)

*Wednesday*.—Society of Arts, 7 P.M.

*Thursday*.—Royal Society, 8 P.M.; Antiquaries, 8 P.M.; Zoological, 3 P.M.; Islington Literary, 8 P.M. (Mr. Downes on Steam); Russell Institution, 8 P.M. (Mr. Lambert on the Literature and Royal Institute of France.)

*Friday*.—Royal Institution, 8 P.M.; Islington Literary, (Literary Meeting).

*Saturday*.—Royal Asiatic, 3 P.M.

#### FINE ARTS.

##### BRITISH GALLERY.

(Fourth notice.)

1. *Zarah*. F. Grant.—We understand this to be the artist's first appearance in the gallery, and we congratulate him on the éclat of his performance. It is a portrait of Mrs. Nisbet, and in resemblance, expression, and energy of action, evinces talents of no ordinary rank.

2. *Peasant Girl of Subiaco, Roman States*. A. Geddes, A.R.A.—But for the title it might have passed for one of our homely clad Gainsborough-sort of subjects. Simplicity is its greatest charm; but it is carefully executed, and possesses a mellow tone of colouring.

21. *Meg Merrilies*. T. Clater.—To make even an approach towards an adequate representation of one of the most powerfully drawn characters in the late gifted writer's list, is no small proof of the talents of an artist. Mr. Clater has, we think, been eminently successful. The sibyl-like and fantastic costume, the gleamy light which partially illumines the haggard countenance, and the gloomy and frowning abode, are all in excellent keeping with the subject.

15. *The Fatal Throw*. T. Von Holst.—The spirit with which this composition is evidently designed, makes us wish that it had been placed nearer the eye. It strongly reminds us of the enthusiastic pencil of Retzsch. But, alas! we fear that the lesson which it conveys is in vain. The habitual gambler, and the habitual drunkard, like the moth in the candle, find their destruction in what captivates their senses.

111. *Maid of Athens*; 128. *Haidee*. J. Boaden.—What titles painters choose to give to subjects like these is of little importance. Professing to be ideal, they are actually from nature; and in that circumstance, when they are finely executed (as in the present instances), resides their charm.

112. *Greenwich Pensioners commemorating the Battle of Trafalgar, in Greenwich Park*. J. Burnet.—Though the edge of public curiosity has been taken off by Mr. Burnet's fine print after this performance, it is but justice on our part to repeat the admiration which we expressed of the picture when it was formerly exhibited at the publisher's. Mr. Burnet's talents, both as a painter and as an engraver, do the highest credit to the British school of art.

78. *River Scene*. F. R. Lee, A.R.A.—Amidst the diversity of styles adopted by our numerous landscape-painters, there is none, which bears more distinctly the stamp of truth, in character and effect, than that of Mr. Lee. This "River Scene" is a fine example of his powers; and its fidelity to Nature will be acknowledged by all accurate observers of that lady.

88. *Evening—Banks of the Stour*. T. S. Cooper.—Under a title of equal simplicity to the last, we have here a picture of English pastoral, worthy of Cuy and Paul Potter; and the landscape of the former, the cattle of the latter; and well might it supply the place of those celebrated masters, in any collection.

68. *The Surprise*. T. Webster.—Like the helmet in "The Castle of Otranto," the accoutrements at the door of the cottage naturally create wonder in those who are not, as we are, let into the secret of what is passing within. The figure of the former is a fine specimen of green old age; and the inquiring looks of the dame are very characteristic.

72. *Piazzetta at Venice, with the Salute Church in the distance*. J. Inskipp.—We do

not know much about the Salute in the distance; but we should like exceedingly to salute the sparkling animated creature in the foreground. It is one of Mr. Inskipp's most brilliant performances.

347. *The Village Tinker*. H. Pidding.—There is not in all the gallery a more spirited production, nor one more true to nature. The Tinker is, in all respects, a picturesque object: he is also an epitome of the spirit of trade; his contrivances being always ready to make tear keep more than pace with wear—or, as the saying is, to make two holes while mending one.

146. *L'Inforata*. T. Uwins, A.R.A.—We wish our native artists would find names for their subjects in their own language. It is, however, a charming head; and the flowers which adorn it are a fit accompaniment and emblem of the innocent gaiety of heart that beams in the countenance. This beautiful work is a set-off against the painful, though powerfully conceived and executed performance, which (if we mistake not, under another title) Mr. Uwins again presents to the public eye.

(To be continued.)

#### NEW PUBLICATIONS.

*Engravings from the Works of the late Sir Thomas Lawrence, P.R.A.* Part III. Hodgson and Graves.

"The Archbishop of York," engraved by J. H. Phillips; "Lady Peel," engraved by W. Giller; and "The Earl of Hardwicke," also engraved by W. Giller; are the three graphic gems of the third part of this charming publication. In the first we witness the late president's power of representing intellect and dignity; the second is one of the most successful specimens of his delineation of beauty and refinement; and the third shows his extraordinary skill in the arrangement and management of ornament and decoration.

*J. D. Harding's Lithographic Drawing-Book, for the Year 1837.* Tilt.

TWENTY-FOUR drawings on stone by Mr. Harding, in imitation of lead or chalk, but not heightened with white. They are executed in that able artist's usual masterly manner; and are admirable examples for a learner who wishes to acquire a feeling for what is called "breadth." We have but one fault to find with this handsome volume. Although the views are numbered, they are without titles, and there is no table of contents. It is evident that some of them are English, some foreign; but it is rather vexatious not to be able to discover of what particular scene some favourite plate is the representation.

*The Continental Drawing-Book, for the use of advanced Pupils; being Views in Switzerland, the Alps, and Italian Lakes.* Drawn from nature, and on stone, by George Barnard. Ackermann and Co.

WITHOUT stopping to inquire whether the title "continental" may not be a little too ambitious, we hasten to express our admiration of these beautiful lithographic prints, a dozen in number, which we have no doubt are, as they are described to be, "exact facsimiles of original sketches;" and which, from the spirit and taste with which they are executed, are well adapted for the purpose indicated by Mr. Barnard. The prefatory hints "to assist the pupil in mastering the difficulties of using the stump and opaque white on tinted papers" are so useful, and are conveyed in so perspicuous, yet condensed a manner, that we were strongly tempted to transfer them to our column; but,

on consideration, we felt it to be hardly fair to do so. We refer any of our readers, therefore, who wish for information on the subject, to the publication itself.

*The Widow's Hope.* T. M. Joy pinxt. J. Porter sculpt. Hodgson and Graves.

MANIFESTATIONS of the domestic affections, whether in life or on canvass, are always pleasing; and of those affections, which can be conceived more powerful and touching than that of a mother—a widowed mother—for her infant? Mr. Joy has represented the fair subject of his pencil comparing the features of her sleeping child, her "hope," with those depicted in a miniature of its father; while a tear trickles down her cheek at the tender recollections excited by the latter. It is a well-executed and attractive print.

#### BIOGRAPHY.

##### THE BISHOP OF SALISBURY.

DR. THOMAS BURGESS, Bishop of Salisbury, died at Southampton, on Sunday, at the advanced age of above eighty years; having adorned the Bench since the year 1803, when he was made Bishop of St. David's. Sprung from the inferior ranks of life—for his father was a grocer at Odiham, Hants—the late Bishop of Salisbury is a splendid example of the rank and dignity to which talents and worth may raise the lowly in our free country. Educated at Winchester School, and Corpus Christi College, Oxford, his early learning and abilities recommended him to the Bishop of Durham; whose favour and patronage advanced him in his honourable career, till, more generally known by his great merit, the rest of his upward way conferred a lustre on those who promoted him to the highest sacred offices.

In this brief record, we will not attempt to enumerate the multitude of his eminent literary productions. From 1780, when he published "Benton's Pentateuch," to within a very few years, he was an incessant labourer in literature of the most elevated class; and, latterly, paid great attention to the Hebrew, not only as a language, but especially for his elucidation of the celebrated disputed text of St. John, in which he took the warmest interest.

The Royal Society of Literature is principally, almost wholly, indebted to the Bishop of Salisbury for its foundation, under the munificent auspices of George IV., from whom the suggestion came, and who endowed it in so princely a manner.

Of his lordship's exertions in this respect, and of his unbounded charity, the writer had opportunities of forming an opinion during some years of gratifying intercourse; and he feels that he does not overcharge the picture in saying, that a better man, a better Christian, one of more genuine piety, one of greater learning, one more liberal and charitable, never adorned the hierarchy of the Church of England.

We remember, in particular, one instance of distress for which an application was made to him. It was of much severity, and involved a large family. The bishop gave his cheque for fifty pounds, saying, "This is rather more than I can afford just now, with other claims to be considered, but I should be sorry if the subscription (some 500*l.* was needed) failed; and if you get more than is wanted from other quarters, I will rely on your enabling me, by returning part, to afford relief to these other cases." The goodness and beauty of this simple trait of benevolent character has never been effaced from our minds. It was the Samaritan of our time.

The foundation of a Welsh College, to provide for the preaching of the Gospel in a tongue to be understood throughout the principality, is also among the Christian acts of this estimable prelate.

In private life he was a model of amenity and courteousness; mingling, in a fine degree, the manners of the gentleman with the calm dignity becoming his eminent station.

His widow was Miss Bright, of Durham, half-sister to the Marchioness of Winchester, whom he married in 1796.

#### SKETCHES.

##### METEOROLOGY.

UNDER this head (having expressed our opinion of Lieut. Murphy's volume, just published, in our review department) we give place to the following letter from that gentleman. We are not sure that it will edify our readers much; but as the subject, *Meteorology*, is one of growing interest and, notwithstanding recent experiments and discoveries, very little understood, we are disposed to look at every hypothesis that may be broached, whether wild or rational. From parts of even the wildest some hints may be taken. With regard to the following letter, the first indicated period, the 5th of March, will, at any rate, soon be here as a test.

*Anticipated Storm-periods of the approaching Seasons of 1837.*

"One circumstance connected with the practical application of Mr. Murphy's meteorological doctrines is worthy of observation: the tremendous storm of wind and rain which occurred on the 13th ultimo, was predicted by him in a letter to the editor of the *Agriculturist*, dated the 26th October, and which, we understand, appeared in that journal on the following day. If it be assumed that the coincidence was merely fortuitous, it was, at least, sufficiently singular to be remarkable; if the result of calculation, and of scientific principles, susceptible of general application, the importance of the discovery to science and society, could hardly be exaggerated."—*Morning Post*, Dec. 3, 1836.

To the Editor of the *Literary Gazette*.

London, February 21st, 1837.

SIR,—The report of a paper of mine, read at the December meeting of the Meteorological Society, On the anticipated state of the weather during the succeeding month of January 1837,\* having appeared in a subsequent Number of the *Literary Gazette*, I am induced—chiefly on the score of its assumed utility in conducting, probably, to the preservation of life, and much valuable property—to request your giving a place in the columns of your widely-circulating journal to the following short paper on the anticipated periods of storm which have to be apprehended during the present year. It was originally intended solely for the inspection of the gentleman (W. S. Stratford, Esq. Lieut. R.N.), as being more particularly referable to maritime affairs, who, with so much credit to himself, and advantage to the service, acts as superintendent to the *Nautical Almanac*; but from its so extensive connexion with the interests of a particular class of society, I have thought it right to give it publicity:—

"On the Anticipated Periods of Storm during the Seasons of 1837.—It being of the nature of meteoric action in the atmosphere, of whatever kind, to converge to a particular point or focus where it is always the most powerful; and that time, no less than particular locality, is a necessary element in the production of each. Thence it is, as connected

\* Of this paper I may observe, *en passant*, that as its predictions of the weather during the month of January proved erroneous, the error was chiefly owing to my having trusted to appearances, rather than to principles: the less excusable, as, on former occasions, I had frequent reason to see the little of confidence which, as connected with the approaching changes of the weather, can be attached to mere appearances.

with the annual round of meteoric action in the atmosphere of either hemisphere, that, similar to the periods of the opposite extreme degrees of temperature in winter and summer, each meteor has not only a locality, but a period more particularly proper to, and connected with, its development, than any other. Some slight variations, both in the times as in the degrees of force with which it develops itself, incident to those of latitude and locality, necessarily occurring in reference to each. And, as, according to our principles, the same analogy, though the action be on a minor scale, exists in the lunar as in the annual circle of meteoric action; and that, notwithstanding the lunar action on the temperature and weather is altogether determined, in its nature and effects, by the existing action in the annual circle which, at the time, constitutes its ground; yet that the actions in these circles are, to a certain extent, independent of each other. Thus, though the actions in both circles usually concur in the production of extreme meteoric results in the atmosphere, that, at particular seasons, the lunar action, of itself, originates storm, equally as the other meteors connected with the latter: thence the necessity of distinguishing between the storms of the annual circle, connected with the changes of the seasons, and those which are more properly induced by the lunar action; or of dividing this meteor into opposite classes—annual and lunar. Of the former, or storms of the annual circle, and which, as the actions which induce them, are the most violent of the year: as connected with the approaching seasons of 1837, the first (or those connected with the vernal equinox) may be expected to set in on the 5th of March, and, according to appearances, with much violence: the usual period of their continuance, when violent, being three days. The second of these storm periods, being that incident to the transit of summer temperature, and the least violent of those which properly belong to the actions connected with the changes of the seasons in the annual circle, may be expected to occur on the 14th of June. The third, or that connected with the autumnal equinox, may be expected to set in on the 13th or 14th of September; but, as assumed, with less violence than that connected with the opposite, or vernal, equinox. And, finally, the last, as the most violent of these storms, may be expected to occur on the 27th of November: the chief region of their development, as assumed, being the shores of the Baltic, of Holland, and of the north of Scotland. The real place of this storm period in the annual circle, as in 1836, is the 29th of November, but owing to the change of the moon occurring on the 28th of the month, or day before: this circumstance, as assumed, may have the effect, on this occasion, of accelerating the period of its occurrence by two days. Of the opposite class of these storms, or those incident to the lunar action, a gale may be expected to occur on the 5th of April; another, probably, on the 20th of the same month; another, on the 7th or 8th of July; another, on the 17th of the month, but, most probably, confined to the higher latitudes; another, on the 16th of August; another, on the 27th of October; and, on the southern shores of these islands, on the 2nd of November; another, on the 12th of the same month; another, on the 12th of December; and, finally, another, on the 26th of December, or following day. These, the storms induced by the lunar action, being usually more violent as we approach the period of the winter solstice."

It is not pretended that these constitute the whole of the storm periods of the approaching seasons of 1837, but simply those which have the most to be apprehended. And, as from the *locality* of the storms induced by the lunar action, but more particularly those which occur in the vicinity of the solstices, the periods marked as those of the occurrence of these storms, are only to be regarded in the light of *approximations*; but which, as assumed, will be found so nearly to quadrate with the occurrence of these storms, as at once to shew their connexion with these periods, and the correctness of the principles of calculation assumed in reference to the latter. And, if the circumstance be taken into account, viz. that the only conclusive and *every-day* proofs of the true theory of the world, are those to be obtained from meteoric action in the atmosphere, it will readily appear that, however important to the interests of society the discoveries which have led to a knowledge of the principles on which the preceding calculations are founded—assuming the latter to be correct—that these discoveries are no less so as connected with science: proving, as observed by Helvetius, that all the preceding systems, in reference to the laws and dispositions of Nature in the physical world, concocted by the ingenuity of philosophers, and who never so much as contemplated the existence of such a text, had nothing more substantial for their bases than the *imaginative powers* of their authors. And, as I feel a well-founded confidence that, as on former occasions, the events predicted will serve to prove the correctness of the calculations made by me in reference to them, the better to shew the originality of these discoveries, as that society may know to whom it is indebted for them, and, at the same time, without wishing it to be understood that in doing so, so weak a passion as that of *courting notoriety* induces me to make the proposal; I not only invite *competition* on the part of the *learned bodies* of this, as of foreign countries, in this department of meteorology, but, allowing them all the information on the subject which they can collect from my published works, where they will find it treated of very much in detail; but, in addition, I hereby offer the sum of 1000*l.* to any individual member of these societies, who, in the course of the present year, will satisfactorily explain the *whole* of the elements necessary to be employed in calculations of the kind, *i. e.* which have for object deductions in reference to the anticipated nature of the approaching seasons and changes of the weather, equally as of the periods of the occurrence of storm *throughout the year*. Trusting to your liberality, equally as to your attention to the interests of science and of society, in giving publicity to the present communication, I have the honour to be, &c.

P. MURPHY.

Let us add here our late usual weekly variety.

*Weather-wisdom.*—We somehow or other forgot the prophecies last week. On the 21st, according to Lieutenant Morrison, "the sun being in the declination of Hercules, would again cause very cold weather," and he "expected much snow about this period." "The 23d and 24th, thermometer very low; expect violent storms of wind, with heavy falls of rain or snow." "The 25th," *i. e.* this day (reader, look up!) "seems very violent," and we are to have "tempestuous weather and flooding rains to the end." March is to "commence with cold rains and sleet." With regard to the past, here referred to, the weather has been

extremely fine on alternate days, rainy and disagreeable on the others, but no snow, and, except on the morning of the 24th (which answered the prediction), little of high wind. Were it not for these discrepancies, we should have but a poor prospect, for all March is of dreary aspects.

## MUSIC.

### VOCAL SOCIETY.

WE owe an apology to our readers, and the Vocal Society, for being thus tardy in noticing the third concert, which took place so far back as the 6th instant. The madrigals, on this evening, were not happily selected. That by Ward, "Die not, fond man," was never a favourite with us; it is essentially dull and monotonous, and we advise that it be placed on the shelf, and, in its stead, that one of the best, such as "Flora gave me fairest flowers," or "Sweet honey-sucking bees," be repeated a little oftener. "Lady, your eye," performed for the first time, is scarcely attractive enough to deserve a place on the list of stock pieces. Storace's song, "There the silver waters roam," gave universal delight, from the extreme beauty of the orchestral part; and it was sung with excellent taste and judgment by Mr. Atkins. Miss Shirreff's performance of "Parto ma tu ben mio" was very unequal; in some parts excellent—in others, much the reverse. Miss Woodyatt executed "Hush, ye pretty warbling choir," very nicely. Mr. Elliott's sweet glee, "Come, see what pleasures," is worth a score of the ordinary run of these sort of compositions. Handel's noble chorus, "Sing, O ye heavens!" was most worthily performed; and Onslow's quintet, played by Messrs. Blagrove, Gattle, Dando, Lucas, and Howell, was a great treat to the lovers of instrumental music. We must reserve, till next week, our notice of the fourth concert, which was too good to be dismissed in one or two brief sentences.

Q.

## DRAMA.

*Adelphi.*—*Hassan Pacha, or the Arab Leap*, introducing the Bedouins as *dramatis personae*, was produced on Monday, embracing nearly the whole strength of this efficient company, and with scenic effects, which no one but Mr. Yates would attempt, in so small a space as the stage of the *Adelphi*. It was, as it deserved to be, most successful, and will continue to "draw," till the end of the season. John Reeve and Wilkinson, as rival *chateaux*; Lyon and O. Smith, as rival chiefs—one of Georgia, and the other a Turkish pasha; Miss Daly, as Lyon's wife; Mrs. Stirling, Miss Daly's attendant, and a host of pretty faces to constitute O. Smith's harem; Arab and Turkish servants, dancers, &c. &c.—all added their quota to the amusement which this "romantic burletta" appeared to give to a crowded house. *Jim Crow* continues to jump, and Mrs. Yates to delight as the *Duchesse de la Vauvalière*; and an evening may be passed with as much entertainment and pleasure, at the *Adelphi*, as in the days of old. The diminution of prices at the large houses seems to have had no bad effects on the favourite minors.

*St. James's.*—*The French Refugee*, Mrs. S. C. Hall's burletta, was produced on Monday, and was highly successful. It will add much to Mr. Morris Barnett's fame as an actor in this line of character. His *Monsieur Jacques* was an admirable performance, and his *Monsieur St. Pierre* is scarcely less so. Mrs. Hall's shorter stories have always had a dramatic

turn, and several been most successfully dramatised by others. Mrs. Yates's *Grace Handley* cannot be forgotten; and we have often thought that Mrs. Hall would be as delightful on the stage as she has ever been in the Annuals. We sincerely hope that this, her first attempt, will induce her to visit us as regularly on the boards as she has within the binding. The plot is extremely simple, and well worked out; the interest is kept up throughout, and, till almost the close, you can scarcely guess how it will finish. *A French Refugee* (Mr. Morris Barnett) gains a living for himself and only daughter, *Julie* (Miss Arison), as a teacher of music and dancing: *Julie* is seen and loved by one of his pupils, *Gerard Hamilton* (Mr. Saville), and secretly married to him. This deceit preys on her mind till she almost fears to see her father; when, in an interview with her husband, appointing a rendezvous for the night, she is overheard by a mischievous girl, *Madge* (Miss J. Smith), who immediately reports the scandal to *St. Pierre*. A scene then ensues between *Julie* and him, which ends in his disowning her: but she acknowledges her marriage, which is confirmed by *Gerard*, and she is forgiven. On the return of Louis XVIII., *Monsieur St. Pierre* is restored to France, and all his honours; and every thing is ended to the satisfaction of all the parties concerned: to which we may add that of the audience, who seemed delighted from beginning to end. Mr. Barnett was not Mr. B., but the old Frenchman, and Miss Allison was natural and pretty as his daughter: one or two scenes between them were of a very high order. Miss Smith was quaint and pointed as *Madge*, and sang two pretty songs. In addition to these, Madame Sala and Miss Booth the *Little* added to the *ensemble*; and Mr. Gardner was clever, with little to do, as *Jacob*, a servant. Altogether, we have seldom seen a piece got up with better effect, in scenery, dresses, &c., and we sincerely wish that *The French Refugee* may be as popular as *Monsieur Jacques* was and is; and, in conclusion, beg to congratulate Mrs. Hall on the deserved success of her stage offering.

*Olympic.*—The *Sentinel* was brought out here on Thursday; and, though the cast includes J. Vining, F. Mathews, Charles Mathews, and Madame Vestris herself, it was not so pointed as the generality of burlettas produced here. It had the advantage of beautiful scenery, and was capably acted; but we have been used to such hits at this house, that we are disappointed at such homely fare as the *Sentinel*. At the close, Madame Vestris asked so prettily to allow it to be a successful piece, that the audience could not refuse her; and, therefore, the *Sentinel* may relieve guard from time to time with the more established favourites.

*New Strand.*—Mr. Webster, of Covent Garden, has collected a motley troop, and commenced Lenten entertainments at this little theatre. The amusements are too various to particularise; so we shall only recommend all lovers of this sort of merriment, who are not deterred by reasonable scruples, to pay a visit to the Strand; where they may pass a very agreeable evening. Mr. Webster's company reminds us of a copy we used to write at school, "*Varicé plait*"—tableaux, posture-making, ventriloquism, conjuring, and his own *Wallet*—a table entertainment of imitation and mimicry.

*Theatrical Affairs.*—We understand that, owing to the shortness of the season, previous to Easter, the *Adelphi*, *Olympic*, and *St.*

James's Theatres, have severally had their licences extended two months. The new theatre, preparing at the Queen's Bazaar, Oxford Street, under the management of Mr. Warde, is expected to open in July, and be open all the year round.

#### VARIETIES.

**High Tide.**—On Monday, the tide in the Thames rose to an unusual height, and inundated much of the low lands and many dwellings on the banks of the river. It was full moon at 2h. 23m., within a few minutes of high water, but the tide flowed till 3h. The newspapers state, that an immense number of rats were dislodged from their underground dwellings about Bermondsey, &c. and slaughtered by boys as they attempted to escape to dry quarters.

**Aurora Borealis.**—The *Bath Journal* of Monday states, that the aurora borealis was so vivid towards the north-west on the preceding evening, as to resemble a dreadful fire. The phenomenon, by ten, shifted to due north, and the sky became one vast expanse of glowing red, extending almost to the point over head. It was beautifully visible at Paris on Saturday night, and was also seen in London, but not so finely. In Hampshire the meteorological phenomena are described as having been of extraordinary brilliancy, but not resembling the aurora.

**Mr. Curtis** held his first conversazione for the season at his house, in Soho Square, on Thursday evening. The Turkish ambassador, and several distinguished foreigners, were present; and, with the rest of the company, extremely gratified with the sight of Mr. Curtis's acoustic chair, the principle of which was explained. A watch, ticking in the dining-room, was distinctly heard in the library; and we were informed that the inventor had before the Commissioners of Woods and Forests a plan for conveying messages from one part of the new houses of parliament to another, upon the same plan.

**Londiniana (Extraordinary).**—Feb. 22. A paragraph has appeared, and will probably go the round of the newspapers, announcing that the excavators employed on a new sewer in Wardour Street, Soho, had discovered, 25 feet beneath the surface of the present street, sundry bones of men and horses, Saxon and Roman coins, intermingled with fragments of swords, spurs, &c. Of course we turned our thoughts to that portion of an ancient road, which is now known as Oxford Street, and drew up a body of Saxons and Roman Britons—one fighting for plunder, the other *pro aris et focis*. We repaired, as good historical antiquaries, *instantly* to the spot. Let our readers judge of our surprise, when we found, after diligent inquiry among the labourers, that there was not the slightest foundation for the report. A few mutton-bones had been thrown out of the line of excavation opposite Edward Street, where, like the reporter of the paragraph, we found them to be *lying*. In short, poor Antiquarius had been *hoaxed*; his walk ended in disappointment. Paragraphs of this nature may be *bread* to the penny-a-line men, but they are poison to an antiquary; for, too hastily *swallowed*, they might prove *death* to his reputation. We, therefore, give to that well-informed, and too credulous race in general, this salutary caution—"Beware of newspaper antiquities, especially within the bills of mortality."—*From a Correspondent.*

**University College, London.**—The annual meeting of the proprietors was held on Wednesday, Mr. J. Wood in the chair. The report

stated the number of students at 515, of whom 439 were medical; shewing the increasing value and character of that department. After some discussion, the report, with an amendment by Mr. Warburton, was agreed to.

**Earthquakes.**—Southern Syria, it appears, from recent accounts, has been ravaged by these dreadful phenomena of nature. Fifteen thousand persons, at least, are stated to have perished; and Tiberias, Napluz, St. Jean d'Acre, and all the country, had suffered from the shocks. On the 22d ult. a severe shock was felt at Constantinople; and on the night of the 23d, Switzerland, Germany, Italy, and the eastern parts of France, were affected.

**The Booksellers' Provident Institution.**—The following gentlemen have been elected the officers of this excellent institution until the annual meeting in 1838:

**President.**—C. Orme, Esq.  
**Eight Vice-Presidents.**—H. Colburn, J. Duncan, T. N. Longman, J. Murray, John Miles, A. K. Newman, R. Saunders, T. Tegg, Esqrs.

**Six Honorary Vice-Presidents.**—J. Bonsor, W. Clowes, W. Clement, J. Dickinson, T. Gardiner, and A. Spottiswoode, Esqrs.

**Four Trustees.**—The Right Hon. the Lord Mayor, E. Hodgson, J. Nisbet, J. M. Richardson, Esqrs.

**Treasurer.**—T. Brown, Esq.

**Three Auditors.**—Messrs. R. Burnside, J. Eden, M. A. Nattall.

**Twenty-seven Directors.**—Messrs. J. Bagster, J. Bain, H. Bohn, Buckman, Chidley, H. Coxhead, Dauding, Dundas, B. Fellowes, Foss, G. Greenland, Hamilton, Hodges, Huntsman, Lawford, Lewis, J. Miles, W. Marshall, Matthews, Rodd, Ramsden, Sherwood, R. B. Seeley, V. Stevens, Taylor, Stoneman, Walther.

At a meeting of the Philosophical Society, Dr. Clark, the president, in the chair,—Read, Memoir, &c., by Professor Rigaud, of Oxford, on the proportion of land and water on the surface of the terraqueous globe; Memoir, by Professor Challis, on the law of decrease of temperature in ascending in the atmosphere; Memoir, by Mr. Kelland, on the transmission of light through crystallised media.—*Cambridge Chron.*

**British Commerce in 1836.**—English trading vessels are in number, 24,280; their capacity, 2,553,685 tons, and are navigated by 166,583 men and boys. In addition, the British colonies possess 3579 ships, of 214,878 tons, and 15,059 sailors; making a total of 27,859 vessels, and 181,642 men, employed in the mercantile service of the British empire.—*Parliamentary Report.*

**Paris Statistics.**—In 1835, the Parisians ate, among other provisions, 1,120,562 francs' worth of oysters. 9,637 boys, and 9,207 girls, were born in wedlock in private houses, and out of wedlock, 2747 boys, and 2669 girls. In hospitals, the lawfully amounted to 283 boys, and 234 girls; and the illegitimates to 2237 boys, and 2207 girls: more than one-third of the births being thus out of wedlock. 2459 of these, however, were recognised by parents. The dead bodies of 226 males, and 42 females, were deposited in the Morgue. The total of deaths was 24,792; of births, 29,792; increase, 4528. Throughout all France, the returns give an increase of population, 94,840 males, 71,498 females; total, 166,338.

**Population of Russia.**—A Russian official return states the European population of the empire at 45,550,000.

**The Mining Review, No. IX.**, New Series, conducted by H. English (Simpkin and Marshall), deserves to be honourably named among the useful publications of the day. The extracts from foreign scientific works are particularly praiseworthy, and the geological papers are of a valuable description.

**Selections from American Papers.**—The editor of the *Boston Morning Post* informs his readers, that no paper will be issued on Friday,

as he had received a glorious thanksgiving turkey, which he meant to eat in peace? What would the readers of the *London Morning Post* say to a similar announcement?

The editor of the *Herald*, published at St. Joseph's, Michigan, laments his awful predicament thus:—"His only journeyman has thirteen little impressions to take care of, and has been for weeks past hunting for a roof to shelter them; his devil is sick, and he has all the work to do himself. He begs hard for help, but candidly confesses that he cannot offer many inducements." It seems this gentleman cannot take it quite so easy as his brother editor of Boston.

**Wonderful, if true!** as Jonathan says.—**Weaving in Glass.**—Signor Olivi, of Venice, has succeeded in bringing to perfection the art of weaving a tissue from the threads of glass. The material is susceptible of taking any colour, and the thread is so perfectly flexible as to allow of its being tied; and the tissue, when manufactured, to be folded up like silk. After this, talk of malleable glass if you please;—only conceive a living lady in a glass case!

Marsden, 12mo. 2s. 6d.—Bishop Hall's Works (in 12 vols. 8vo. monthly), Vol. I. 12s.

#### TO CORRESPONDENTS.

##### \* \* \* MEDALLIC MACHINE ENGRAVING.

The following notice has been inserted in a *Second Edition* of our No. 1047:

"The interest attached to the subject of Medallion Engraving, and the extreme beauty of Mr. Bates's specimen plate of friezes, gems, and Henry IV., delivered gratis with this Number of the *Literary Gazette*, has called for a Second Edition; which we have not been enabled, however, to furnish in the original form, with an extra half-sheet of letter-press. By omitting the Advertisements, a Letter from Geneva, Report of the Proceedings of the Asiatic Society, Notices of the Drama, and a Variety or two, we have reduced the publication to its usual compass, and are thus happy to provide for the continued demand, still presenting the Plate with the Number."

To this intimation we beg here to add, for the guidance of our friends and subscribers out of London, that copies of the Plate are preserved for them, and we trust they will take early means, through their newsmen or agents, to secure for their annual volume so admirable and interesting a specimen of art.

In order to make room for a number of interesting learned and scientific reports, and miscellaneous articles, we have gladly availed ourselves of the paucity of this week's publications to confine our review within less than its usual compass.

The portion of Messrs. Southgate's advertisement relating to bedsteads, featherbeds, sofas, &c. was made up in our advertising page, too late for alteration, before we noticed that it was inconsistent with our rules. We propose writing an article on it next week, if we have nothing better to do.

# ADVERTISEMENTS, Connected with Literature and the Arts.

## EMBELLISHED WITH A PORTRAIT OF T. W. COKE, Esq. of Norfolk.

On the 1st of March, with the Magazines, Part I. price 4s. 6d. of a republication, on smaller paper, with all the Armorial Bearings, &c. (to be completed in 16 monthly parts, at 4s. 6d. each), of

## BURKE'S HISTORY OF THE LANDED GENTRY,

OR

## COMMONERS OF GREAT BRITAIN AND IRELAND.

COMPRISING ACCOUNTS OF

## ALL THE EMINENT FAMILIES IN THE KINGDOM,

And upwards of 100,000 Individuals connected with them.

Forming a desirable Companion to the Peerage and Baronetage.

"This important work has been undertaken by Mr. Burke, as a Sequel to his well-known and established "Dictionary of the Peerage and Baronetage of the United Kingdom," and upon a somewhat similar plan, in order that, when completed, the two publications may embrace the whole body of the British Peerage, Baronetage, and Gentry, and may furnish such a mass of authentic information in regard to all the principal Families in the Kingdom, as has never before been brought together.

"This is a book of the deepest interest, and containing, indeed, so vast a portion of family history, as perhaps the annals of no other country could produce. Besides the descents, dignities, and armorial bearings of every family, it contains the most memorable actions of persons who have distinguished themselves, intermixed with curious anecdotes. It includes, also, a countless number of particulars relating to the intermarriages of the various families."—*Sun*.

\* Orders for the supply of the First Number on the day of publication, should be sent immediately to the Booksellers, to prevent disappointment.

HENRY COLBURN, Publisher, 13 Great Marlborough Street.

MR. JAMES'S NEW ROMANCE.  
**A T T I L A.** 3 vols.  
By G. P. R. JAMES,  
Author of "The Gipsy," "Mary of Burgundy," "One in a Thousand," "John Marston Hall," &c.  
On March 1st.

II.  
**The Spirit of the Woods.**  
Royal 8vo. with 95 beautifully coloured Engravings, 30s. hf.-bd.  
"These trees shall be my book, and in their barks my thoughts I'll character."  
Just ready.

III.  
**College and School Greek Testament;**  
with English Notes.  
By the Rev. S. T. Bloomfield, D.D. F.S.A.  
1 thick vol. 18mo. price 12s. in cloth lettered.  
The present work is intended to supply an acknowledged desideratum, namely, a School Edition of the Greek Testament, with English Notes; and is also intended as an introduction to the editor's larger work, in 2 vols. 8vo.

IV.  
**A Dictionary, Practical, Theoretical, and Historical, of Commerce and Commercial Navigation.**  
Illustrated with Maps and Plans.  
By J. R. McCulloch, Esq.  
Supplement to December 1836.  
1 thick vol. 8vo. pp. 1389. 6s. half vellum.  
The Supplement may be had separately, price 7s. 6d.

V.  
**Glenlonely.** 3 vols. 24s.  
"A cleverly constructed story, with a strength of interest which is scarcely ever allowed to flag."—*Naval and Military Gazette*.

VI.  
**Grand's Fifteen Years in America.**  
**The Americans.**  
By Francis J. Grund. 2 vols. 8vo. 34s.  
"One of the best books that have yet been written on America; it is, we believe, a faithful, and certainly a highly interesting, description of the Americans. Every person, whether he wishes to do the author and his work the justice to read the two clever volumes."—*Metropolitan Conservative Journal*.  
"One of the most ably written books we have had in our hands for a long time. The energy of language, strength of reasoning, and force and originality of remark, entitle it to be ranked among the first literary productions of its class."—*Scotsman*.  
"A valuable contribution to our knowledge of America, and an able illustration and defence of free institutions."—*Monthly Review*. London: Longman, Rees, Orme, and Co.

**NEW BOTANICAL and AGRICULTURAL WORKS,**  
BY J. C. LUDLOW, F.L.S.  
**AN ENCYCLOPEDIA of GARDENING:** comprising the Theory and Practice of Horticulture, Floriculture, Arboriculture, and Landscape Gardening, including all the latest improvements, &c. New edition, greatly enlarged and improved, with nearly 1000 Engravings on Wood, pp. 1310. 1 vol. 8vo. 34. 10s.

In 8vo. price 15s. in cloth,  
**EDUCATION REFORM;** or, the  
Necessity of a National System of Education. Vol. I.  
By THOMAS WYSE, Esq. M.P.  
"Less than thorough will not do it."—*Lord Strathford*.  
"We have read Mr. Wyse's volume with great pleasure; it is the production of a man who unites the character of a statesman with that of a philosopher, who has corrected theory by practice, and tested the results of thought by experience and observation."—*Athenæum*, Sept. 21, 1837.  
London: Longman, Rees, and Co.

## BOOTHBY'S BIBLE.

In royal 8vo. 20s. cloth.  
**THE HOLY BIBLE; containing the Old and New Testaments, revised from corrected Texts of the Original Tongues; and with former translations diligently compared; with Critical and Explanatory Notes.**  
 By B. BOOTHBY, D.D.  
 Editor of the "Biblia Hebraica," &c. &c.

The work announced comprises the text of the author's Family Bible and improved version, with such corrections as a repeated and diligent perusal during the last ten years has suggested, aided by the many biblical works which have been published since his own was completed. The results of the labours of the most eminent scholars and biblical critics of past and present times will here be found in a condensed form; by which infidel objections are, in many instances, satisfactorily obviated, and the judicious English reader will be enabled to peruse the sense, coherence, and beauty of the Holy Scriptures.  
 James Duncan, 37 Paternoster Row.

## HEBREW LITERATURE.

New edition, in 1 vol. 8vo. (1800 pages), price 12s. boards; inferior paper, but very superior to any foreign edition, 15s. boards.

 Seaford and Oley, Conduit Street, Hanover Square.

PUBLISHED BY FISHER, SON, AND CO. LONDON, PARIS, AND NEW YORK.

## ENTIRELY NEW EDITION.

*Two Sets of Plates having been found necessary to supply the Demand.*

This Day is Published,

The Plates having been Re-engraved in a superior Style,

Part I, containing Five Engravings, price 2s. of

**SYRIA, THE HOLY LAND, ASIA MINOR, &c.  
ILLUSTRATED.**Drawn from Nature by W. H. BARTLETT, Esq.; and Described by JOHN CARNE, Esq.  
Author of "Letters from the East."

A Part, containing Four Plates and their respective Descriptions, will appear Monthly, or the Volume, containing Thirty-Seven Plates, may be had at once, handsomely bound, price 21s.

"Eastern modes of life start from the canvases, and arrest, as by enchantment, the lover of sacred history. He lingers with Saul at Tarasus, or travels with him on his way to Damascus; gazes on the majestic ruins of Baalbec; listens with the ear of fancy to the roar of the torrent's fall of the river Cydnus, and luxuriates in the varied scenes of pastoral and civic life. The descriptions confer an additional value to the sketches of the pencil, and throw a brilliant intellectual charm over the performance. We have no fear that any language or panegyric of ours should overstep the modesty of truth, or mislead the purchaser of this beautiful accompaniment to the sacred volume."—*The Watchman*.

"We have repeatedly expressed our admiration of this work in the course of its publication. It forms one of the handsomest series in our possession. The views do the highest credit to the artists employed—they are beautiful as works of art; but to the pious and reflecting they have, a much deeper interest."—*Literary Gazette*.

"We feel nationally proud of the illustrations of the thousand charms that render the dear scenes of our beloved native land more familiar to every one's view; but a holier, deeper, and more permanent feeling associates with the views of Palestine and Syria, the land where, near two thousand years ago, the Divine Author of our faith secured to his followers a blessed immortality. The scenery presented in this series has therefore a double attraction: by its loveliness it attracts the eye; by its holy associations it interests the mind."—*Caroline Patriot*.

"This is, unquestionably, one of the best publications which the age has produced."—*Methodist's Magazine*.

"It is difficult to imagine a series of views more full of interest than these,—Lebanon, Damascus, Antioch, Tarasus!—What names are these!"—*British Magazine*.

"There is a charm in this splendid publication which can only be felt by beholding the interesting scenes depicted in these views, each closely associated with Scripture meditations."—*Sheffield Iris*.

"Nothing scarcely can be more attractive to every class of readers. We find highly finished representations of the present aspect of these scenes which are held in the mind of every one who has read the Bible; they convey vivid ideas, also, of Oriental life as it is witnessed at the present day."—*Edinburgh Evening Post*.

"The scenes portrayed are romantic, replete with the beauties of nature, and deeply interesting from their association with the events narrated in the Holy Scriptures. There are few books more appropriate for the leisure of the drawing-room or parlour."—*Daily Reporter*.

"This series of Fisher's Views presents a rich collection of artistic excellence. The whole is a valuable illustration of the most interesting portion of the globe."—*Bath Journal*.

"Seldom has it fallen to our lot to call public attention to a work of more genuine merit. It represents the gorgeous East, with its 'everlasting hills' and fruitful valleys in all their enchanting beauty. The situations are well selected; the difficult and delicate touches of light and shade are contrasted in a masterly style, and the pictorial effect is lovely and grand. Fancy and imagination are at once waked to the land flowing with milk and honey."—*Aberdeen Herald*.

Published this day,

(The First Edition having been sold off in Six Weeks),

**SECOND EDITION OF MORISON'S (JOHN, D.D.) FAMILY  
PRAYERS FOR EVERY MORNING AND EVENING  
THROUGHOUT THE YEAR;**

With Additional Prayers for Special Occasions.

"I have read a considerable portion of the specimens of your new Work, which you were kind enough to forward to me. The plan appears to me to be a very admirable one for those who prefer the variety afforded by the use of extemporaneous prayer, and yet are unable to conduct their family worship as the leisure of the drawing-room or parlour. I am pressed to say so, seems every way worthy of the design; and, from what I know of your other writings, I feel convinced that, while the whole will breathe a truly evangelical spirit, every thing sectarian will be omitted. If, as indeed I have no doubt, the remainder of the work be equal to the portion which I have seen, I shall feel a pleasure in recommending it to those among my flock who may be in need of such an aid for the holy and happy services of the family altar."—*Henry Blunt, Streatham*.

Recommended, also, by the following eminent Ministers:

B. Boothroyd, D.D. of Huddersfield J. P. Smith, Homerton  
J. Leitch, 18 Piccadilly J. Sherman, Surrey Chapel House  
Caleb Morris, Peter Lane R. Vaughan, Notting Hill  
Thomas Raffles, LL.D. Liverpool Ralph Wardlaw, Glasgow.

## COMPLETION OF BAINES'S HISTORY OF LANCASHIRE.

Published this day, in four 4to. volumes,

**HISTORY OF THE COUNTY PALATINE AND DUCHY  
OF LANCASTER.**

By EDWARD BAINES, Esq. M.P.

The Biographical Department by W. R. WHATTON, Esq. F.S.A.

## THE CHRISTIAN KEEPSAKE, 1837.

Edited by the Rev. W. ELLIS.

Containing Portraits of the Caffre Chief, Jan Taztzo;—Mrs. Hemans—Rev. W. Jay, of Bath—Thomas Clarkson—Dr. Carey and his Pundit—Bishop Ryder—Dr. Doddridge's Mother teaching him Scripture History on the Dutch Tiles—Missionary Grave at Elmeo—Dome at Worms—Marina Malta—Basle—Bath in which Bishop Heber died—Rhodes—Mountains of Aboo—Feast of the Mohurrum—Church of Vaali Biagennoi, at Moscow. In small 4to. 16 Engravings, elegantly bound in morocco, 15s.  
(Copies of last year's volume may be had, price 15s.)

## FISHER'S DRAWING-ROOM SCRAP-BOOK, 1837.

With Poetical Illustrations, by L. E. L.

In 4to. Thirty-six Engravings, handsomely bound, price One Guinea.

## THE JUVENILE SCRAP-BOOK, 1837.

By AGNES STRICKLAND and BERNARD BARTON.

In small 4to. Seventeen Engravings, neatly bound, price 6s.  
"This promises to be the most successful of the Juvenile Annals, because the literature is free from the forced and faded style so abhorrent to children."—*Ladies' Magazine*.

## JOSIAH CONDER'S LIFE OF BUNYAN.

## ILLUSTRATIONS OF BUNYAN'S PILGRIM'S PROGRESS.

From Original Drawings by Turner and Melville, and a Portrait by W. Derby.

Accompanied with extracts from the work, and descriptions of the Plates,

By BERNARD BARTON;

And a Biographical Sketch of the Life and Writings of Bunyan,

By JOSIAH CONDER.

4to. containing Fourteen highly finished Plates, handsomely bound, price 10s.

"Strong as the word 'exquisite' is, it is not too strong to use in the description of these illustrations. They are all, more or less, beautiful."—*Literary Gazette*.

## ELLIOT'S (Commander R. J., R. N.) VIEWS IN THE EAST,

Comprising India, Canton, and the Shores of the Red Sea.

With Historical and Descriptive Accounts of each Subject,

By Miss EMMA ROBERTS.

In 2 vols. 4to. 60 Engravings, handsomely bound, 21. 2s.

**WESTMORLAND, CUMBERLAND, DURHAM, AND  
NORTHUMBERLAND ILLUSTRATED.**

Drawn from Nature by THOMAS ALLOM,

With Descriptions by THOMAS ROSE.

In 3 4to. vols. containing upwards of 200 Engravings, handsomely bound, 21. 2s.

## SCRIPTURE BIOGRAPHY;

Comprehending all the Names mentioned in the Old and New Testaments.

By ESTHER COPLEY (late Hewlett.)

1 thick 8vo. vol. cloth, 14s.

"Her chief object in it is 'to present to the mind of the reader all the leading characters of the Sacred History; and to point out such hints of instruction as they appear calculated to suggest.' The former of these is accomplished in an engaging manner, and the latter with united discrimination, piety, and modesty. Every name which is mentioned in Scripture is to be found in this volume, arranged in alphabetical order, its meaning (for all Hebrew names had distinct significations) explained, and the character and events of the individual's life, so far as communicated, with the particular book and chapter in which they appear, stated. The work is rendered complete by a chronological table, 'presenting at one view the principal contemporary characters of each successive period.' both for reference and for continuous reading, it will prove an acquisition to family libraries."—*Leeds Mercury*.

## FOX'S BOOK OF MARTYRS.

Edited by the late ADAM CLARKE, LL.D. F.S.A.

With numerous Plates, cloth, 21s.

## HEWLETT'S SCRIPTURE HISTORY FOR YOUTH,

Embellished with upwards of 130 Plates.

2 vols. handsomely bound in embossed roan, gilt edges, 18s.

**HEWLETT'S SCRIPTURE NATURAL HISTORY FOR  
YOUTH,**

Illustrated by 80 Engravings. 2 vols. handsomely bound in embossed roan, gilt edges, 12s.; with coloured plates, 15s.

"Quite treasures for any deserving child, from six years of age to the time of the teens. These infantine quartos are in themselves a valuable juvenile library."—*Literary Gazette*.

## MORE'S (HANNAH) POPULAR WORKS;

With Notes, and a Memoir of the Author.

In 6 vols. embellished with Plates, cloth, 30s.

**FLEETWOOD'S LIFE OF CHRIST AND HIS  
APOSTLES, &c.**

A new and beautiful edition, in 4to. illustrated with Engravings after the Old Masters, boards, 18s.; handsomely bound in cloth, gilt edges, 21s.

# THE LITERARY GAZETTE;

Second Edition, 94.

### REVIEW OF NEW BOOKS.

*The State Prisoner; a Romance.* By Miss M. L. Boyle. 2 vols. 12mo. London, 1837. Saunders and Otley.

LET there not be any imputation upon our critical gallantry, which all the world knows is of a most courteous and urbane character, if we acknowledge that it is not always with the most comfortable sensations we take up a lady's first book, especially if that lady be a very young one. On the contrary, that very feeling of apprehension is the strongest proof of our devotion to the fair authoress, as it springs solely from a fear that we may not find that within the pages which we can wisely praise. In general, a lady can know very little of the world from her own experience; still less if she be a very young lady; and still less if she be moving in a high rank of society. Those persons who, notwithstanding such obstacles, have displayed keen knowledge of the world (and several, we must acknowledge, have done so), must surely have derived it from intuition, which, perhaps, after all, is but another name for genius. But, to turn to the work before us: our alarm, in regard to it, had been in some degree mitigated, by having seen some previous productions of Miss Boyle—a tale or two which pleased us much, and some very graceful poetry. In the second place, though we had seen the book very much advertised, it did not appear to us to have been so much puffed and paragoned as many others. It may have been so, for aught we know; but we did not remark it. To be unpuffed is always a good sign; and we cannot refrain from giving publishers a hint in regard to a system, or rather a disease, which, having abated for some time, is now upon the increase again, and bids fair to be as prevalent as the influenza lately has been. The disease is puffing; and booksellers may rest assured, that it is a very bad disease too. At all events, we are convinced that the public eyes are now opened to the matter, till they are round as the bull's eye on a target; and that a book that is not puffed is likely, from the very novelty of the thing, to attract more attention than a book that is. We do not mean to say, not to advertise the book. Fie upon it! that would never do; and far be it from us to advocate a system so detrimental to the revenue. Let them take every legitimate means of making the work known without having recourse to the imp of puffs, who is no very distant relation, if we may judge from his handywork, of the father of lies. We would almost venture to parody a very beautiful song, and say to them—

"Puff not! puff not! those you puff must fall:  
Bad books, most puffed, can live but for an hour;  
Time's mighty foot shall crush them, great and small;  
No puff can puff them from his searching power.

Puff not! puff not!

Puff not! puff not! puffing's all in vain;  
Nor man nor book can live on puff's alone,  
If truth and talent mix not with the strain:  
The book wraps candles, and the puff is gone.

Puff not! puff not!"

Miss Boyle's book, however, is certainly not of that class which requires any thing but its own intrinsic merit to recommend it. If we entertained any apprehensions when we took it up, those apprehensions vanished before we got a quarter through the first volume, though that

volume is by no means the best; and, as we went on, any pleasurable expectations were infinitely more than realised. *The State Prisoner* is a work of very great talent; and, what is better still, it gives the promise of infinitely higher things hereafter: for every page, and every chapter, as we advance in it, we find the natural inexperience of a young author giving way before the exercise of her powers, and genius spreading her wings in longer and longer flights. We do not, by any means, say that the book is without its defects; for, though the interest is great throughout, and increases as we advance, and the scenes and incidents are highly dramatic, and full of talent; yet there are marks of inexperience in the conduct of the story, which shew the hand of youth. They are covered, however, by such rich poetical beauties, and invested with so much of the freshness of a fine mind, that we will not pause upon them further than to point out to the author, that although strict unities of any kind cannot be demanded in a romance, yet it is required, as far as possible, to avoid introducing any scene, personage, or dialogue, which does not tend to advance directly the progress of the story.

The more agreeable task of pointing out beauties is also a far easier one, in the present instance, where we can scarcely open a page without finding something to give us pleasure. We will not spoil the interest of the story by giving any detail thereof, but will mention one or two of the principal characters; some of which are of the common staple, but some quite original, and excellently conceived. The hero of the piece, William Clifford, is nothing very extraordinary; though, we must applaud Miss Boyle's good taste in induing him with a reasonable quantity of faults and weaknesses. Those faults certainly do lean to the amiable side; but they, nevertheless, serve to plunge him into some difficulties which give variety and interest to the story. The heroine is a sweet picture of a quiet but sensitive and accomplished English girl; and so far the tale displays nothing out of the usual course. The character of Dumont, the state prisoner, however, though a sketch, is a powerful one; and infinite tact and extraordinary knowledge of the human heart are displayed in the portraits of Sir Philip Courtenay, the courtier of the reign of George I., Madame d'Aubrey, and Lady Courtenay. Roland Stanley, too, the cool and calculating Jacobite, in whose character is mixed up, here and there, some amiable traits with a great deal that is unamiable—whom we cannot love, and yet whom we cannot wholly hate, is admirably conceived; and is, indeed, one of those fine paintings done with small touches, which must be looked at closely to be rightly seen. But of all characters in the book, the one which deserves, and must meet with, the most attention, is that of Mirabel de Bernay. This is something entirely new. In the world of romance-writing it is, as far as we remember, a creation. Wild, passionate, eccentric, witty, gay, beautiful, feeling; yet pure and holy as a nun, in the midst, not only of a licentious court, but also amidst all the strong affections and eager passions of her own heart.

Every scene where she appears is full of intense interest, and also of novelty; and the first extract we shall give from the work is one in which she plays a conspicuous part. We must premise, that William Clifford, the hero of the piece, has met with a domino at a masked ball at the Palais Royal, who provokes him by repeating some of the court scandal regarding himself and the Baronne de Bernay, who has won his esteem, though his heart was otherwise engaged. The figure and appearance of the domino was that of the dwarfish Count de Salins; and Clifford accordingly takes up the quarrel: on which they go down into the gardens to settle it on the spot. The domino shews no apprehension; and even exchanges a pass with the Englishman before he discovers that it is Mirabel de Bernay herself. Some further conversation ensues in a different tone, and then the following scene is introduced:—

"'Nay, do not speak in so sad a tone!' exclaimed her companion, as he saw the tear that trembled in the moonlight; 'such subjects are painful to us both.' 'What a lovely night!' she broke off suddenly, looking up to the sky. 'A night when those who love, send a thousand thoughts and wishes in the direction of the absent. Do you know, William, sometimes I think the stars above us are the homes of the blessed, and that Gaspard looks down upon his sister from the brightest among them. He is my guardian angel now; I am sure he would not suffer any other to possess that office but himself. Oh, William Clifford, William Clifford! he sees us both at this moment; he knows what you have been to me, and he blesses you as I do.' She turned aside her face for one moment, and then continued: 'But I will not talk of myself, for I know your thoughts are wandering with your heart. Speak to me, then, of her you love, for I can bear it now; describe her to me; let me know the human being that is worthy of your love.' 'Oh, Mirabel,' replied Clifford, 'I feel that it is kind and noble of you to speak in this manner, but do not ask me to dwell upon what she is; do not ask me to describe her. Nothing that I said could give you an idea of her beauty, her goodness, her disinterested nature, disinterested as your own; and, believe me, she would appreciate your character—she would love you, Mirabel!' 'No, no!' exclaimed the other eagerly, 'she would not, she could not love me, and I—I should hate her! You do not know how often she occupies my thoughts; I think of her, and strive to picture her to my mind, but in vain; sometimes I fancy that my heart expands towards the woman with whom its dearest feelings are in common, and then again a fearful feeling of hatred takes possession of my mind. Alas! such violence is no doubt foreign to her gentle nature; she would shrink from such as me! What would I give to see her! perhaps, perhaps, William, I might learn to love her; at least I might admire and emulate her. Have you no portrait, no resemblance, in your possession, to appease my curiosity in some degree?' 'Yes,' replied Clifford, 'I have a small, but imperfect, copy of a large picture—that was painted at Bourdeaux,

which I always wear.' 'Let me see it! You will not refuse me so simple a request!' exclaimed the baronne, earnestly, 'you do not know how my mind is set upon it!' 'The moon is very bright,' said Clifford, 'but it is a bad moment to judge of the painting.' He took the miniature from his bosom, and gave it to Mirabel, who looked at it for several moments without speaking, while a thousand conflicting emotions rose within her at the sight of Blanch's portrait. 'She is fair,' said the baronne at length, with some hesitation; 'and her hair seems golden.—Is she tall, then?' 'Yes,' replied Clifford, 'you are right. She is above the ordinary height.' A deep, deep sigh, which forced its way, in spite of her efforts to check its progress, followed these remarks, and then she returned the picture. 'It is beautiful,' she said, 'most beautiful. They are happy whose countenance can reflect their soul, and vouch for its nobleness.' A pause ensued, painful to both, which was, at length, broken by William. 'There are people coming down the staircase,' he cried, hurriedly; 'put on your hat and mask, and draw your cloak round you: they have been attracted by the glitter of my sword, which I unfortunately did not sheathe.' 'Holy Virgin! what will become of me!' cried Mirabel; 'one of them looks like the regent. For pity's sake do not let them discover me.' 'Draw your sword, then,' said William, 'and play the part of Monsieur de Salins boldly, for we may be hardly tried.' The baronne obeyed, but she trembled so violently as to retard her efforts, and she had hardly reassumed the disguise before the regent came up, attended by several courtiers. 'Hold, gentlemen!' he cried; 'the first who strikes another blow will have to deal with Philip of Orleans! Is your valour so impetuous as to require a display at the expense of the law, even in our very gardens? For you, sir Englishman, who will, no doubt, plead ignorance as an excuse, let me advise you to beware how you again brave the laws of the land in which you live: but your antagonist, at least, can offer no such idle apology—M. le Comte de Salins.' 'Pardon me, my lord,' interrupted a courtier, 'but three hours ago I saw the Comte de Salins stretched on a sick bed, too weak to raise his hand to his mouth.' 'Pasques Dieu!' exclaimed the duke; 'has the count gained a twin brother since yesterday? or who has stolen his favour, his stature, and his taste for duelling?' He advanced towards Mirabel, whose usual presence of mind now forsook her; and who, sheltering herself behind William, addressed one word of earnest supplication in his ear. This movement elicited a general laugh from all but the duke and Clifford. The one was too angry, the other too much alarmed, to join in the mirth. \* \* 'The king!' burst at once from every lip, while the duke himself stood uncovered, and most of the courtiers bent the knee.

We must leave the reader to discover the mystery for himself, and will now turn to two points which are but too frequently lost sight of altogether, in the present day, by the writers, the readers, and the reviewers of romances, namely, the tone and the style of the book. Of the first we must express our most unqualified approbation, as it is noble, high minded, and pure in every line; and, though the writer does not overload the story with detached observations, yet many a fine moral lesson is placed naturally in the mouth of those who acted their part in days gone by; but whose words might often be well applied to ourselves. We cannot too much applaud this inculcation

of high and noble feelings, nor the manner in which it is done.

In regard to the style, it is paying Miss Boyle no mean compliment when we say that the rich and poetical imagery which it every where displays, puts us often in mind of the writings of L. E. L. There are, indeed, occasional marks of carelessness, but we cannot rest upon them for a moment amidst the beauties which the work contains. One of its principal features, indeed, is the number of little graceful allusions and poetical illustrations which sparkle through its pages. We shall conclude by selecting one or two of these, to shew the reader of what materials the web is woven.

'Far, far more lovely becomes every memory that can be coupled with some fair page in nature's varied volume; far dearer to the well-constructed mind each remembrance that is bound up with the inestimable gifts of the Creator. Such associations render transitory moments permanent, immortal. While by the side of one we love, to let the eye wander over the green bosom of the earth, or the wide expanse of heaven: to mark together the exquisite colouring of the flowers, or the majestic proportions of the forest trees, has in it a spell to bind for ever recollection.'

We could select many more extracts, to shew the spirit of the book as well as its style, but we must here pause, only adding, that the work is full of scenes, situations, and characters, of deep interest, and that it displays much genius, which, if properly managed, may lead the writer to great things. Miss Boyle, however, will do well to remember, that high talents require none the less very great attention to guide them properly; and that even the greatest experience, though it bestows ease of composition, will never justify any carelessness: and, as a general rule to all romance-writers, we may add, that they cannot examine too strictly whether the causes they display be sufficient to the effects; and whether the motives—either latent in peculiarities of the character they depict, or proceeding from the circumstances they relate—be sufficient to account for the actions of their *dramatis personæ*. We take leave of the *State Prisoner* with regret to part with him, but with a sincere expression of gratitude for the pleasure we have derived from his company; and we trust that the pen which has so well depicted, and so gracefully ornamented a part of his career, will not suffer this to be its only effort.

*Contributions to Modern History, from the British Museum and State Paper Office.*

By F. Von Raumer. *Frederick II. and his Times*. 8vo. pp. 468. London, 1837. Knight.

It may surely be classed among the curiosities of literature, that a foreigner, a gentleman to whom our language was strange, should have sought our national repositories; and, out of their masses of confusion (though greatly improved, in arrangement and classification, within the last twenty years) have supplied us with such inestimable contributions to our own peculiar, as well as to general, European history. How rich the neglected field is, the present interesting volume demonstrates. The period it embraces is one of those memorable epochs, which change, re-shape, and control the destinies of nations. A century has very nearly elapsed since the second Frederick mounted the throne of Prussia; and that single circumstance has exercised a remarkable influence on all the (then) future fate of Europe. Prussia has become a powerful

monarchy; Russia has emerged from comparative barbarism into a mighty empire; Poland has been blotted from the map of kingdoms; Electors and Palatines have, from branches of the Germanic league, been converted into independent sovereigns: a hundred years have altered every relative position and political relation of the most civilised quarter of the globe.

It is delightful to trace the springs of such events; and M. Von Raumer has enabled us to do so in a delightful manner. We know not when we have read a book at once so instructive and entertaining. The despatches and letters which furnish the materials, are not only of undoubted authenticity, but the condition of the parties by whom and to whom they were written, is a voucher for their being the uncoloured and simple truth. An ambassador wishes to inform, and not to deceive and mislead, his government: hence, only qualified by the quantum of their own acumen and penetration, every line in the correspondence of residents at foreign courts is to be received as fact. And, much as the era to which these papers refer has employed the pens of actors in them, from the Prussian monarch to the humblest chroniclers, we rejoice to gather their new lights, and find ourselves looking at what we thought realities, in points of view, very, if not altogether, different. In some measure, the following selections will display the admirable way in which the author has performed his task; which, of necessity desultory, carries us from London to Stockholm, from Vienna to Berlin, from Paris to Petersburg; and unfolds the secret transactions, as well as the more public exhibitions and intrigues, of every court, so as to remind us closely of Horace Walpole, alike in style and in matter. Before entering upon these, however, we have pleasure in transcribing a passage in the Preface, which does honour to the liberality of our rulers.

'The English government,' says M. Von Raumer, 'deserves so much the greater praise and more sincere gratitude for having opened to me the State Paper Office, with its treasures, not merely for more ancient times, but also to that part of the eighteenth century to which my investigations were directed. And this permission was not accompanied with a hundred suspicions, restrictive precautionary measures, which cost time and create vexations; but it was unfettered: and I met also with the most willing and friendly support from the gentlemen who are in offices of the establishment. The despatches of ambassadors, which passed through my hand, were:—

From France, 37 folios; Prussia, 85 (including the papers of Mr. Mitchell); Austria, 60; Russia, 75; Saxony, 3; Holland, 16; Sweden, 15; Royal Letters, 1: In all, 292 folios.

I have received from Paris assurances of similar favours, if my avocations would permit me to make use of them. At home, the prophets who look forwards, and those who look backwards (the historians), are equally destitute of credit; at least, we in Germany have, unfortunately, not yet attained to the laudable theory and practice respecting the use of historical documents, which is recognised in London and Paris.'

Explaining the nature of his work, he adds: 'Under these circumstances, I could not compose a comprehensive, critical, comparative work on the times of Frederick II.; but, necessarily, confined myself to extracting from the above folios what was most important and instructive, and arranging it in a clear manner. King

Frederick II. is the centre of the whole; but his age, as well as himself, is reflected on those sources, by which the title of the book, if not justified, is excused. After many doubts how the materials should be arranged and worked up, it appeared to me to be the most advisable to retain the original form of the despatches in the essential parts, in order that the English point of view might be, as far as possible, preserved. In order to avoid too great a dismemberment of the accounts, coming from such various countries, I was sometimes obliged to comprehend many of them (accurately marking the time, however) under one general head; nor could I refrain from making, in some places, additions and explanatory observations. A circumstantial introduction on the state of Europe at the time of the accession of Frederick II., appeared to me to be superfluous, because every friend of history is sufficiently informed on this subject, or may read in the king's works in what light he viewed that time and his own situation."

So early as page 14 the author refers us to a treaty of Russia, from 1704 to 1740, the date of his commencement. It contains many curious particulars, touching which we shall offer some extracts from the twenty-five folio volumes in the State Paper Office, that relate to that time. Mr. Whitworth, our ambassador, proceeds from Breslau for Moscow, in January 1705; and he says—

"I was five days in travelling twenty-two German miles through the king of Prussia's country, on the road to Wilna. I cannot sufficiently express the misery I found over all, the desolation of the present war having doubled what the inhabitants suffered, even in time of peace, through the pride and luxury of the lesser nobles, and the abject slavery of the other country people. \* \* \* In Toshihofe (?), the first little town of the czar's dominions, the starost or burgo-master, a good old peasant, attended by half a dozen of his brethren, with long beards, came to make me a compliment, and presented me a great loaf of coarse brown bread, strowed with salt, bidding me welcome in the czar's country, and desiring me to take part of such fare as they had."

At Moscow he is well received by the czar; and tells us—

"His majesty has made a thorough change in the dress of his country. In all this great city I see not one of consideration appear otherwise than in German cloaks. One of the hardest tasks was the persuading them to lay aside their long beards. Most of the chief nobility lost theirs in the czar's presence, where there was no room to dispute his orders. The common people, however, were not so easily brought to follow the new fashion, till a tax was laid, at the city's gates, on every one who went in or out with a beard; and this was to be paid as often as they passed: by which means they have at last been brought to conform."

Afterwards he relates—

"You will have heard with how much difficulty the whole nation submitted to the razor. They were prepossessed both by custom and religion. Their forefathers lived unshaved; their priests, saints, and martyrs, were venerable for their beards; they were bid to imitate; and the ignorant thought part of the devotion lay in the beard, as Samson's strength did in his hair. Nay, even the ladies themselves joined in the fashion, and could at first be scarce brought to suffer the reformation in their husbands. But the court and the chief persons having complied with the czar's desires, the most prudent and moderate way of

reducing the commonalty was thought to be the laying a tax on all beards, as often as they passed the gates of any principal town; and leave was also given to take out protection for a yearly sum of money, which a great many have done; and on producing their ticket stamped with a long beard, are let pass without any further inquisition. Some time after another edict was published, enjoining the women to wear petticoats, under the same penalties; whereas their former habit was only a loose gown, buttoned down before, and reaching to their heels. I have been the more particular in this account, because, however trifling these points may seem, they gave no small occasion to the present disturbances. For the governor of Astrachan being a cruel, imprudent man, would not be content with the fine imposed by the czar on the disobedient, but was resolved to make a thorough reformation. For which, and after the time of grace was expired, he placed his officers at all the church doors, who cut off the women's loose garments, from their middles, and pulled out the beards of several persons by the roots, which violence put the whole town (who were generally of the sort above mentioned) in great anger; and one of the most zealous, an under-receiver of the customs, being chosen for their captain, they assaulted the governor in the night, and cut him to pieces, together with three hundred families of foreigners, part merchants and part Swedish prisoners. In one of the houses they by chance found a peruke block, formally carved with nose, mouth, and eyes, which was immediately seized, and carried in triumph through the town, the rabble crying after it, 'Behold the god of the strangers, which we shall at last be forced to worship, if we do not free ourselves from their customs and slavery!' The ring-leaders, without doubt, knew the barber well enough; but it served a turn, and passed current with the mob, who were used every day to see as rough hewn images adored by their neighbouring heathens of Tartary and Siberia. \* \* \*

Whitworth's despatches contain much information respecting the barbarities of the northern war, the desire for war or peace, as also of the hopes and fears of the different parties, from which, by way of specimen, I select the following:—"Forty-five Russians were taken prisoners by the Swedes. They had the two former fingers of their right hands cut off, in cold blood, some months after, and were then dismissed, with that ignominious mark in their own country. The czar is extremely moved at this proceeding, and declared publicly, that though the Swedes endeavoured, by false reports, to represent him and his people as barbarians and unchristian, yet he appealed to all the world, and particularly to some thousands of Swedish prisoners, now in his dominions, whether ever he had treated any of them with such indignity? Adding that, though he was sorry for these poor soldiers, yet he should find a great advantage by this action, for he intended to place one of them in every regiment, who might be a living remonstrance to their companions, what usage they were to expect from their merciless enemies, in case they suffered themselves to be taken or overcome." On the 21st November, 1705, Whitworth writes:—"The czar is more in earnest to treat with Sweden than ever, out of different reasons, at least, whether the Swedes would not listen to the Christian proposals of releasing the poor people, who suffer under so long a captivity, either by a general exchange, or on their word given not to serve during the present war. The King of Poland is equally weary of

the czar's direction, the war with Sweden, and the crown of Poland, which he only maintains out of a pure point of honour and reputation; or else, as he told me himself, he would rather live a private citizen in Leipzig than reign over such a people."

We conclude this part of the work by copying an interesting account of the Saporogue Cossacks, given by Rondeau, in a despatch of the 24th April, 1736. "The Saporogue Cossacks are a very strong and indefatigable people. Their cashevoy, or general, has a room for himself, of about ten feet square; but the others live in large rooms, called kuraveis, in each of which there are about six or seven hundred men. Whoever pleases to go into the kuravei may lodge and eat with them without being asked, and without thanking them for their entertainment. As the whole nation are a very extraordinary people, more used to live in the fields than in settled habitations, there are generally four or five hundred men about every kuravei, who lie in the open air, but have the liberty to come into the room when they please without any ceremony. The Saporogues are a sort of knights, who suffer no women among them; for if any one of them was found to keep a woman, he is stoned to death. They have no written law, but all causes are judged by six or seven persons they choose for that purpose; but their sentence cannot be put in execution till it be approved by the fraternity. If any theft is committed among them, and the robber is taken, he is immediately hung up by the ribs. In case a murderer is discovered, they dig a pit, and lay the murdered person on the murderer, and bury them both together. They profess the Greek religion; and when they were under the protection of the Turks, the patriarch of Constantinople furnished them with priests; but since these two years, that they are under the protection of the czarina, their priests are sent them by the Archbishop of Kiev. They have only one church, which is served by an abbot and a few priests, who are not permitted to meddle with any worldly matters further than to intercede for delinquents, and to see them do public penance in the church, in case they commit any slight fault. The Saporogues admit in their fraternity all persons of whatever nation they are, in case they embrace the Greek religion, and are willing to undergo seven years' probation before they are admitted knights. If any of their fraternity run away, they make no inquiry after them; but look upon such as unworthy of their society. Their riches consist in cattle, particularly in horses. Some of them have above a hundred; and there is hardly any one of these Cossacks but has ten or twenty. They have a great many thousand horses, that run all together in the open fields. It is hardly ever heard that one is stolen, for such thefts are unpardonable among those people. They sow no corn. In time of war they plunder all the provisions they can from their enemies; and in time of peace they barter horses and fish for all sorts of necessaries. They catch vast quantities of fish, particularly in the river Dnieper. In their studs they have Turkish and Circassian stallions. Their arms, that consist in rifle guns and sabres, they make themselves. Nobody is admitted a knight of this society who is not very strong and well made; but any one may be admitted as Choloops, who are their servants, and some of them have two or three. They never care to mention how many knights there are in their fraternity; and when asked, they say they cannot tell, because their number exceeds 20,000 men. It is certain the greatest

part of these people are Cossacks, who have deserted from the Ukraine; but the Choloyps, or servants, are mostly Poles. The Saporogues are divided into thirty great rooms, or kuraveis, each of which has its particular commander or attaman, who, nevertheless, are obliged to obey the cashevoy, or general. Every knight has the liberty to vote when they choose a general; and, in case he does not behave well, they turn him out of his employment and choose another, as it happened some years ago to the present cashevoy, who was turned out, and another elected, who is since dead, and the present was rechosen. When a Saporogue knight dies, he may leave his horses and what he has to whom he will; but, generally, the church gets the most, which is given to maintain the priest."

Reverting to the main body of the "Contributions," we find the court of St. Petersburg still the prey of factions. On the death of the Empress Anne (October 1740), the Duke of Courland succeeded to imperial power, as regent, till the Infant, Iwan III., should attain his 17th year; and all seemed to be settled and permanent.

"The English ambassador, writing from St. Petersburg, on the 8th of November, 1740, says:—"The regent applies himself with great assiduity to the despatch of business. He is determined to know the exact state of all affairs as he found them, in order to shew how he leaves them. Princess Anne is on an apparently good footing with him; they see each other frequently, but her husband has not appeared any where since his examination. He stirs not out of the Princess Anne's apartments; and the Duke of Courland but yesterday told a friend of mine, that this prince confessing his design to 'rebel a little,' as he called it, could not move anger, though it might pity, for his highness' weakness, in having been drawn into such a mad notion with only eight accomplices, of which the buffoon of this court's coachman, an apprentice, and waiter, were three, who had been released.' So secure and composed, nay, almost presumptuous, was the duke, so little did he and the ambassador pre-  
sage events that were close at hand, so entirely were most persons deceived respecting the state of affairs. On the 9th of November, only a few hours after the writing of the above despatch, the whole fabric of the new government was completely overthrown. 'On the 9th of November, (writes the ambassador two days later), between three and four in the morning, Field-Marshal Munnich, at the head of a detachment of forty grenadiers from the guard of the winter palace, marched to the summer one, and seized, by a verbal order of the Princess Anne, the regent in his bed, who, about six, was brought prisoner to the guard-room in the winter palace; the whole Courland family being put under arrest. Immediately after, General Biron and the new cabinet minister, Bestucheff, were taken prisoners and carried to the winter palace also. Upon which all the great people were immediately summoned to court, when the Princess Anne, in her son's name, was declared great duchess, with the title of imperial serene highness, and charged with the administration of the government during the minority of her son. The prisoners were then taken to different fortresses, a *Te Deum* sung, orders distributed, petitions granted, the debts of the nobles paid, and the Prince of Brunswick declared generalissimo. Munnich declined this office, and desired that the army might have the honour to be commanded by the father of their sovereign. He was, however, appointed prime minister; Ostermann, high admiral

and minister of foreign affairs; Czerkaaski, high chancellor; and Goloffkin, vice-chancellor. The captive duke was then despoiled of all his money and possessions, even to his gold watch and clothes.' Later despatches of the ambassador, particularly one of the 18th of November, give the following account: 'This step,' he says, 'was resolved upon only the day before; the duke, by a strange fatality and blindness of his own, augmented by the flatteries of others, was firmly persuaded that he was to the last degree popular, and in full possession of the affections of every body, of what rank, degree, or profession soever, interpreting the implicit submission to his power to be a firm attachment to his person.'

How much ambassadors may be mistaken! But, to diversify our review, and conclude for the present week, we now copy another Cossack anecdote; and a most curious and characteristic example of royal and political diplomacy. The postscripts (so lady-like) are glorious.

"In the midst of European fêtes, ceremonies, disputes about precedence and the like, there appeared, by way of change, a chief of the Don Cossacks, named Krosno Tzockin; that is, red cheeks. He is turned of seventy, but has a great deal of desperate brutal courage. He has knocked off several score of his prisoners' heads; sometimes in cold blood, sometimes in drunken fits, but always, as he says, to keep his hand in; and has been wounded all over his body; on which occasions he only makes use of human fat by outward application; and inwardly a glass of brandy."

"On the 30th of January, 1741, Frederick wrote from Berlin to the King of England:—"I am charmed to see, by the letter which your majesty has just written to me, that I was not mistaken in the confidence which I placed in you, from the favourable manner in which you speak of my enterprise in Silesia. Having had no alliance with any body, I have not been able to open my mind to every body, but seeing the good intentions of your majesty, I consider you already as my ally, from whom I ought in future to keep nothing hid or secret. I must then inform you that I have taken possession of all Silesia (except two wretched forts, into which the officers of the Queen of Bohemia have very imprudently thrown some troops, and which cannot hold out); that I have driven Mr. Braun into Moravia, and that if I had the smallest intention of overthrowing the house of Austria, it would have depended only on myself, to have advanced to Vienna. But not having any right, except to a part of Silesia, I have stopped where its frontiers end. Far from desiring to disturb Europe, I pretend to nothing, except that regard be paid to my incontestable rights, and that justice be done me, without my being obliged to push things to extremity, and to keep no measure in future with the court of Vienna. I infinitely value the friendship of your majesty and the common interest of the Protestant princes, which require, that those who are oppressed on account of their religion, shall be supported. The tyrannical government under which the Silesians have groaned is dreadful, and the barbarity of the Catholics towards them is not to be expressed. If these Protestants lose me, they have no resource left. I believe that the reasons which I have just given your majesty are sufficient, but I think I see still stronger ones, in the interest of your majesty; for if ever you wish to gain a faithful and ever constant ally, this is the moment. Our interest, our religion, our blood, are the same; and it would be melancholy if we were seen to act in

a manner contrary to each other, by which other jealous neighbours would not fail to profit. It would be still more melancholy to oblige me to concur in the great designs of France, which, however, I have no intention of doing, unless I am forced; whereas, at present, your majesty finds me most advantageously inclined for your interest, ready to enter into your views, and to act in all things in concert with you. I am, with the most perfect esteem, your good and faithful brother and friend,

FREDERICK.

"I forgot to inform you that I have concluded a defensive alliance with Russia."

"The King of England, in his answer, exhorts him to a speedy reconciliation, in which he will willingly co-operate as far as alliances and engagements permit. The loose, undiplomatic manner in which Frederick mentions his alliance with Russia, had doubtless been thought singular in London. We, therefore, find at the conclusion of the English answer; 'Postscript: I also thank you for informing me of your alliance with Russia.'"

*Attila.* By G. P. R. James. 3 vols. London, 1837. Longman and Co.

THAT "the Scourge of God" should ever have been made agreeable and pleasant to the children of men, is entirely attributable to the genius of Mr. James. In this production, which displays to great advantage all the excellences of the writer, we have his research, his descriptive powers, his style, his identification of character, his poetry, his historical accuracy, and his actual presentation of remote times, mingled with all the interest of a well-conceived and finely executed story. The age and the deeds of Attila, the Hun, are indeed of rich material; and no man could employ them to a better use than Mr. James. Like some of the most distinguished *litterati* of Germany, who have applied themselves to similar illustrations—like the author of *Valerius* (which never obtained its just popularity)—like Bulwer, in his "*Rienzi*," and, we have no doubt, in his forthcoming "*Athens*,"—our author has restored an ancient epoch of intense interest to the light of day. As Herculaneum, and Pompeii, and Tarquinia, are forced to yield their long-buried treasures to our gaze, and their antique forms to our examination, so are Attila and his barbaric associates, Huns, Alani, Ostrogoths,—Theodosius and Valentinian, the emperors of the east and west (as the Roman empire rushed down towards its fall), with their tributaries of Gaul and Asia, brought vividly before us; and connected together by a tale of domestic life, its misfortunes, loves, and destinies, till we could fancy ourselves living, and taking part in the scenes so ably described.

The narrative opens in Dalmatia, where Flavia, a noble Roman matron, residing in the palace of Diocletian,—even now so glorious in its ruins,—is seen with her family, a young boy and a girl, Ildica, just budding into womanhood, together with the daughter of her cousin, Paulinus (afterwards murdered by Theodosius); and they are joined by Theodore, the son of the latter, and the affianced of Ildica. A terrible earthquake and the hate of the emperor drive them into exile; and, by a strange concurrence of events, Theodore acquires the favour and protection of Attila, and is bound to remain with him during seven years. The others seek repose and safety among the Alani. At this time, Attila's first irruption into the Roman territories takes place, and affords Mr. James

opportunities for very striking pictures of war and desolation. But the abode of Theodore among the Huns is still more productive of original views; and the manners, customs, and, as we believe, almost real condition of that people (hitherto much misrepresented as altogether barbarous by Roman writers), are painted with a masterly hand. Above all, the character of Attila is a splendid performance.

Much do we regret that we can, this week, give only a few imperfect extracts to justify these opinions; but the work reached us very late, and is not even yet before the public.

We begin with the opening group, and the Roman matron.

"Under the cypresses, not exactly where the shade fell—for the sun near the horizon had lost his meridian heat, and the western breeze swept over the cool bright waters of the Adriatic—were seated three women, and a boy of some fourteen years of age. They were, evidently, of the highest race of the land in which they lived; and, had nothing else bespoken their rank, the broad deep border of purple, of triple die, which edged the snowy robe of the eldest of the party, would have distinguished her as a Roman lady of patrician blood. She was scarcely beyond the middle age, and time had treated her beautifully. Somewhat of the elastic grace, and all the slight pliant outline of early youth, were gone; but in contour and dignity much, too, had been gained; and the eye, more calm and fixed, was as bright and lustrous, the teeth as white and perfect, as ever. The hair, drawn up and knotted on the crown of the head, was still full and luxuriant; but, meandering through its dark and wavy masses, might here and there be seen a line of silver gray: while the cheek, which had once been as warm and glowing as the morning dawn of her own radiant land, sorrows—calmly borne, but not the less deeply felt—had rendered as pale as the twilight of the evening, just ere night reigns supreme. Her dress was plain and unadorned, of the finest materials and the purest hues; but the gems and ornaments, then so common, were altogether absent. The consciousness of beauty, which she might once have felt, was now altogether forgotten; its vanity she had never known. As much grace as health, perfect symmetry of form, and noble education from infancy, could give, she displayed in every movement; but it was the calm and matronly grace where all is ease, and tranquillity, and self-possession. The same placid charm reigned in the expression of her countenance. She seemed to look with benevolence on all. Nay, more, as if the sorrows which had reached her in her high station had taught her that in every bosom, however well concealed, there is, or will be, some store of grief, some memory, some regret, some disappointment, there mingled with the gentleness of her aspect an expression of pity; or, perhaps, its better name were sympathy, which existed really within, and formed a tie between her heart and that of every other human thing. She was, indeed, to use the beautiful words of the poet, 'kind as the sun's blest influence.' Yet the light dark eye, the proud arching lip, and the expansive nostrils, seemed to speak of a nature originally less calm, of days when the spirit was less subdued. Time and grief, however, are mighty tanners of the most lionlike heart: and it was with that look of pity, mingling with tender pleasure, that she gazed down upon a beautiful girl, of, perhaps, thirteen years of age; who, leaning fondly on her knees, as the hymn concluded, looked up in her face for sympathy

tic feelings, while the sweet sounds still trembled on her full rosy lips."

The younger party are then described, with equal truth and felicity, as the author proceeds:—

"The affection, however, of the Lady Flavia, for so was called the elder of whom we have spoken, was divided. For the love of man woman has but one place in her heart, but maternal tenderness has many; and the agony of Niobe was not less for every child that died than if she had had but one. Flavia looked upon Eudochia as her child, and loved her as such; but the two others, of whom we have said that group was composed, were in reality her children. Ammian, the boy, was like his mother in features and complexion, but not in character. More of his dead father's nature had descended to him—more of the wild and daring spirit which, sporting with perils and dangers, contemning pain, and laughing at fear, found food for a bright and eager imagination in scenes and circumstances which to others were full of nothing but horror and dismay. His pastime, as a boy, was to climb the mountains, and spring from rock to rock across the yawning chasms; to stand gazing down over the dizzy side of the precipice, and to drink in the sublimity of the scene below; to dash through the wild waves, when the southwest wind rolled them in mountains on the shore; or to mingle with the pagan inhabitants, which still filled many of the villages near, and to watch, without taking part in, those sacrifices which were prohibited under pain of death by the Christian emperors, but which often took place even in the open face of day. His mother put no check upon his hazardous pleasures, for she was Roman enough to wish that her children might never know the name of fear. But yet her heart sometimes sunk with a chilly dread when she witnessed his wild exploits: for, though the qualities which prompted them were those for which she had loved his father, yet she could not forget that the same daring spirit had led that father to death, by barbarian hands, in the wilds of Pannonia."

Ildica is exquisitely drawn; but we cannot copy the lovely whole-length, and must pass to a brief extract, when Theodore learns the loss of his father.

"'Thank God (he says), we have enough to support us with dignity till this storm be blown away, and the sun shines once more.' 'Alas, Theodore!' replied the priest, 'seldom is it with man that the sun, once clouded, ever shines again. The bosom of nature, torn by the tempest, soon recovers its gaiety and its beauty; or, swept by the shower, wakes up again in brighter loveliness: but the heart of man, beaten by the storms of fate, never regains its freshness, but is dulled and withered by every drop that falls, and revives not again till his short day is closed.'"

Here we will add an example of the poetry—the slave's song, sung as the exiles wend their way from happy Dalmatia for the dark Danube.

"We leave ye behind us, sweet things of the earth;  
Our life's but a race to the death from the birth;  
We pause not to gather the flowers as they grow,  
The goal is before us, and on we must go.

We leave ye behind us, sweet things of the earth!

Fair scenes of our childhood, dear homes of our youth,  
Memorials of innocence, virtue, and truth,  
The land of our birth, the dear mother that bore,—  
We leave ye behind us, we see you no more.

We leave ye behind us, sweet things of the earth!

The joys that we tasted we taste not again;  
Each hour has its burden, each day has its pain;  
No moment, in flying, but hurries us past  
Some sight, sound, or feeling, more dear than the last.

We leave ye behind us, sweet things of the earth!

We leave ye behind us, and others shall come,  
To tread in our footsteps, from cradle to tomb;  
Still gazing back fondly, with lingering eyes,  
Where behind them the bright land of memory lies.

We leave ye behind us, sweet things of the earth.

The sound of Time's pinion, as fast he doth fly,  
Is echoed from each mortal breast by a sigh;  
What if there be fruits?—they ungathered must grow,  
For fate is behind us, and on we must go.

We leave ye behind us, sweet things of the earth.

We leave ye behind us, sweet things of the earth,  
Hopes, joys, and endearments, sport, pleasure, and mirth;  
Like a tempest-driven ship, sailing by some bright shore,  
Time hurries us onward—we see you no more.

We leave ye behind us, sweet things of the earth!"

The account of the dreadful earthquake, which threw down the imperial palace, is very fine, but not altogether novel; as Mr. James states that he had only altered it from preceding publications. Not so the tremendous battle in Gaul between Attila and the Roman Ætius; of parts of which we shall (difficult as it is to separate them from the whole) avail ourselves, in conclusion.

"Ere half an hour had passed, the war-horse of Attila pawed the ground beside the fallen land-mark, and the myriads of the Huns spread out over all the plain. 'Let the ground before me be cleared,' cried the king; and then, poising his javelin above his head, he cast it forward with prodigious force. A hundred cubits further than any other arm could throw, it still sang on through the air, then touched the earth, and quivered in the ploughed-up ground. 'There pitch my tent,' continued Attila; 'there fix our camp. Turn all faces back towards the west; for Attila has retreated far enough, and here we have space to wheel our horses on the foe. Oh, Theodoric! Theodoric! thou hast deceived and betrayed thy friend. I offered to make thee a king indeed, instead of a puppet in the hands of Rome; but Ætius, with his loud promises, and Avitus, with his fair flattery, have seduced thee to the side of Attila's enemies, and, ere two days are over, either he or thou must die. Had it not been for thee and thy Goths, the Romans of Gaul, like the Romans of the east, had been now crouching in trembling terror at the feet of Attila. But they shall still tremble! Shall it not be so, O Valmir? Will not thy subjects die their hands in the blood of their degenerate kinsmen? Shall it not be so, Arderic? Will not thy Gepidæ smite the heads of the vain loquacious Franks? Attila will beard the Roman, and even here shall be the spot. Make the camp strong, and let no one sit apart from the rest. Let the waggons be placed around, and the spaces beneath them filled up, and leave no entrance but one: for, if we destroy not this Roman army in the field, we will wait it in our camp; and, by the head of my father! I will not quit the land till it is dispersed. Bid the wise men and the diviners sacrifice! and consult the bones of the slain, that I may know what will be the event of tomorrow. Tell them that we fight, even if we die. Let them speak the truth, therefore, boldly. Ha! Theodore, my son, ride hither with me.'

"Difficult were it to describe, impossible to convey any adequate idea of the scene of tumult, din, and confusion, which the camp of the Huns presented during that night. The circle of waggons, placed in a double row, and forming, in reality, a strong fortification, was nearly completed, when Attila led the way thither, and turned his steps towards his own tent. Fastened to strong stakes driven into the ground, between the inner wheels, the waggons were immovable from without, but

easily turned or withdrawn from within; and, embracing an immense extent of ground, they afforded space for the mighty host which Attila had led into the plains of Gaul. During that night, and comprised in a space of a few miles, more than a million of human beings, either in the Hunnish or the Roman army, prepared for battle, and panted for carnage. No still quiet followed in the train of night: the blows of the hammer and the mallet, the ringing of armour, the voices of guards and commanders, the tramp of thousands passing to and fro, the murmur of innumerable voices, the loud and ringing laugh, the war-song shouted high and strong, the sounding of trumpets and of wild martial music, the neighing of several millions of horses, raised a roar through the whole air, in the midst of which the sounds of an accidental conflict that took place between the troops of Arderic and those of Theoderic, the Gothic ally of Ætius, were scarcely heard; though, so fierce was the struggle for the bank of the rivulet, that fifteen thousand men were left dead within a stone's throw of the Hunnish camp.

"On one side of that little brook, running pure and clear between those hostile armies—like the bright stream of Divine love, pouring on its refreshing waters of peace amidst the strife and turbulence of human passions—stretched forth the host of Attila, nearly seven hundred thousand horsemen from every land, and every nation of the North. There, in the centre, under his own immediate command, appeared the dark line of dusky Huns, little embarrassed with defensive armour, but bearing the strong and pliant bow upon their shoulders, and at their side the quiver loaded with unerring arrows; the large heavy sword, too, was in the hand of each, and at many a stirrup of the wilder tribes hung, as an ornament, a gory human head. Far on the right appeared the Gepidæ, fairer in complexion, more bulky in limb, and more splendid in arms and apparel, but generally reputed less active, less fierce, and less persevering, than the Huns. On the left, again, were seen the Ostrogoths, tall, fair, and powerful; and the intervening spaces were filled up with a thousand barbarous tribes—the Rugi, the Geloni, the Heruli, the Scyri, Burgundians, Turingians, and those called the Bellonoti. A thousand tongues were spoken in that host, a thousand varieties of face and garb were seen; but all were actuated by the same feelings—hatred to the Romans, and reverence for the mighty Hun. On the other side of the brook, again, appeared, not less in number, and not less various in appearance, the vast army which Ætius had collected from the different nations that inhabited Gaul: the long-haired Frank, the blue-eyed Goth, the sturdy Armorican, the powerful, but doubtful Alan; and there, upon his right, appeared Theoderic, the wise and valiant monarch of the Visigoths, with his white hair, speaking the passing of many a careful year, and his three gallant sons, ready to obey, with the activity of youth, those directions which the wisdom of his age might dictate. In the centre were placed all the more doubtful allies of the Roman empire, mingled with such as might act as a check upon their wavering faith. On the left of the line appeared the Roman eagles, under the command of Ætius in person. There, too, might he be seen, in the eyes of the whole army, riding from rank to rank, and with bold and cheerful words encouraging his soldiers, and exciting them to great exertion. Small in person, but graceful, well-proportioned, and active, with the lion

heart of the hero, and the eagle glance of the great general, the whole aspect of Ætius breathed courage, and inspired energy. Wherever he rode, wherever he appeared, a cheerful murmur greeted him; and when, at length, he galloped his splendid battle-horse along the line, and, riding up to Theoderic, embraced the old chieftain without dismounting from his charger, a loud and universal shout burst from the army, and seemed to the ears of the Romans a presage of victory. Calm, grave, and immovable, sat Attila upon his black charger, a stone's throw before the line of the Huns. On him every eye in his own host was turned; and in that moment of awful suspense which precedes the closing of two mighty powers in the first shock of battle, the barbarian myriads seemed to forget the presence of their Roman adversaries in the intense interest with which they regarded their terrible leader. Armed, like themselves, with a bow upon his shoulder and a sword in his hand, Attila sat and gazed upon his forces; turning, from time to time, a casual glance upon the Romans, and then looking back along the far extending line of Huns, while a scarcely perceptible smile of triumphant anticipation hung upon his lip. He sat almost alone, for his nearest followers and most faithful friends remained a few paces behind; while, with that stern, proud glance, he ran over his often victorious bands, and seemed waiting with tranquil confidence for the approaching strife. At length, all seemed prepared on every side, and the stillness of expectation fell upon the field. It continued till it seemed as if all were afraid to break it—so deep, so profound, grew that boding silence."

Here, even on the eve of a battle in which half a million of men were slain, we must break off; trusting that, however inadequately, we have said and done enough to recommend *Attila* to the distinction and popularity it so eminently deserves. The ground is new.

*Crichton*. By W. Harrison Ainsworth. Author of "Rookwood." 3 vols. 12mo. London, 1837. Bentley.

AFTER a long delay, *Crichton* has at last issued from the press; and that delay is satisfactorily accounted for by the evident pains the author has bestowed upon his subject, and the research into the particulars of his hero's life, which are especially manifest in the third volume. Of that volume alone we have to speak, since the two preceding *tomes*, and the general excellences of the work, were described in the *Literary Gazette*, of the 26th November, No. 1036. "*Romanesque, chivalresque, et pittoresque*," were the terms we applied to the unfinished *Crichton*; and now that we have the whole before us, we can but repeat the eulogy, and place the little word *très* before it. "Time, place, and a hero," we said, were the triad of fiction, and our author has been eminently fortunate in them all. Why should we repeat ourselves? the publication will soon be universally read; and then these pilot-balloons, sent up before, will be laid aside or forgotten. We will simply ballast ours by another specimen or two of the author's beauties. The entire chapter of "the Two Henris," is a masterly piece of writing and delineation of character, of which we shall endeavour to convey some idea by quoting a portion of the interview—it is between Henri of Navarre and Henri III., on the former resolving to throw himself on the generosity of the latter.

"Accordingly, when Henri III. turned aside to confer with Blount, he struck spurs into his charger, and rode towards him. A greeting of

apparently fraternal warmth passed between the two monarchs. Though each, in secret, distrusted the other, both deemed it prudent to assume an air of unbounded confidence and good-will. Dissimulation formed no part of the Bourbon's frank and loyal character; but his long experience of the perfidy and insincerity of the race of Valois, while it prevented him from being Henri's dupe, satisfied him that any advantage which might accrue to him from the interview could only be attained by the employment of similar artifice. Throwing himself, therefore, instantly from his steed, he attempted, with the greatest cordiality, to take the hand of the king, with the intention of proffering the customary salutation. Henri III., however, drew back his steed as he approached. 'Your pardon, my brother,' said he, with a gracious smile: 'we would cut off our right hand could we suspect it of heresy; nor can we consent to take yours, tainted as it is with that contagious leprosy, unless we first receive assurance from your lips that you are come hither, like the prodigal son, to confess your indiscretions, to implore our forgiveness, and to solicit to be received once more into the indulgent bosom of our holy Catholic, Apostolic, and Roman Church.' 'Sire,' replied the Bourbon, 'I own that I am in much the same predicament as the unfortunate wight to whom you have likened me. I have, at this moment, more nose than kingdom, more care than coin, more hope than faith, more regard for your majesty than the religion you propose.' 'And more regard for your body than your soul, I fear, my brother,' interrupted Henri III., gravely shaking his head, and telling a bead or two upon his rosary. 'That is to say, he has more regard for his mistresses than his queen,' said Chicot: 'you are right, *compère*. Our Béarnais will never be saved unless the good old faith of the Gentiles comes round again, and new altars are raised, at Cnidos and Paphos, to the goddess he worships.' 'Certes, thou malapert knave, I am a heretic in no creed in which beauty is concerned,' replied the Bourbon, laughing; 'and, amid your gallery of fair saints, there is not one to whom I would refuse my adoration.' 'I could point out one,' cried the jester. 'I defy thee,' said the Bourbon. 'Your queen!' returned Chicot. Even Henri III. could not help joining in the mirth occasioned by this sally of the jester. 'Ribald!' exclaimed the Bourbon, laughing louder than the rest, 'thy fool's cap alone protects thee from my resentment.' 'My fool's *calotte* is a better defence than many a knight's casque,' answered Chicot; 'for the love I bear her majesty of Navarre, I will exchange it for thine, and throw my *marotte* into the bargain. Thou wilt need both on thy next encounter with Crichton.' 'Wilt thou throw thyself into the bargain, knave,' asked the Bourbon, 'and follow my fortunes?' 'Of a surety, no!' replied the jester: 'that were to quit the master for the valet; the provost for the prisoner; the falconer for the quarry.' '*Par-dieu! compère*,' said Henri III., in a tone of railleury, 'art thou so blind to thy own interest as to tarry in our service, when an offer so brilliant is made thee by our brother of Navarre? Bethink thee of the eminence to which thy wisdom and decorum must necessarily promote thee amongst the synods of the Huguenots, and the sage councils of the court of Pau!' 'I never leap in the dark, gossip,' replied Chicot. 'It were the province of a wise man to go in quest of danger: I am a fool, and prefer safe quarters at home.' 'Wholesome advice may be gathered even from the mouth of

fools, you perceive, my brother," said Henri III. 'May we now inquire to what fortunate circumstance we owe the unexpected happiness of this visit? We have been singularly misinformed about you, and your proceedings. We are told you are an enemy—we find you our best of friends. We learn that you are at the head of a hostile army, putting our towns and subjects to fire and sword—we find you as blithe companion as ever, and almost unattended. Our last accounts are, that you are barricaded within the walls of Pau, or Nérac; our next are gathered from your own lips within the walls of the Louvre. See how one may be deceived!' 'Your majesty is not deceived in my expressions of friendship,' replied the Bourbon, cordially. 'Will it please you to command your gentlemen to stand further off?' 'Excuse us, my brother, if we venture to retain our attendants,' replied Henri III. 'We are curious to question this bold knave,' added he, glancing at Blount. 'You may reserve your tale, if you please, for the ear of our confessor, whom you will permit us to recommend, in the hope of accomplishing your conversion.' 'Your confessor, sire!' ejaculated the Bourbon, knitting his brow. 'And at the tail of the priest, the headman,' added Chicot. 'Ha!' ejaculated the Bourbon. 'You will not then fail to profit by his instruction; and, for the third time, get rid of any scruples of conscience,' returned Chicot. 'The laconic message of his late majesty, Charles IX., to your cousin, Henri de Condé, had other merits besides its conciseness.' 'What message was that, gossip?' asked Henri III., affecting ignorance. 'Messe, mort ou Bastille!' replied the jester. 'Our Béarnais will remember it by the token, that about the same time he abjured his own Calvinistic heresies.' 'Ventre-saint-gris!' thou scurrilous varlet,' cried the Bourbon, fiercely; 'if thou dar'st to push thy mischievous pleasantry further, not even thy own insignificance, nor thy royal master's presence, shall prevent my inflicting due chastisement upon thee.' Alarmed by the menacing aspect of the King of Navarre, with a grimace of mixed terror and defiance, Chicot, like a snarling cur, apprehensive of the heels of a noble steed he has annoyed beyond endurance, now turned tail, and retreated to the protection of his master, who was secretly delighted with this specimen of his skill in the 'art of ingeniously tormenting.' 'Since you decline answering our inquiries respecting the motive of your visit, my brother,' said Henri III., in his blandest accents, 'we will not press the point. But we trust you will not object to remaining near our person till we return to the banquet?' 'Your majesty has only to command me.' 'And, as you have no attendants excepting the Baron de Rosni, we give you your choice of six of our own gentlemen, who will continue constantly by your side.' 'I understand your majesty. I am a prisoner.' 'I said not so, my brother. Choose your attendants.' 'My choice is readily made, sire. I shall name but one—the Chevalier Crichton. I leave the nomination of the others to him.' 'Fenum habet in cornu,' muttered Chicot: 'a wittol's choice!' 'You could not have made a better election,' observed Henri III., with a smile. 'I think not,' said the Bourbon. 'I am sure not,' added Chicot: 'forgiveness becomes a Christian prince. Madame Marguerite will highly applaud your generosity and placability.' 'Peace, droll!' said Henri III. 'And now, my brother,' continued he, in the same homed tone which he had previously adopted, and which, by those who knew him,

was more dreaded than the most violent burst of indignation,—as the jousts are at an end, and you will have no further occasion for it, we entrust you to resign your sword to the custody of him whom you have appointed your principal attendant.' 'My sword, sire!' exclaimed the Bourbon, recoiling. 'Your sword, my brother,' repeated Henri III., blandly. The King of Navarre looked around. On all sides he was invested by danger. The whole circle of the area in which he stood bristled with pikes and spears. Above the halberds of the Swissers rose the javelins of the Scottish guards; and above the javelins of the Scots gleamed the long lances of D'Épernon's gallant Gascon troop. Here was stationed a company of archers—there a band of arquebusiers. On the right were arrayed the youthful nobles, under the command of the Vicomte de Joyeuse, ready to be distinguished by their gorgeous apparelling and fluttering pennons; on the left was drawn out the sumptuous retinue of the Duc de Nevers. Nor was this all: a nearer circle of the king's body-guard encompassed him. Every hand was upon a sword-hilt—every glance fixed upon him. As he carelessly noted all this hostile preparation, the Bourbon turned towards his counsellor, Rosni, who stood leaning upon the handle of his sword immediately behind him. Not a word—not a sign was exchanged between them; but the monarch understood the meaning of the cold stern look of his counsellor. At this moment the rolling of drums, mingled with the sound of other martial instruments, was heard from the outer courts of the palace. 'Hark! the tambour!' exclaimed Henri III., 'fresh troops have entered the Louvre.' 'By your command, sire?' asked the Bourbon, in a tone of displeasure. 'Our subjects are careful of our safety,' answered Henri III. evasively. 'They ought to be so, sire,' replied the Bourbon: 'your majesty has well earned their love; and when were the people of France ungrateful? But against whom are all these precautions taken? Is the Louvre in a state of siege, or have the burghesses of your good city of Paris broken into revolt?' 'No, my brother, our good city is at present free from faction or tumult; and it is our intention (with the aid of Heaven!) to maintain its tranquillity undisturbed.' 'You cannot suppose that I would be the instigator of disorder, sire,' said the Bourbon. 'I have drawn the sword to protect the rights of my people, and to uphold their persecuted creed—not to wage war upon your majesty. On any terms which shall secure to my subjects the immunities and religious toleration they seek, I will, at once, enter into a compact of truce with your majesty, and place myself in your hands as a hostage for the due observance of its conditions.' 'Sire!' exclaimed Rosni, grasping his sovereign's arm, 'each word you utter is a battle lost.' 'Your majesty will not now suspect me of disloyalty,' continued the Bourbon, disregarding the interruption. 'We suspect nothing, my brother—nothing whatever,' said Henri III. hastily; 'but we will sign no truce, enter into no compact, which shall favour, or appear to favour, the dissemination of heresy and sedition. To tolerate such a faith were to approve it. And we would rather command a second Saint-Bartholomew—rather imitate the example of our brother, Philip II. of Spain, or pursue the course pointed out to us by our cousin of Guise and the messieurs of the League, than in any way countenance a religion so hateful to us. We are too good a Catholic for that, my brother. Our reign has been (for our sins!) disturbed by three great troubles: our brother

of Anjou and his faction; the Balafré and his leaguers; you and your friends of the reform.'

We are sorry that our limits prevent us from quoting the whole of this historically correct and characteristic scene; but we must be content with giving a few examples of the admirable versions of Crichton's poetical compositions, as rendered into English by our author. Like the lyrics of "Rookwood," they add lustre to the prose in which the tale of interest is told.

#### "The Thirty Requisites."

Thirty points of perfection each judge understands,  
The standard of feminine beauty demands.  
Three white:—and, without further prelude, we know  
That the skin, hands, and teeth, should be pearly as snow.  
Three black:—and our standard departure forbids  
From dark eyes, darksome tresses, and darkly fringed lids.  
Three red: and the lover of comeliness seeks  
For the hue of the rose in the lips, nails, and cheeks.  
Three long:—and of this you, no doubt, are aware?  
Long the body should be, long the hands, long the hair.  
Three short:—and herein nicest beauty appears—  
Feet short as a fairy's, short teeth, and short ears.  
Three large:—and remember this rule as to size,  
Embraces the shoulders, the forehead, the eyes.  
Three narrow:—a maxim to every man's taste—  
Circumference small in mouth, ankle, and waist.  
Three round: and in this I see infinite charms—  
Rounded fullness apparent in leg, hip, and arms.  
Three fine:—and can aught the enchantment eclipse,  
Of fine tapering fingers, fine tresses, fine lips?  
Three small:—and my thirty essentials are told—  
Small head, nose, and bosom compact in its mould.  
Now the dame who comprises attractions like these,  
Will need not the cestus of Venus to please:  
While he who has met with an union so rare,  
Has had better luck than has fall'n to my share."

#### "The Three Orgies."

In banquet hall, beside the king,  
Sat proud Thyestes, revelling.  
The festal board was covered fair,  
The festal meats were rich and rare;  
Thyestes ate full daintily,  
Thyestes laughed full lustily:  
But soon his haughty visage fell—  
A dish was brought—and, wo to tell!  
A gory head that charger bore!  
An infant's look the features wore!  
Thyestes shrieked—King Atreus smiled—  
The father had devoured his child!  
Fill the goblet—fill it high—  
To Thyestes' revelry.  
Of blood-red wines the brightest choose,  
The glorious grape of Syracuse!

For a victory obtained  
O'er the savage Getæ chained,  
In his grand Cæsarean hall  
Domitian holds high festival.  
To a solemn feast besought  
Thither are the senate brought.  
As he joins the stately crowd,  
Smiles each grave patrician proud.  
One by one each guest is led  
Where Domitian's feast is spread;  
Each, recalling, stares aghast  
At the ominous repast:  
Round altars of blackest shade  
Black triclinia are laid,  
Sable vases deck the board  
With dark-coloured vials stored;  
Shaped like tombs, on either hand,  
Rows of dusky pillars stand;  
O'er each pillar in a line,  
Pale sepulchral lychni shine;  
Cherub urns are seen,  
Carved each with a name, I ween.  
By the sickly radiance shewn  
Every guest may read his own!  
Forth then issue swarthy slaves,  
Each a torch and dagger waves;  
Some like manes habited,  
Figures ghastly as the dead!  
Some as lemures attired,  
Larvæ some, with vengeance fired,  
See the throat of every guest.  
By a murderous gripe is prest!  
While the wretch, with horror dumb,  
Thinks his latest hour is come!  
Loud then laugh'd Domitian,  
Thus his solemn feast began.  
Fill the goblet—fill it high—  
To Domitian's revelry.  
Let our glowing goblet be  
Crown'd with wine of Sicily!

Borgia holds a papal fête,  
And Zizime, with heart elate,  
With his chiefs barbarian  
Seeks the gorgeous Vatican.  
'Tis a wondrous sight to see  
In Christian hall that company!  
But the Ottoman warriors soon  
Scout the precepts of Mahoun.

Wines of Sicily and Spain,  
Joyously those paynims drain;  
While Borgia's words their laughter stir.  
*'Bibimus papaliter!'*

At a signal—pages three,  
With gold goblets bend the knee:  
Borgia pours the purple stream  
'Till beads upon its surface gleam.  
'Do us reason, noble guest,  
Thus Zizime, the pontiff priest:  
'By our triple-crown there lies,  
In that wine-cup Paradise!  
High Zizime the goblet raised—  
Loud Zizime the Cyprus praised—  
To each guest in order slow,  
Next the felon pages go.  
Each in turn the Cyprus quaffs,  
Like Zizime, each wildly laughs,—  
Laughter horrible and strange!  
Quick ensues, a fearful change,  
Stuffed soon is every cry,  
Azrael is standing by.  
Glared Zizime—but spake no more:  
Borgia's fatal feast was o'er!  
Fill the goblet—fill it high—  
With the wines of Italy;  
Borgia's words our laughter stir—  
*'Bibimus papaliter!'*

*"The Sword of Bayard."*

'A boon I crave, my Bayard brave!—'twas thus King  
Francis spoke; [stroke.  
'The field is won, the battle done, yet deal one other  
For, by this light! to dub us knight, none worthy is as  
thou, [peer we trow,  
Whom nor reproach, nor fear approach, of prince or  
'Sire! said the knight, 'you Judge not right, who owns  
a kingdom fair, [the share,  
'Neath his command all knights do stand—no service can  
'Nay! by our fay! the King did say, 'lo! at thy feet we  
kneel. [steel.  
Let silken rules sway tilt-yard schools, our laws are here of  
With gracious mien did Bayard then, his sword draw from  
his side; [knight, he cried.  
'By God! Saint Michael! and Saint George! I dub thee  
'Arise, good king! weal may this bring—such grace on  
thee confer,  
As erst from blow of Charles did flow, Roland or Oliver!  
With belted blade the king arrayed—the knight the spur  
applied. [supplied—  
And then his neck with chain did deck—and accolade  
'Do thy devoir at ghostly choir—unsustain high courtesie,  
And from the fray in war's array, God grant thou never  
flee!  
'Certes, good blade, then Bayard said, his own sword  
waving high.  
'Thou shalt, perdue, as relic be preserved full carefully!  
Right fortunate art thou, good sword, a king so brave to  
knight! [my sight.  
And with strong love, all arms above, rest honoured in  
And never more, as heretofore, by Christian chivalry,  
My trenchant blade, shalt thou be rayed, or e'er endan-  
gered be!  
For paynim foes reserve thy blows—the Saracen and Moor  
Thine edge shall smite in bitter fight, or merciless estour!  
Years since that day have rolled away, and Bayard hurt  
to death, [breath.  
'Neath gray Rebecca's walls outstretch'd, exhales his latest  
On Heaven he cried, or ere he died—but cross had none, I  
wist, [he kissed.  
Save that good sword-hilt cruciform, which with pale lips  
Knight! whom reproach could ne'er approach, no name  
like unto thine, [scroll shall shine!  
With honour bright, unsullied, white, on Fame's proud  
But, were it not to mortal lot denied by grace divine,  
Should Bayard's breath, and Bayard's death, and his good  
sword be mine!"

*"Dirge of Bourbon."*

When the good Count of Nassau  
Saw Bourbon lie dead,  
'By Saint Barbe and Saint Nicholas!  
Forward!' he said.  
'Mutter never prayer o'er him,  
For litter ne'er halt;  
But sound loud the trumpet—  
Sound, sound to assault!  
'Bring engine—bring ladder,  
Yon old walls to scale;  
All Rome, by Saint Peter!  
For Bourbon shall wail."

ORIGINAL CORRESPONDENCE.

EDUCATION: CHINA.

THE two following documents have been lately received by the Right Hon. Sir Alexander Johnston, the chairman of the Committee of Correspondence of the Royal Asiatic Society, from a very intelligent corresponding member of that Society in China, and laid by Sir Alexander before the committee as a decided proof of the moral and political importance at the present moment of the College established at

Malacca, in affording to the Chinese the means of improving their understandings, and acquiring a knowledge of European civilisation, science, and literature, and thereby bringing about a gradual change in the moral, political, and commercial opinions of that extraordinary people. The first document contains an account of a young Chinese gentleman who was educated at the College of Malacca, and who is understood now to hold a high office, and to command great influence at Pekin by the superiority of his understanding, and his knowledge of European languages. The second is a project which is supposed to have been, in the first instance, suggested by the gentleman who has just been mentioned, and which is now under the consideration of the Chinese government, for the abolition of the penal edicts which have long prevailed in China against the importation of opium, and for declaring legal, in future, the importation into China of that valuable article of commerce upon the payment of a fixed duty.

*First; from our Canton Correspondent.*

Sham-teh went to Pekin in 1828, in consequence of a requisition being sent to Canton for a Chinese capable of translating from other languages into Chinese. I have made very particular inquiry about him from an American gentleman who was at the Malacca College with him, and for some time—indeed, the whole time he was there—lived in the same room with him. Sham-teh left China at about the age of fourteen. He was a native of, and was for some time under the charge of the Catholic missionaries at, Penang, where and when he learned Latin. He afterwards went to the Malacca College to study, and was perfectly destitute of every thing when he got there. The college library was assigned to him as a dormitory: there, also, was the American gentleman. The description this American gives of him is, that he was very proud, and would never admit the inferiority of his country in any thing;—that he was very ambitious and industrious in acquiring knowledge, even to such an extent that he never left his room, but passed all the hours which the other youths at the college lost in amusement, in reading; for which, being in the library, he had every opportunity. He soon learned English very well, and, when he went to Pekin, could speak it perfectly. He was well informed in the geography, commerce, statistics, and government, of most civilised nations. Mathematics and arithmetic, however, appear to have been his favourite study. After having passed two years and upwards at Malacca, he came to Canton, where he luckily happened to be at the time the order came from Pekin for an interpreter; and in 1828 he went there. Two years afterwards he wrote a very good letter, in English, to his friend, the American, and told him he had been much employed in translating for the Russians;—that he had had bestowed upon him the button of the fifth highest rank in the empire, and received a salary of about 8000 taels a-year (about 2500*l.*). He requested that some English books might be sent to him (Euclid, amongst others), pointing out how it was to be done so as not to attract suspicion.

Sham-teh, while he was at Malacca, translated some book—an account of China, by a missionary—from Latin into Chinese; for which he was handsomely remunerated by some gentlemen who took an interest in the Malacca College. He speaks and writes English perfectly; the former, with rather a Scotch accent.

*Memorial to the Emperor proposing to Legalise the Importation of Opium.*

Hen Naetze, the president of the sacrificial court, presents the following memorial in regard to opium, to shew that the more severe the interdicts against it are made, the more widely do the evils arising from it spread, and that it is right urgently to request, that a change be made in the arrangements respecting it; to which end he earnestly entreats his sacred majesty to cast a glance hereon, and to issue secret orders for a faithful investigation of the subject.

I would humbly represent, that opium was originally ranked among medicines; its qualities are stimulant; it also checks excessive secretions, and prevents the evil effects of noxious vapours. In the herbal, written by Le She-chin of the 'Thing dynasty, it is called *Afooyung*. But when one has been long habituated to inhaling, it is necessary to resort to it at regular intervals, and the use of it becoming inveterate, is destructive of time, injurious to property, and yet dear to one even as life. When used in great excess, the breath becomes feeble, the body wasted, the countenance sallow, the teeth black, the individual himself, though clearly seeing its evil effects, cannot refrain from it. It is, indeed, indispensably necessary to enact severe prohibitions, in order to eradicate so vile a practice.

On inquiry I find that there are three kinds of opium. One is called Company's, the outer covering of which is black; whence it is also called Black Earth: it comes from Bengal. A second kind is called White Skin, and comes from Bombay. The third kind is called Red Skin, and comes from Madras. These are all places belonging to the English.

In Keen-lung's reign, as well as previously, opium was inserted in the tariff of Canton as a medicine, subject to a duty of three taels per hundred cutties, with an additional charge of two taels, four mace, and five cundarmes, under the name of charge, per package. After this it was first made contraband. In the first year of Keu-king, those found guilty of smoking opium were subject only to the punishments of the pillory and the bamboo. Now, they have become, in the course of time, liable to the severest penalties; transportation, in various degrees; and death, after the ordinary period of continuance in prison. Yet the smokers of the drug have increased in number, and the practice has spread through almost the whole empire.

In Keen-lung's and the previous reigns, when opium passed through the custom-house, and paid a duty, it was given into the hands of Hong merchants in exchange for tea, and other goods. But, at the present time, the commands of government being most strict against it, none dare openly to exchange goods for it; but all secretly purchase it with money. In the reign of Keu-king, there arrived, it may be, some hundred chests annually. The number has now increased to 20,000 chests, containing each 100 cutties. The black earth, which is the best, sells for about 800 dollars foreign money per chest; the white skin, which is next in quality, for about 600 dollars; and the last, or red skin, for about 400 dollars. The total quantity sold during the year amounts, then, in value, to ten and some odd millions of dollars; so that, reckoning the dollar at seven mace standard weight of silver, the annual waste of money somewhat exceeds ten millions of taels.

Formerly, the barbarian merchants brought foreign money to China, which being paid in

exchange for goods, was a source of pecuniary advantage to the people of all the sea-bound provinces. But, latterly, the barbarian merchants have sold opium for money payments, which has rendered it unnecessary for them still to import silver. Thus, the foreign money has been going out of the country, while none returns.

During two centuries the government has now maintained peace; and, by fostering the people, has abundantly promoted the increase of wealth and opulence among them. With joy we witness the economical rule of our august sovereign—an example to the whole empire. Most right is it that yellow gold should be common as the dust; but, in all past times, a tael of pure silver has exchanged for nearly about 1000 coined cash: while, of late years, the same sum has borne the value of 1200, or 1300 cash, and the price of silver rises, but never falls. In the salt agency, the price of salt is paid in cash, while the duties are paid in silver, and the salt merchants have all become deeply involved, so that the state of their trade is abject in the extreme. To what is this owing but to the unnoticed nozing out of silver? If the easily exhaustible stores of the central spring go to fill up the wide and fathomless gulf of the outer seas, the gradual progress, from day to day and from month to month, will reduce us to a state of which I cannot bear to speak.

Is it proposed entirely to cut off the foreign trade, and thus to remove the root and dam up the source of the evil? The celestial dynasty, indeed, would not hesitate to relinquish the few millions of duties arising therefrom. But the nations of the west have had a general market open to them for upwards of a thousand years; and of these, the English alone are dealers in opium. It would be wrong, for the sake of cutting off the English trade, to cut off that of all the other nations. Besides, the hundreds of thousands of people living on the sea-coast depend wholly on trade for their livelihood; and how are they to be disposed of? Moreover, the barbarian ships, when on the high seas, can proceed to any island that may be selected as an entrepôt, and the native sea-going vessels can meet them there, so that, to cut off the trade is impracticable. Of late years the foreign vessels have visited all the ports of Fuh-keen, Che-keang, and Shan-tung, even to Teen-tsin and Munchouria, for the purpose of selling opium; and, although at once expelled by the local authorities, yet it is rumoured that the quantity sold by them was not small. Thus, it appears that, though the commerce of Canton should be put an end to, yet it will not be possible to prevent the clandestine introduction of merchandise.

Is it said that the daily increase of opium is owing to the negligence of officers in enforcing the interdicts? The laws and enactments are the means which extortionate underlings and worthless vagrants employ to benefit themselves: and the more minute the laws are, the greater and more numerous are the bribes paid to the extortionate underlings, and the more crafty are the schemes of pettifogging worthless vagrants. In the 1st year of Tuoukwang, Yeun Zeun, then governor of Kwangtung and Kwang-se, proceeded, with all the vigour of the law, against Ye Hung-shoo, the proprietor of an opium establishment at Maeno. The consequence was, that foreigners, having no one with whom to place their opium, proceeded to Sintin to sell it. This place is within the precincts of the provincial government, and has, on all sides, a free communication by

water. Here are constantly anchored seven or eight large ships, in which the opium is kept, and which are therefore called receiving ships. At Canton, there are brokers of the drug, who are called "melters." These pay the price of the drug into the hands of the resident foreigners, who give them orders for the delivery of the opium from the receiving ships. There are conveying boats plying up and down the river, and these are vulgarly called "fast crabs," and "scrambling dragons." They are well armed with guns and other weapons, and are manned with some scores of desperadoes, who ply their oars as though they were wings to fly with. All the custom-house and military posts which they pass are largely bribed. If they happen to encounter any of the armed cruising boats, they are so audacious as to resist, and slaughter and carnage ensue. The late Governor Loo, on one occasion, having directed the commodore, Hin Yuechang, to cooperate with Teen Poo, the district magistrate of Heang Shan, they captured Leang Heen-nee, with a boat containing opium to the amount of 14,000 catties. The number of men killed and taken prisoners amounted to several scores. He likewise inflicted the penalty of the laws on the criminals Yaou-keu and Owk-wan (both of them being brokers), and confiscated their property. Thus, it appears that faithfulness in the enforcement of the law is not wanting; and yet the practice cannot be checked. The dread of the laws is not so great on the part of the people as is the anxious desire of gain, which incites them to all manner of crafty devices: so that sometimes, indeed, the law is rendered wholly ineffective.

There are, also, both on the rivers and at sea, banditti, who, under pretence of acting under the orders of government, and of being sent to search after and prevent the smuggling of opium, seek thereby opportunities for plundering. When I was lately placed in the service of your majesty, as acting judicial commissioner at Canton, cases of this nature were very frequently reported. Out of these arose a still greater number of cases, in which money was extorted for the ransom of plundered property. Thus, an innumerable multitude of innocent people were involved in suffering. All these wide-spread evils have arisen since the interdict against opium was published.

It will be found, on inquiry, that the smokers of opium are idle, lazy vagrants, having no useful purpose before them, and being quite unworthy of regard—or even of contempt: and, though there are smokers to be found, who have overstepped the threshold of age, yet do they not attain to the long life of other men. But new births are daily increasing the population of the empire, and there is no cause to apprehend a diminution therein: while, on the other hand, we cannot adopt, too late or too early, precautions against the annual waste which is taking place of the resources—the very substance of China. Now, to close our ports against all trade will not answer; and laws issued against opium, in particular, are quite inoperative. The only method left is, to revert to the former system; to permit barbarian merchants to import opium, paying duty thereon as a medicine; and to require that, after having passed the custom-house, it shall be delivered to the Hong merchants, only in exchange for merchandise—that no money shall be paid for it. The barbarians, finding that the amount of duty to be paid on it is less than what is now spent in bribes, will, also, gladly comply herein. Foreign money should be placed on the same footing with Syu silver;

and the exportation of it equally prohibited. Offenders, when caught, should be punished by the entire destruction of the opium they may have, and the confiscation of the money that may be found with them.

With regard to officers, civil and military, and to the scholars and common soldiers, the first are called on to fulfil the duties of their rank, and attend to the public good; the others to cultivate their talents, and thus fit themselves for public usefulness. None of these, therefore, must be permitted to contract a practice so bad, or to walk in a path which will lead only to the utter waste of their time and destruction of their property. If, however, the laws enacted against the practice be made too severe, the result will be mutual connivance. It becomes my duty, then, to request that it be enacted, that any officer, scholar, or soldier, found guilty of secretly smoking opium, shall be immediately dismissed from public employ, without being made liable to any other penalty. In this way, lenity will become, in fact, severity towards them. And, further, that if any superior, or general officer, be found guilty of knowingly and wilfully conniving at the practice among his subordinates, such officer shall be subjected to a court of inquiry: lastly, that no regard be paid to the purchase and use of opium on the part of the people generally.

Does any suggest a doubt, that to remove the existing prohibitions will detract from the dignity of government? I would ask, if he is ignorant that the pleasures of the table, and of the nuptial couch, may also, by indulgence, be rendered injurious to health? Nor are the invigorating drugs, *footsye* and *woolon*, devoid of poisonous qualities. Yet it had never been heard that any one of these has been interdicted. Besides, the removal of the prohibitions refers only to the vulgar and common people; those who have no official duties to perform. So long as the officers of government, the scholars, and the military, are not included, I see no detriment to the dignity of government; and, by allowing the proposed importation and exchange of the drug for other commodities, more than ten millions of money will annually be prevented from flowing out of the central land. On which side, then, is the gain? on which the loss? It is evident at a glance. But, if we still idly look back, and delay to retrace our steps, foolishly paying regard to a mere empty matter of dignity, I humbly apprehend that, when, eventually, it is proved impossible to stop the importation of opium, it will then be found that we have waited too long, that the people are impoverished, their wealth departed. Should we then begin to turn round, we shall find that reform comes too late.

Though but a servant of no value, I have, by your majesty's condescending favour, been raised from a subordinate censorship to various official stations, both at court and in the provinces, and filled, on one occasion, the chief judicial office in the region south of the great mountains (Kwang-tung.) Ten years, spent in earnest endeavours to make some return, have produced no fruit; and I find myself overwhelmed with shame and remorse: but, with regard to the great advantages or great evils of any place where I have been, I have never failed to make particular inquiries. Seeing that the prohibitions now in force against opium serve but to increase the prevalence of the evil, and that there is no one found to represent the facts directly to your majesty, and feeling assured that I am myself thoroughly acquainted with the real state of things, I dare

no longer forbear to let them reach your majesty's ear. Prostrate, I beg, my august sovereign, to give secret instructions to the governor and lieutenant-governor of Kwang-tung, together with superintendent of maritime customs, that they faithfully investigate the character of the above statements, and that, if they find them really correct, they speedily prepare a list of regulations adopted to a change in the system, and present the same for your majesty's final decision. Perchance this may be found adequate to stop further oozing out, and to enrich the national resources.

With awe and trembling fear beyond expression do I reverently present this memorial, and await your majesty's commands.

*Document from the Council at Peking to the Government of Canton, inclosing the preceding.*

The following document was received on the 2d July from the grand council of ministers, at Peking, addressed to "Tung, governor of the two Kwang, and Ke, lieutenant-governor of Kwang-tung, by whom it is to be enjoined, also, on the Hoppe-Wan:—

"On the 29th of the 4th month (12th June, 1836), the following imperial edict was given to us:—

"Hen Naetsa, vice-president of the Sacrificial Court, has presented a memorial in regard to opium, representing that the more severe the interdicts against it are made, so much the more widely do the evils arising from it spread; and that, of late years, the barbarians, not daring openly to give it in barter for other commodities, have been in the habit of selling it clandestinely for money; thus occasioning an annual loss to the country, which he estimates at above ten millions of taels. He, therefore, requests that a change be made in regard to it, permitting it to be again introduced, and given in exchange for other commodities. Let Tung Ting-ching deliberate with his colleagues on the subject, and then report to us. Let a copy of the original memorial be made for their perusal, and sent with this edict to Tung Ting-ching and He-Kung, who are to enjoin it also on Wan. Respect this.

"In obedience hereto, we, the ministers of the grand council, transmit the inclosed."\*

## ARTS AND SCIENCES.

### GEOGRAPHICAL SOCIETY.

SIR JOHN BARROW in the chair.—Two papers were read. The first was Capt. Alexander's report of his journey from Clan William, visit to Red Wall Bay and Orange River Mouth, and return to Kamiesberg, whence the letter is dated, Nov. 12, 1836. Though this communication does not contain much to interest the general reader, it bears ample testimony of the intrepidity and conciliatory manners of our gallant countryman; and we are happy to see, from an order, dated Head Quarters, Cape Town, Sept. 8, 1836, that the commander-in-chief had expressed his high sense of Capt. Alexander's meritorious services, as well in the field during the active operations of the last year, as since, in the duty of private secretary to the commander-in-chief, which he most assiduously

\* Sir Alexander Johnston, at the time he submitted these documents to the committee, stated, that the moral and political importance of the College of Malacca appears to him, from letters which he has received from various quarters in the East, to be so great, that he shall feel it his duty to lay before them several other documents upon that subject written by Sir George Staunton, to whose knowledge of China, and to whose munificent donations this college is so much indebted, together with such an account of the nature and objects of the institution, as may shew the British government the necessity of affording it the most efficient patronage.

discharged, and with equal judgment and ability. The second communication read was on that part of India watered by the Indus, and called Sinde. The paper is by that indefatigable and intelligent traveller, Lieut.—now, we are happy to learn—Capt. Burnes. We pass over the geographical distribution of the Sinde, its geological features, and its ancient history, and come to the more important—certainly more interesting—portion, that which relates to the present state of its people, their religion, politics, &c. The government of Sinde may be called despotic. Its rulers, the Ameers, are restrained by no laws, though they pretend to abide by the dicta of the Koran in their administration of justice. There are no officers, such as Cazees or Moollahs, who exercise, independent, their functions, or receive their patronage and encouragement. Syuds and Fakcers are, however, respected to veneration; the one, as being descended from the line of the prophet; the other, as following, or as pretending to follow, a life of great austerity. Many of the fakcers are, without doubt, virtuous men; but the great bulk are hypocritical fanatics. The universal respect shown to them seems to have corrupted the land. The mendicants in Sinde are more numerous than in any other country in Asia. They can scarcely be called beggars, for they levy tribute in crowds, and by threats, with great arrogance. Many of the common people take to this profitable vocation, which only requires some show of sanctity. This is exhibited in various ways: one of the most common is to sit all night on the house-top and repeat the sacred name of *Ullah* (or God) as many thousand times as the tongue can utter it. In Sinde, religion takes the worst possible turn. It does not soften the disposition of the rulers, or the asperities of the people; it becomes a trade, and its worthless professors degrade it and themselves. To this there is no counter-acting effect in the government, which, besides encouraging these worthies, is in itself politically oppressive. Trade and agriculture languish under it. The people have no stimulus to moral rectitude, and yet they are less degraded than might be looked for. They are passionate as well as proud. They have much supple flattery; but this does not deceive in Sinde. If trusted, the Sindian is honest; if believed, he is not false; if kindly treated, he is grateful. In oppression, the Mahomedan and the Hindoo appear to be pretty equal sharers. Without political freedom, and with misdirected religious zeal, Sinde cannot boast of the condition of its population. There is no intermediate class between the rulers, their favourite Syuds, and the common people. Some Hindoos are rich; but the mass of the people are poor. Their dress, subdued manners, and filth, all attest it. They have no education; few of them can read; very few write. In physical form they seem adapted for activity; the reverse is their character. Their faculties appear benumbed. Both sexes, Hindoo and Mahomedan, are addicted to "bang," an intoxicating drug made from hemp. They also drink a spirit distilled from rice and dates. Debauchery is universal; and the powers of man are often impaired in early life. They do not seek for other than gross and sensual amusements. People only congregate to visit the tombs of worthies or saints, who are deemed capable of repairing the wasted and decayed body, as well as the soul. They have few social qualifications, and, even in common life, keep up much formal ceremony. There are no healthful exercises among the peasantry, who,

as well as the grandees of the land, lead a life of sloth. To be fat is a distinction. A better government would meliorate the condition of this people: without it the Sindian and his country will continue in the hopeless and cheerless state here represented. Capt. Burnes reverses the observation of Montesquieu, and says that the mediocrity of their abilities and fortunes is fatal to their private happiness. The effect is also fatal to the public prosperity. It is unnecessary to state, that the sciences are not cultivated in Sinde. The arts, however, exhibit some taste and ingenuity. Leather is better prepared here than in any part of India, and their 'loomgees,' or silk-cotton cloths, are rich and beautiful; but the artisan receives no encouragement: the peasant has no reward for his toil. We were informed at the meeting, that Capt. Burnes was about to start on another mission to Cabool, to which he had been appointed by the governor-general, Lord Auckland.

### ZOOLOGICAL SOCIETY.

THE usual monthly meeting took place on Thursday afternoon, Mr. Hardisty in the chair. Four thousand seven hundred and fifty-nine persons visited the gardens and museum in February; and a considerable balance in favour of the Society was carried to the account for March. Mr. Yarrell liberally consented to officiate as secretary gratuitously; an assistant was appointed to Mr. Yarrell. We give the substance of a letter, addressed to the secretary by Mr. Mackay, the British vice-consul at Maracaibo, and a corresponding member of the society. The letter describes the habits of a vulture (*cultur papa*, Linn.), which was forwarded to the Society, for the menagerie, but which, unfortunately, died during the voyage. After noticing the peculiar habit attributed to these birds (which frequently congregate to the number of three hundred), of paying deference to an individual, differing from the rest in plumage, and to which the inhabitants give the title of king, the writer states, that these birds in their flights ascend to such a height as to be lost sight of, and from their elevation discover their prey. They reside in the savannas of a warm and dry temperature, and their travels do not extend beyond five or six leagues from the place where they are bred. They lay their eggs, and hatch their young, in the small concavities of the mountains. At a distance from towns, villages, and frequented roads, they generally assemble in large bodies; but in the immediate vicinity of such situations the king never deigns to associate with his vassals.—The following facts were related by Mr. Gray, in reference to the habits of a cuckoo; which appear to prove, that the female, though she leaves the eggs to be hatched by another bird, sometimes at least takes care of the young bird, and feeds it after it leaves its nest, and teaches it to fly. Mr. Gray expresses some doubt respecting the eggs of cuckoos being laid in the nest of granivorous birds; and stated an instance, where a chicken had been hatched under a pigeon, that the pigeon neglected it when it found that it would not eat the soaked peas, and, eventually, ejected it from the nest.

### BOTANICAL SOCIETY.

ON Thursday, Dr. Macreight, vice-president, in the chair, the minutes of the last meeting were read and confirmed. Donations of plants, from Dundee, &c., were presented by W. H. White, Esq. Some members were elected and others proposed. A paper was read by Mr. Meeson, on the "Classification of Vegetables,"

which led to an interesting discussion, after which the meeting adjourned for a fortnight.

#### MR. CROSSE'S DISCOVERIES.

Royal Institution, 2d March, 1837.

My dear Sir,—Several of the papers, in reporting what I said relative to Mr. Crosse's insects, at the Royal Institution, on the evening of Friday the 17th ult., make me to confirm that gentleman's results by particular experiments of my own. Your reporter (if then present) will know that I expressly said, we had no opinion to offer as to their origin. Can you oblige me by stating this in your *Gazette*, either in your words or mine, or in any way that shall remove the idea that I am a witness in the case? I am satisfied the insects exist, but doubt very much the mode of production.—Ever, dear Sir, very truly yours,  
M. FARADAY.

#### LITERARY AND LEARNED. UNIVERSITY INTELLIGENCE.

OXFORD, 23d February.—The following degrees were conferred:

*Bachelor in Divinity*.—Rev. E. J. Parker, Fellow of Pembroke College.

*Masters of Arts*.—Rev. L. P. Dykes, Taberner of Queen's College; E. Thornton, Student of Christ Church.

*Bachelors of Arts*.—J. Pennesfather, Balliol College; T. Hume, Brasenose College; H. R. Surtess, St. Mary Hall; Rev. R. Jackson, Pembroke College; Incorporated from Clare Hall, Cambridge.

CAMBRIDGE, 23d February.—The following degrees were conferred:

*Honorary Masters of Arts*.—Lord A. Hervy, Trinity College, sixth son of the Marquess of Bristol.

*Masters of Arts*.—A. L. Massingberd, Trinity College; W. Pullen, Queen's College.

*Bachelors of Arts*.—J. Blandy, Trinity College; F. L. Osler, Catharine Hall; H. T. Dowler, Magdalene College.

#### SOCIETY OF ANTIQUARIES.

THE Earl of Aberdeen in the chair.—Sir F. Palgrave communicated a drawing and description of a large engraved onyx, inserted in the cover of a MS. copy of the Gospels, presented by Charlemagne to the Monastery of St. Maximin, near Treves. Sir Henry Ellis communicated an account, or report, written in 1612, and preserved in the British Museum, on the Province of Connaught, the Irish chieftains, and principal families, and on the state of the harbours, which appear to have then been in a neglected and unprotected state: part of which being read, the remainder was postponed.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

*Monday*.—Entomological, 8 P.M.; Russell Institution, 8 P.M. (Mr. Goodby on Insect Anatomy with the Hydrogen Microscope; and 13th.)

*Tuesday*.—Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Lambeth Literary, 8 P.M. (Dr. Haslam on the Human Mind); Architectural Society (Room, by Mr. A. W. Hakevill).

*Wednesday*.—Society of Arts, 7½ P.M.; Geological, 8½ P.M.; London Institution, 8 P.M.; Graphic, 8 P.M.; Literary Fund (Annual Election), 3 P.M.; Literary Fund Club, 5½ P.M.; Medico-Botanical, 8 P.M.

*Thursday*.—Royal Society, 1½ P.M.; Antiquaries, 8 P.M.; Royal Society of Literature, 4 P.M.; Western Literary, 8½ (Dr. Lardner on Astronomy, and two ensuing Thursdays); Islington Literary (Mr. T. Cromwell on the Archeology of the British Islands); Royal Institution (Mr. Wilkinson on Bronze, and on various combinations of iron and steel, to produce the varieties called Damascus).

*Friday*.—Royal Astronomical, 8 P.M.; Royal Institution, 8½ P.M.

#### FINE ARTS.

##### BRITISH GALLERY.

[Fifth and concluding notice.]

261. *The Bombardment of Algiers by Lord Exmouth, painted for the Royal Hospital, Greenwich*. G. Chambers.—Battles by water, as well as by land, have undergone a great change in

the manner of their representation since the times of Serres, Paton, &c. They have now less of the geometrical, and more of the picturesque. As a work of art, this does great credit to the talents of Mr. Chambers. It reminds us of the destructive effects of the "Leviathans afloat," described by the poet as "like a hurricane eclipse of the sun." Perhaps there never was a warlike enterprise, the results of which were so gratifying to humanity as the bombardment of Algiers.—234. *An American Packet running for Swansea Harbour*, by the same artist, is one of those spirited examples in marine art which convey a perfect idea of motion.

398. *Venice*. J. Holland.—We do not think the quotation from Byron at all applicable to this enchanting scene, this fairy vision of animation and gaiety. There is no indication that the dethroned queen of the Adriatic, however she may have abated of the pomp of her regal days, is about to

"Sink, like a sea-weed, into whence she rose."

350. *Le Bonnet Rouge, in imitation of Téniers*. W. Kidd.—It is not judicious to provoke comparisons. Whatever may be the case in other respects, however, in humour and pathos Mr. Kidd excels the celebrated Flemish painter; as witness 363, *Mike Smith*, and 262, *The Wreck of a Slaver*.

346. *Scene on the Lake of Zurich*. A. G. Vickers.—It is but to look at the present performance, and to recollect others in which the talents of this able artist have been manifested, to join in the general regret that he should have so soon been snatched from us. His practice was, in every way, calculated to do credit to the British school.

438. *The Departure*. A. Johnston.—Represents a frequent occurrence in domestic life; although it does not always take place under circumstances of such striking and various interest. The picture is painted in a fine, broad, fluent style.

278. *The Fisherman's Proposal*. A. Fraser.—There is so much of honesty, manliness, and good temper, in the popper of the question, that no one can doubt it will be answered by the amiable monosyllable "yes." As a subject, the incident pleases the imagination; as a work of art, it pleases the eye.

263. *Fruit Piece*. G. Lance.—Of the painted fruit that deceived the birds, and is, therefore, recorded in the history of ancient art, we can know nothing; but it must have been extraordinary, indeed, if it could boast a more perfect resemblance to nature than is to be found in this and other works by Mr. Lance; or in 23, *Peaches*, and 24, *Mouse and Filberts*. A. J. Oliver, A.R.A.

138. *Trial of Rebecca*. H. Andrews.—With the exception of Shakspeare, no writer has furnished a greater number of subjects for the pencil than Scott. The trial of Rebecca, with its concomitant incidents and accessories, has been very successfully depicted by Mr. Andrews. The dungeon-like gloom of the vaulted chamber, and its characteristic architecture, accord with the transaction, and excite a powerful interest for the intended victim.

In further illustration of our observations on the diversity of style in the British school of landscape, we point out the following examples: 224. *The Ford—Break of Day*. F. C. Lewis.—348. *On the Coast of Wicklow*. T. Creswick.—245. *View on the Banks of the Thames, near Putney*. C. Deane.—51. *The Tuileries and Chamber of Deputies*, and 52. *Château de Versailles*. G. Hilditch.—251. *Distant View of*

*the Reguliers Church, from Herne Bay*. J. Tennant.—89. *Scene on the Rhine, between Dusseldorf and Nimeguen*. P. H. Rogers.—35. *A Scene on Walthamstow Heath*. C. R. Stanley.—55. *Entrance into Oxford, by High Street*. J. M. Ince.—84. *A Grove Scene*. E. Childe.—100. *A View of Syracuse*. W. Scrope.—175. *Scene near Borchurch, Isle of Wight*. F. W. Watts, &c. &c.

#### NEW PUBLICATIONS.

*Outlines to the Second Part of Goethe's Faust*: eleven plates designed and etched by Moritz Retzsch; with explanations in German and English. London, A. Schloss.

EVERY thing that proceeds from the pencil and etching-point of Retzsch must be full of powerful imagination. We confess, however, that we are not so much struck with his illustrations of the second part of Goethe's Faust as we were with those of the first. Nevertheless, they are deeply imbued with the wild, the wonderful, and the unearthly, not unmingled with grace and beauty. Of the former qualities, plates 4, 9, and 10; of the latter, plates 7 and 11, are striking specimens. Plate 6 is a remarkably fine composition.

#### SKETCHES.

##### METEOROLOGY.

To the Editor of the Literary Gazette.

3 Andover Terrace, Cheltenham,  
28th February, 1837.

SIR,—I regret to intrude on your valuable time; but, perceiving in your last a letter from Mr. Murphy, in which he points out fourteen periods of storms during this year, I beg to remark, that at nine of those periods I have predicted "storms" or "high winds;" and that on three others I have done so to within two days. I do not wish to imply that Mr. Murphy has borrowed my predictions, but I protest against the fulfilment of them, on those occasions, being taken as proof of Mr. M.'s theory: He will very likely be right on the 5th of March, as there is a square aspect on the night of the 4th between Saturn and Mercury; and the moon will pass the opposition of Mars and Jupiter, both of which tend to disturb the electricity of the atmosphere, and produce high winds. That this is the case, as regards the latter, you may see by a reference to the ten instances which have occurred within the last five months, during which Mars and Jupiter have been close together. You will see that this position of the moon has brought "high winds" eight times out of the ten, and "rain" eight times, also that the hurricane of the 29th November, the great snow on Christmas-day, and the remarkable electrical meteor on the 18th of February, all occurred on the very day of this aspect of the moon to those two planets.

If thoroughly examined, there will be found ample evidence to prove the principle for which I contend; but the application of the principle is another affair. The former may be perfectly true, but the mode of applying it still imperfect. The recent conjunction of the Sun with Herschel has been attended with remarkable increase of cold, as is always the case. The Sun passed Herschel on the 23d; and, from the 19th to the 25th, the minimum of the thermometer at Cheltenham fell ten degrees: I feel sure that your next *Gazette* will shew the like effect at Edmonton. The thermometer was very low here both on the 23d and 26th; on each day we had snow; and on Sunday, the 26th, hard frost: so far I was correct,—Yours, &c. R. P. MORRISON.

P. S.—Unfortunately your printer made three errors in your last observations on my prediction of the weather: for “Hercules,” read “Herschel;” for “the 24th,” read “the 26th;” and for “flooding rains to the end,” read “at the end.”

*Account of the Weather on each occasion of the Moon passing the Conjunction or Opposition of Mars and Jupiter, since those Planets have been in conjunction.*  
1836.

Oct. 18. (Opposition.)—Heavy rain.  
Nov. 3. (Conjunction.)—Heavy rain and sleet.  
16. (Opp.)—High wind; heavy rain.  
29. (Conj.)—Heavy rain; violent hurricane.  
Dec. 12. (Opp.)—High wind; heavy rain.  
26. (Conj.)—High wind; great snow, all over England, France, &c.  
1837.  
Jan. 9. (Opp.)—High wind; rain.  
22. (Conj.)—High wind; heavy rain.  
Feb. 5. (Opp.)—High wind at times.  
18. (Conj.)—High wind; heavy rain; remarkable meteor at night; violent storm next day.

## DRAMA.

*Opera.*—The opera opened on Saturday with Bellini's *Norma*; the cast is so very inferior to that of last season that to compare would be odious. The only change for the better was Catone vice Winter. The great attraction is the new ballet, which is one of the most beautiful we have ever witnessed; it is founded on *Fra Diavolo*, and called the *Brigand of Terracina*, the story being almost the same. Some of the new dancers are most graceful, and the *corps de ballet* is very strong. Duvernay ranks first: she is enchanting as ever, and two of her new dances are perfectly exquisite. Herminie Elsler, a first appearance, is a beautiful danseuse, and, in the more rapid movements, unrivalled. Montessa is a droll-looking little thing, but a very pretty dancer, notwithstanding. Others are good, and will be found very serviceable; and the *ballet* is likely to be the magnet till Easter. The *Brigand* is got up in a manner worthy the King's Theatre, in scenery, dresses, &c. &c. The house was filled in every part.

*Drury Lane.*—Mr. John Barnett's long-expected opera, *Fair Rosamond*, was produced on Tuesday, with, we regret to say, but indifferent effect. By it Mr. Barnett has ranked himself among the able composers of the age, for the music is well constructed and original; but the piece is wondrous long and wondrous heavy. There is a total want of popular relief; and, though musicians may admire, the public cannot. The libretto is below contempt, and the poetry—oh, such poetry! angels could make nothing agreeable of it. H. Phillips and Miss E. Romer, and, indeed, the whole cast embracing the operatic strength of the company, did their utmost, but the end was weariness and dulness.

\* And here issue is joined. Saturday, the 25th, was bitterly cold, with touches of snow and hail; Sunday was a fine, clear, frosty day; Monday was colder, but still clear; and Tuesday, clear and frosty, but not so cold. Where, then, were “the flooding rains at the end?” At the commencement “of March, too,” cold rains or sleet are predicted; and, up to this date, Friday, 3d, during the little rain which has fallen, the temperature has been increased. To-morrow, Saturday, however, is the prominent 4th, when both Lieut. Murphy and Lieut. Morrison agree there will be a climax. The Meteorological Almanack of the latter says, “About the 4th, very severe cold—easterly winds, with snow, and frosty weather. The new moon (6th) brings cold unsettled weather, with sudden changes. The night of the 7th, the Sun aspects Saturn, which produces much cold. A change, as the Moon enters Aries that night: I expect a sharp frost. 10th and 11th, high winds; changeable.” At any rate, all this is distinct and particular enough; and the time is immediate and short wherein to try the truth of these new (no, not new, but, on other data, renewed) principles of meteorology. Should they prove correct, what horrid injustice will have been done, by the Utilitarians, to Francis Moore, Physician, and his prophetic, heirs, excoctors, and assigns, in the publishing line!—Ed. L. G.

## VARIETIES.

*Ashmolean Society.*—Professor White read a paper on Saxon coins. A letter was read from the Rev. James Clutterbuck, detailing the particulars of the locality in which an ancient shield, and some fragments of pottery, both of which were exhibited to the Society, were found. The shield was found in the pool below Day's Lock, near Dorchester, in the gravel below the bottom of the river, on what appeared to have been an ancient bed of the river; and near which, if not exactly on the spot, it appears that a ford formerly existed. There were a Roman station and entrenchments on Sinodun Hill, which is very near. The pottery was some of it found on the surface of the ground, and some in a stratum of gravel, three or four feet below the surface. The shield is 14 inches by 13, and has its surface, with round bosses, arranged in concentric circles, with a large boss in the centre. The metal is, probably, a mixture of copper and tin. Mr. Duncan, and the President of Trinity, spoke on the subject. The former shewed some prints of shields resembling that found, and the latter thought that the workmanship was too rude for the shield to have been a genuine Roman shield. Two papers were read on the subject of the luminous arch seen on Saturday evening, February 18th. Dr. Daubeny read an account, from Mr. Tancred, of an aurora that was seen over a great part of France and the north of Italy, on the 18th of October last. He also shewed a very delicate instrument for measuring very minute variations in temperature.

—*Oxford Herald.*

*The Pictorial History of England, No. I. (C. Knight).*—This appears to be a history similar, in printing, embellishment, and publication, to the Pictorial Bible, and to be illustrated with numerous woodcuts. The first is a fair specimen; but we will wait a few Nos., in order to ascertain what is meant by the announcement of the work, as “being a history of the people as well as a history of a kingdom;” which, we confess, these eighty pages do not enable us to comprehend. Perhaps, referring to so early a period, they could not differ from other histories.

*Pickwick, No. XII.* is really so good a No. that we must pay the unfortunate hero a consolatory tribute, on his being cast in heavy damages for breach of promise of marriage. The trial is one of the happiest of Mr. Dickens' efforts, and, though most humorous, no caricature of the mode of getting up cases, badgering witnesses, cajoling and misleading juries, and administering (Heaven save the mark!) the laws of the land. This would have been quite enough for one publication; but to have a characteristic *Vellarian* Valentine burlesque, and a ludicrously laughable Temperance Branch Society meeting, in the same fasciculus, is a triumph even for Boz.

*Bentley's Miscellany.*—“*Oliver Twist*,” in No. III., is a marvellously proper continuation of the lot of a workhouse orphan, and does as much honour to the feelings as to the descriptive talents of Boz. Several others of the contributions are very original, and we rejoice to see those of humour sustained by narratives of more solid, and not less entertaining character. On the whole, the *Miscellany* may now be reckoned fairly in the field, among the most successful of its elder contemporaries.

## LITERARY NOVELTIES.

In the Press.

Sketches in the Pyrenees, by the Author of “Slight Reminiscences of the Rhine,” “The Gossip's Week,”

&c.—Colloquies on Religion and Religious Education, by the Author of “Hampton in the Nineteenth Century,” being a supplement to that Work.

## LIST OF NEW BOOKS.

Number of days of rain and snow, 22.  
Quantity of rain and melted snow, in inches and decimals, 3.28125.

Winds.—5 North-East—0 East—7 South-East—4 South—5 South-West—2 West—7 North-West—1 North.

*General Observations.*—During the last thirteen years the thermometer has never before reached to 58 degrees, and only twice in that time, viz. in 1828 and in 1834, has the mean temperature been so high, and only in those years has there been so much rain and melted snow; this proves that humidity and warmth attend each other even at this season of the year. The range of the barometer was small, and the mean was very nearly the same as in the corresponding month of last year; the extreme of cold happened on the night of the 1st, as it did on the night of the 1st of January last year. Snow fell on five different days, but the whole quantity was very little; but once covering the ground to the depth of a quarter of an inch, which soon melted away. At 10 P.M. on the 23d, the thermometer, which stood at 51° at 3 P.M. had risen to 58°, when the whole atmosphere had the appearance of steam, the minimum of the night was 47°.

## TO CORRESPONDENTS.

\* \* We beg to refer our readers to the remarkable document relative to China in a preceding page. It involves the initiation of the greatest change in Chinese policy which has been heard of for a thousand years; and, we trust, shews that education is about to penetrate even that sealed empire, and lead to its moral and social improvement in an unexpected and wonderful degree.

Sir A. Brooke Faulkner's “Details of a Tour through France, Switzerland, and Italy,” and Campbell's “Letters from the South,” reached us too late for notice this week.  
ERRATA.—In last week's *Gazette*, p. 128, col. 2, line 24 from bottom, for “mass,” read “map;” and in same col. line 20 from bottom, for “Anthoninus,” read “Antoninus.”

## ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION,  
FALL MAIL.

The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admittance, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

## PUBLIC LIBRARY, CONDUIT STREET.

**FAMILIES and BOOK SOCIETIES**  
Furnished with all New Works for Personal, by a moderate Yearly, Half-yearly, or Quarterly Subscription; and, in order to reduce the expense of carriage, families resident in the same neighbourhood may unite in a single subscription. Supplies of Books are forwarded monthly or more frequently, if desired.

An extensive Publishing Business, chiefly devoted to the productions of the most popular Authors, conducted at this Establishment, gives peculiar advantages to Subscribers who are desirous of obtaining New Books.

Terms, and List of New Publications (gratis), are forwarded as a single letter, on application, post-paid, to Messrs. Saunders and Okey, Library, Conduit Street, Hanover Square.

## LODGE'S PORTRAITS.—This day is published, the First Part of the new edition of this celebrated Work, containing the following Portraits and Memoirs:

Wentworth, Earl of Stratford,  
Charles James Fox,  
Thomas Stanley, First Earl of Derby,  
Queen Anne Bullen,  
Ceil Lord Bury,  
Henry Fox, Lord Holland.

The First Number is also published, containing the three first-mentioned Portraits.

Price of the Parts, 5s. plain, 8s. India; and of the Numbers, 3s. 6d. plain, 4s. India.

London: Published by William Smith, 1 Bouverie Street, and sold by all Booksellers.

## MUSIC.

## VOCAL CONCERTS.—

The Members of the Vocal Society have the satisfaction to announce, that their Royal Patroness, the Duchess of Kent, has been graciously pleased to signify her intention of honouring their Fifth Concert, on Monday Evening next, with her presence. The Selection will comprise the Anthem, "My heart is inditing," Handel; "Alma Virgo," Mozart; "Praise Jehovah," Mozart; Chorus, "O! the pleasures," Handel; Glees, by Webbe, Calcott, R. Cooke, and E. Taylor; and Madrigals, by Wilbye and Morley.

Single Admissions, Half-a-Guinea each, may be obtained of the Members of the Society.  
3 Regent Square.

EDWARD TAYLOR, Secretary.

## SALES BY AUCTION.

SOUTHGATES' ROOMS.

## Very Extensive Circulating Library.

HALL. A new edition, revised and corrected, with considerable Additions. Vol. I. handsomely printed in demy 8vo. with a beautiful Portrait, price 12s. is now ready, and a volume will be published every succeeding Month, till the work be completed.

D. A. Talboys, Publisher, Oxford, and 1 Bouverie Street, London.

On Monday next, in 1 vol. 8vo.

## A General History of the Civilisation of

Europe, from the Fall of the Roman Empire to the French Revolution: From the French of M. Guizot, Professor of History, and Minister of Public Instruction in France.

## GUIDO SORELLI'S NEW WORK.

An English edition, now ready, of

## CONFESSIONS to SILVIO PELLICO.

By GUIDO SORELLI,

Professor of Logic, &amp;c.

"We rise from the perusal of the narrative with the conviction, that Guido Sorelli is a man of talent and sincerity, and that he has given us a faithful record of his experience."—*The Christian Advocate*.

"Sorelli's life is both curious and interesting; and there is, throughout his work, much matter to attract the attention of the general reader, merely for information and amusement."—*Literary Gazette*.

"The principal interest of this volume will be found in the perfect candour and unsuspecting frankness with which Guido Sorelli lays before the reader the history of his own mind; and the openness with which every imperfection in disposition, as well as every mistake in judgment, is presented for the purposes of instruction and warning. By the avowal of his present sentiments, Signor Sorelli, perhaps, justly apprehends that he has forfeited the esteem of those dearest to him—the affection of near relatives, and the regard of sincere friends. We trust, that, in the country of his adoption, and amidst the society to which he is now united, by a tie more sacred than even that of relationship itself, he will find, if not an equivalent source of satisfaction, at least a compensation, in some degree, for the sacrifice he has not shrunk from encountering, by his open and conscientious avowal of the important change in his religious opinions. We must not forget to add, that Guido Sorelli has an additional claim to the respect of English readers, as the translator of 'Paradise Lost'; and that the indications of a mind of no ordinary powers are evident throughout his most recent work."—*New Monthly Magazine*.

"The 'Confessions' are full of interest, and will be read with avidity."—*Sunday Times*.

"These 'Confessions' lay bare the whole nature of the writer, and present at once his intellectual and moral portrait. In both respects Guido Sorelli claims to be highly regarded."—*Court Journal*.

Printed for the Author, 18 Piccadilly: P. Roland, 30 Berners Street; and Simpkin and Marshall, Stationers' Hall Court.

8 St. James's Square.

II.

Sketches by "Boz"; the Second Series, complete in 1 vol. Second Edition.

Contents: Doctor's Commons Mr. John Bounce's Attachment Vauxhall Night of it Criminal Courts Scotland Yard The New Year Meditations in Monmouth Street Cext-door Neighbours The Hospital Patient Seven Dials The Mistaken Milliner

With Twelve Plates by George Cruikshank. "We cannot too strongly recommend these facetious works. They are perfect pictures of the morals, manners, and habits of a great portion of English society. It is hardly possible to conceive a more pleasant reading miscellany—delightful from the abundance of its sly humour, and instructive in every chapter. Taken altogether, we have rarely met with works that have pleased us more, and we know that our taste is always that of the public."—*Metropolitan Magazine*.

Price 2s. 6d.

## ON the SONNETS of SHAKESPEARE,

identifying the Person to whom they are addressed; and elucidating several Points in the Poet's History.

By JAMES HODGKIN, Esq.

T. Rodd, 2 Great Newport Street.

## THE EDINBURGH JOURNAL OF NATURAL HISTORY, and of the Physical Sciences,

with the Animal Kingdom of Baron Cuvier; containing elegantly coloured Plates of Elephants and Tanners.

This work commenced in October 1825, and a Number has appeared regularly on the first day of each Month, containing, on an average, Twelve beautifully coloured Plates.

The Public are respectfully informed, that the former Conductor of this work having retired, it is now under the management of

WILLIAM MACGILLIVRAY, A.M.

Conservator of the Museum of the Royal College of Surgeons, Edinburgh; Fellow of the Royal Society of Edinburgh; Member of the Wernerian Natural History Society; of the Academy of Natural Sciences of Philadelphia, &c. &c.

The Translation and Additions to the "Régne Animal," of the Baron Cuvier, are continued by the same Correspondent formerly.

"The very choicest and most splendid work published in numbers that even this age can boast of."—*Metropolitan Magazine*.

"We recommend its introduction in schools and families, where knowledge is sought, but where enjoyment is also essential."—*New Monthly Magazine*.

"An important and valuable work."—*Felix Farley's Bristol Journal*.

"The very first work of its kind, both in its composition and leading features."—*Edinburgh Evening Post*.

Smith, Elder, and Co. Cornhill.

## FRASER'S MAGAZINE unquestionably now takes the lead as the Protestant Magazine; and is entitled to the peculiar patronage of all Conservatives and faithful Protestants."—From the Standard.

The March Number was published on Tuesday last, and contains

Greek Comedy—Aristophanes Citharæa Memorabilia. By Nim-Whigs and Tories of Old Times rod  
Coffee and Crumpets. By Blue Friar Pleasantry. No. II. Play-going Days.

A second edition of the January Number is now ready, and those who desire to avail themselves of the New Year for commencing this Periodical, are requested to send their orders immediately to 215 Regent Street, or to their respective Booksellers.

Mr. Valpy has just published, in 7 vols. 8vo. price 3*l.* 13*s.* 6*d.*

## THE HISTORY OF ENGLAND,

From George II. to William IV.—1760 to 1836.

By the Rev. T. S. HUGHES, B.D. Prebendary of Peterborough.

This work is intended to range (both in size and type) with the various octavo editions of Hume and Smollett, to which it forms a Continuation to the present time.

"This continuation has been impartially done, even well done. It is the best History of England extant."—*Metropolitan Magazine*.

"Mr. Hughes's undertaking was one of no mean difficulty: he has, however, executed his task in a way honourable to his understanding and his industry, and the result is an impartial and critical history of one of the most important epochs of ancient or modern times."—*Monthly Magazine*.

Printed and published by Valpy; and sold by all Booksellers.

**FLITTINGS OF FANCY.**

By ROBERT SULLIVAN, Esq. 2 vols. post 8vo.

*"Productions of striking grace, tenderness, and romantic interest."*—*Court Journal*.**WALPOLE'S CORRESPONDENCE WITH  
GEORGE MONTAGU, &c.**During a Period of Sixty-two Years; forming a Companion to Walpole's Letters to Horace Mann.  
In 3 vols. 8vo. with numerous curious Illustrative Notes, now first added, and a Portrait.**CAPTAIN SCOTT'S EGYPT AND CANDIA.**

With Details of the Military Power and Resources of those Countries, and Observations on the Government, Policy, and Commercial System of Mohammed Ali.

In 2 vols. 8vo. with Plates.

*"One of the most sterling publications of the season."*—*Naval and Military Gazette*.

The second edition of

**MRS. ARMYTAGE; or, Female Domination.**

By the Authoress of "Mothers and Daughters."

*Now in regular course of publication,*

To be completed in Sixteen Monthly Parts, commencing March 1st, price 4s. 6d. each, a small paper edition of

**MR. BURKE'S HISTORY OF THE LANDED GENTRY,  
OR COMMONERS OF GREAT BRITAIN AND IRELAND.**

COMPRISING ACCOUNTS OF ALL THE EMINENT FAMILIES IN THE UNITED KINGDOM,

And of upwards of 100,000 Individuals connected with them: illustrated with the Armorial Bearings of each Family, Portraits, &amp;c.; forming a desirable

Companion to "The Peerage and Baronetage." This important work has been undertaken by Mr. Burke as a Sequel to his well-known and established "Dictionary of the Peerage and Baronetage of the United Kingdom," and upon a somewhat similar plan; in order that, when completed, the two publications may embrace the whole body of the British Peerage, Baronetage, and Gentry, and may furnish such a mass of authentic information, in regard to all the principal Families in the Kingdom, as has never before been brought together.

**MR. BURKE'S NEW PEERAGE AND BARONETAGE,**

For 1837, is now ready.

This new and beautiful edition is printed in a single volume, on a new plan (the arms incorporated with the text), and comprises a quantity of matter equal to no less than thirty ordinary volumes, price 38s. bound. It contains all the recent creations, and also many new and important particulars, from the communications made to the author by almost every noble family in the kingdom, and includes all the collateral branches of the various families; thus rendering it altogether the most complete, the most convenient, and, at the same time, the cheapest work of the kind ever presented to the Public.

EMBELLISHED WITH A PORTRAIT OF MRS. GORE.

THE MARCH NUMBER OF

**COLBURN'S NEW MONTHLY MAGAZINE  
AND HUMORIST,**

Edited by THEODORE HOOK, Esq.

Contains, among other Articles—

The Gurney Papers, No. III. By Theodore Hook, Esq.  
The Phantom Ship. By Captain Marryat  
Scenes in a Country House. By the Hon. E. Phipps  
Lady Imogen Ravensgold's Romance. By N. P. Willis, Esq.  
The Widow and her Son's Betrothed. By the Hon. Mrs. Norton  
Third Epistle from the Grand Kentucky Balloons. By One of the Authors of "The Rejected Addresses"  
The Times We Live in

Opening of the Little Poddington Theatre. By the Author of "Paul Pry"  
Mr. Peppercorn at Home. By Douglas Jerrold, Esq.  
Modern Town Houses. By Captain Marryat  
The Two Dogs, or the Pet and the Fag. By Alfred Crowquill  
Jack Abbott's Breakfast. By Leigh Hunt, Esq.  
Conversations on the Literature of the Month  
Memoir of Mrs. C. Gore, Authoress of "Female Domination," &c. &c.

Mr. Colburn has the pleasure of informing the readers of this Magazine, that he has made an arrangement with Captain Marryat, by which he has entirely secured to the New Monthly, after the 1st of May next, the Contributions of that popular Writer.

N.B. New editions of the January and February Numbers are now ready for delivery; and those who desire to commence this Magazine with the New Year are requested to forward their orders, without delay, to any Bookseller.

**THE BEST AND CHEAPEST NAVAL HISTORY.**

Now complete, in 2 thick vols. 8vo. bound, price only 31s. 6d.

**CAPTAIN BRENTON'S NAVAL HISTORY OF  
GREAT BRITAIN,**

From Official Documents and other Authentic Sources.

Dedicated, by permission, to His Majesty; and illustrated with beautiful Portraits of

The King	Lord Exmouth
Lord Howe	Sir E. Codrington
Lord Duncan	Lord Collingwood
Sir J. Duckworth	Sir G. Cockburn
Sir Sidney Smith	Sir J. Saumarez
Sir C. M. Pole	Sir D. Milne
Earl St. Vincent	Admiral Rainier
Lord Nelson	Sir A. Cochrane,

And the Author; and Engravings of Plans of Battles, Views, &amp;c.

**HENRIETTA TEMPLE;**

A LOVE STORY.

By the Author of "Vivian Grey." 2d edition, 3 vols. post 8vo.

*"Henrietta Temple" is a splendid creation. The author has woven a spell over the story, by which criticism is wholly overpowered. This love story is, indeed, a powerful appeal to the sympathies and passions of our nature."*—*Evening Post*.*Preparing for immediate publication:—***MEMOIRS OF A PEERESS;**

OR, THE DAYS OF FOX.

Edited by the LADY CHARLOTTE BURY. 3 vols.

**SOUVENIRS of a SUMMER in GERMANY.**

In 2 vols. post 8vo.

**THE HUSSAR.**

By the Author of "The Subaltern."

In 2 vols. post 8vo.

**HUMAN LIFE.**

By the Author of "Tremaine," and "De Vere." 3 vols.

**THE CITY OF THE SULTAN.**

By Miss PARDOE, Authoress of "Traits and Traditions of Portugal."

In 2 vols. 8vo. with Plates.

**GENTLEMAN JACK; a Naval Story.**

By the Author of "Cavendish."

In 3 vols. post 8vo.

#### REVIEW OF NEW BOOKS.

*Napoleon in Council; or, the Opinions delivered by Buonaparte in the Council of State.* Translated from the French of Baron Pelet (de la Lozère), Member of the Chamber of Deputies, and late Minister of Public Instruction, by Captain Basil Hall, R.N. 12mo. pp. 334. Edinburgh, 1837. Cadell; London, Whittaker and Co.

THERE is nothing connected with the history of Buonaparte which can fail to attract public curiosity and interest; and we are indebted to Captain Hall for laying before us the traits developed in this volume. He himself describes it so well as to save us the trouble of analysis.

"I have been induced," he states, "to bring this work before the English public, from a belief that it contains not only a good deal that is interesting and characteristic, but, probably, something which is new respecting Napoleon. From an intimate personal acquaintance with the author, Monsieur Pelet (de la Lozère), I feel thoroughly persuaded that the whole is written in good faith, and that every incident or conversation here recorded is perfectly authentic. The subject, it may, perhaps, be thought, is well nigh worn out; but, as there can be no doubt that many parts of it have hitherto been mystified—some by design, and some unintentionally—it occurred to me that a trustworthy statement, coming from a person who has enjoyed peculiar advantages for ascertaining the truth, might still be considered acceptable. M. Pelet's means of obtaining information arose from his having occupied high and confidential situations; first, under the consulate and the empire, afterwards, during the restoration, and, more recently, under the present government of France: while his rank in society, his talents, and his habits of business, enabled him to profit by the ample opportunities which a position so advantageous gave him, during these successive political epochs. Under Napoleon, the author was long a member of the council of state, and administrator of the royal forests of the civil list; both of which situations brought him frequently in contact with the head of the government. During the restoration, he enjoyed the title of councillor of state; and for four years was Prefect of the Loire and Cher, of which department he was elected a deputy in 1827, a seat which he has occupied up to this time. Since the accession of Louis Philippe to the throne, he has been vice-president of the chamber of deputies; and, for some time, held the important office of minister of public instruction. Finally, by his marriage with the daughter of M. Otto (who, it may be remembered, negotiated the preliminaries of the treaty of Amiens, and afterwards filled various high diplomatic situations on the Continent), M. Pelet came into the possession of many valuable official documents, several of which, so far as I know, are now for the first time laid before the public."

Such are the claims of this work upon the attention of readers; and the author observes:—

"There is, I believe, only one writer, a distinguished member of the council of state, who has published the opinions of Napoleon as

he actually gave them utterance in the council, at the very moment of action, and while the business to which they related was going on. But that author ceased to be a member of the council of state in 1803, and could not, therefore, continue his notes. My purpose is, to continue the work just alluded to, first, by help of memoranda, made up to 1806 by a hand in which I have perfect confidence, and, afterwards, by means of those taken by myself."

The account of the Council itself, its constitution, members, and modes of proceeding, is not the least remarkable part of this volume; but it will better suit our purpose to offer some specimens of its contents, than to examine the various subjects discussed by this Napoleon-chamber, where his personal presidency left but little of freedom for debate, or appetite for opposition. A few features of the assembly and its proceedings must suffice.

"When Chénier, accordingly, as the head of a commission from the Institute, read to the emperor a report on the decennial prizes, and took occasion to mention the names of many distinguished persons belonging to different parties, who had been swallowed up by the revolution,—the Baillys, the Lavoisiers, the Vergniauds, and the Gensonnés, he said, with perfect truth, that if they had outlived the hurricane, they would now have filled the seats round the emperor, and laboured with him to reconstruct the shattered fabric of society. Chénier, himself pale and trembling, and deeply marked with the traces of the passions by which he had been shaken, presented a living monument of those stormy times, which he had survived not without the greatest difficulty. There was something not a little dramatic, and even touching, in the old man's appeal to the shades of those men, many of whom had taken different lines from himself, but whom he would have ranged as supporters of the new throne, which had risen out of their discords. The most laborious periods of the council of state were during the consulate, and during the first years of the empire. Then were framed the codes—the laws—the decrees, and the regulations, which constituted the new administration of the country, and under which we still live. Napoleon, when first consul, presided sometimes at the meetings of the sections, from ten o'clock in the evening till five in the morning. He then took a bath, after which he was soon ready to recommence work. In speaking of this practice, he said, 'One hour in the bath is worth four hours of sleep to me.' This restless activity, which he exhibited in his own person, he exacted from all those whom he called to his aid.

"It may be asked, 'what impression will be produced on the reader's mind by the documents I here lay before him? what opinion will be formed of Napoleon, and his system of administration, by the observations made by him in the council of state?' The reply is that, unquestionably, the same opinion which the public have already formed will be thereby confirmed. They will recognise in Napoleon's character a mixture of impetuosity and trickery, half French, half Italian, but in which impetuosity predominated; while it was modified

by such a decided bearing towards absolute power, that it could not fail, on the one hand, to deaden all the internal energies of his country, and, on the other, eventually to rouse foreign nations into resistance. At the period when Napoleon came to the possession of power, he found himself placed in the most favourable circumstances possible to establish the union of freedom with the monarchical authority. France, in fact, dreaded nothing so much as anarchy, and would have been contented with a very reasonable allowance of freedom. But, unfortunately, that is always the predicament in which despotism is the most tempted to establish itself. Napoleon, accordingly, did establish a despotism; and, in the dread of having to combat republican tendencies at home, he carried abroad all the active spirits of the nation, and precipitated himself into a series of wars and conquests, which could have no other end but a fatal catastrophe. Even he himself was possessed with the notion that he could found nothing permanent. In full council he exclaimed one day,—'All this will last as long as I hold out; but, when I am gone, my son may call himself a lucky fellow if he has a couple of thousands a-year.'"

After the rupture of the peace of Amiens, the projected invasion of England became a council business. M. Pelet says,—

"Napoleon now resumed his intention of invading England; or, at all events, his demonstrations,—for it is still a question whether or not he ever seriously meditated this enterprise. He gave directions for publishing accounts of all the past invasions of a similar nature—not forgetting those of Julius Caesar and William the Conqueror, whose success appeared to furnish an example for imitation; and, as flat-bottomed boats and pinnaces were constructed every where—even in the wood-yards of Paris—the harbours of the Channel were soon crowded with vessels of all sizes and sorts. In a short space of time there were brought together in the ports of Boulogne, Etaples, Vimereaux, and Ambleteuse, two hundred and fifty sloops, each armed with three guns, six hundred and fifty gun-boats or pinnaces with one gun each, and a great number of praams carrying six guns a-piece. There were, moreover, assembled in these ports seven or eight hundred transports laden with artillery and other stores. It was reckoned that two thousand other vessels would be got together, and about forty thousand troops embarked at these points, while other twenty thousand were to start from Ostend, and as many more from Holland. These eighty thousand men, it was asserted, if once landed in England, would be sufficient to conquer the country and establish themselves in the first instance, while the army of Brest formed the reserve. At Boulogne, especially, the greatest efforts were made. In the department of the Marine alone there were expended upwards of a hundred thousand pounds sterling a-month, without taking the wages of the people into account. The soldiers employed in the works received the high pay of from a shilling to eighteenpence a-day. A mass of artillery, twice as great as was required

to equip the flotilla, was collected together; and new forts, constructed on every accessible point of the coast, impeded the attempts of the English to land: and though these batteries were washed away more than once by the violence of the waves, they were instantly built up again.

"To these encouraging speculations was added the assurance that the Rochfort and Toulon fleets, starting ostensibly for India, and having drawn off the English ships, would suddenly double upon them, and return to the Channel to cover our passage across. The more wonderful these wild combinations really were, the more they pleased the fancy and raised the spirits of the troops; who readily believed that the grand secret of this invasion was found out by their chief, to whose genius nothing, they firmly believed, was impossible. So that every individual soldier indulged himself confidently in anticipated glory and fortune! In the meantime, some small experiments were made, the result of which was by no means flattering. A flotilla of six-and-thirty sail, which proceeded from Havre to join the main force at Boulogne, perished by the way; and another, which set sail with a similar intention from Dunkirk, fell in with the English and lost many of their number. Nevertheless, these accidents caused no despondency, and every thing was speedily got ready at Boulogne."

The death of the Duke d'Enghien was another affair under the cognisance of the Council; and Buonaparte, among other remarks, is reported as saying, —

"The population of Paris," exclaimed he, "is a collection of blackheads (*un ramas de badands*), who believe the most absurd reports. Did they not take it into their heads to assert that the princes were concealed in the Austrian ambassador's house? — as if I did not dare to seek for them in that asylum! Are we, then, in Athens, where criminals cannot be followed into the temple of Minerva? Was not the Marquis of Bedmar arrested in his own house by the Venetian senate? and would he not have been hanged but for the dread of the power of Spain? Were the rights of nations respected at Vienna in the case of our ambassador, Bernadotte, when the national flag, hoisted over the very house of embassy, was insulted by a crowd, who threatened to pull it down? I respect the decisions of public opinion when they are justly formed; but it has its caprices, which we ought to learn to despise. It belongs to the government, and to those who support it, to enlighten the public — not to follow them in their wanderings. I carry with me the will of the nation, and have at my back an army of five hundred thousand men — with which I know how to make the republic be treated with respect. If I had chosen to do so, I might have put the Duke d'Enghien to death publicly; and, if I did not, it was not from any fear of the consequences: it was in order to prevent the secret partisans of that family from exposing themselves, and thus being ruined. They are now quiet, and it is all I ask of them. I don't investigate the hearts of men to discover their secret sorrows. No complaints have been laid before me against the emigrants included in the amnesty; they were counted as nothing in this conspiracy; it was not with them that Georges or the Polignacs found refuge, but with women of the town and other reprobates of Paris. I have no thoughts of returning to promiscuous *en masse*; and those who affect to believe so know it to be untrue. But let those look so

themselves who take an individual share in such proceedings: they shall smart for it severely."

The dramatic and aristocratic, or rather Bourbon-royal (for the precedent of Louis XVI. and the unfortunate Marie Antoinette is followed) provisions for the journey of Maria Louisa from Vienna to Paris are whimsical illustrations of human life; but we shall conclude with a specimen or two. Thus, on education, &c. :—

"At the sitting of the 11th March, 1806, he made the following observations on these topics. 'In framing the body of instructors, we must imitate the subordination observed in military ranks. I wish, above all things, to establish a corporate body of teachers, because a corporation never dies. The military school at Fontainebleau goes on capitally at the moment, because there is a good governor at its head; but this prosperity is merely transient. People need not be afraid that I shall establish monks. I should not succeed even if I wished it, especially if I required of them a life of celibacy at the age of twenty-one! Even in M. de Choiseul's time, the monks could not muster recruits, although his decree held out many advantages to them. His religious establishments for instruction were not, in fact, instituted in that view, but on the principle of renouncing the world, in order to obtain the distinction which belonged to this sacrifice. The monks were the pope's militia, who owned no other sovereign; and, consequently, they were more to be dreaded than the secular clergy, who, but for the monks, would never have caused any embarrassment. Every one knows the scandalous excesses which were carried on by the monks; and I can myself form a good estimate on that subject, as I was for some time brought up by them. I respect all which religion respects; but as a statesman, I cannot esteem the fanaticism of celibacy, which was a mere device adopted by the court of Rome for riveting the chains of Europe, by preventing the religious orders from becoming citizens. The military fanaticism is the only one which is of any use to me, as it makes men indifferent to death. After all, my chief object in establishing a body of instructors is, that I may possess the means of directing the political and moral opinions of the community. Such an institution will prove a guarantee against the re-establishment of the monks, and I shall hear no more on that subject; but if the institution I speak of be not formed, the monks will be back upon us some day. For my part, I should certainly prefer trusting the public education to a religious order than to leave it as it is at present: but I wish to have neither.' At the sitting of the 20th March, 1806, he remarked: 'It strikes me, that the corps of instructors may consist of about ten thousand persons, and it seems essential that the members of the university — since that is to be its name — shall have the exclusive right of teaching, and that they shall be sworn in. Eight hundred thousand, or a million of francs (30,000*l.* or 40,000*l.*), will be sufficient to cover the expenses of the proposed corporation. We must take care that the young men be not brought up either too bigoted or too sceptical; they ought, in short, to conform to the state of the nation and of society. It is worthy of remark, that education, at its commencement, has always been connected with religious notions. My habitual reading,' continued Napoleon, 'on going to bed, is that of the old chronicles of the 3d, 4th, 5th, and 6th centuries. I either read them myself, or have them translated for me. Nothing is more curious, nor less known, than

the step from ancient to modern manners, and the transition from the old states to the new ones founded on their ruins. We take upon us to suppose, for example, that the ancient Gauls were barbarians: but this is a great mistake; for they were the real barbarians who carried barbarism amongst them."

On the press:—

"The liberty of the press and the Emperor Napoleon are terms which, it was well observed, always growed at one another, whenever they came together. 'The character of the French nation,' said he one day, in the council of state, 'requires that the liberty of the press should be restricted in the case of works of a certain size; and the newspapers must be subjected to the rigid surveillance of the police.' This opinion was given at the time of the discussions respecting the constitution which was to declare him emperor; and we need not wonder at the small allowance of liberality which it contains. Some one spoke of the guarantees which should be given to the nation; and both the senate and the council of state, out of mere habit, muttered something about the 'liberty of the press,' which had formed a necessary part of every one of the constitutions promulgated up to the time in question (1st December, 1803). But Napoleon took good care that no such master as the press should be placed over him. The utmost he would allow was the nomination of a commission in the senate, whose nominal office it should be to watch over the freedom of the press, but who, it was well understood, should remain altogether inactive. How, indeed, was it to be expected that he who could never get accustomed to the freedom of speech with which he was assailed from the other side of the Channel, should submit to be criticised at home? The perusal of the insults which were lavished upon him by the English papers drove him into a fury which resembled that of the lion in the fable, stung to madness by swarms of gnats. He affected to grant a small modicum of liberty in the case of books, but this distinction was allowed to exist but a very short while; for it was found that when the papers were placed under a censorship and books not, the books soon acquired the influence which belonged properly to the newspapers. During the 'Hundred Days,' the liberty of the press formed by no means the least of Napoleon's annoyances; and it was clear that either it must crush him, or he must crush it. But the press and the tribunes had become more than ever incompatible with his position, which was far more conformable to a dictatorship than to a representative government. Napoleon in France at the same time with a free press could be compared to nothing but Gulliver in Lilliput, bound down by a multitude of petty cords, which rendered it impossible for him to move hand or foot."

With this we conclude; in the hope that, from what we have quoted, our readers will perceive that this volume is pregnant with matter for study and reflection.

*Marcus Manlius; a Tragedy, in Five Acts.*  
By David Elwila Columbine. 8vo. pp. 112.  
London, 1837. Bentley.

IT gives us pleasure to see another aspirer to dramatic literature step forth, especially one coming under the gracious patronage of her Royal Highness the Princess Victoria, and approaching his task with so much modesty. Dramatic composition we have ever considered to be about the loftiest and most difficult part of literature; for in that alone must poetry be tied down to purpose: we speak not of the great

essentials, but of every particular image and description, springing from some feeling, illustrating some action, or otherwise furthering the plot. If the author but pauses to apostrophise a flower, it must become interwoven with his story; not a cloud must pass over his passages without being associated with them in purpose or passion: but it is with the classical drama (such as our author has chosen) that the thoughts and language must be as disguised as the characters drawn. The Roman toga sits but ill upon the figure of a hero, unless, by his graceful action and flowing eloquence, he can gather its floating folds, or throw them out at pleasure with as much ease as the playful wind aways a banner. For they were men who ever moved as if in the presence of their gods—cold, staid philosophers; their very laugh must have been solemn; and their loves—but the Roman maidens are gone, and it is only in such creations as these that we can ever hope to reach

"Their sighs, and tears, and soft emotions," and their daring converse, when they whispered to ambition in secret, or spoke aloud in the streets of patriotism.

Our author has chosen a period of great interest for his work; no other than the extermination of the Gauls from Italy. The plot is well sustained. The eager ambition of Marcus Manlius, and the calm circumventing policy of Camillus, are finely contrasted; while the loves of Octavia and Lucius are beautifully portrayed, and remind us pleasantly of Romeo and Juliet—more from their ill-starred situations than from either thought or incident being drawn from the Prince of Poets. This tragedy also possesses another feature, which we must not pass in silence: the gradual development of the plot and characters; each appearing, "as charm by charm unrolls," in perfect harmony, while the interest slowly swells, like the far-off murmuring of the sea before a storm. We are sorry that our space prevents us from entering more fully into the subject, as we can only snatch a beauty or two at random, and must leave the whole to the good taste of our readers.

Love.

"Octavia. Nay, I will tell thee all,  
And lay my bosom open to thy view.  
My heart was not won lightly—yet, 'tis won:  
'Tis not a day that hath produced this love,  
To bloom at morn, and set the evening, fade;  
As oft the brightest flower will droop and die;  
'Tis founded on esteem—sweet, dear esteem;  
The breath of love which gives it being, and  
Long outlives the passion it inspires."

Ocean.

"Oct. How shone the midnight planet o'er the waves,  
Which bore, in calm serenity, their freight  
Of love and beauty? In a fragile bark,  
Too light for stormy winds, or boisterous seas,  
A happy, yet a hapless, pair appeared:  
The lover rose. 'Twas for a moment; but the air  
That instant changed, and, with a sudden swell,  
The billows rose. No longer did they bear  
The bark upon the bosom of the deep:—  
'Twas whelmed! Yet, ever and anon, far off  
We saw the maiden struggling with the waves;  
With each sea seemed to combat, but, at length,  
Her life and nature sunk. We turned aghast  
From such a scene, and, looking up, behold—  
Lucius. Nay, sweet Octavia, why on such a theme  
Dost thou think, in such an hour?"

Oct. Dost thou remember?  
Luc. Ay, I remember, when we looked on high,  
Thou didst exclaim:—Behold, my natal star,  
The planet which o'errules my destiny,  
Sinks into ocean! But, away with this,  
It was an idle thought, and thou didst shudder,  
And cling to me for help: then did I chide  
Thy fantasy, as now, and made thee smile.  
Oct. Such days are past! As did that maiden strive  
With ocean's billows, have I struggled on  
With fortune: as she to her rest retired,  
I, thus subdued, as she my star foretold,  
I, overwhelmed, shall sink to my eternal rest."

Conscious Innocence.

"Camillus. Yes, it avails us much,  
When in our solitude we seek repose,

After many a long and weary toil  
And buffet with the world. This inward thought  
Sweetens the coming morn, declining eve,  
And makes our days pass placidly along;  
But in the world, the bitter—say, the vile,  
Ungenerous world, it is as nothing.  
Can conscious rectitude in aught avail you,  
When fellow man shall hold you up to scorn,  
And pointing at your bosom, with his finger,  
Marks you as—a villain! The stain remains,  
And as a canker in the healthiest tree,  
The heart will wear away."

Unexpected Hope.

"Octavia. Oh! do I merit it?  
This gleam of sunshine 'cross the gloomy soul—  
This spark of reason 'cross the maddened mind—  
This ray of hope, where all so hopeless seemed!  
I, who have even warred with the bright skies,  
And almost called the gods themselves unjust!"

Sudden Joy.

"Lie still, my heart! thou should'st not flutter thus  
At happiness! Away all care and sorrow!  
Oh! ye blest gods, receive my humble thanks!—  
'Tis vain—my tongue refuses utterance!  
This foolish—restless tenant of my breast,  
E'en as a bird fresh caught beats 'gainst its bars,  
As tho' 'twould burst such bonds, or perish there.  
Back, back to rest! I've neither speech nor words;  
Accept the silent offering of my heart,  
In prayer and gratitude."

*Letters to the Right Hon. Lord Brougham and Vaux; presenting Rambling Details of a Tour through France, Switzerland, and Italy; with some Remarks on Home Politics.* By Sir A. Brooke Faulkner, author of "A Visit to Germany," &c. 12mo. pp. 350. London, 1837. Macrone.

WITH the notorious dislike borne towards politics by the *Literary Gazette*, and its anxiety, during twenty years, to preserve, at least, one green and quiet spot of Literature uncontaminated and undisturbed by their presence, it will be felt as very natural that we should regret their intermixture with the otherwise more agreeable details of Sir Arthur Faulkner. Had our author confined himself to a separate discussion of his opinions, we should have cared less; but, running through the volume, they are apt to cause the tourist to be suspected of prepossessions and prejudices which do not tend to strengthen the general and indifferent portions of his narrative. Such, we presume, will be their effect upon the minds of these readers who hold opposite tenets; but, on the other, the "Liberal" party, who agree with them, will only be the more gratified by seeing them so stoutly maintained and so frequently illustrated. The fact seems to be, that Sir Arthur, passing through countries suffering from despotic governments, priestly influence, and other abuses, has been led to impute all the evils he witnessed to these causes; and, by reflection and comparison, assimilate some of them to points which he condemns in our condition at home. As a sample how far an ardent temperament may be carried in such respects, we will quote a passage relating to Turin.

"The same system of keeping the people in ignorance prevails here as in other parts of Italy. There is a strict censorship of the press; hardly an English book is to be seen but the eternal Walter Scott, whose Tory principles have obtained for him a place in all the shop-windows over the Continent; yet, is the king said to make books his hobby, especially such as are of a religious character."

Are we to understand that "Guy Mannering," "Old Mortality," "Ivanhoe," &c. &c. are but recommended to readers of every clime by their Tory principles? We pass an unfeeling mention of the melancholy suicide of Lord Castlereagh (p. 206)—another instance of the ill consequences of entertaining ultra-political notions; for, with the author's high and fine sense of the beauties of nature and art, it is also impossible to account for the bad taste it

exhibits—and copy, with relief, a notice of Sir W. Scott during his sojourn at Naples.

"None of the manuscripts are ever allowed to be taken out of the library without special permission from government. The rule, however, was waived in favour of Sir Walter Scott, who became a prodigious favourite with his present majesty. The novelist was anxious to take a copy of a particular legend, but found it impossible to obtain leave, but on the condition of transcribing it within the walls of the library. Sir Walter wrote direct to the king, and an order was immediately in the hands of the censor to place the manuscript at his disposal, with a verbal message to say that he was at perfect liberty to take it to his house, and retain it as long as he liked. During his short stay, we are told, he occupied himself laboriously in preparing matter for a new romance, founded on the story of Masaniello, when he was compelled, by the rapid decline of his health, to set out for England."

Having got over the reluctant part of our public duty—which, indeed, we have done as briefly as we could—we shall now proceed to the pleasanter paths of the author's lucubrations. At Florence there are some interesting details of the branches of the Buonaparte family, with whom Sir Arthur enjoyed a gratifying degree of intercourse.

"An acquaintance," he says, "with the family of Napoleon was not among the least of the inducements that prevailed with us to stop a whole month at Florence. Four branches of the fallen dynasty were domiciled in this delightful capital. Prince De Montfort, the ex-king of Westphalia; Princess Survilliers, ex-queen of Spain; the Princess Lipona, ditto of Naples; and Prince de St. Lou, the ex of Holland; from each of which Xes we were honoured with the kindest attentions. The Westphalian chief is strikingly like to Napoleon, only much thinner. The princess remained me of the charming affability of the Landgravine of Hesse Homberg. Prince Montfort has two sons, the eldest of whom has been some time at the military college at Stuttgart; his second son, Napoleon, a youth of twelve years of age, the very image of the emperor, remained with his father, who, with an only sister, the Princess Matilda, composed his family. The Princess Matilda is about sixteen years of age, and one of the most amiable, lovely, and accomplished of her sex: English, too, in her predilections, English in her style of beauty, and speaking our language like a native. I have said young Napoleon is the image of the emperor; nor is the resemblance confined to his person and features. He has the same quickness and point in his remarks. I asked him if he spoke French. 'Why not?' said he, 'I am a Frenchman.' I apologised in French for not speaking with more fluency. 'How so,' said he, 'when you are speaking it so well?' You find none of the frivolities about this youth that cleave to boys of his age: and in every one respect he is as well mannered as the most accomplished man of the world. I am much mistaken, should a good opportunity offer, if this youth is not heard of yet. The soirées of the Prince De Montfort were among the most select, as well as splendid, in Florence.

"Poor Louis, the ex-sovereign of Holland, lingers in a deplorable state of health—half paralysed—and lives quite in retirement; never seeing any body, with the exception of his own immediate family, or an intimate friend. Yet, when this best-natured of beings understood we had a wish to be presented, he immediately fixed a day for the purpose, and received us

with a kindness of manner altogether peculiar to himself. Princess Charlotte, the daughter of King Joseph, who had been married to his eldest son, did us this kind office. We arrived before the princess, and found him looking on at a game of billiards. He immediately rose, and, carrying us into an interior apartment, entered into conversation. The princess was presently announced, and, on entering the *salon*, the amiable Louis got up, and, taking both her hands in his, remained for some time apparently overcome by an overpowering emotion. The reason was afterwards explained. That day happened to be the anniversary of her marriage with his son, whose untimely fate is so well known; and his infirm state of health was unequal to bear up against the feeling which her presence excited. The overflowing of good Louis's heart on this occasion well accords with the character of the man who refused to wear a crown rather than become the oppressor of his subjects. The Princess Lipona, sister of the emperor, who is still commonly addressed as Queen of Naples, is a woman of the rarest fascination of manner, and her palace the rendezvous of all that is gay and illustrious in the capital of Tuscany. Her likeness to her son, Colonel Achille Murat, struck me as quite remarkable; and the more remarkable, as Achille is so very like to Napoleon; though, what may sound paradoxical, his mother has positively not one feature in common with the emperor. The title of Lipona, which the princess has assumed, is a *literal* retention of her claims as Queen of Naples, or Napoli, the syllables being only reversed. She never formally abdicated her right to the crown. Murat, as every one knows, was put to death without having consented to any act of abdication. The princess bears her reverses with the most philosophical indifference; apparently the very happiest of the happy; commanding equally the love and admiration of all who are honoured with her acquaintance, and share her delightful conversation. In an apartment of her palace adjoining the great saloon, is deposited, in an enclosure of glazed frame-work, festooned with his orders of chivalry, a piled trophy of the arms presented to the hero of the 'haughty plume,' by the different sovereigns who were anxious to pay him their homage; swords, rifles, carbines, daggers, lances, all of the most costly workmanship, especially a scimitar from Achmet Bey, magnificently studded with brilliants. The special sword, too, which he bore through all his battles, is ornamented on the hilt with miniature enamels of the queen and her children; and in a vacant space of the armorial enclosure lies, in modest obscurity, the immortal plume itself.

"In a small apartment, off the princess's bed-room, there stands, on an elevated pedestal, the bust of Murat. None but the *élite* of her acquaintance are allowed to approach this hallowed little temple, the shrine of the idol of her pride and affections. When we were admitted, the bust was brilliantly radiated by lights, shedding a solemnity which struck me as far more imposing than could be produced by the most sombre sepulchral style of decoration. Flowers, and flowering shrubs, of the choicest beauty, were placed about the figure, uniting their graceful shade over the brows and forehead. The impression of solemnity may probably be accounted for by the gay contrast of these flowers and brilliant lights with the awful image of death. This gratification was reserved for the last evening we had the honour of passing at Princess Lipona's. On the same occasion we were de-

lighted with the well-remembered tones of Catalani's voice, in a duet with her daughter; and we visited her, next day, at her villa, within a few miles of Florence, where she is sumptuously lodged, and enjoys the green autumn of her days in great comfort, respected by every body, and unwearied in deeds of charity and usefulness. I have a pleasure in speaking about Catalani, if it was only for the devotion she feels for England, which amounts to a passion, and is shewn in every thing she says or does. Catalani, in fact, swears by England; she has English grates, English carpets, English chairs, English bedsteads and bed-curtains; and the beds are covered with our counterpanes. She never speaks of England but with enthusiasm; and, if her arrangements will permit, she does not despair of passing the remainder of her life on our shores. Catalani is an universal favourite in all the best society at Florence, on account of qualities that will long survive her voice: for it need hardly be remarked, that her vocal powers are a little on the wane."

At Rome, we are told, "The excavations in the Forum are still going on, but proceed at a very slow rate. Some Duchess of Devonshire is again needed to give fresh animation to the work. I have often stood over the excavators; but there was no reward for curiosity, excepting loose earth, mixed with the crumbled fragments of the 'marble wilderness.' The arrangement for carrying on these excavations almost makes it impossible that any valuable object should elude the eye. The workmen are stationed with their pickaxes and shovels tier above tier on a kind of terrace cut in the soil, and each shovel of rubbish is examined as it is tossed from one to the other in succession; and, when it reaches the top, is gathered into a heap to be carried away, so that it were next to a miracle that a rusty nail should escape."

The ignorance of the clergy is curiously illustrated.

"Ignorance is universal through all ranks at Rome, and superstition in as full blow as in the fifteenth century. The credulity of the priests is, above all things, astonishing, and would be laughable, were it not so humiliating. To hear what he would say, I related a story to a prior of the church, which has long been current among the Maltese, respecting the miraculous nature of the sanctified cave formed out of a rock in that island, where the Apostle Paul is said to have been confined; assuring him, with all the gravity I was master of, that, although pilgrims and strangers from every part of the world had been cutting away fragments of the rock for eighteen centuries, the cave still remained without one atom of change. 'Ecco,' said his reverence, turning quick and earnestly round to a friend of his at his elbow, and striking the forefinger of the right hand against the thumb of the left, 'Ecco, amico mio, una prova assoluta della sua funzione apostolica,' which proof his friend appeared to accept with quite as assured a conviction as himself. The prior betrayed an ignorance of things that a boy of ten years old ought to be ashamed of. He had never heard of the lake of Geneva, which made his friend stare, and provoked to venture a gentle rebuke for exposing himself. He supposed that he must have forgotten the name of the place. His reverence was astonished when I told him that the Countess of Albani was a descendant of our deposed royal family; and it seemed a material accession to his stock of facts when informed that Ireland is under the same government as England; yet it was a mistake for which you may allow, perhaps, that he de-

served some little indulgence. There was a strange wholesale substitution of credulity for rational belief. He allowed unbounded credit to the history of Romulus and Remus. Both brothers, he remarked, shewed a turn for architecture; and almost as soon as they had quitted their nurse, 'one set about building the houses and the other the walls of Rome.' He was a staunch worshipper of the redoubtable Wellington, and asked if he was still alive."

Of the state of society at Naples, with its 40,000 professional beggars,\* the author's sketches are lively and striking; but, for columns like ours, what he tells of antiquities and literature is more to the purpose: and he is so completely at home in them, so competent a judge, with such classical attainments, that we again and again repeat our wish that he had given us ten times as much of them, and left politics to men of inferior calibre.

On the important subject of education, Sir A. says:—

"We can scarcely wonder at this gross immorality. Education here, as at Rome, is wholly in the hands of the priesthood, who are

\* The following, as connected with this subject, appears to us to deserve notice:—"To the other causes of poverty which have degraded these people may be added the number of their charities. Among countless establishments of this nature, an enormous national poor-house, called the *Albergo dei poveri*, large enough to contain the two Sicilies, is open to the whole beggary of Naples. The Albergo will justify some observations, as it is an academy and house of industry, as well as a refuge for the poor. This establishment, if it were completely filled, I am told, would lodge between 6000 and 7000 persons. It is under the direction of the brother of the minister of the interior, a Colonel St. Angelo, who conducts the details on strictly military principles; and so jealous is he of any interference with his management, that he has been known to refuse the king himself to infringe upon his rules. The Albergo, as a school of art, embraces every kind of instruction which is necessary to fit the rising generation for earning their bread without begging. Book-binding—lithography—working in lava, bronze, brass, and steel—the manufacture of pens, pencils, nails, and glass—shoemaking—tailoring—needlework—hastening—turning—spinning—weaving in all its branches, and in every kind of stuff—carpenters' work—sculpture—women's work—type-founding, &c.: all these branches of industry are in constant activity; besides which, there are schools to teach drawing, music, mathematics, and languages. The Lancaster plan is the one adopted for the children. Their punishment extends no further than disgrace; and every boy, when he commits a serious offence, is tried by a jury of his equals. The accommodations are of a superior order, and comprise all kinds of conveniences; kitchens—bakery (from which twenty cantars of bread issue every morning)—washhouses—cellars—wardrobes—die-houses—infirmaries—apothecaries' shops, &c.; and a spacious chapel, for the general use of the public as well as the poor, is appointed with steady useful clergymen, and the sick supplied with the best medical and surgical assistance. The whole is under the tutelar guardianship of St. Gennaro and the *Donna della concezione*; but priests are allowed to have no share whatever in the direction. This institution is maintained partly by government and partly by subscription, assisted by the industry of the inmates. The food is excellent and abundant, and every attention paid to health. When the weather is unfavourable, there are spacious saloons separately appropriated for the exercise of both sexes. I found, however, that the poor had no great relish for the Albergo; nor is it, in such a climate and with such habits, very surprising. Liberty is dear to all, and rags and vermin felt as a grievance by none. If a pauper gets but half a dozen granes by his profession—and it must be a poor day's work that fails to turn in double or treble that amount—he can breakfast and dine for half that sum, and lay by the remainder for the *madonna*. Should an epicure of the craft take a fancy to indulge himself more generously, he can provide three very satisfactory meals for a carlin, consisting of macaroni, fish, fruit, and of wine as much as he can desire, for a farthing. For a farthing he has a tumbler of ice-water; for three farthings the same tumbler with an addition of lemon-juice, or the juice of the blood-orange; and, if he spends one penny more, he commands a dash of capillaire, that makes a draught for an alderman. Nor have the poor of Naples much reason to envy the more honourable and industrious occupations. A soldier's pay is but seven granes and a half a day, and a labourer gets no more than fourteen, to find himself in every thing; all wages, in short, are miserably small. Even a *coiffeur* changes rarely earns above twelve ducats a-month. The daughter of a major in the army (a friend of Lord W. Bentinck's) hires as a sempstress at 4*d.* a day. All the world knows that their cheating is on a par with their poverty."

never wanting in a plausible pretext for slurring over their task, or getting rid of it altogether. One of their devices, when they find a peasant particularly desirous of having his children instructed, is to affect warmly to second his wish: but mark the knavery. When a child is sent, every thing is done to puzzle him at starting, that his reverence may be able to furnish himself with a plausible reason in his stupidity for dismissing his pupil at once; or he, perhaps, finishes by flinging the horn back at his head, to give verisimilitude to his indignation. The parents are then easily persuaded to give up the idea of education altogether. In Murat's time there were upwards of 7000 Lancaster schools, not one of which is now in existence. So deplorably ignorant are the clergy themselves, though the fountain of all knowledge to others, that you may see them every day at the corners of streets dictating their thoughts, without a blush, to be wrought up into epistles to their friends, by a professional amanuensis—an artist in universal request. And yet some of these clergy, who, from a defective acquaintance with the alphabet, are obliged to commit the church service to memory, have actually reached the very highest preferment in their profession. Nor is the ignorance of the very highest order of nobility less disgraceful. I have been solemnly assured by a Neapolitan, that one of the king's brothers gravely put him a question as to the position of Gibraltar on the map of Europe.

“There is no spot about Naples so famous for the work of the stiletto as Torre Annunziata. Assassinations have been unusually frequent here of late; and, to elicit confessions, the Jesuits had recourse to the following rather curious expedient. They gave out that Vesuvius was to spread indiscriminate ruin over the country, unless the men immediately surrendered their stilettoes, and the women their tambourines. On a particular day, fixed for the peace-offerings, the priests assembled, and many thousand stiletto-bearers arranged themselves rank and file on one side of the street, and the ladies on the other; the latter in fearful apprehension, and deprecating the mountain horrors on their knees. All the tambourines were given up, but not one stiletto, which clung fast like the besetting sin; even the terrors of the church are impotent to dissolve the clasp charm of the dearest of their passions—the love of revenge. These would seem impolitic experiments on the credulity of the mass; a repetition of such false alarms by their clergy, one would suppose, must lead to some distrust of the infallibility of their authority. Not so. Their reverences are never without a back-door to escape. Their prayers can always turn the current of any prediction to which they may be committed, and the failure, in place of being put down to the score of imposture, will be swallowed as confirmation strong of the church's omnipotence; which, as in this particular instance, is not only able to move mountains, but to keep them quiet.”

[To be concluded next week.]

*Von Raumer's Frederick II., &c.*

[In continuation.]

WE resume with pleasure our illustrations of this volume, satisfied that our miscellaneous sheet could not be occupied with more generally interesting matter. For the personal character of Maria Theresa, and the phases of Austrian affairs during the period it embraces, we must be content to refer to its own pages; whilst we divide what remains for us into a few separate

heads, though the events occur with lapses of years between them.

Concerning Russia, the accounts of the several revolutions given by our ambassadors in their despatches contain many remarkable particulars. Thus, in 1742, when Elizabeth was raised to the throne, we learn:—

“This revolution was accompanied by a series of appointments and arrests, liberations, banishments, and confiscations. There is no describing the insolence of the guards, since the last event, especially of those who were actors in it, to whom court is paid, as if they were masters here, which they think themselves, and perhaps with too much reason. Ostermann does not behave with the same intrepidity as Münnich. The French ambassador still continues prime-minister. Great court is paid to him; he publicly kisses and is kissed by the Janissaries in the drawing-room.

Her majesty has declared the 300 grenadiers her life company; the private men are all to have the rank of lieutenants; the corporals and sergeants, of captains and majors; and the six who had the greatest share in the late affair, lieutenant-colonels; the ensign, brigadier; the two second-lieutenants, of major-generals; and the first-lieutenant, of a lieutenant-general. They are to be quartered in houses which her majesty has bought for that purpose just by the palace. She herself is to be captain, and has ordered her grenadier's cap and amazon dress to be made, to appear at their head. The commission of state prisoners meets at the court palace. Her majesty is constantly at the tribune, where she can see and hear every thing without being seen, as she says, to prevent favour or injustice. This declaration, with the general confiscations previous to any hearing in defence, cannot be reconciled but by the constant practice of this court on such occasions. They speak, also, of the application of the knout to the prisoners. Münnich was before the inquisition, for there is nothing in this country, at least in such cases, which deserves the name of court of justice. He told the commissioners to their face, that he was not more guilty than they. Lestock's ordinary discourse is a continued egotism. I proposed, ordered, this and that. So, too, he says, he has appointed an ambassador to London.’ The following extracts are from the despatches of the year 1742:—‘The proceedings against the prisoners continue: it is impossible to conceive the inhumanity of the commissioners towards the unfortunate prisoners, which grows worse and worse, and, it is said, by the express commands of those who are present to prevent injustice. But it is to be feared that private piques and personal revenge prevail where they might be least expected, and are least becoming. One of the new lieutenants affirmed that field-marshal Münnich had told him, on the nightly attack of the Duke of Courland, that it was intended to place the Princess Elizabeth on the throne. Münnich denied this; and, upon the confrontation, the lieutenant offered to receive the knout, provided that, if he maintained this assertion under that torture, the old field-marshal should undergo it in his turn: who, rather than be exposed to that indignity, owned the accusation; however, made it so appear, to those who certainly knew, that the great duchess herself desired the officers and soldiers that accompanied Münnich on that expedition to follow his orders. The new counsellors do not agree together, and the empress thinks ill of their heads, and still worse of their hearts. I know not one here who would pass for a tolerably honest man in an-

other country. A subaltern officer was sent after the deposed czar and his parents, to give one of the great duchess's chambermaids the knout, without saying why, and immediately returned.’ After the inquiry, as it was called, into the conduct of the prisoners was ended, the ambassador relates, on the 19th of February:—‘Count Ostermann, Münnich, Golofkin, President Mengden, the high steward Löwenwolde, and the secretary Jacoblitz, were yesterday brought to the scaffold before the college. First of all, about ten o'clock, Ostermann, whom Elizabeth hated the most, was carried in a chair, when the enumeration of the crimes laid to his charge, containing five sheets of paper, was read to him by a secretary. His excellency stood all that time bareheaded, in his gray hairs, and with a long beard; and, with an attentive, but firm countenance, listening to it. At last his sentence was pronounced, which, as I hear, was, to be broke on the wheel. However, no preparations for so terrible an execution were there: instead of them, there were two blocks with axes by them; and he was immediately drawn forward out of his chair by the soldiers, and his head laid on one of the blocks; when the executioner approached, and, unbuttoning the collar of his shirt and night-gown he had on, laid bare his neck. The ceremony took up about a minute, when it was declared to him that his capital punishment was by her majesty changed into perpetual banishment; when, after having made a sort of inclination of his head, he immediately said (and these were the only words he uttered), ‘Pray, give me my wig and cap again;’ which he immediately put on, and then buttoned his shirt-collar and night-gown without the least change in his countenance. The sentence of the other five, who stood below, was also read to them: Münnich was to be quartered, and the others beheaded, but the change into banishment was as soon declared to each. The four had all long beards; but the field-marshal was shaved, well dressed, and with as erect, intrepid, and unconcerned a countenance as if he had been at the head of an army or at a review. And, from the very beginning of his process, he has always behaved in the same manner before his judges, and in his way from the citadel and back; he always affected to joke with his guards, and constantly told them, that, in some actions before the enemy, when he had had the honour to command them, they had thought him a brave man, and they should find him so to the end.”

M. Von Raumer seems to think, that Katherine, in 1762, when Elizabeth's death caused such a change in the state of Europe, might not have been aware of the murder of her husband, Peter III., and contrasts her case with that of Mary of Scotland, in her favour, and to the disadvantage of the latter. The catastrophe of Iwan III. is a sad tragic story (1764):—

“Count Panin told Buckingham, that the prince's understanding was absolutely confused, and his ideas were blended together without the least rational distinction. The ambassador gives the following account of his end on the 20th of July, 1764:—‘Lieutenant Mirowitz, who was upon guard in the citadel of Schlüsselburg, where Prince Iwan was confined, having first seduced the soldiers under his command, went to the commandant, and insisted upon his immediately releasing the prince, which the commandant declining, he immediately caused him to be bound. He next obliged the keeper of the magazine of powder to deliver powder to his soldiers. The noise which these proceedings occasioned alarmed a captain and lieutenant; one of whom was in the prince's bed-

chamber, the other in the ante-room. Lieutenant Mirowitz, having afresh encouraged his men, advanced to the prince's apartment, and demanded, with the most violent threats in case of a refusal, that the emperor, as he called him, should be produced. After some resistance, the captain and lieutenant, finding themselves in danger of being overpowered, told Mirowitz that, if he persisted, it would endanger the prince's life; as their instructions were, in case they found their efforts to guard him ineffectual, immediately to put him to death. Mirowitz, deaf to all remonstrances, forced the door, which put them under the unhappy necessity of executing their orders. The first stab, from a Captain-lieutenant Uchtinskoi, waked the unfortunate youth, who was asleep in bed: he made so stout a resistance as to break one of the swords, and received eight wounds before he expired. The officers then produced the body to Mirowitz and his soldiers, and told them, they might now do with their emperor what they thought proper. Mirowitz carried the corpse to the front of the guard, and covered it with the colours; and then, with all his soldiers, prostrated himself before it, and kissed his hand. Then, taking off his own gorget, sash, and sword, laid them by the body, and, addressing himself to Korsakoff, colonel of the regiment of Smolensko, who was then arrived, and, pointing to the body, told him, 'There is your emperor—you may do by me as you please. Adverse fortune has blasted my design. I mourn, not my own fate, but the misery of my poor fellow-citizens, and the innocent victim of my undertaking.' He then embraced the under officers, and surrendered himself and his soldiers."

With regard to general history, all the negotiations after the peace of Aix-la-Chapelle convey much curious information; and the breaking out of the famous Seven Years' War (1756), together with the circumstances of its process and results, are replete with valuable features. Sorry are we to notice the poor figure which our own country cuts in this mighty contest, and the lesson it affords of the injury and disgrace inalienable from the struggles of factions for political power. Hear how our ally, Frederick, describes us to our ambassador.

"I am very sorry, my dear Mr. Mitchell, to hear of the divisions which have broken out in your English government. Good God! it seems to me, that, at the present moment, every man who has at heart the interests of his nation, and those of Europe, ought to lay aside all personal interest, to think only of an interest paramount to all others—that of maintaining the Protestant cause and the liberty of Europe. I confess that I have learned with the most lively grief the dissensions in your government. Is it possible that so many men who, however, have a regard for the interests of the country, can give the advantage to the eternal enemies of their government by intestine divisions? How can the King of England and the nation adopt good measures against their enemies? I find, in the nation itself, persons who, though hostile to the French, render them the greatest services, by hindering the state from taking measures in time against the enterprises of our common enemies. For Heaven's sake, let patriotism revive among your countrymen, and let them look at things on a grand scale, and not through the microscope of personal interest. For my part, I think at the present moment only of Europe: I have opposed to me only the dummviate, which is dangerous to the liberties of England, as well as to those of Germany, and especially to the Protestant cause. I see

the winter approaching, and with it the interval of truce, in which the inclemency of the season suspends the madness of men. I think that this precious moment should not be suffered to escape without taking on all hands, both by sea and land, the measures which are calculated to resist the powerful efforts which the houses of Austria and Bourbon will make against us. I have many things to propose to you, which I withhold till your internal storms are allayed. I am, perhaps, like the Abbé St. Pierre, who dreamed about the happiness of Europe; but I do not know to whom I should propose my dreams. A preliminary is the restoration of tranquillity at London: and I believe that all well-disposed persons will labour to bring it about. Let people dispute about personal interests when they have nothing better to do—well and good—but at present, my dear Mr. Mitchell, to dispute about offices when liberty is at stake! I think all parties ought to unite against the common enemy, and leave such wretched disputes to a more convenient season. I speak to you as a citizen of Europe, who has much at heart the good of his allies and the independence of his country—who hates tyranny, from whatever quarter it comes, and desires only the good of Europe. I wish that all your countrymen were as sensible and as good citizens as you; and we should together be a match for all the conspiracies which ambitious minds might form against the tranquillity of Europe. Adieu, dear Mitchell."

This picture was but too just; for, the year after, Mitchell himself writes:—"For nine months together, in consequence of the internal dissension of England, the king has been answered with fair words. But, in the situation his affairs now are in, there is no time to be lost; if England will not endeavour to save him, he must save himself as he can." And again:—"England is cheated, and its ministers duped, by Hanover. What a pitiful figure will they make in England! The most notorious breach of faith has been wantonly committed, to support a weak, ill-judged, and ineffectual measure. You know what has happened. Why was not the King of Prussia previously consulted? I can answer with my head, he would have yielded to any reasonable proposal for the safety of Hanover. What will posterity say of an administration that made the treaty of Westminster for the safety of Hanover, and suffered the Hanoverian ministers to say openly, that they have no treaty with the King of Prussia; nay, have suffered them to betray that prince, who has risked all to save them, and whose misfortunes are owing to his generosity and good faith. Let us have done with negotiating; after what has happened no man will trust us. I know not how to look the King of Prussia in the face; and honour, my lord, is not to be purchased with money. Nothing (less) than a miracle or an absolute submission to France can save the king. The loss of a battle will only anticipate the ruin of his countries a few weeks; the winning of it cannot save him. I lose myself when I think of his situation. I see no salvation for him but in the arms of France. He assumes a gaiety and easiness not natural nor suited to his situation, but I can perceive a sensible alteration in his temper, which has made him do some harsh things. He said, 'I have commenced the war like a general; I will finish it like a partisan.' The king never appears discouraged or disconcerted; he even in public shews a cheerfulness and easiness of mind difficult to be maintained in such circumstances."

And, nine years later, Macartney tells Mitchell, in a despatch from Petersburg:—"I must not omit to tell you, in confidence, that nothing can equal the contempt in which not only the empress and her ministers, but even all the diplomatic body, hold British politics. For, however wise or necessary the frequent changes in the administration may be supposed at home, it is certain that they render us ridiculous and despicable abroad."

We shall conclude with a few extracts relative to Frederick himself; and the following, at the death of his mother, is of singular interest.

"On the 28th of June, ten days after the battle of Kollin, died Sophia Dorothea, the mother of King Frederick. Mitchell speaks in several despatches of his unfeigned and profound sorrow. 'The king (he writes on the 2d of July) has seen nobody since he has received this news, and I hear he is deeply afflicted. His grief, I am sure, is sincere; for never any man gave stronger marks of duty and affection than he has done on every occasion to his mother; and no mother ever deserved better of all her children than she did. Yesterday,' he continues on the 4th of July, 'the king sent for me, which is the first time he had seen any body since he received the news of the death of his mother. I had the honour to remain with him some hours in his closet: I must own to your lordship I was most sincerely affected to see him indulging his grief, and giving way to the warmest filial affections by recalling to mind the many obligations he had to his late mother, and repeating to me her sufferings, and the manner in which she bore them, the good she did to every body, and the comfort he had to have contributed to make the latter part of her life easy and agreeable. The king was pleased to tell me a great deal of the private history of his family, and the manner in which he had been educated: owning, at the same time, the loss he felt for the want of proper education; blaming his father, but with great candour and gentleness; and acknowledging that in his youth he had been *étourdi*, and deserved his father's indignation—which, however, the late king, from the impetuosity of his temper, had carried too far. He told me, that by his mother's persuasion, and that of his sister of Baireuth, he had given a writing, under his hand, declaring he never would marry any other person than the Princess Emilia of England; that this was very wrong, and had provoked his father. He said he could not excuse it, but from his youth and want of experience. That this promise, unhappily, was discovered by the late Queen Caroline, to whom it was intrusted, having shewn or spoken of it to the late General Diemar. He had betrayed the secret to Seckendorf, who told it to the King of Prussia. Upon this discovery, and his scheme of making his escape, his misfortunes followed. He told me, with regard to making his escape, that he had long been unhappy, and hardly used by his father. But what made him resolve upon it was, that one day his father struck him, and pulled him by the hair, and in this dishevelled condition he was obliged to pass the parade; that, from that moment, he was resolved, cost what it might, to venture it. That during his imprisonment at Küstrin, he had been treated in the harshest manner, and brought to the window to see Katt beheaded, and that he had fainted away. That . . . \* might have made his escape and saved himself, the Danish minister having given him notice; but he loitered, he believed, on account of some

\* "The space for the name is left blank in the MS., but M. Von Raumer thinks it may be Katt."

girl he was fond of. The king said, the happiest years of his life were those he spent at . . . . . a house he had given to his brother, Prince Henry. There he retired after his imprisonment, and remained till the death of the late king. His chief amusement was study, and making up for the want of education by reading, making extracts, and conversing with sensible people and men of taste. The king talked much of the obligation he had to the queen, his mother, and of his affection to his sister, the Princess of Baireuth, with whom he had been bred. He observed, that the harmony which had been mentioned in his family was greatly owing to the education they had had; which, though imperfect and defective in many things, was good in this,—that all the children had been brought up, not as princes, but as the children of private persons."

The following is also curious:—

"In the summer of 1769, Voltaire negotiated with the king about war and peace. Mitchell, at least, writes on this subject:—"I believe the court of France makes use of the artful pen of Voltaire to draw secrets from the king; and, when that prince writes as a wit, and to a wit, he is capable of great indiscretions. But what surprises me still more is, that, whenever Voltaire's name is mentioned, his majesty never fails to give him the epithets he may deserve, which are, the worst heart and greatest rascal now living. Yet, with all this, he continues to correspond with him. Sober, in this prince, is the lust of praise from a great and elegant writer, in which, however, he will be at last the dupe; for, by what I hear from good authority of Voltaire's character, he will dissemble, but never can, nor will, forgive the king what has passed between them."

"Frederick, duly appreciating the greatness of the danger that threatened him, wrote to D'Argens a few days before the battle of Torgau:—"I will never see the moment which shall oblige me to make a disadvantageous peace. No persuasion, no eloquence, shall ever induce me to sign my own dishonour. I will either suffer myself to be buried under the ruins of my country; or, if this consolation appears too much to fate, which persecutes me, I shall know how to put an end to my misfortunes when it will no longer be possible to endure them. I have acted, and I continue to act, according to that internal sense, and the point of honour, which guide all my steps: my conduct will at all times be conformable to those principles. After having sacrificed my youth to my father, my manhood to my country, I think that I have acquired a right to dispose of my old age. I have told you, and I repeat it, my hand shall never sign a disgraceful peace. When every thing is lost, when no hope is left, life is a disgrace, and death a duty."

"Frederick was sensible how difficult,—may, how desperate, his situation was; thought seriously of death, and, on the 1st December, 1761, wrote a speech of the Emperor Otho, after the battle of Bedriacum, and, on the 8th December, a speech of Cato before his death. We are entitled to believe that, if he had not met with death on the field of battle, he was resolved, in case of extremity, to die by his own hand."

We do not think our author's reasoning on this point, however, will meet with universal assent. He adds:—

"It is unnecessary to enumerate and enforce in this place the irrefragable arguments of Christianity against suicide; but those who

"Without doubt, Rheimsberg."

bear with great tranquillity the disgrace of an unworthy life have no right, on this account, to represent themselves as good Christians. Nay, even those who would willingly spin out to eternity the thread of their empty and insignificant existence, have here no right to pass sentence of condemnation, for they do not understand what the question properly is, and measure things essentially different with the same standard. *Duo cum faciunt idem, non est idem.* If a gamester, a bankrupt, no longer able to prolong his extravagant and worthless course of life, puts an end to it in a moment of despair, is he to be placed on a level with Otho, Cato, and Frederick the Second? The king's task was at an end as soon as he could no longer be a king—no longer a great king. For him, a life in dishonour was a complete impossibility. If this assertion implies that the tendency of his life was not perfectly conformable with the Christian mode of thinking and acting, saints may sit in judgment, and condemn him, but not old women of both sexes. Had it been the will of God that Prussia should be reduced to a little electorate, without spirit and energy, Frederick was not the man to direct the eternal monotony of the petty machine. Some other person was required for this purpose. Accordingly, he puts the following words into the mouth of Cato:—

'Le sage avec mépris voit la mort sans la craindre;  
Laissez mon action, gardez-vous de me plaindre.  
Quand on voit sa patrie et ses amis périr,  
Un lâche y peut survivre, un héros doit mourir.'

But it was otherwise decreed in the book of Fate. This noble monarch, who had dedicated his whole life to the weal of his people, who was about to sacrifice it for them, was not to pass unrewarded from the scene of action."

To his constancy and military talents did he owe this consummation; and, without shewing how it was realised, we bid adieu to the admirable work which has unfolded so many of its concomitant events and combinations.

*Coup-d'œil sur les Progrès et sur l'Etat actuel de la Littérature Anglo-Saxonne en Angleterre.* Par M. Thomas Wright. Traduit de l'Anglais par M. de Larenauvière. 8vo. 1836. Paris, Silvestre; London, Pickering. This is a neat and comprehensive popular sketch of a very interesting subject; and gives a complete view of what has hitherto been done in England in the cultivation of the study of the Anglo-Saxon language, which is now beginning to receive from our scholars the attention it deserves. Within a few weeks, we expect to have to notice several most important publications of, or concerning, the literature of our Anglo-Saxon forefathers. The little tract whose title we have given above, and which is published in London by Mr. Pickering, to whom Anglo-Saxon scholars owe so many nice books, originally appeared in England in the shape of a review; but the additions and alterations, which have been made in the translation by the original writer, have made it, in its present form, quite new to use. We ought, perhaps, to observe, that it contains an analysis of the curious Anglo-Saxon romance of Beowulf. The translator, M. de Larenauvière, is a gentleman well known for the encouragement he has given to the publication of the early literature of his own country, and as a distinguished geographer, the colleague of Malte Brun and Humboldt. He has designed it as the first of a series on the same subject, under the title of *Anglo-Saxonica*; of which the second part, nearly ready, will contain a bibliographical view of all

the works which have hitherto been published, which concern the Anglo-Saxon language.

*The Adventures of Gil Blas, &c.* Parts I. to X. 8vo. Pp. 314. (Smollett's Translation.) London, 1837. Dubochet and Co.; Tilt and Co.

THE admirable and far-famed novel of *Le Sage, Gil Blas*, here appears in an English dress, adorned as befits a work of such celebrity. It is profusely illustrated with wood engravings of a very highly characteristic and superior order. The accuracy of the printing, and the beauty of the type, demand especial notice; and these recommendations, combined with the admirable manner in which the plates are worked off, give the Willoughby press a claim to rank high among the foremost in the race for excellence. This edition would grace any library, and will, doubtless, hold a distinguished place in the collection of every patron of literature and the arts.

#### ARTS AND SCIENCES. GEOLOGICAL SOCIETY.

FEB. 22.—The Rev. W. Whewell in the chair.

—A paper was read by Captain Grant, of the Bombay Engineers, on the geology of Cutch. This district, so peculiarly interesting on account of the earthquake by which it was devastated in 1819, is bounded on the west by the eastern branch of the Indus and the territory of Sind; on the north, by the Thur, or Little Desert; on the east, by the province of Guzerat; and on the south, by the Gulf of Cutch and the Indian Ocean. It is naturally divided into two districts, distinguished by their physical features. The northern, called the Great Runn, is a sandy flat, containing about 9000 square miles; but the southern is a hilly district, consisting of about 6500 square miles. The formations of which the latter is composed are arranged by the author under seven heads: 1. A system of laminated shale, limestone, and sandstone, abounding with ammonites, belemnites, and other fossil characteristics of the secondary formations of Europe. It occurs principally in the northern part of the district, constituting a range of hills which borders the Great Runn. 2. A series of sandstones and shales, including layers of iron-ore and thin beds of coal, sometimes tolerably good, but generally very impure. It forms the central and principal part of the district, rising also into a chain of hills. Captain Grant was not able to determine satisfactorily its age, with reference to the preceding deposit. The iron-ore is smelted by the natives to some extent, particularly near the town of Doodye. The variety generally selected, on account of the imperfect apparatus employed, has a spongiform texture, small specific gravity, and is easily frangible. The ore is broken into small pieces, and disposed in layers, alternately with others of charcoal, in a rude open furnace, acted upon by two small bellows made of sheep-skin. The metal, on being fused, falls into a small hole at the bottom of the furnace; whence it is removed into an inclosed furnace, and subjected to similar blasts, till it acquires a white heat, when it is taken out and beat into a bar. The third formation is a white limestone, which occupies a small area south of Luckput, on the Indus, and contains innumerable nummulites and fasciolites; also echini, spatangi, and corals. 4. A series of strata, considered by the author as tertiary, on account of its fossils. The principal genera mentioned in the paper are *clypeaster*, *pecten*, *ostrea*, *cardium*,

conas, cyprea, solarium, ovula, fusus, and strombus, the species being often grouped in beds; and in some localities there are patches of corals, two or three acres in extent. The tract occupied by these strata ranges along the southern side of the province. 5. Another sandstone deposit was noticed by Capt. Grant, though without being able to determine its geological position with reference to the other formations. It differs very materially from that connected with the coal, being much softer, and of a greater variety of colours. Associated with it are beds of variegated clay; and it is overlaid by an aluminous earth, which is covered by a bed of red clay. 6. Alluvial deposits. Under this head Captain Grant described the changes produced along the southern coast by the accumulation of sediment. At Mandaree, three miles inland, is a ruin called the old Bunder, or quay; and in the centre of the town is a small temple, built upon a rocky foundation, but said to have stood in the sea when the old Bunder was the landing-place. At other localities in the Gulf of Cutch similar processes are going on, rendering it necessary to remove the landing-places frequently further seaward. The same operations are also in progress over a district, not situated immediately on the coast, but connected with the gulf by small creeks, some of which penetrate six or seven miles into the interior. This district is covered with shrubs, which at low-water are exposed to the roots, but at high tides have merely their tops visible; so that boats appear to sail through a marine forest. The growth of the shrubs is rapid; and the sailors have constantly to force their vessels through the upper branches, particularly at the bends in the creeks, when they wish to save a tack. The stems and lower boughs are covered with testacea, while the upper are occupied by numerous water-fowl. During the monsoons, the water of the creeks is charged with mud; and, passing but slowly through the shrubs, a great portion of the sediment is precipitated. In August 1834, the rains were very violent and continuous; and the river Nurra covered with a fine soil a surface of nearly one thousand acres. 7. Volcanic rocks. In the southern part of the province is a range of hills composed entirely of basalt, with other volcanic rocks; and extensive similar formations occur a little to the south of Luckput; and minor outbursts are scattered over the central districts. These rocks were described by Captain Grant with considerable minuteness; and he enumerated a great variety of instances in which the disturbances of the strata can be traced in the clearest manner to the protrusion of trap. He shewed, also, that eruptions had taken place at many distinct periods; beds of basalt, trachyte, or amygdaloid, alternating with each other, and with limestone, calcareous grit, and tuff. Among the phenomena connected, apparently, with volcanic action, is a number of convex mounds, varying in diameter from three to twenty yards, and covered with small tabular plates of sandstone, the lines of fracture radiating, though irregularly, from a centre. In some instances the summits had been removed, and a circle of stones was displayed, inclosing an area of sandstone, the fractures in the stones decidedly radiating as the stones of an arch. In other instances the mounds assumed the magnitude of small hillocks; from which the outer coating having generally fallen away, the whole presented a heap of broken masses of rock. Another class of volcanic phenomena occurs near the village Wágé-ké-pudda, where a district of about two square miles forms a

table-land, which is covered by mounds of loose volcanic scoræ. The platform itself consists of marl; and the sides are fissured and flanked by long irregular hills of ironstone and gravel. From the loose nature of the scoræ, and the facility with which it is removed by atmospheric agents, Captain Grant inferred that the mounds have been thrown up at a comparatively recent period. The paper concluded with an account of the Great Runn. This singular region, as already described by Captain Burnes, consists principally of a sandy flat, for the greater part of the year dry, but during the prevalence of the S.W. winds converted into an inland sea, passable, however, on camels. Captain Grant believes that the present oscillating position between land and water of the Runn is due to its elevation, and not to a depression in the level of the sea; and in support of this opinion adduced the alterations, both of elevation and depression, produced by the earthquake of 1819. The author described also several extraordinary walls of rock, thrown up, apparently, by volcanic action, some of them assuming a dome shape, others segments of circles, or straight lines.

#### LINNEAN SOCIETY.

MR. LAMBERT in the chair.—A plant of the tree cabbage, 9 feet in height, which the chairman had received from Sir William Symonds, was exhibited. Read, an account of some useful plants of the South-sea Islands, by Fred. Bennett, Esq. The first plant which Mr. Bennett notices is the *Tacca pinnatifida*, from the tubers of which the natives of the Society Islands prepare large quantities of arrow-root; a considerable part of which is exported. The second is the yellow or Nankin cotton-bush (*Gossypium religiosum*), which Mr. Bennett found at Moree, one of the Sandwich Islands. The natives call it Merou, and use an infusion of the flowers of the dye. The mountain plantain, a species of *Musa*, Mr. Bennett states is found abundantly throughout the Marquesas and Society Islands, particularly in the more elevated districts; the fruit of which forms a favourite article of food of the natives, a great part of whose time is occupied in bringing it from the mountains. The fruit is larger than that of the common plantain, and is of a deep orange or red colour outside, but filled with a yellow pulp. Amongst the trees noticed by Mr. Bennett, are the *Inocarpus edulis*, or South Sea chestnut; the *Calophyllum inophyllum*, the wood of which resembles mahogany, and is employed extensively by the natives in ship-building, and for other purposes; and the *Ito*, a species of *Casaurina*, whose wood is very hard, durable, and heavy; and is used for making spears, clubs, &c. The groves of *Casaurina* are selected by the natives as places of interment. It bears no inconsiderable resemblance to our cypress.

#### NUMISMATIC SOCIETY.

FEB. 23. The president, Dr. Lee, in the chair.—The papers read at this meeting were as follow:—The first was a communication by Mr. Akerman to the president, on the oversights to which historians and antiquarians are liable in consequence of neglect of the numismatic department of history. This deficiency in the best scholars, which can alone be remedied by the systematic extension of medallic studies, was exemplified by reference to a notice by Mr. Hogg "on two Roman inscriptions, relating to the conquest of Britain by the Emperor Claudius Cæsar," read before the Royal Society of Literature at the meeting of Feb.

9th.\* These appear in a wall of the Barberini Palace at Rome; and the oldest, from which the other has been copied, is thus given in Donati's "Roma Antiqua," as restored by Gauges de Gozze.

TI. CLAVDIO Drusi f. Cæsari  
AVGVSTO Germanico Pio  
PONTIFICI Max. [Trib. Pot. IX.  
COS. V. IMPERATORI XVI.] Patri Patris  
SENATVS. POPVLSQVE Romanus quod  
REGES. BRITANNICI perduelles Sine  
VILLA. IACTVra celeriter cepisset  
GENTESQ. Extremarum Orchadum  
PRIMVS. INDICIO. facto R. Imperio indiceret.

In commenting on this inscription, Mr. Hogg remarks, that the prenomén IMPerator belongs to Claudius, although here omitted. Reference to the numerous coins of Claudius would, however, have assured him that the title was never adopted as a prenomén by that emperor, in agreement with evidence of Suetonius (*in vit.*), *prænomine imperatoris abstinuit*. The learned writer, instead of the dates as restored by De Gozze, *Trib. Pot. IX. COS. V. IMP. XVI.* would read *Trib. Pot. XI. COS. V. IMP. XXII.* But the coins struck by Claudius to commemorate his British conquest prove that De Gozze is right; these having a triumphal arch, with the inscription DE BRITANNIS, and, on the obverse, the words restored by that scholar, who hence appears to have derived his dates from these contemporary records of the event.—This was followed by the first portion of a memoir by Mr. Cullimore "on the Medo-Persian coins, named *darics*, or *archers*." The assumed existence of a national mintage in the metropolis of Upper Asia, ascending to the sixth century before the Christian era, and only second in antiquity to that of the earliest coinage of Greece,—while the surrounding countries of the East, from the Euphrates and the Nile to the Ganges, have left no traces of a coined currency until the art was introduced by Alexander and his successors,—is an anomaly in the history of nations which has hitherto been admitted without contradiction. Its validity was first called in question by the writer, in a communication on the Jewish shekel, addressed to Dr. Lee, in the second No. of the *Numismatic Journal*; and his present object was to submit to the Numismatic Society the more matured results of his inquiry. Egyptian discovery has furnished us with a decided negative to the existence in that country of any coined currency previously to the Ptolemaic dynasty, not only as regards the period of the ancient Pharaohs, but that of their Persian successors, who ruled Egypt during the principal part of the two centuries which preceded the Macedonian conquest. If the Ptolemies re-coined the Persian money, they may equally have done so with that of the previous native dynasties; so that no argument can be grounded on such an hypothesis: which is, moreover, negated by the ruins on the Euphrates and Tigris, and the whole of oriental history, monumental, monetary, and written; which, eastward of the Nile and Asia Minor, offers no exception to the oriental equivalent by weight, from Abraham until the age of Alexander. As the period of the Ptolemies in Egypt, that of the Seleucids, fixes the earliest numismatic limits in Syria, Phœnicia, and the adjacent regions, as well as in Parthia, Bactria, and India. In like manner the coined shekels of Simon Maccabæus offer the first indication of Jewish money. It follows, that if the gold and silver *darics* mentioned by Herodotus and Xenophon, of which there are many existing examples of about the

\* We accidentally omitted the notice of these in our report of that meeting.—Ed. L. G.

value of our guineas and shillings, formed the national currency of the Persians under Cyrus and his successors, this circumstance is an exception to general principles,—the inhabitants of this and the surrounding countries being alike allied in lineage, habits, and wants. That no such exception existed seems evident from the fact of the darics, although bearing the royal Persian stamp of the archer, being found only in countries which are known to have possessed a coinage of their own previously to their annexation to their Persian empire, and whose relations and commercial habits required it. Thus, in Egypt, where there was no previous coinage, no darics appear; whereas, it is in the Lesser Asia, among the nations to which the art had spread from Greece, the parent of some and the relative of all, that these coins are discovered. Besides, although the stamp is Persian, the standard weight and value are strictly Grecian. The Persian arrow-head writing is never seen in the inscriptions, which, wherever such appear, are invariably in Greek or Phœnician characters, and their import local and provincial; and the common obverse device, that of a galley or a fish, in the more advanced period of the darics, connects these with commercial states and purposes: from all which there seems but one possible inference—that these are a re-coinage of the money previously existing in the conquered provinces, for circulation within the former territorial limits, under the royal Persian authority. The age to which the darics ascend is next shewn, from contemporary evidence and its consequences, to be that when the countries of Asia Minor were annexed to Persia by the conquests of Darius the Mede, and Cyrus, about 650 years before our era, and the proverbial poverty of the Medes and Persians ended.—The readings were concluded by a communication from Sir Henry Ellis to the president, on the siege pieces of the time of Charles I. The authenticity of some of these being questionable, in consequence of the silence of contemporary documents respecting them, and the uncertainty of the places at which they were struck, the writer's object was to supply this desideratum in numismatic history, so far as regards the shillings struck at Pontefract, in Yorkshire; and this is effectually done by the production of a contemporary notice\* hitherto unseen by numismatic writers, in which some of the square Pontefract shillings, found on a royalist prisoner by the republicans, are described as being stamped on one side with a castle, and the letters P. O.; and on the other with a crown, having C. R. on each side of it. Sir Henry reminds collectors, that by the letters P. O. are to be understood P. C., the form of the C being carried round like that of an O, either from bad striking or battering, as is evident from some of the extant pieces.

#### MEDICO-BOTANICAL SOCIETY.

MARCH 8. Humphry Gibbs, Esq. in the chair.—A communication from Mr. Judd, on the *Conium*, was read. The author, for the purpose of testing the value of the various extracts, had prepared one *in vacuo*; another in a wedgwood dish, by heat; and a third by spontaneous evaporation. The two first he considered to have failed in fulfilling their objects; the last, however, was certainly a valuable preparation. Dr. Bureaud Riofrey recommended a trial of the acetate of conium, as made use of by Recamier; it was considered by many practitioners to be a very valuable

medicine. Dr. Hancock exhibited the stem and leaf of the Woorari plants, from which is obtained a poison, in which the natives of South America steep their arrows. A bundle of these poisoned arrows were on the table.

#### LITERARY AND LEARNED.

##### UNIVERSITY INTELLIGENCE.

OXFORD, 2d March.—The following degrees were conferred:

*Bachelor in Divinity*.—Rev. R. Rees, Fellow of Jesus College.

*Master of Arts*.—Rev. H. M. Villiers, Student of Christ Church.

*Bachelor of Arts*.—G. J. R. Salter, Christ Church.

The election for a Professor of Political Economy took place in the afternoon of the same day, when Mr. Merivale, of Balliol College, was the successful candidate; the numbers being—for Mr. Merivale, 88; for Mr. Twiss, 82.

#### ROYAL SOCIETY.

PROFESSOR SEDGWICK in the chair.—A valuable paper, by Professor Whewell, on the tides, especially in reference to those at Plymouth and Singapore, was read. This communication chiefly treats of those remarkable diurnal inequalities which frequently characterise the tide in the morning and that in the evening of the same day; inequalities, according to the testimony of naval officers, to which is attributed the destruction of many a ship. The diurnal inequality at Plymouth, from March to September, is as much as a foot in height, and *vice versa* the rest of the year. Professor Whewell finds that his results correspond with the equilibrium theory. The calculation of the inequality at Singapore (a port chiefly chosen by the author for the excellence of the tide observations made there) is equal in quality as in amount with that at Plymouth—perhaps, a little greater. The author then adverts to the inequalities at Liverpool, at Bristol, not more than a few inches; at Leith, not much; and at other places. This diurnal inequality creeps from place to place; for instance, when it is great on the shores of America, it is nothing on those of Europe, and again *vice versa*. Further, it is singular that, while the phenomenon is distinct and steady at some places (for example, on the coasts of America, Spain, &c.), it is nothing at places interjacent: thus, it is found to affect nearly the whole of the Indian Ocean, yet at an island in its centre it is not felt. The paper was accompanied by tables.

#### ROYAL ASIATIC SOCIETY.

MARCH 4th. The Right Hon. C. W. Wynn, in the chair.—Donations to the library were presented. A paper, by Col. Sykes, on the origin of the popular belief in the poison-tree of Java, was read to the meeting. The romantic story of this wonderful tree, which spreads its baneful influence for many miles round, and the near approach to which is almost certain death,—with the details of condemned criminals sent to the tree to collect its poisonous juices, and pardon to the few who might escape its malignant emanations,—have been for many years before the public. The discovery of the real upas-tree very much lowered the interest of the tale, and the whole was set down to the imagination of the Dutch physician who first circulated the account. But a visit made in 1830 to the poison-valley of Java, by Mr. Loudon, whose account has been published, has restored much of the credibility of the original story; though still much must be set down to exaggeration. The noxious exhalations; the rapid extinction of life in the animals directly submitted to their influence; the number of skeletons seen lying about in the valley, bleached to the whiteness of ivory under

a tropical sun,—go far to furnish a foundation for the most dreadful tale: and such are the actual scenes visited and described by Mr. Loudon. This gentleman is inclined to impute the poisonous nature of the air in the valley rather to vegetable miasmata than to the emission of carbonic acid gas from the ground, as at the celebrated Grotto del Cane near Naples; both from the much greater extent of the noxious vapour, and the absence of sulphur in the neighbourhood of the valley—though he admits that the whole vicinity is decidedly volcanic. Col. Sykes is, however, of opinion, that the description given by Mr. Loudon affords a very lively idea of the Grotto del Cane; and that the only difference between them is, that in Java the gas issues from a crater at the top of a hill, and at the Grotto del Cane from a small cave. In both localities the traces of volcanic action are strongly manifested; and in both the noxious gas produces very similar effects.—The next paper read was a journal of a pedestrian tour, by Capt. Low, from Tavoy to the range of mountains which separate Siam from the British province of Tenasserim. Captain Low was attended by nearly ninety persons, sixty of whom were Burmese porters and guides, and the remainder the sepoy guards and servants. The expedition left Tavoy in the dry season, when a drop of rain is an extraordinary phenomenon; but the party were wetted to the skin by a deluge on their first day's march. They reached the Siamese frontier, a distance of fifty miles, on the sixth day; having passed through a country covered in most parts with dense forests, and traversed by elephants' paths in all directions, but entirely destitute of human inhabitants. After the first day they did not meet with a single human being. The density of the forest may be imagined by the fact, that an attempt to get a horse and elephant along their path was abandoned at once; not from any impracticability on the road, but because the overhanging trees absolutely precluded a passage. The elephants' tracks, which often traversed the path pursued by the expedition, were much more open, and better beaten, than the travellers' road, which shut out from them all view of the surrounding country. On the mountain range separating the provinces a fine view, extending one hundred miles, was obtained. The scene is described as wild and magnificent, but utterly uncultivated and abandoned. On the Siamese side it was a region of mountains,—range succeeding range, until lost in the distance. On the side of Tavoy the country was more open; hills and valleys were mingled, and the Tavai peak was seen towering over the intervening ranges. The British flag was hoisted on the ridge which separates the two countries, and saluted with three rounds of musketry; it was then pulled down, and a common lascar's handkerchief substituted for it. The writer learned that the handkerchief was afterwards carried to Siam, where it was magnified into an union-jack. During much of their route the party found the grass abundant and verdant, although the dry season had lasted four months. This was occasioned by the copious dews which collect in the leaves of the trees, and shower down a torrent upon the passers by,—a bounteous supply, without which all those regions would be utterly parched up. There are scarcely any means of traversing this country otherwise than on foot. There are no beasts of burden whatever; and, although a slight cart, drawn by a single buffalo, may be procured, it can be used only on short excursions. Five miles is about the greatest distance that

\* This notice appears in a newspaper of the time, *The King's Own faithful and impartial Scout*, dated Feb. 9 to 10, 1848.

can be traversed in any direction without being obstructed by broken-down bridges, gaps in old causeways, sloughs, and rocks. The paper also contains some curious anecdotes of the habits of the Burmese, whose capabilities as guides and porters on a march were now first ascertained, and, apparently, have not been entirely unsatisfactory.

#### LITERARY FUND.

At the general meeting for the annual election of officers, &c. on Wednesday, the only vacancy in the list of vice-presidents was filled with the name of Lord Stanley: all the others were, with his grace the Duke of Somerset, president, re-elected, viz. Marquess of Lansdowne, Earls of Mountnorris, Mulgrave, Munster, and Ripon; Lords Carrington, Ellenborough, Brougham and Vaux, Henley, Fris. Egerton, and John Russell; Sirs R. Peel, J. Hobhouse, E. Swinburne, and R. H. Inglis; C. Savill Onley, Esq., A. Spottiswoode, Esq., A. T. Hope, Esq. M.P., and J. T. Hope, Esq. The members of the council were re-elected, with the Rev. Dr. Croly, who had resigned the office of registrar, in the room of T. Crofton Croker, Esq., who had accepted that office, and Daniel Wilkinson, Esq., in the room of Dr. Valsey, deceased. For the general committee, to fill up vacancies which had occurred during the year, were elected, J. Emmerson Tennent, Esq. M.P., T. Longman, jun. Esq., and W. H. Rosser, Esq. F.A.S. At the close of the meeting, thanks were voted to G. Woodfall, Esq., for his impartial exertions in the chair; and the general committee being formed, sat for two hours, to examine the claims for relief, when ten cases of unfortunate literature received such succour as their several circumstances appeared to sanction. The anniversary was fixed for Wednesday, May 3, and a numerous and distinguished attendance is anticipated.

There was, however, one matter which occasioned considerable regret to the committee, namely, a letter from Mr. Roney, resigning the office of secretary to the Fund. The efficient services of that gentleman in every thing that concerned the Institution, but especially his delicate and kindly conduct in all communications with claimants (a point of deep interest, as affecting the best feelings of the Society), cause his loss to be much regretted.

#### LITERARY AND SCIENTIFIC MEETINGS FOR THE ENSUING WEEK.

**Monday.**—Royal Geographical, 9 P.M.; British Architecture, 8 P.M.; Marylebone Literary, 8½ P.M. (Mr. E. Taylor on Vocal Music, and the 20th); Russell Institution. (Mr. H. Gosby on Insect Anatomy with Oxy-Hydrogen Microscope; and ensuing 20th and 27th); Belgrave Literary Conversazione, 8 P.M.

**Tuesday.**—Royal Medical and Chirurgical, 8½ P.M.; Civil Engineers, 8 P.M.; Zoological, 8½ P.M.; Society of Arts, 8 P.M. (Mr. J. Taylor on recent improvements in mining); Belgrave Literary, 8 P.M. (Dr. Gully on the Physical and Moral Attributes of Men of Genius; and the 21st); Lambeth Literary, 8½ P.M. (Mr. Serle on the Drama); Meteorological (Anniversary), 8 P.M.

**Wednesday.**—Society of Arts, 7½ P.M.; Statistical, 3 P.M. (Anniversary).

**Thursday.**—Royal Society, 8½ P.M.; Antiquaries, 8 P.M.; Islington Literary, 8 P.M. (Mr. Downes on Steam Power, conclusion); Numismatic, 7 P.M.

**Friday.**—Royal Institution, 8½ P.M.

**Saturday.**—Royal Asiatic, 2 P.M.

#### FINE ARTS.

##### GRAPHIC SOCIETY.

THE third conversazione of this most agreeable Society took place on Wednesday last. It was numerously attended, and there were many beautiful drawings and studies exhibited. A very rich folio of Turner's drawings, from Mr. Windus' collection; one of Harding's finest drawings, "Como," belonging to Mr. Austen;

some beautiful drawings and studies by Mr. J. Nash and Cattermole, &c.; a folio of splendid drawings sent by Mr. Griffiths; sketches by Copley Fielding; some fine engravings by Lewis and others; and several fine drawings by D. Roberts, for a forthcoming work of his, to add to the same class of works already published by Harding, Lewis, and Prout. The supply of works of art by the members and visitors afforded a most gratifying treat.

#### NEW PUBLICATIONS.

*Historical and Literary Curiosities.* Engraved by C. J. Smith. No. V. Pickering.

THE present Number of this curious and ably executed work is published on an extended scale. Of the views which it contains, the most interesting, perhaps, are, "The house formerly occupied by the Royal Society, in Crane Court," and "The residence of Sir Isaac Newton, in St. Martin's Street;" of the antiquities, the Bible used by Charles I. on the scaffold," and "The Caligraphic Exhibition-Bill of Matthew Bunchings, the Dwarf of Nürnberg;" of the original documents, "Letter of Dr. Barlow, bishop of Lincoln, relating to the removal of the King's Tracts, in the British Museum, from the Bodleian Library," and "Part of a Letter from Lord Bolingbroke to Dr. Swift." We will transcribe the last-mentioned, to shew that the world, and its censurers, are much the same now as they were when that letter was written.

"Sincerity, constancy, tenderness, are rarely to be found. They are so much out of use, that the man of mode imagines them to be out of nature. We meet with few friends. The greatest part of those who pass for such are, properly speaking, nothing more than acquaintance; and no wonder, since Tully's maxim is certainly true, that friendship can subsist *non nisi inter bonos*."

*The Edinburgh New General Atlas of Modern Geography, No. 1.* Edinburgh, W. and A. K. Johnston; London, Whitaker and Co.

THE first part of this new geographical publication contains "the World," "the Eastern Hemisphere," "the Western Hemisphere," and "Europe." The plates are engraved with great clearness; and every map is so coloured as to represent the territorial connexions of the various countries.

*The Churches of London.* By George Godwin, jun. Architect; assisted by John Britton, Esq. F.S.A. No. III. Tilt.

Two views of that fine relic of the architecture of the early part of the twelfth century, "St. Bartholomew the Great, Smithfield," engraved by J. Le Keux, from drawings by R. W. Billings, and a woodcut, representing "the old Vestry," form the neat and pleasing embellishments of this Number; in the typographical part of which there is an instance of conscientiousness, so rare and so laudable that we cannot refrain from noticing it. It appears that an error, entirely that of the printer (for it did not occur until after the final revision of the author), crept into the first page of the first Number. That error merely consisted of converting the singular "Englishman," into the plural "Englishmen." So solicitous, however, is the proprietor of the publication "to make the work as accurate as possible," that in the present Number he has actually furnished a cancel-leaf; in which, of course, the mistake is corrected. We recom-

mend the example to the publishers of works of greater magnitude and price.

#### ORIGINAL POETRY.

I AM NEVER ALONE.

*Lines by Lady J.—s.*

I AM never alone at early dawn,  
When the lark pours her gushing notes on high;

When the diamond dew-drop gems the lawn,  
And the daisy opens her tearful eye:  
I am never alone!—with fragrant hair,  
The spirit of the first sweet hour is there!

In one glad poem our songs arise—  
"Thanks be to God for the earth and skies;  
For the early dawn, the glittering dews,  
The heaven of song, the glow of hues;  
The life, the light, the love we share;—  
Thanks for the thoughts of praise and prayer!"

I am never alone at warm noon-day,  
When the breeze is drunk by the scorching heat;

When the lark hath hushed her trifling lay,  
And the flower shut up her odours sweet:  
I am never alone!—for near me lies  
The spirit of woods, with deep dark eyes;  
And my heart is stilled as flower and bird,  
For my soul that spirit of woods hath heard.

In low soft murmurs the sounds arise—  
"Thanks be to God for the earth and skies;  
For the glowing noon, the cooling glade,  
For the sweets of rest, the calm of shade;  
For the life, the love, the peace we share;—  
Thanks for the thoughts of praise and prayer!"

I am never alone at evening's close,  
When the twittering birds bid earth good-night;

When the insect hums round the laurel-rose,  
And the bat flits low in the gray twilight:  
I am never alone!—on bended knee,  
The spirit of night doth pray with me.

#### SKETCHES.

*A Brief Description of the Etruscan and Greek Antiquities, now open at 121 Pall Mall.* Inscribed to Samuel Rogers, Esq. Pp. 24. London, 1837. Mallett.

SINCE the exhibition, by Belzoni, of the facsimile of one of the Egyptian tombs explored by him, we have seen nothing in London more interesting to the antiquary and philologist than the objects which the above little tract describes.

In them are placed before us certain tangible records of the sculpture, rites, and ceremonies, of the ancient Etruscans; a nation whose *lucumones*,\* or principalities, were established long before the foundation of Rome, in whom that infant empire found powerful oppony, and who, when overcome, gave to Rome herself many of the religious rites and civil arts which she (Etruria) had possessed in common with the Greeks. Into the numerous speculations relative to the origin of the Etruscians themselves we have not leisure, at this time, to enter; suffice it here to say, that, at the first glance at these antiquities, the vases, sculptures, arms, and paintings, of which they are composed, we were convinced that they emanated from the same source with Grecian art. Several inscriptions, in the Etruscan language, appear on the sarcophagi in these tombs; and a proof of their great antiquity is, that they are read from right to left. The characters are a mixture of Greek and Roman together, with

\* So called from *Lucumo*, an Etruscan word for a chieftain.

some which may be considered peculiarly Etruscan. The antiquities exhibited are the result of excavations which Signor Campanari has made at Vulci, in the limits of the ancient Etrurian district of Tarquinia, since the year 1838. It will make his tract rather more intelligible to the general reader to observe, that he uses the term *urn* in a very extended sense, and that when he speaks of an urn, he generally means a sepulchral chest or sarcophagus, as in the following passage: "From these specimens (the cists exhibited) it is evident that the urns frequently presented on the fascia or upper cornice the epitaph of the deceased, which comprised his own name and that of his family, age, and, sometimes, particulars of his life. At the top of the *urn* [read *chest*] was placed the statue of the deceased in a recumbent position, whether male or female, if their condition had been such as to call for this mark of distinction. Within the urns we have often found, together with the skull and bones, the favourite objects of the deceased which he or she used, when living—such as a woman's gold ornaments, the whole or part of the armour of a warrior, mirrors, cestuses, dice, table utensils, and pieces of money of very ancient date." Of almost every one of the articles here enumerated, the tombs exhibited contain most interesting and singularly perfect specimens: the greaves, shield, sword, and javelin, of the warrior; the golden wreath of the priestess, the sacrificial implements and tripod altar of the temple where she had served: all these objects are presented to us with an identity of locality, effected by the painted walls of the tombs being careful facsimiles of the real receptacles. The statues, vases, ornaments, weapons, &c. are the original articles themselves, the sculptures are all made from the stone of the country; the Tarquinian tombs are grottoes or excavations formed in the sides of cliffs, and closed, after the primeval mode, with a huge stone: "the whole are cut in a certain granite stone of the district, called *Peperino*; for, at the period of their formation, they had not begun in Italy to work the marble of Luna, the Greek or African marble, which were afterwards introduced by the Romans. To those acquainted with Pompeii, these tombs afford a singularly gratifying illustration of the fact, that that city was but an Etruscan colony Romanised; and they will observe in the paintings and objects of these funeral mansions the pure Etruscan, or Pelasgo-Greek style: in Pompeii they will recognise it still preserved, with some variations conformable to Roman taste. We are not in the habit of rendering indiscriminately the meed of our applause to every "foreign wonder" which a London spring-season establishes in our streets, and we entered these Etruscan catacombs quite unprejudiced, and, therefore, unprepared for the importance of their contents. Surely many of these, particularly the sculptured sarcophagi, are worthy of the attention of the trustees of our national Museum. They are, indeed, extraordinary specimens of classic "monumental effigies;" a point from which a Charles Stothard might have exulted to start, in illustrating sepulchral memorials.

We hope, at least, to see the details of the painted walls and contents of these tombs preserved in a graphic form, with literary illustration more extended than in the little tract now before us. Most heartily, in the mean time, do we wish Signor Campanari that encouragement from the enlightened portion of our countrymen which his undertaking has so well earned. How gratifying is it to the scientific and inquiring mind to have perfect spe-

cimens of the earliest periods of art thus cheaply brought home—even to our doors!

The author dedicates his *brochure* to Samuel Rogers, Esq., whose classic taste and poetry are so well known, and whose patronage, we are happy to infer, he enjoys.

We purpose to return to the subject of M. Campanari's exhibition very shortly.

#### EGYPTIAN ANTIQUITIES.

AT the close of a series of six very interesting and instructive Lectures on Egyptian Antiquities, delivered at Exeter Hall, by Mr. Pettigrew,—which it is a good sign of the taste of the times, and the increasing desire for information, to notice, were well attended by persons of both sexes, and of various ranks of life,—that gentleman, on Monday evening last, summed up his remarks, and unrolled a mummy, most liberally presented for the occasion by Mr. Jones, of the Admiralty. This operation excited a marked feeling throughout the whole of the numerous auditory, including many individuals of distinction in the literary circles. In the commencement, Mr. Pettigrew, referring, with just eulogy, to Mr. Wilkinson, who was present, noticed that the inscription on the outer case differed from that on the inner case containing the mummy. Both stated the party to have been a female; but the names and genealogies were different, and the latter stated the mother of the deceased to be living when her daughter died. It might be that the wrappings would settle the point; which, however, they did not,—for no name was found on them, as often occurs. The mummy was Greco-Egyptian, and embalmed after the ancient manner; the bowels being extracted by an incision on the left flank, and the brains, probably, through the nostrils, as the nose was much broken. The legs were separately bandaged, and the ankles bound by stripes of painted linen, about half an inch in breadth. The figures were not hieroglyphic, but simply ornamental. Bands of the same kind surrounded the arms, which were crossed upon the breast; and a similar circle went round the neck, with a thin golden scarabæus (?) in front. On each knee was also a thin piece of gold, resembling the lotus-flower; over each eye the providential eye of Osiris, of the same material; and another golden ornament upon the top of the ridge of the nose. There were rings on the fingers; but the opportunity was not sufficient for examining them, nor time for proceeding to the careful and laborious unrolling of the body to the end. The upper wrappings were not voluminous, and of coarse nankeen-coloured linen. Then came a complete envelope of asphaltus, and below that the usual disposition and extent of linen rolls. On the soles of the feet were slight sandals, transversely striped black, white, and red, exactly like those painted on the bottom of the inner case. The finger and toe-nails were gilt; and, altogether, the subject presented many objects for further investigation and study.

At the conclusion of his discourse, which was much applauded, Mr. Pettigrew feelingly took occasion to mention a paragraph in the *Times* newspaper, which stated that Mr. Davidson, the enterprising and intrepid traveller in Africa, had been murdered, within fourteen days' journey of Timbuctoo. By accounts received from our vice-consul at Mogadore (of Feb. 1), it appeared that two reports had reached him of our countryman's having been stopped and robbed: but these did not convey the fatal intelligence of his murder; and, on the contrary, from their tenor, encouraged a

hope that Mr. Davidson, though plundered, was not destroyed, and might yet return in safety to his friends and country. God send it may be so!

Mr. Pettigrew also intimated, that Mr. Athanasi's splendid mummy, from Memphis, would be unrolled on the 10th of April, in Exeter Hall: a notice which has excited a strong sensation among the lovers of Egyptian lore and antiquities; for, hitherto, those which have been examined in this country are from Thebes and other places, and we have had no opportunity of seeing the generally richly ornamented mummies of Memphis.

*The Friendly Loan Society.*—This truly benevolent and eminently useful Society has fairly tried the experiment of the vital and extensive benefit it is calculated to confer on the struggling lower orders. The losses, which many individuals feared so much, have, during the first year, been very trifling; certainly nothing to impede the well-working of the Institution. Experience, too, has been acquired; and the managers will not again be liable even to these drawbacks, and rules have been framed to provide for their avoidance. On the other hand, the particular instances of absolute salvation from ruin, and restoration to comfort, by means of the Society, are most gratifying. Eight hundred loans, amounting to 5603*l.* have been granted; and, in almost every case, a blessing has attended the timely aid. 104 shoemakers, 60 tailors, 44 dress and bonnet-makers, 40 carpenters, 23 school-keepers, 35 booksellers and stationers, 31 greengrocers, 15 laundresses, and so on, in various proportions, have sought and obtained such aid, without the interference of the pawnbroker, and often escaping the low attorney. Need we say how much such an association is entitled to the liberal patronage of the good and the charitable?

#### MUSIC.

##### VOCAL SOCIETY.

THE fourth concert was, in all respects, a very delightful one. Mrs. Bishop and Miss Mason were greeted with a warmth that showed how much their absence had been felt and regretted by the audience. The last-named lady "wou golden opinions" by her finished and energetic performance of Purcell's trying cantata, "From rosy bowers." This song, and the ever beautiful coronation anthem, "The King shall rejoice," were of themselves sufficient to render the concert attractive. The madrigals were, "The Lady Ariana," by Wilbye, and "Fair shepherd's queen," by Luca Marenzio; the latter performed for the first time. Both were good, and received with the usual tokens of satisfaction. Mrs. Anderson delighted the admirers of good pino-forte playing by her masterly style of performing the first movement of Hummel's concerto in A flat. The other vocalists were Mrs. Seguin, the Misses Woodvatt and Hawes, and Messrs. Hobbs, Hawkins, Francis, King, Fitzwilliam, Bradbury, Belamy, and E. Taylor. Q.

[Notice of the fifth concert in our next.]

##### ANCIENT CONCERTS.

THE first concert, on Wednesday last, under the direction of the Archbishop of York, for the Duke of Cumberland, consisted of a very good selection, including the overture and "Prismers' chorus," from *Fidelio*; the trio, "Fia grata," from the same opera; and a good sprinkling of Mozart and Haydn. The vocalists were Mademoiselle Blasis and Signor

Catone, Messdames Knyvett and Shaw, and Messrs. Bennett, Phillips, and King.

**Royal Academy of Music.**—We are glad to see announced four morning concerts by the pupils of the Royal Academy of Music, and commencing next Saturday. The noble chairman, Lord Burghersh, deserves the utmost regard of the musical world, and especially of those who admire the cultivation of a national and native school, for the indefatigable attention he bestows on this excellent institution.

#### DRAMA.

**Opera.**—*La Donna del Lago* was produced on Saturday. The operatic corps is, as yet, inferior to what we are accustomed to look for, as the standard for comparison, at this theatre; but it is nevertheless hardly fair, before Easter, to criticise the performances by that test. Rubini, Lablache, Tamburini, and Grisi, are still so fresh in our memory, that aught short of such a combination must produce something like disappointment. The management of the Lyceum did wisely in giving us new operas; we had then nothing to regret, and they afforded a pleasant evening's amusement; but, where we expect more, the same means are insufficient. Signora Angiola, the *débutante* of Saturday, has a pleasant and melodious voice, which would be heard to great advantage in a room, but has not power for so large a space as the King's Theatre. Her great exertion was so evident, that we really felt for the signora, and feared she would break down. Signor Deval, another *débutant*, has a tolerable voice, a barytone, and, till the arrival of our favourites, will be an acquisition, though not as *primo*. Catone sang very sweetly, and is the only foreign transplantation adequate to the situation. Miss Wyndham did her best, and was heard to greater advantage than ever. She is rapidly and fully confirming our prognostics in her favour. We have not yet heard Madame Giannoni, but, with her fine musical taste, we have no apprehension for her success. The ballet continues its delightful attraction, and we are to have the great hit of last season, *Beniowski*, revived immediately.

**Adelphi.**—A most successful burletta was produced on Monday, entitled *The Gamester Father*, in which Mr. Yates's acting was so fine and touching, that he drew tears from almost every eye. It is an adaptation from the French, and, of its kind, the best thing we have seen for a long time. The license of the Adelphi has been, as we stated, extended two months, on account of Easter falling so early in the year; and great preparations are making for the extra campaign. There are many novelties announced, and among them an Easter piece, for which Mrs. Honey has been engaged, and which is said to be very beautiful. Mr. Rice took his benefit and departure on Saturday. He has amused and offended many; he should have been seen but once, and he was very good; but we got so tired of *Jim Crow*, that we are glad it is over.

**St. James's.**—One of the best farces that has appeared for some time was brought out on Monday. It is called *Is she his Wife?* and though rather a ticklish plot, is so well written and acted, that it affords a fund of amusement. Mr. Harley never appeared more at home, and Miss Allison was as successful in farce as she has been in tragedy. Mr. Gardner improves, and is very ludicrous with his pomposity in this piece. We are on thorns for the appearance of *Mr. Pickwick*, who is announced for Monday, Harley's benefit. He has been an excellent character since he has been at the St. James's, and

we shall doubtless have a hearty laugh at his personation of the gallant head of the Pickwickians, which report says he dresses to the life; for "Boz's" pen has really made him a living character.

#### VARIETIES.

**Mr. Davidson.**—Referring to Mr. Pettigrew's statement relative to this gentleman, we have (Friday afternoon) made the latest inquiries in our power upon the painful subject. There is no authentic account of his death in London, and it rests on the paragraph in the *Times* newspaper. That he has been attacked and robbed seems but too probable, from the rumours at Mogadore; and, under such circumstances, fears must be entertained for the safety of any traveller in that country. The Mogadore letters, as mentioned by Mr. Pettigrew, were very contradictory, and evidently exaggerated, as the sheikhs, &c. wished to make an impression in favour of themselves, and against their rivals; and this is another circumstance to strengthen our hope that Mr. Davidson has been allowed to go on to Timbuctoo.

**Royal College of Physicians.**—At the first meeting of the season on Saturday, which was attended by many distinguished individuals, Sir H. Hallford delivered a discourse on comparative longevity.

**The Drury Lane Theatrical Fund**, announced for Wednesday, holds out great promise, both for the day's enjoyment and the future interests of this excellent charity.

Lord Viscount Kingsborough, eldest son of the Earl of Kingston, died on the 27th ult. His lordship was much attached to, and a considerable proficient in, antiquarian learning, and has left behind him one public monument of his diligence and munificence—having, in 1831, printed six splendid volumes of the "Antiquities of Mexico," which were illustrated by facsimile plates, taken from inedited MSS. preserved in the Royal Libraries of Paris, Berlin, and Dresden; in the Imperial Library at Vienna; the Vatican; the Borgian Museum; the Library of the Institute at Bologna, together with some, and those of the most curious and beautiful description, in the Bodleian Library, preserved among the collections of Archbishop Laud, and the learned Mr. Selden. Of this magnificent work, four copies were printed upon vellum. His lordship sat in the first parliament of George IV. for the county of Cork, and died in prison, to which he was consigned for debt.—*Newspapers.*

**Weather-Wisdom.**—(10th.) The weather has been extremely cold during the past week; but the winds have not been high, nor the weather unsettled. The storm anticipated on the 4th, according to Lt. Murphy, did not take place; and, *à-propos*, we have not now room for a second letter from that gentleman. Lieutenant Morrison, for the ensuing seven days, predicts "12th, cloudy; the middle, turbulent, gloomy, and frequent rains; 18th and 19th, milder."

**Lord Lyndhurst** has been elected Lord Rector of the Marischal College, Aberdeen: the competition was pretty strong, and was made much of a political struggle.

**Junius.**—The *Inverness Courier* continues to mention matters tending to prove, that Iachlan Maclean was the author of Junius's Letters: we shall look with curiosity for Sir D. Brewster's statement on the subject.

**Sudden Death of Miss Macauley.**—Miss Elizabeth Wright Macauley, a lady who has been some time known to the public in the varied and opposite characters of actress and preacher of the Gospel, who some years ago left

the stage and became the occupant and preacher of a chapel in the metropolis, and who subsequently returned to her former profession, died suddenly in the city of York, on Wednesday, the 22d ult. It appears that, for the last twelve months, Miss Macauley had been travelling through the provinces, delivering lectures on "domestic philosophy," which were interspersed with recitations, &c. During the last three weeks she had been sojourning at York, delivering a course of lectures in the Merchants' Hall. Tuesday evening was the third lecture delivered by her in that city, and, melancholy to relate, her last; for, although on that evening she appeared in excellent health and spirits, the following day she was a corpse. On the following day (Wednesday) her health appeared better than usual, and her spirits very good, until towards nine o'clock in the evening, when she suddenly fell from her chair, in her apartments, apparently in a fit, and shortly afterwards died. An inquest was held upon the body on the following day, and a stroke of apoplexy was declared to be the cause of death. Deceased was a very stout person, and very fat. She was 52 years of age.—*Newspapers.*

#### LITERARY NOVELTIES.

*In the Press.*

**Memoirs of Samuel Taylor Coleridge**, by James Gillman, Esq. [This announcement we are well pleased to see. Mr. Gillman, with whom Mr. Coleridge resided so long, can give us, if he will, the best, most particular, and only genuine account of the latter domestic and literary years of the poet.—Ed. L. G.]—**The Candidate for the Ministry: a Course of Expository Lectures on the First Epistle of Paul the Apostle to Timothy**, by the Rev. H. Pinder, M.A.

#### LIST OF NEW BOOKS.

Medico-Chirurgical Transactions for 1836, Vol. XX. 8vo. 15s. 6d. — **Parke's Domestic Duties**, 4th edit. 12mo. cloth, 10s. 6d. — **Ermargarde, a Tale**, and other Poems, by Eliza Heywood, 12mo. 7s. 6d. — **Xenolia: Poems** by John Anster, LL.D. post 8vo. 7s. 6d. — **Old Friends in a New Dress**, by R. S. Sharpe, 12mo. cloth, 4s. 6d. — **Sketches of the Commercial Resources and Monetary System of British India**, 8vo. cloth, 4s. — **Guide for Invalids to the Continental Watering-Places**, by Dr. Home, 3s. 6d. cloth. — **Francis Abbott, the Recluse of Niagara, and other Poems**, by J. Bird, 8vo. 7s. 6d. — **B. Montague and J. Ayrton's Law and Practice in Bankruptcy**, 2 vols. 12mo. 11s. 6d. — **Wilsius on the Covenant**, 2 vols. 8vo. 11s. 6d. — **J. W. Smith's Selection of Leading Cases in Law**, royal 8vo. 11s. 2s. — **Semilasso in Africa: Adventures in Algiers**, &c. by Prince Puckler Muskau, 3 vols. post 8vo. 11s. 6d. — **The Library of Anecdote, the Book of Human Characters**, Vol. 11. 6s. — **Von Raumer's Contributions to Modern History**, Vol. 11. Frederick 11. and His Times, 8vo. 10s. 6d. — **C. P. Wyatt's Poems**, Original and Translated, fcap. 6s. — **Life of John Milton**, 2d edit. royal 8vo. 11s. 6d. — **Questions on Ancient and English History**, by Mrs. E. Carrington, 18mo. 1s. — **Reinhardt's Treatise**, with Notes by Dr. Hickie, 12mo. 9s. 6d. — **The Linnean Artificial System of Botany**, by T. Castle, 4to. 6s. — **Napoleon in Council**, from the French of Baron Pelet, by Captain Basil Hall, 9s. — **Popular Guide to Phenology**, 18mo. 1s. — **Sunday Scholar's Annual for 1837**, by the Rev. J. Burns, 32mo. 1s. — **C. W. Gainfield on the Image and Likeness of God in Man**, 8vo. 7s. — **The Highlanders of Scotland, their Origin, History, &c.**, by W. F. Skene, 2 vols. post 8vo. 11s. — **Lyell's Geology**, new edit., 4 vols. 12mo. 11s. 2s.

#### TO CORRESPONDENTS.

We are sorry we cannot oblige "E. K." The Poor-Law Poems, by Maurice Harcourt (under which *soubriquet* we think we recognise a young writer who has a hereditary claim to literary distinction), do great credit to his heart, as well as to his talents; but they are not in our way for quotation. We thank "a correspondent," however, for directing our attention to them.

## ADVERTISEMENTS.

Connected with Literature and the Arts.

## BRITISH INSTITUTION,

FALL MAIL.

The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

## EDUCATION. — A Gentleman, residing at

a short distance from Town, receives a limited number of Pupils, whom he engages to educate upon a System, the result of twenty years' experience, and as yet unequalled in its results. His terms are such as to keep his school select, but do not exceed the remuneration which every parent, anxious that his son should be soundly and religiously educated, will readily afford.

Address (post-paid) F. Ridgway, 169 Piccadilly.

## THEATRE OF ANATOMY,

37 Little Windmill Street, Haymarket.  
The Annual Course of Twelve Lectures on Anatomy, as applicable to the Arts of Design, and for the purposes of general instruction.

By Mr. J. GREGORY SMITH,  
Member of the Royal College of Surgeons, and Teacher of Anatomy, Surgery, &c.

will commence on Tuesday Evening, April 4th, at Half-past 8 o'clock, and will be continued on each succeeding Friday and Tuesday, at the same hour.

The Lectures will be illustrated by recent Dissections and by preparations of Human and Comparative Anatomy. A practical demonstration and every facility will be afforded to those gentlemen who may be desirous of making Studies or Drawings from the recent Dissections, on the morning subsequent to each Lecture.

Prospectuses, exhibiting an outline of the Course, and Cards of Admission, at One Guinea each, may be obtained of Messrs. Dominic Colnaghi and Co. Printers to the King, Pall Mall East; of Messrs. Carpenter and Son, 14 Old Bond Street; and at the Theatre of Anatomy, 37 Little Windmill Street, Haymarket.

## ROBERTS'S PICTURESQUE

SKETCHES OF SPAIN.  
Comprising Madrid, Seville, Granada, Burgos, Xeres, Malaga, Gibraltar, Carmona, &c. &c.

Price, Imperial folio, 4s. 4 half-bound.  
London: Hodgson and Graves, Printers to the King, 6 Pall Mall.

Just published, Part I. containing Four large Plates, price 2s. India Paper, &c.

## VIEWS ON THE NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY, from Drawings

by J. W. Carmichael.  
With Descriptions by J. Blackmore, Engineer to the Company. C. Tilt, Fleet Street; Currie and Bowman, Newcastle; Thurnham, Carlisle.

## SALES BY AUCTION.

SOUTHGATES' ROOMS.

## Fine Topographical Works.

By the late THOMAS FISHER, Esq. F.R.S. London and Perth.

By MESSRS. SOUTHGATE AND SON, AT THEIR WEEKLY SALE-ROOMS, No. 25 FLEET STREET,

ON WEDNESDAY, MARCH 15,

Consisting of the remaining copies of Fisher's Bedfordshire Collections, 114 Plates, together with the Copperplates, and the Author's MSS. relating to Bedfordshire; the remaining copies of a Series of Ancient, Historical, and Legendary Exhibitions in France, on the walls of the Chapel of the Trinity at Stratford-upon-Avon, 47 coloured Plates (the lithographed stones of which have been destroyed, and the Paintings obliterated by the whitewashing of the walls); the Copperplates of the same work, and Mr. Fisher's valuable and interesting MSS. Collections for a History of the Guild of Stratford.

Several portfolios of Drawings and Sketches, illustrative of the Topography of Bedfordshire, Buckinghamshire, Hertfordshire, Kent, Middlesex, and various other counties; together with a few Prints, Copperplates, &c.

May be viewed, and Catalogues had at the Rooms.

ON FRIDAY, MARCH 17th,

By M. E. BOURLIER.

A Member of the Church of England.

London: John Hatchard and Son, 127 Piccadilly.

## SOUTHEY'S COWPER.—VOL. XI.

On Tuesday, the 7th Instant, was published, Vol. XI. illustrated with superb Engravings by Stock; and Goodall, price 5s. cloth extra.

## THE LIFE AND WORKS OF WILLIAM

COWPER.

By ROBERT SOUTHEY, Esq. LL.D. Poet Laureate.

"This volume of the 'Complete Works of Cowper,' contains the first portion of his Translation of Homer. Mr. Southey gives the following reasons for adopting the first edition in the place of the second, which all the reprints have been taken from:—

"It is incumbent upon the present editor to state the reasons which have induced him, between two editions of Cowper's Homer, differing so materially from each other that they might almost be deemed different versions, to prefer the first.

"Whoever has perused the translator's letters must have perceived that he had considered, with no ordinary care, the scheme of his versification, and that, when he resolved upon altering it in a second edition, it was in deference to the opinion of others.

"It seems to the editor, that Cowper's own judgment is entitled to more respect than that of any, or all his critics; and that the version which he composed when his faculties were most active, and his spirits least subject to depression—indeed in the happiest part of his life—ought not to be superseded by a revision, or rather reconstruction, which was undertaken three years before his death—not like the first translation, as it is pleasant work, an innocent luxury, the cheerful and delightful occupation of hope, and ardour, and ambition—but as a 'hopeless employment,' a task to which he gave 'all his miserable days, and often many hours of the night,' seeking to beguile the sense of utter wretchedness, by altering as it were the scale of alteration.

"The editor has been confirmed in this opinion by the concurrence of every person with whom he has communicated on the subject. Among others he takes the liberty of mentioning Mr. Cary, the translator of Dante, whose authority upon such a question is of especial weight.

"In support of this determination, the case of Tasso may be cited as curiously in point. The great Italian poet altered his Jerusalem, like Cowper, against his own judgment, in submission to his critics: he made the alteration in the latter years of his life, and in a diseased state of mind; and he proceeded upon the same prescribed rule of 'altering as it were the scale of alteration,' and removing all the elisions. The consequence has been that the reconstructed poem is utterly neglected, and has rarely, if ever, been reprinted."

The publishers need not observe, that no good edition of Cowper's Homer has ever appeared, and at this time not a new copy of any edition can be had.

London: Baldwin and Cradock, Paternoster Row.

## POTTER'S ANTIQUITIES OF GREECE, BY BOYD.

An improved edition, of

## POTTER'S ANTIQUITIES OF GREECE,

with numerous Notes and enlarged Indices.

By JAMES BOYD, LL.D.

One of the Masters of the High School, Edinburgh, and Editor

of "Adam's Roman Antiquities," &amp;c.

In this edition the Text has been carefully read, and cleared from many misapprehensions of style; the References to many of the Authorities and Authors quoted are made more precise and definite; numerous Notes from Müller, Herken, Boeckh, Cramer, Leake, Anthon, Henderson, &c., and a Supplementary Chapter on the Darians, with Tables of the Coins, Weights, and Measures of Greece, have been supplied. A Sketch of the Progress of Literature in Greece, by Sir D. K. Handford, is added; and the whole is accompanied by new and enlarged Indices, and illustrated by upwards of One Hundred and Fifty Engravings on Wood and Steel. With these improvements, the Work is published at the very low price of 6s.

Also, just published, a new edition of

## Boyd's Adam's Roman Antiquities, with

numerous Notes and improved Indices, and illustrated by upwards of One Hundred Engravings on Wood and Steel. Price 5s. 6d.

London: Printed for Thomas Tegg and Son; T. T. and H. Tegg, Dublin; also, Blackie and Son, Glasgow and Edinburgh.

## ANALYSIS OF RAILWAYS.

By FRANCIS WHISHAW, Esq.

Civil Engineer, M. Inst. C. E.

London: John Weale, Architectural Library, 59 High Holborn.

Price Seven Shillings.

Dedicated to the Right Hon. the Earl of Carnarvon.

## ERMARGARDE, a Tale of the

Twelfth Century; Royalist Lyrics; and other Poems.

By ELIZA HEYWOOD.

Cheltenham: Printed for G. A. Williams; and Messrs. Longman and Co. London; and sold by all other Booksellers.

## MACNISH ON PHRENOLOGY.

2d edition, 12mo. price 4s. cloth boards.

## AN INTRODUCTION TO PHRENOLOGY.

By ROBERT MACNISH, LL.D.

Author of "The Anatomy of Drunkenness," &amp;c. &amp;c.

Illustrated by Thirty-four Engravings, copious Notes, and an Appendix.

"In the present edition, the work wears an entirely new aspect. It has been in a great measure rewritten; and, besides such new matter, contains a series of illustrations on wood, executed by Mr. Bruce of Edinburgh, the most skilful engraver of phrenological subjects in this country."—*Author's Preface*.

The MS. of this work was completed, and nearly the whole of it had gone through the press, and received the last corrections of its justly celebrated author, before he was seized with that malady which proved fatal.

Glasgow: John Simpson and Co. (late John Reid and Co.) Edinburgh: Oliver and Boyd. London: Whittaker and Co.

In 8 vols. 8vo. price 17. 10s. in boards.

**THE SACRED CALENDAR of PROPHECY.**

By GEORGE STANLEY FABER, B.D.  
Master of Sherburn Hospital, and Prebendary of Salisbury.

The object of this Work is to combine together the various Prophecies both of the Old and of the New Testament, which treat of the grand double Period of Israel's period, coinciding with those times of the Gentiles, which, existing in strict chronological succession, are there justly styled by Meade the Sacred Calendar of Prophecy. In the present both much more extensive and much more complete Work, the author has been enabled at once to rectify various errors in his preceding publications, and to give a better arrangement (extending down to the present day) of that part of the prophetic volume which he believes to have been already unfolded.

Printed for J. G., and F. Livingston, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

New edition, price 2s.

**PRISON DISCIPLINE, and SECOND-ARY PUNISHMENTS;**

being Remarks on the First Report of the Inspectors of Prisons; with some Observations on the Reformation of Criminals.

**SPILLAN'S TRANSLATION of the PHARMACOPŒIA LONDINENSIS;**

with a Commentary, explanatory of the Chemical Decompositions, the Pharmaceutical and Medicinal Uses, of the several Preparations; with the Doses and most convenient Forms of Administration. The Rationale of the Directions given by the College, for ascertaining the purity or detecting the adulteration of Medicines, has been given, for the use of the Junior Student; several new Formule have been added in the form of an Appendix, derived originally from the Continental Pharmacopœia.

By D. SPILLAN, M.D.

Fellow of the King and Queen's College of Physicians in Ireland. London: Henry Baillière, 360 Strand.

In royal 8vo. price 1s. to be completed in about Twenty Monthly Parts.

**A BIOGRAPHICAL, CHRONOLOGICAL, and HISTORICAL DICTIONARY**

of the most remarkable Persons and Occurrences connected with the Art of Typography; to which is added, the Origin of Language, and the Muses and Materials employed by the Aesclepias in propagating Knowledge before the invention of the Art of Printing; together with Biographical Notices and Anecdotes of the most celebrated Authors, Bookellers, Type-Founders, Printers, Bookbinders, Stationers, &c.

By C. H. TIMPERLEY.

It has often been remarked, and almost become a reproach, that the art of printing, "which records all other events, has been the most forgetful of its own;" to rescue, in some measure, its professors from this reproach, this work has been undertaken, to show chronologically the rise and progress of an art which is so intimately connected with the amelioration of mankind—which has become the palladium of civil and religious liberty—the source and preserver of the arts and sciences.

In the course of the work an Abridgement of the Printers' Grammar will be given, applicable to the present improved state of the art, containing the most recent Scales of Prices, New Impositions, Receipts, &c. &c.

Part I. will be published on the 1st of April.

A copious Index, with a list of authorities quoted, will be given at the end.

London: R. H. Moore, 44 Paternoster Row; Banks and Co. Manchester; and all Booksellers.

Price 2s. 6d.

I.

*Under the Superintendence of the Society for the Diffusion of Useful Knowledge.*

Now completed in Seven Volumes,

**THE GALLERY OF PORTRAITS.**

This Work contains Portraits and Memoirs of the most illustrious Persons of all Countries. The Portraits have been executed by eminent artists from the most authentic originals; and the Memoirs have been drawn up with the greatest care and impartiality. At the end of the last volume are appended an Alphabetical Index, with the dates of birth and death; a Classified Index, separating the persons whose portraits are given into their respective countries and professions; and a Chronological Table, in which they are arranged according to the dates of their deaths. The seven volumes contain 168 Portraits, of which the following is a classified list:—

**BRITISH AND AMERICAN.**—*Statesmen and Lawyers*—Sir T. More, Queen Elizabeth, Raleigh, Coke, Hampden, Selden, Cromwell, Clarendon, Hale, Somers, Penn, Chatham, Mansfield, Burke, Washington, Pitt, Fox, Kemble, Erskine, Jefferson, Wilkes, force. *Soldiers*—Blake, Marlborough, Rodney, Nelson. *Navigators*—Drake, Cook. *Divines*—Wickliff, Cranmer, Knox, Taylor, Barrow, Wesley. *Men of Letters*—Chaucer, Buchanan, Spenser, Shakespeare, Bacon, Ben Jonson, Milton, Hobbes, Dryden, Locke, Addison, Deane, Beattie, Pope, Swift, Hume, Dr. Johnson, Adam Smith, Gibbon, Sir W. Jones, Cowper, Porson, Bentham, Scott. *Arts and Sciences*—Harvey, Sydenham, Boyle, Ray, Newton, Halley, DeLond, Bradley, Brindley, Harrison, Franklin, Arkwright, Smeaton, Hunter, Black, Priestley, Maskelyne, Watt, Banks, Cartwright, Jenner, Wollaston, Davy. *Fine Arts*—Wren, Hogarth, Reynolds, Flaxman, Siddons.

**FOREIGNERS.**—*Statesmen and Lawyers*—Lorenzo de' Medici, Ximenes, Bolivar, Charles V., De Witt, William III., Peter I., Catherine II., L'Hôpital, Henry IV., Sully, Richelieu, Colbert, Daguesseau, Turgot. *Soldiers*—Gustavus Adolphus, Sobieski, Frederick II., Kosciuszko, Turenne, Vauban, Napoleon, Cortez. *Navigators*—La Perouse. *Divines*—Luther, Melancthon, Schwartz, Calvin, Bossuet, Fénelon, Loyola. *Men of Letters*—Dante, Petrarch, Boccaccio, Ariosto, Tasso, Cervantes, Erasmus, Grotius, Schiller, Goethe, Montaigne, Joseph Schalliger, De Thou, Pascal, Molière, Corneille, Rousseau, Voltaire, Madame de Staël. *Arts and Sciences*—Galileo, Copernicus, Kepler, Leibnitz, Linnaeus, Euler, Herschel, Paré, Descartes, D'Alembert, Buffon, De l'Épée, Lavoisier, La Grange, Delambre, La Place, Cuvier. *Fine Arts*—Bramante, Leonardo da Vinci, Raphael, Correggio, Raimondi, Michael Angelo, Titian, Palladio, Canova, Murillo, Rubens, Rembrandt, Handel, Mozart, Poussin, Claude.

Each volume of the Gallery of Portraits may be purchased separately, price One Guinea. The set is also elegantly half-bound in morocco, price 7l. 17s. 6d., and whole bound in morocco, price 9l. 9s. A small number of Proofs, without text, half-bound, in 2 vols. price 12l. 12s.

II.

**THE MUSICAL LIBRARY,**

Complete in four volumes of Instrumental Music, and four volumes of Vocal Music.

The "Musical Library" was commenced with a view to assist the same aid in the progress of the musical art that literature had so undeniably received from the cheap publications of the day. Before this work appeared, the exorbitant sums demanded for engraved music amounted to a prohibition of its free circulation among the middle classes. A "Musical Library" has now been formed, containing a collection of music of the most varied character, and by the best masters, ancient and modern, foreign and native. The older music has been adapted to the improved condition of our musical instruments; and the foreign vocal compositions, particularly the German, have in numerous instances been provided with English words or translations of the originals. A large sale has enabled the Publishers to effect this at a very moderate price to the public. The four volumes of each Series, Vocal and Instrumental, handsomely bound in cloth, with ornamental Title-pages, may be had separately, the first two of each Series, price Half-a-Guinea each volume; the last two of each Series, price Twelve Shillings each. The Volumes of Vocal and of Instrumental Music are also each half-bound in 2 vols. morocco, price 9l. 8s. each Series.

III.

**THE LIFE OF THOMAS JEFFERSON,**

Third President of the United States.

With parts of his Correspondence never before published, and Notices of his Opinions on Questions of Civil Government, National Policy, and Constitutional Law.

By **GEORGE TUCKER,**

**AN ACCOUNT OF THE MANNERS AND CUSTOMS OF THE MODERN EGYPTIANS,**

Written in Egypt during the Years 1833, 1834, and 1835, partly from Notes made during a former Visit to that Country, in the Years 1825, 1826, 1827, and 1828.

By **EDWARD WILLIAM LANE.** In 2 vols. post 8vo. price One Guinea.

XIII.

*Under the Superintendence of the Society for the Diffusion of Useful Knowledge.*

**THE CHINESE.**

A General Description of the Empire of China, and its Inhabitants.

By **JOHN FRANCIS DAVIS, Esq. F.R.S.**

Late his Majesty's Chief Superintendent in China.

In 2 vols. post 8vo. illustrated with Woodcuts, price One Guinea.

"In Mr. Davis's account of China, we find every subject brought forward that can throw light on the laws and institutions of a people to whom, we think, that justice has not been rendered by foreigners which is their due. Mr. Davis brings to his task advantages which have fallen to the lot of few Europeans. He resided twenty years at Canton, where he at length went to be chief of the Factory; he accompanied Lord Amherst's embassy to Peking; and he ranks as one of the few Europeans who have ever really mastered the language and literature of China. He has rendered into English several pieces from their romances, their poetry, and their dramatic works; of which last class, in all tongues, but more especially in the unique tongue of China, it is particularly difficult to preserve the spirit in a translation. We have a right, therefore, to consider the statements which he has now submitted to the public, as containing as full and correct a view of this singular people, of their government, laws, and institutions, and, in short, of the whole frame of their society, as the many difficulties with which the subject is beset will admit."—*Quarterly Review*, July 1834.

XIV.

**REPORTS OF COMMISSIONERS,**

Published by Direction of his Majesty's Principal Secretary of State for the Home Department.

**THE SECOND ANNUAL REPORT OF THE POOR LAW COMMISSIONERS FOR ENGLAND AND WALES,**

With the Appendices. 8vo. price 6s.

XV.

**SMITH'S WEALTH OF NATIONS.**

**AN INQUIRY INTO THE NATURE AND CAUSES OF THE WEALTH OF NATIONS.**

By **ADAM SMITH.**

With a Commentary, Critical and Explanatory, by the Author of "England and America."

In 5 vols. royal 8mo. price 25s. bound in cloth.

Three volumes have been already issued, and the remaining two will be published in a few weeks. The last volumes may be purchased separately, to complete sets. The work is illustrated with Portraits of Smith, Huskisson, Quennay, William Penn, and Ricardo.

8 New Burlington Street, March 10, 1837.

MR. BENTLEY has just published the following NEW WORKS.

In 3 vols. post 8vo.

**CRICHTON.**

By W. HARRISON AINSWORTH, Esq. Author of "Rookwood," &amp;c.

#### REVIEW OF NEW BOOKS.

*Memoirs of the Life of Sir Walter Scott, Bart.*  
Vol. I. 8vo. Pp. 418. Edinburgh, 1837.  
Robert Cadell; London, John Murray, and Whittaker and Co.

As public curiosity is deeply excited with regard to this work, though the first volume has reached us too late for aught but the most cursory glance, we cannot suffer one of our Nos. to go forth without doing what we can to afford our readers a taste of its quality. A few lines from the Preface describes it sufficiently, and they may stand for our introduction.

"In obedience to the instructions of Sir Walter Scott's last will, I had made some progress in a narrative of his personal history, before there was discovered, in an old cabinet at Abbotsford, an autobiographical fragment, composed by him in 1808, shortly after the publication of his 'Marmion.' This fortunate accident rendered it necessary that I should altogether remodel the work which I had commenced. The first chapter of the following memoirs consists of the Ashetiel fragment; which gives a clear outline of his early life down to the period of his call to the bar, July, 1792. All the notes appended to this chapter are also by himself. They are in a handwriting very different from the text, and seem, from various circumstances, to have been added in 1826. It appeared to me, however, that the author's modesty had prevented him from telling the story of his youth with that fullness of detail which would now satisfy the public. I have therefore recast my own collections as to the period in question, and presented the substance of them, in five succeeding chapters, as illustrations of his too brief autobiography. This procedure has been attended with many obvious disadvantages; but I greatly preferred it to printing the precious fragment in an appendix.

To this autobiography we turn, as decidedly the most interesting portion of the work.

"The present age has discovered a desire, or rather a rage, for literary anecdote and private history, that may be well permitted to alarm one who has engaged in a certain degree the attention of the public. That I have had more than my own share of popularity, my contemporaries will be as ready to admit, as I am to confess that its measure has exceeded not only my hopes, but my merits, and even wishes. I may be therefore permitted, without an extraordinary degree of vanity, to take the precaution of recording a few leading circumstances (they do not merit the name of events) of a very quiet and uniform life—that, should my literary reputation survive my temporal existence, the public may know from good authority all that they are entitled to know of an individual who has contributed to their amusement. From the lives of some poets a most important moral lesson may doubtless be derived, and few sermons can be read with so much profit as the memoirs of Burns, of Chatterton, or of Savage. Were I conscious of any thing peculiar in my own moral character which could render such development necessary or useful, I would as readily consent to it as I would bequeath my

body to dissection, if the operation could tend to point out the nature and the means of curing any peculiar malady. But as my habits of thinking and acting, as well as my rank in society, were fixed long before I had attained, or even pretended to, any poetical reputation; and as it produced, when acquired, no remarkable change upon either, it is hardly to be expected that much information can be derived from minutely investigating frailties, follies, or vices, not very different in number or degree from those of other men in my situation. As I have not been blessed with the talents of Burns or Chatterton, I have been happily exempted from the influence of their violent passions, exasperated by the struggle of feelings which rose up against the unjust decrees of fortune. Yet, although I cannot tell of difficulties vanquished, and distance of rank annihilated by the strength of genius, those who shall hereafter read this little Memoir may find in it some hints to be improved, for the regulation of their own minds, or the training those of others. Every Scottishman has a pedigree. It is a national prerogative as unalienable as his pride and his poverty. My birth was neither distinguished nor sordid."

Into his genealogy Sir Walter goes at length, relating anecdotes of his progenitors and family in his own natural and playful manner. Thus, he tells of his elder brother, Robert:

"Robert sung agreeably—a (virtue which was never seen in me)—understood the mechanical arts, and when in good humour, could regale us with many a tale of bold adventure and narrow escapes. When in bad humour, however, he gave us a practical taste of what was then man-of-war's discipline, and kicked and cuffed without mercy. I have often thought how he might have distinguished himself had he continued in the navy until the present times, so glorious for nautical exploit. But the peace of Paris cut off all hopes of promotion for those who had not great interest; and some disgust which his proud spirit had taken at harsh usage from a superior officer, combined to throw poor Robert into the East India Company's service, for which his habits were ill adapted. He made two voyages to the East, and died a victim to the climate in . . ."

Returning to himself, he relates: "I shewed great reluctance to be caught and put to bed, and after being chased about the room, was apprehended and consigned to my dormitory with some difficulty. It was the last time I was to shew such personal agility. In the morning I was discovered to be affected with the fever which often accompanies the cutting of large teeth. It held me three days. On the fourth, when they went to bathe me as usual, they discovered that I had lost the power of my right leg. My grandfather, an excellent anatomist as well as physician, the late worthy Alexander Wood, and many others of the most respectable of the faculty, were consulted. There appeared to be no dislocation or sprain; blisters and other topical remedies were applied in vain. When the efforts of regular physicians had been exhausted, without the slightest success, my anxious parents, during the course of many years, eagerly grasped at every prospect of cure

which was held out by the promise of empirica, or of ancient ladies or gentlemen who conceived themselves entitled to recommend various remedies, some of which were of a nature sufficiently singular. But the advice of my grandfather, Dr. Rutherford, that I should be sent to reside in the country, to give the chance of natural exertion, excited by free air and liberty, was first resorted to; and before I have the recollection of the slightest event, I was, agreeably to this friendly counsel, an inmate in the farm-house of Sandy-Knowe. An odd incident is worth recording. It seems my mother had sent a maid to take charge of me, that I might be no inconvenience in the family. But the damsel sent on that important mission had left her heart behind her, in the keeping of some wild fellow, it is likely, who had done and said more to her than he was like to make good. She became extremely desirous to return to Edinburgh, and as my mother made a point of her remaining where she was, she contracted a sort of hatred at poor me, as the cause of her being detained at Sandy-Knowe. This rose, I suppose, to a sort of delirious affection; for she confessed to old Alison Wilson, the housekeeper, that she had carried me up to the Craigs, meaning, under a strong temptation of the devil, to cut my throat with her scissors, and bury me in the moss. Alison instantly took possession of my person, and took care that her confidant should not be subject to any further temptation, so far as I was concerned. She was dismissed, of course, and I have heard become afterwards a lunatic."

His residence at Sandy-Knowe, and his early education, and the instilling of ballad poetry into his boyhood, have been pretty accurately related in preceding biographies. We select, however, a few passages:

"I was in my fourth year when my father was advised that the Bath waters might be of some advantage to my lameness. My affectionate aunt, although such a journey promised to a person of her retired habits any thing but pleasure or amusement, undertook as readily to accompany me to the wells of Bladud, as if she had expected all the delight that ever the prospect of a watering-place held out to its most impatient visitants. My health was by this time a good deal confirmed by the country air, and the influence of that imperceptible and unfatiguing exercise to which the good sense of my grandfather had subjected me; for, when the day was fine, I was usually carried out and laid down beside the old shepherd, among the crags or rocks round which he fed his sheep. The impatience of a child soon inclined me to struggle with my infirmity, and I began by degrees to stand, to walk, and to run. Although the limb affected was much shrunk and contracted, my general health, which was of more importance, was much strengthened by being frequently in the open air; and, in a word, I who in a city had probably been condemned to hopeless and helpless decrepitude, was now a healthy, high-spirited, and, my lameness apart, a sturdy child—*non sine diis animosus infans*. We went to London by sea, and it may gratify the curiosity of minute biographers to learn that our voyage was

performed in the Duchess of Buccleuch, Captain Beatson, master. At London we made a short stay, and saw some of the common shows exhibited to strangers. When, twenty-five years afterwards, I visited the Tower of London and Westminster Abbey, I was astonished to find how accurate my recollections of these celebrated places of visitation proved to be; and I have ever since trusted more implicitly to my juvenile reminiscences. At Bath, where I lived about a year, I went through all the usual discipline of the pump-room and baths; but, I believe, without the least advantage to my lameness. During my residence at Bath, I acquired the rudiments of reading at a day-school, kept by an old dame near our lodgings; and I had never a more regular teacher, although I think I did not attend her a quarter of a year. An occasional lesson from my aunt supplied the rest. Afterwards, when grown a big boy, I had a few lessons from Mr. Stalker, of Edinburgh; and, finally, from the Rev. Mr. Clure. But I never acquired a just pronunciation, nor could I read with much propriety. In other respects, my residence at Bath is marked by very pleasing recollections. The venerable John Home, author of 'Douglas,' was then at the watering-place, and paid much attention to my aunt and to me. His wife, who has survived him, was then an invalid, and used to take the air in her carriage on the Downs, when I was often invited to accompany her. But the most delightful recollections of Bath are dated after the arrival of my uncle, Captain Robert Scott, who introduced me to all the little amusements which suited my age; and above all, to the theatre. The play was 'As You Like It,' and the witchery of the whole scene is alive in my mind at this moment. I made, I believe, noise more than enough; and remember being so much scandalised at the quarrel between Orlando and his brother in the first scene, that I screamed out, 'A'n't they brothers?' A few weeks' residence at home convinced me, who had till then been an only child in the house of my grandfather, that a quarrel between brothers was a very natural event."

The circumstances of his return to Edinburgh, mixing with the rest of his brethren in his father's house, and his going to High School, are related.

"I read," he says in one of the notes of 1826, "not long since, in that authentic record, called the 'Percy Anecdotes,' that I had been educated at Musselburgh school, where I had been distinguished as an absolute dunce; only Dr. Blair, seeing further into the millstone, had pronounced there was fire in it. I never was at Musselburgh school in my life; and though I have met Dr. Blair at my father's, and elsewhere, I never had the good fortune to attract his notice, to my knowledge. Lastly, I was never a dunce, nor thought to be so, but an incorrigibly idle imp, who was always longing to do something else than what was enjoined him."

The death of Dr. Adam, one of his masters, is very characteristic:

"He survived a few days, but becoming delirious before his dissolution, conceived he was still in school, and after some expressions of applause or censure, he said, 'But it grows dark—the boys may dismiss,' and instantly expired."

Scott was intermediately, for a short period, at Kelso School, under Mr. Launcelot Whale; and extended his knowledge of English literature:—

"I left the High School, therefore, with a

great quantity of general information,—ill arranged, indeed, and collected without system, yet deeply impressed upon my mind; readily assorted by my power of connexion and memory, and gilded, if I may be permitted to say so, by a vivid and active imagination. If my studies were not under any direction at Edinburgh, in the country, it may be well imagined, they were less so. A respectable subscription library, a circulating library of ancient standing, and some private bookshelves, were open to my random perusal; and I waded into the stream like a blind man into a ford, without the power of searching my way, unless by groping for it. My appetite for books was as ample and indiscriminating as it was indefatigable; and I since have had, too frequently, reason to repent that few ever read so much, and to so little purpose."

"To this period, also, I can trace distinctly the awakening of that delightful feeling for the beauties of natural objects which has never since deserted me. The neighbourhood of Kelso, the most beautiful, if not the most romantic, village in Scotland, is eminently calculated to awaken these ideas. It presents objects, not only grand in themselves, but venerable from their association. The meeting of two superb rivers, the Tweed and the Teviot, both renowned in song—the ruins of an ancient abbey—the more distant vestiges of Roxburgh Castle—the modern mansion of Floors, which is so situated as to combine the ideas of ancient baronial grandeur with those of modern taste—are in themselves objects of the first class; yet are so mixed, united, and melted among a thousand other beauties of a less prominent description, that they harmonize into one general picture, and please rather by union than by concord. I believe I have written unintelligibly upon this subject, but it is fitter for the pencil than the pen. The romantic feelings which I have described as predominating in my mind, naturally rested upon and associated themselves with these grand features of the landscape around me; and the historical incidents, or traditional legends, connected with many of them, gave to my admiration a sort of intense impression of reverence, which at times made my heart feel too big for its bosom. From this time the love of natural beauty, more especially when combined with ancient ruins, or remains of our fathers' piety or splendour, became with me an insatiable passion, which, if circumstances had permitted, I would willingly have gratified by travelling over half the globe."

He attended college very little, was called the *Greek blockhead*, because he did not like the trouble of learning Greek; and was bound apprentice for five years to his father's profession, a writer to the signet. He describes himself as very fond of country excursions, on foot or horseback, to visit remarkable places. In *Literary Societies*, he says, he did not make a great figure.

"I never was a good speaker, unless upon some subject which strongly animated my feelings; and, as I was totally unaccustomed to composition, as well as to the art of generalising my ideas upon any subject, my literary essays were but very poor work. I never attempted them unless when compelled to do so by the regulations of the society, and then I was like the lord of Castle Rackrent, who was obliged to cut down a tree to get a few faggots to boil the kettle: for the quantity of ponderous and miscellaneous knowledge, which I really possessed on many subjects, was not easily condensed, or brought to bear upon the

object I wished particularly to become master of. Yet there occurred opportunities when this odd lumber of my brain, especially that which was connected with the recondite parts of history, did me, as Hamlet says, 'yeoman's service.' My memory of events was like one of the large, old-fashioned stoue-cannons of the Turks—very difficult to load well and discharge, but making a powerful effect when by good chance any object did come within range of its shot. Such fortunate opportunities of exploding with effect maintained my literary character among my companions, with whom I soon met with great indulgence and regard."

Looking back on these times, I cannot applaud, in all respects, the way in which our days were spent. There was too much idleness, and sometimes too much conviviality; but our hearts were warm, our minds honourably bent on knowledge and literary distinction; and if I, certainly the least informed of the party, may be permitted to bear witness, we were not without the fair and creditable means of attaining the distinction to which we aspired. In this society, I was naturally led to correct my former useless course of reading; for—feeling myself greatly inferior to my companions in metaphysical philosophy, and other branches of regular study—I laboured, not without some success, to acquire, at least, such a portion of knowledge as might enable me to maintain my rank in conversation. In this I succeeded pretty well; but, unfortunately, then, as often since through my life, I incurred the deserved ridicule of my friends from the superficial nature of my acquisitions, which being, in the mercantile phrase, *got up* for society, very often proved flimsy in the texture; and thus the gifts of an uncommonly retentive memory and acute powers of perception were sometimes detrimental to their possessor, by encouraging him to a presumptuous reliance upon them. Amidst these studies, and in this society, the time of my apprenticeship elapsed; and in 1790, or thereabouts, it became necessary that I should seriously consider to which department of the law I was to attach myself."

This, it is well known, was the study of the law; and the fragment of Autobiography ends in the following words:—

"My progress in life during these two or three years had been gradually enlarging my acquaintance, and facilitating my entrance into good company. My father and mother, already advanced in life, saw little society at home, excepting that of near relations, or upon particular occasions; so that I was left to form connexions, in a great measure, for myself. It is not difficult for a youth with a real desire to please and be pleased, to make his way into good society in Edinburgh—or indeed any where—and my family connexions, if they did not greatly further, had nothing to embarrass my progress. I was a gentleman, and so welcome any where, if so be I could behave myself, as Tony Lumpkin says, 'in a concatenation accordingly.'"

From Mr. Lockhart's portion of the volume we can take but one example—one, however, of considerable piquancy.

"I have already said something of the beginning of Scott's acquaintance with 'the Ettrick Shepherd.' Shortly after their first meeting, Hogg, coming into Edinburgh with a flock of sheep, was seized with a sudden ambition of seeing himself in print, and he wrote out that same night 'Willie and Katie,' and a few other ballads, already famous in the Forest, which some obscure bookseller gratified him by

putting forth accordingly; but they appear to have attracted no notice beyond their original sphere. Hogg then made an excursion into the Highlands, in quest of employment as overseer of some extensive sheep-farm; but, though Scott had furnished him with strong recommendations to various friends, he returned without success. He printed an account of his travels, however, in a set of letters in the 'Scots Magazine,' which, though exceedingly rugged and uncouth, had abundant traces of the native shrewdness and genuine poetical feeling of this remarkable man. These, also, failed to excite attention; but, undeterred by such disappointments, the Shepherd no sooner read the third volume of the 'Minstrelsy,' than he made up his mind that the editor's 'Imitations of the Ancients' were by no means what they should have been. 'Immediately,' he says, in one of his many Memoirs of himself, 'I chose a number of traditional facts, and set about imitating the manner of the ancients myself.' These imitations he transmitted to Scott, who warmly praised the many striking beauties scattered over their rough surface. The next time that Hogg's business carried him to Edinburgh, he waited upon Scott, who invited him to dinner in Castle Street, in company with William Laidlaw, who happened, also, to be in town, and some other admirers of the rustic genius. When Hogg entered the drawing-room, Mrs. Scott, being at the time in a delicate state of health, was reclining on a sofa. The Shepherd, after being presented, and making his best bow, forthwith took possession of another sofa, placed opposite to hers, and stretched himself thereupon at all his length; for, as he said afterwards, 'I thought I could never do wrong to copy the lady of the house.' As his dress at this period was precisely that in which any ordinary herdsman attends cattle to the market, and as his hands, moreover, bore most legible marks of a recent sheep-shearing, the lady of the house did not observe with perfect equanimity the novel usage to which her chints was exposed. The Shepherd, however, remarked nothing of all this—dined heartily and drank freely, and, by jest, anecdote, and song, afforded plentiful merriment to the more civilised part of the company. As the liquor operated, his familiarity increased and strengthened; from 'Mr. Scott,' he advanced to 'Sherra,' and thence to 'Scott,' 'Walter,' and 'Wattie,'—until, at supper, he fairly convulsed the whole party by addressing Mrs. Scott as 'Charlotte.'

**Jack Brag.** By the Author of "Sayings and Doings," "Maxwell," &c. 3 vols. 12mo. London, 1837. Bentley.

**JACK BRAG**, the son of a deceased tallow-chandler, is the Parolles or Bobadil of low life, and belonging to our existing condition of society. By sheer effrontery, tricks, and lying, he is enabled to mix with persons in a higher sphere, and figure for a short season among the fashionable world; but his mortifications are many, and his punishment perfect. Our author, inimitable in his painting of scenes such as occur in this tale, has not only displayed in them the combined humours of a Rowlandson and Gilray, but has, by the whole, pointed a moral which, while the former whimsical caricature raises many a laugh, may not be thrown away upon the braggadocias who corrode every link of the social chain. Egotists and pretenders, of every grade and degree, should take a lesson from their prototype, *Jack Brag*: but egotism is too blind to be taught, and pretence too deeply rooted to be eradicated; and even the mortifying and ludi-

crous experiences of our hero will, we fear, be lost upon the inflated fraternity. There is no deceit, perhaps, so perfect as self-deceit; for, though it may be attended by its misgivings for a while, it ultimately triumphs over every doubt, and becomes too confirmed to be shaken. In other cases there are, at least, two minds to share in the imposition: in this there is only one, and the deluded has no chance against the presumption of the deluder. Mr. Hook has sketched the matter admirably in the character of "Brag," of whom it may justly be said, even in his worst humiliations, that,

Raised aloft, he tumbles down amain,  
But falls so hard he bounds to rise again:

so elastic is that India-rubber property in human nature called Vanity. But our readers would rather, we doubt not, have a few samples from the ever-amusing page of our author than a discourse upon the subject it so cleverly illustrates from us; and, in that belief, we accordingly proceed to exemplify the tale.

The very opening of the work is in Hook's happiest style: it is a dialogue between Jack and his mother, in which both are "done to the life."

"'Johnny,' said Mrs. Brag, 'you are a silly fellow. What is there to be ashamed of in honest industry? If all the fine folks whom you go a-hunting with, and all the rest of it, like you, and are really glad to see you, it is for yourself alone: and if they, who must know by your name and nature that you can never be one of themselves, care a button for you, your trade, so as you do not carry it about with you, will do you no harm. What difference is it to them how you get your thorough-bred horses, your smart scarlet coat, neat tops, and white cords, so as you have them?—they won't give you any new ones when they are gone.' 'It is all very well talking,' said Johnny; 'but I never should shew my face amongst them if I once thought they guessed at my real trade. I live in a regular worry as it is. If ever a fellow asks me if I was at Melton last year, that moment I think of the shop: 'pretty mould of a horse' tingles in my ears—'sweet dip of the country' sets me doubting; and, only last week, a proposal to go 'cross country and meet Lord Hurricane's harriers at Hampton Wick nearly extinguished me.' And what now, Johnny,' said Mrs. Brag, 'do you think these lords take you for, if not for a tallow-chandler?' 'An independent gentleman,' said Jack. 'That is to say,' replied his mother, 'a gentleman who has nothing to depend upon.' 'They look upon me as an agreeable rattle,' said John. 'One that has often been in the watchman's hands, too,' said the old lady. 'I talk big and ride small,' said Jack; 'I am always up with the hounds—never flinch at any thing—am the pride of the field wherever I go—and, in steeple-chases, of infinite value.' And very little weight, my dear Johnny,' interrupted his mother. 'One of my dearest friends,' continued Brag, 'Lord Tom Towzle, a deuce of a fellow amongst the females, is going to put me up as a candidate at the Travellers.' 'What, riders for respectable houses?' said Mrs. Brag; 'and a very proper club, too.' 'Respectable houses!' said Jack. 'Poh! not a bit of it! What! bng-men in buggies with boxes of buttons in the boots? No, no! the Travellers—*par excellence*.' 'Par what?' said Mrs. Brag. 'What, d'ye mean the fine club-house in Pall Mall which you shewed me the outside of last king's birth-night?' 'The same,' said Brag. 'Now, if I had stuck to the naked, as Lord Tom says—told the plain unvarnished—I never could have

qualified. Lord Tom asked me if I should like to belong to the Travellers?'—in course I said yes—straight up, right down, and no mistake. Well, then he asks me if I could qualify;—so, not quite understanding him, he says, 'Have you ever been in Greece?' 'Yes,' said I: I might have added 'up to the elbows often;' didn't though. Had him dead. Down he whips my name, and calls in Sir Somebody Something out of the street to second me.' 'If you should get in there, Johnny,' said Mrs. Brag, 'do get 'em to give up gas and take to oil on illumination nights.'

"'But pray, Johnny, where do these people think you live?' 'At a great house in Grosvenor Street,' said Jack, 'next door to What-d'ye-call-'em's Hotel: my name is on the door, and my address on my card.' 'But you don't live there,' said Mrs. Brag. 'Not I,' replied the son: 'I only rent the door.' 'How d'ye mean?' said his mother. 'Why, I went to the man,' said Brag, 'who keeps the house. 'Now, sir,' said I, 'I want to rent four square inches of your panels.' He was puzzled for the moment; but I was down upon him in no time, and no mistake.—Out I pull from my pocket a brass plate of those precise dimensions, whereon is engraven 'Mr. Brag.' 'What will you take per annum,' said I, 'to let this be screwed on to your door, and let your servant take in my cards and letters?' Startled him a little at first: however, he entered himself for the plate, acceded to my proposition,—and so, for the trifling consideration of four guineas per annum, and a tip to the slavey, I got the credit of five windows in front, three stories high, in one of the best streets in London.' 'But do none of your friends ever expect to be let in?' said Mrs. Brag. 'Yes,' said Brag, 'for a good thing now and then,—and so they are, pretty often. Long head, mother—have it here'—tapping his forehead with his fore finger—'look simple with my fresh colour and curly hair, but as deep as Garrick—cannot write your X's Z's with me'—else, in course, they might expect admission. 'Not at home,' is always the answer. 'Out of town?' is the next question:—'Yes,' is the next answer. 'Where?' comes next. 'Down at his little place in Surrey.' That finishes it. They lodge their pasteboard and away they go.' 'Little place in Surrey!' said Mrs. Brag; 'why, what d'ye mean? Have you a country-house, too?' 'Country-house!' said Brag: 'Lord bless your dear heart, not I! Nothing but my old lodging, on the second floor, No. 37, at the carpenter's, corner of Caterpillar Row, Kensington.' 'And that you call your little place in Surrey, do you?' said Mrs. Brag. 'Yes, mother, and no fib neither,' said Brag. 'It is almost the littlest place I ever saw in my life; and, as for Caterpillar Row, if it isn't in Surrey, I know nothing of going 'cross a country.' 'Ah, Johnny, Johnny,' said his respected parent, with a mingled look of sorrow and admiration, 'you never will mend till it is too late!' 'Mother,' said Jack, 'now you say that, I think I shall be too late for Lord Tom Towzle. We are going off for Wigglesford to mark out a line. All ready for a run: we have got no mercy in us—none of your bowl-ing-green, daisy-cutting work for us—no, we'll try to pick out rasping-fences, bottomless brooks, and ditches as wide as rivers;—a steeple-chase, without killing a horse or two, cracking a collar-bone, slipping a shoulder, or pitching an out-and-outer on the top of his conk, is no fun in the world.' 'Ah! well, well,' said Mrs. Brag, 'I wish you would give a little time to the books and the business; some day you'll

repent this,' 'Not I, mother,' said Jack: 'I can pull up any day and marry. I never yet saw the woman I could not win—they are all ready to eat me up: in course, as the book says, I am the more wary—hang back a bit. Don't you see, as I get on in the world, I get up; and if I can marry a Lady Sally or a Lady Susan—eh! won't that be nice?'—'specially if there happens to be an odd thirty or forty thousand pounds tacked to the title.' 'Don't flatter yourself, Johnny,' replied Mrs. Brag, shaking her head: 'that scheme will never answer.' 'You'll see,' said Jack;—'I say nothing, but you'll see.'"

The widow thinks seriously of marrying again, as her hopeful son advises her, and anonymously advertises for a husband; which advertisement is answered, in the dark, by Jack and some of his dashing associates, for a frolic. His meeting with his mother on Waterloo Bridge, by concerted appointment and signals, is a capital bit; but we must follow him a little in his swift career. He is dining with a distinguished party, to whom he has pushed his way, at Dover.

"It strikes me," said Sir James, "that our government ought in some way to interfere, in order to prevent the exportation of our best English horses; the effect of which must eventually be,—not only the improvement of the breed in countries which, however peaceable the world looks just now, must and will, in the course of time, be at war with us,—but the deprival of the English cavalry of their acknowledged superiority in cattle, at all events, over our enemies." "If I had my way," said Brag, encouraged by the deference with which Sir James addressed this observation specially to him, "not a nag should go abroad—no, not at any price. I have been over and over again offered lumps of money for some of my hunters to go to France and Germany, and the deuce knows where. No, says I, not a bit of it: I'm English from top to toe—straight up, right down, and no mistake. I'll be no party to mending the foreign breed, let what may happen." The German baron coughed, and young Gunnersbury silently expressed his astonishment at the burst which his father's injudicious patronage of the stranger had occasioned. "You are a true sportsman, sir," said Lord Dullingham, gravely taking a pinch of snuff. "And," said Lord Tom, "as good a rider as you'll see from Totnes to Newcastle." "I do flatter myself," said Jack, "I can come it strong in that line"—(here Sir Henry Rocky exchanged a look with Carnaby)—"and no mistake. Lord Tom knows what I'm up to. In one week I've hunted five times, rode two trotting matches, and three steeple-chases, picked up a hundred stones with my mouth in fifty-five minutes, and killed two hundred and nineteen brace of partridges." "With a long bow," said somebody, loud enough to be heard by every body except Jack himself, who was now on his hobby. "I stick at nothing in that way," said Brag; "do I, my lord?"—looking at Lord Tom. "Many a time I've gone after hounds for twenty minutes, as blind as a bat, as wet as a rat, and as sick as a cat, with the skin of my leg rasped up by the top of a grower from my shin to my knee, and only brought to my senses then by bumping my head right against that of my horse, for all the world like a flash of lightning, that loosened all my teeth in their sockets. That's what I call going across a country, and no mistake. I'd have backed my 'Tantrum' against any thing of his age and inches that ever switched rasper. Jem Jiggins had the handling of him for some

time, and a queer one he was, at first; but they as begins rum, turns out generally well in the end. One day, however, sold him:—run three foxes, one after another, right on end, seventy-two miles and a half in all!—he was done—got my money for him though, after that. Had him painted; the picture is now at a little place I have in Surrey, with me on his back, topping a flight of rails, just alongside of "Fly-away Dick," with portraits of two or three Melton men in the distance—eh!—that's good!"

As a variety, we may notice the apparition of his mother after her second marriage, one of the incidents which tend to floor the unlucky aspirant to "tip-top" association. Jack and Colonel Stiffkey (who does him out of a few hundreds at *écarté*) are sipping their claret after dinner at Eastbourne, when his "Ma" arrives per coach, and forces her way into the room where they are sitting.

"Don't disturb yourself, sir," said the lady; "there's plenty of room:—only, coming outside, the wind blows up all about one, and I'm as cold as charity,—though Jim made me have a glass of hot rum and water at the last place we stopped at." "Very nice beverage, ma'am," said Stiffkey, with one of his most graceful bows. "My dear ma'am," said Jack, "wouldn't you rather have another room? We have scarcely finished dinner, and it would be more comfortable to have a sitting-room to yourself." "They haven't got another sitting-room disengaged," said the lady; "Jim asked them. No matter: what's good enough for you, Jack, is good enough for me; so this will do for us till bed-time." "My dear colonel," said Jack—"My dear sir," said Stiffkey, "no apologies. I am too glad to see any friends of yours—if I don't intrude." "Intrude!" said the lady, "not a bit: we have no secrets, sir. To be sure, things have turned out queerish: however, you have as much right here as we, and we as you—so we won't make no words of that. Why, you dine late, Jack!" "No, on the contrary, rather early," said Jack, perfectly at a loss what to do, overcome by the unexpectedness of the visit, from its being so particularly ill-timed, and by the malicious determination which Stiffkey had too evidently formed of not stirring: indeed, the announcement of the fact, that there was no other sitting-room disengaged, would of itself have justified his remaining in what really was his own apartment, even if he had not wished to stay out a scene which promised him some amusement. "Jack," said the lady, "I want you just to look out and see if Jim is getting in all the bundles and things." "Who is Jim?" said Jack, in an under tone. "Jim Salmon," said the lady. "What! is he with you?" "Yes," said his mother, "where else should he be?" At this moment Jem made his appearance, dressed in a tight light green coat, and a buff-waistcoat, with striped blue and white cotton trousers, made tightish to his plump figure, a coloured check handkerchief round his neck, and a white hat stuck on one side of his head, with a bunch of whitish-red curls sticking out from under it. "Ah!" said Jem, "Brag, how d'ye do?—didn't expect us, I reckoned—skimming down here—eh? Titay would come—agreeable surprise—twig?" "Very agreeable, indeed!" said Brag, drawing back somewhat indignantly from the familiar approach of the *ci-devant* shop-boy. "Have you got all the parcels up to the bed-room, J. S.?" said the lady. "Yes, Titay," said Jem. "Got the umbrella, J. S.?" said the lady. "No, Titay," replied Jem, "but I'll be after it in no time—twig?" Jack's dismay and mortifi-

cation had now risen to a considerable height. What could have induced his mother to make Jem Salmon her travelling companion?—what could have induced her to undertake the journey?—or what Jem could mean by calling his respectable parent 'Titay,' were to him questions unsolvable. One thing, however, appeared necessary: the old lady had evidently planted herself for the evening where she was. Stiffkey, who had scarcely begun his wine, and had no engagement elsewhere, had quietly deposited himself in an arm chair; Jack, therefore, felt it absolutely essential to introduce the colonel to their fair visitor, resolving, afterwards, to check her in her conversation, so as to prevent the development of all the real circumstances of the case, and trust to chance and impudence to wriggle through and out of this most 'untoward affair.' 'This, colonel,' said Jack, 'is my mother. Colonel Stiffkey, madam.' Mutual bows ratified the treaty. 'I say,' said the lady, 'put a chair for Jem. P'raps he is taking a drop of something.' 'Mr. Salmon, ma'am,' said Brag,—'is he coming in?' 'I s'pose so,' said the lady. 'Oh!' said Brag. 'Here he is,' said the lady. 'All right now, Jim?' 'Yes, Titay,' said Jem. Jack's astonishment at the repetition of this 'familiar word,' was too great to admit of concealment; and, accordingly, betrayed itself in his countenance. 'Ah!' said his mother, 'that's it—isn't it, Jim? He doesn't know all.' 'No,' said Jem—'don't twig, Titay.' 'I told you, John, I should surprise you one of these days,' said his mother: 'J. S. and I are married!' 'Married!' exclaimed Jack. 'Yes,' said Jem, 'Titay is Mrs. Salmon—d'ye twig?' 'My dear mother,' said Jack, 'are you serious?' 'No, Jack,' replied Mrs. James Salmon,—'for such she really was,—never less serious in my life since your daddy died. All true: Jim and I were married, last Friday was a week, at Hornsey church, and passed the honey-day—we couldn't stop out longer on account of the business—at 'The Sluice House.' 'This is really a surprise!' said Stiffkey, sipping his claret, looking, how—it is impossible to describe. Jack was, as Major Downing says, 'catawampously stumped,' and could say nothing. 'It oughtn't to be, sir,' said Mrs. Salmon, addressing herself to the dandy. 'Jack knowed well enough what a lone life I led. He never came near me—never, except for what you could get, Jack—did you? He advised me to marry, sir—and I could tell you a pretty story about that, if I liked—eh! Jack?—the pickle-shop. Well, so things went on, till at last—praise afore people's faces sometimes spoils them—I took Jim for better or worse.' A very prudent resolve, indeed, ma'am, said the colonel, taking a huge pinch of snuff. 'My dear colonel,' said Jack, 'I am sure we ought to apologise for troubling you with our family affairs. I wish—eh!—isn't there any other room—are you sure?' 'A'nt I?' said Jem—'first thing as I axed about—twig?' 'Get yourself something warm, Jim,' said the ancient bride: 'I'm sure if the cold once gets into your poor little stomach, you'll have no rest all night. I know what it is myself to be troubled with cold: and I tell you what, Johnny, we shall want a bit of something by way of supper; for though we had three or four mutton-chops at Godstone, which were very nicely done, and fine meat, too, and uncommon fat, still that was some time ago—and I get peckish at night, somehow.' 'Fat!' said Mr. Salmon—'yes, they were fat—reminded me of the shop, Brag—twig?' 'I should venture to recommend,' said the colonel, with the

most studied politeness, 'something to drink—a glass of claret—or—' 'Oh, Lor' no!' said Mrs. Salmon, 'no claret for me, sir: as I used to say to my poor dear first—Jack's father—don't talk to me of claret: it's a waste of time as well as of money to drink them sort of thin stuffs! If Jack was to have behaved like what he is, he might have asked me to take some kind of refreshment before this; for since the rum and water at—what do they call that last place we stopped at, James?'—'Wholesome, Titzy,' said the bridegroom. 'Hailsham, mother,—Hailsham,' said Jack, 'is the name of the place.' 'I haven't had the least drop as is, in my mouth, since Godstone,' continued Mrs. Salmon. 'And there,' said Salmon, 'the hale was uncommon 'eavy.' 'What! ma'am,' said Stiffkey, 'had you a storm, coming down?' 'No, no,' said Jack, '—who, although he could not, as his mother would have said, 'exasperate' the *h* himself, was nervously alive to the absurdity of any body else who laboured under a similar incapacity.—'ale—the ale was heavy.' 'Come Mr. Brag,' said the colonel, 'the wine is with you.' 'Yes,' said Jack, 'and I'm not the man to stop it—eh? I like it to go—keep circulating, as we say, right up, straight down, and no mistake!' 'What do they charge, John, for claret here?' said Mrs. Salmon, addressing her son. 'Can't say, I am sure,' said Jack. 'I say,' said Salmon, leaning over towards his wife, with his hand up to his mouth to hide a very audible whisper—that's it—they never pay!—twig? But, I say, Titzy, what will you have—something hot?' 'Whatever you like, dear,' said the respectable matron. 'I tell you what,' said Salmon, 'I'll just go out and brew for you myself. I know your taste—eh?—don't I? Sugar, rum, nutmeg—eh?—twig?' With this most affectionate speech Mr. Salmon left the room; Jack regularly used up; and the colonel, who was now convinced that his particular friend must be the identical creature described in Gunnersbury's letter from Dover, having thrown himself back in his chair, waited to hear what might happen next."

In the third volume, Jack's impudence, favoured by circumstances (for which, like others throughout, we must give the author credit, rather than think them very probable), becomes owner of a yacht, and almost a member of the Aristonautic Club which sails by that name,—gives splendid entertainments on board, &c.; but is finally found out, and obliged to "cut and run." His amours, and their result, and the finale of his family affairs with Mrs. Titzy, and James, and James's favourite lady, a little actress—in short, the inevitable prostrations which attend his every effort at imposition—are all described in a manner which excites great merriment; while, at the same time, the author has, with great art, imparted such an interest to the insignificant creature, that the reader carries it on to the end, and is really anxious to learn what is his final fate. Many of the other portraits are drawn with a skillful pencil; Mr. and Mrs. Peckover, a huge Nimrod, henpecked by a delicate little wife; Lady Lavinia Newbiggen, the fantastic bore with her illustrious genealogy; Lord Tom Towzle, and his clique; and nearly all the lesser sketches, are, indeed, excellent, and display so accurate a knowledge and acute and ludicrous appreciation of the world as it goes, that *Jack Brag* will justly take its place beside the popular *Sayings and Doings*, and *Marvell*.

*The Miscellaneous Works of Oliver Goldsmith, M.B. including a variety of Pieces now first collected.* By James Prior, F.A.S. &c. 4 vols. 8vo. London, 1837. Murray.

ALTHOUGH, since the days of Goldsmith, a new school of poetry, and consisting of several prominent classes, has not only arisen in England, but almost faded into a cloudy preparation for another era; and although the style of prose writing has undergone a marked alteration, the reader will turn, with pleasure and delight, to these volumes, in which the treasures of Goldsmith's mind are collected. His poetry the sweetest of didactic and descriptive writing; and his prose the most easy and natural, whether in fiction, in popular science, or in the various branches of polite literature which employed his pen, must always appeal with effect to human sympathies and gentle imagining. To the "Traveller" or "Deserted Village" we can ever turn with gratified taste from the stirring and ancient troubadour ballad-compositions of Scott, the fierce and fiery delineations of passion in Byron, or the native simplicities and rural beauties of the bards of the Lakes; and no time nor change (though many another wild, romantic, or vivid tale of genius may intervene) can efface the claims of the domestic "Vicar of Wakefield" upon our affectionate participation in his troubles and sorrows. Thus, the publication which now issues from the press must always continue to be a family library in the best sense, exhibiting specimens of almost every species of authorship which pertained to the generation before that which is now passing away—the generation of the Johnsons, Burkes, Humes, Robertsons, Goldsmiths, and other worthies, whose names are inscribed on the bright page of English lettered immortality.

The way to this acceptable work has been fitly paved by Mr. Prior's *Life of Goldsmith*; and, having so lately reviewed that biography, it is at present only necessary for us to mention the particulars of this its successor.

The first volume has a brief advertisement, in which it is generally described.

"The pieces (says the editor) now for the first time collected are numerous; but the editor has said so much on most of them in his recent "Life of Goldsmith," that any detailed account of them here will not be required. Some of them will, in his opinion, be found of high merit; and to the rest, the language of Goldsmith himself, in reviewing a collection of pieces, by Montesquieu, put forth under similar circumstances, is strikingly applicable: 'There is,' he says, 'a pleasure arising from the perusal of the very bagatelles of men renowned for their knowledge and genius; and we receive with veneration those pieces, after they are dead, which would lessen them in our estimation while living: sensible that we shall enjoy them no more, we treasure up, as precious relics, every saying and word that has escaped them; but their writings, of every kind, we deem inestimable. Cicero observes, that we behold with transport and enthusiasm the little barren spot, or ruins of a house, in which a person celebrated for his wisdom, his valour, or his learning, lived. When he coasted along the shores of Greece, all the heroes, statesmen, orators, philosophers, and poets, of those famed republics, rose in his memory, and were present to his sight: how much more would he have been delighted with any of their posthumous works, however inferior to what he had before seen!' Both the old and the new materials are accompanied with brief notes, clearing up the local and temporary allusions in which they abound; but which the lapse of another gene-

ration would probably have rendered it impossible for any diligence to explain."

"The Bee," without alteration, commences the original matter, and occupies about 150 pages. It is followed by essays, of which some dozen or fourteen are now "first collected." One of these, "On Public Rejoicings for Victory," contains a passage which we may quote as a fair sample of the whole.

"A country at war resembles a flambeau: the brighter it burns the sooner it is often wasted. The exercise of war, for a short time, may be useful to society, which grows putrid by a long stagnation. Vices spring up in a long-continued peace, from too great an admiration of commerce, and too great a contempt for arms; war corrects these abuses, if of but a short continuance. But when prolonged beyond that useful period, it is apt to involve society in every distress. The property of a country, by its continuance, is transferred from the enterprising; from men of abilities to men who have no other qualification than bravery; every man who is enriched by the trade of war is only rewarded from the spoils of some unhappy member of society, who could no longer live by the trade of peace. Now, now, then is the time to offer terms of accommodation; and as we conquer our enemies in war, so let us excel them in generosity. Let us sheath the sword that has already reeked with too much blood. Let victory be attended by peace; for peace is the only triumph of victory."

The "History of Miss Stanton," another of the new Essays, and not included in any former edition of Goldsmith's works, is curious and interesting, as being almost a complete sketch of the "Vicar of Wakefield." Notwithstanding its monstrous finale, we shall give it entire in a future *Gazette*.

Prefaces and Introductions, with much new matter, complete this volume. We take an example, which will be felt more aptly at this moment, when we have just shewn our readers some of the facts connected with the Seven Years' War, as illustrated from state papers by Von Raumer. In the preface to his history of that war, Goldsmith writes:—

"But whatever these contentions may be thought of by others, they will never be regarded by Britons but as instances of her power, her bravery, and her successes. In this war England will appear in greater splendour than in any period of the most boasted antiquity; it will be seen to poise the fates of Europe, and bring its most potent and most ambitious states into the lowest degree of humiliation. This is a glory which should excite every lover of his country to celebrate as well as to share in."

Such is the grandiloquence of hack writing addressed to power and popularity: even the genius of a Goldsmith could not surmount the evil; and we see, when history is looked at through the medium of truth, what sad misrepresentations pass under its name when contemporary purposes demand the prostitution of the pen.

The second volume gives us "The Citizen of the World," and a "Familiar Introduction to the Study of Natural History;" the latter now first collected; but containing nothing which could throw a light upon a science now so much further advanced and more successfully cultivated. Vol. III. has the incomparable "Vicar of Wakefield;" biographies of Voltaire, Beau Nash, Dr. Parnell, and Lord Bolingbroke; and some miscellaneous criticisms. On these we may, perhaps, bestow another notice; but must now finish by stating that Goldsmith's cele-

brated poems and dramas, with the "Oratorio of the Captivity," miscellaneous pieces, and criticisms on poetry and the *belles lettres* (the last now first collected) complete the fourth volume and the work.

"Letter, in Prose and Verse, to Mrs. Bunbury.—Madam, I read your letter with all that allowance which critical candour could require; but, after all, find so much to object to, and so much to raise my indignation, that I cannot help giving it a serious answer. I am not so ignorant, madam, as not to see there are many sarcasms contained in it, and solecisms also (solecism is a word that comes from the town of Soleis, in Attica, among the Greeks, built by Solon, and applied as we use the word Kidderminster for curtains, from a town also of that name—but this is learning you have no taste for)—I say, madam, there are sarcasms in it, and solecisms also. But, not to seem an ill-natured critic, I'll take leave to quote your own words, and give you my remarks upon them as they occur. You begin as follows:

'I hope, my good doctor, you soon will be here,  
And your spring velvet coat very smart will appear,  
To open our ball the first day in the year.'

Pray, madam, where did you ever find the epithet 'good' applied to the title of doctor? Had you called me learned doctor, or grave doctor, or noble doctor, it might be allowable, because they belong to the profession. But, not to cavil at trifles, you talk of my spring velvet coat, and advise me to wear it the first day in the year—that is in the middle of winter; a spring velvet in the middle of winter!!! That would be a solecism, indeed; and yet, to increase the inconsistency, in another part of your letter you call me a beau. Now, on one side or other, you must be wrong: if I am a beau, I can never think of wearing a spring velvet in winter; and if I am not a beau—why—then—that explains itself. But let me go on to your two next strange lines:

'And bring with you a wig that is modish and gay,  
To dance with the girls that are making of hay.'

The absurdity of making hay at Christmas you yourself seem sensible of; you say your sister will laugh, and so, indeed, she will may. The Latins have an expression for a contemptuous sort of laughter, *Naso contemnere aduncos*; that is, to laugh with a crooked nose: she may laugh at you in the manner of the ancients if she thinks fit. But now I am come to the most extraordinary of all extraordinary propositions, which is, to take your and your sister's advice in playing at loo. The presumption of the offer raises my indignation beyond the bounds of prose; it inspires me at once with verse and resentment. I take advice! And from whom? You shall hear.

First let me suppose, what may shortly be true, The company set and the word to be loo;  
All smirking and pleasant, and big with adventure,  
And ogling the stake which is fixed in the centre.  
Round and round go the cards, while I inwardly damn,  
At never once finding a visit from pam;  
I lay down my stake apparently cool,  
While the harpies about me all pocket the pool;  
I fret in my gizzard, get cautious and sly,  
I wish all my friends may be bolder than I;  
Yet still they sit snug; not a creature will aim,  
By losing their money, to venture at fame.  
'Tis in vain that at niggardly caution I scold,  
'Tis in vain that I flatter the brave and the bold;  
All play their own way, and they think me an ass.  
What does Mrs. Bunbury? I, sir? I pass.  
Pray what does Miss Horneck? Take courage—come, do.  
Who, I? Let me see, sir—why, I must pass too.  
Mrs. Bunbury frets, and I fret like the devil,  
To see them so cowardly, lucky, and civil;  
Yet still I sit snug, and continue to sign on,  
Till made by my losses as bold as a lion.  
I venture at all, while my avails regards  
The whole pool as my own: come, give me five cards.  
Well done! cry the ladies: ah! doctor, that's good,  
The pool's very rich: ah! the doctor is loo'd.  
Thus foil'd in my courage, on all sides perplex,  
I ask for advice from the lady that's next.

Pray, ma'am, be so good as to give your advice;  
Don't you think the best way is to venture for't twice?  
I advise, cries the lady, to try it, I own.  
Ah! the doctor is loo'd. Come doctor, put down.  
Thus playing and playing I still grow more eager,  
And so bold and so bold, I'm at last a bold beggar.  
Now, ladies, I ask, if law matters you're skilled in,  
Whether crimes such as yours should not come before  
Fielding?

For giving advice that is not worth a straw,  
May well be called picking of pockets in law;  
And picking of pockets, with which I now charge ye,  
Is, by *quinto* Elizabeth, death without clergy.  
What justice, when both to the Old Bailey brought!  
By the gods I'll enjoy it, tho' 'tis but in thought!  
Both are placed at the bar with all proper decorum,  
With bunches of fennel and nosegays before 'em;  
Both cover their faces with mobs and all that,  
But the judge bids them angrily take off their hat.  
When uncover'd, a buzz of inquiry goes round,—  
Pray, what are their crimes? They've been pilfering  
found.

But, pray, whom have they pilfer'd? A doctor, I hear.  
What, you solemn-faced odd-looking man that stands  
near?

The same. What a pity! how does it surprise one!  
Two handsomer culprits I never set eyes on!  
Then their friends all come round me with cringing and  
leering.

To melt me to pity and soften my swearing.  
First Sir Charles advances with phrases well strung—  
Consider, dear doctor, the girls are but young.  
The younger the worse, I return him again,  
It shows that their habits are all dyed in grain.  
But then they're so handsome, one's bosom it grieves:  
What signifies handsome when people are thieves?  
What where is your justice? their cases are hard:  
What signifies justice?—I want the reward—

There's the parish of Edmonton offers forty pound—there's the parish of St. Leonard, Shoreditch, offers forty pound—there's the parish of Tyburn, from the Hog in the Pound to St. Giles's Watchhouse, offers forty pound: I shall have all that if I convict them.

But consider their case—it may yet be your own;  
And see how they kneel! Is your heart made of stone?  
This moves; so at last I agree to relent,  
For ten pounds in hand and ten pounds to be spent.

I challenge you all to answer this. I tell you, you cannot. It cuts deep. But now for the rest of the letter; and next—but I want room.—So I believe I shall battle the rest out at Barton some day next week.—I don't value you all.  
O. G."

*Illustrations of Human Life.* By the Author of "Tremaine" and "De Vere." 3 vols. Colburn.

HUMAN life is a thing of many aspects, many phases, and he is a delightful mundane-astronomer who can observe and note them for us, the great orbs and their satellites, the comets, and all the little, even the shooting stars, which attract our admiration or cross our sphere. Whether born on high and of glorious splendour, or mere emanations of muddy matter, the study of their various forms and appearances is one of extreme interest; for we are taught and feel that we are part of the system, and that our shine or twinkle belongs to the aggregate mass. This sort of *quorum pars* is a mighty ally to an author. Does he exalt what we imagine in ourselves, or does he hit some little conscious foible; no matter—we are not alien to the scheme; and what from complacency, comparison, or some other deliciously blinding quality, we arrive at the idea that where we exist at all we must be something, if not somebody!

Mr. Ward has addressed his observations, in these volumes, to such a multitude of subjects, and exhibited such a multitude of individual characters, that hardly any living being could fancy himself excluded from the crowded pale. To revert to our astronomical parallel, his first volume is a double star, called "Atticus," and "St. Lawrence;" and his other two volumes, under the name of "Fielding," an absolute milky way of innumerable lights. In the whole, he displays all the attraction and merits of his preceding works. Much reading and

reflection, great experience of the world, sensibility towards the beauties of nature, and a highly cultivated taste, a pleasant and accurate acquaintance with mankind, and a philosophical turn of mind, engendered by these preliminaries and by leisure, are the prominent features of the production before us.

Instead of being one work, however, it is three; and, even with our bounded limits, we must notice the trio distinctly and separately.

"Atticus" is an essay on moderation, which induces retirement from active life in a Lord Grenville of the author's imagining. He is wooed back to office by friends who miss and want him; and the results of his firm grounds for contented refusal are stated in several letters from the confidant sent to sound him. A few passages will serve to shew the nature of this treatise, finely enriched by familiar illustrations from excellent authors. The love of flowers is described in language which will be echoed by thousands who may, like us, enjoy a passion for these sweet, enchanting, and evanescent "loves."

"Then I would not have my garden too extended. Not because flowers are not the most delicious things on earth, speaking to the sentiment as well as the senses, but on account of the intrinsic and superior value of moderation. When interests are divided, they are not so strong. Three acres of flowers and a regiment of gardeners bring no more pleasure than a sufficiency. Besides which, in the smaller possession, there is more room for the mental pleasure to step in, and refine all that which is sensual. We become acquainted, as it were, and even form friendships, with individual flowers. We bestow more care upon their bringing up and progress. They seem sensible of our favour, absolutely to enjoy it, and make pleasing returns by their beauty, health, and sweetness. In this respect, a hundred thousand roses which we look at *en masse*, do not identify themselves with us in the same manner as even a very small border; and hence, if the cottager's mind is properly attuned, the little cottage garden may give him more real delight than belongs to the owner of a thousand acres. All this is so entirely nature, that, give me a garden well kept, however small, two or three spreading trees, and a mind at rest, and I would defy the world."

"St. Lawrence," which divides the first volume with the foregoing, involves a metaphysical disquisition on free will, secondary causes, and supernatural agencies; but is heralded by a few striking superstitious stories, and one of which would make a prodigiously effective modern drama. Castle Campbell, on the Mull of Cantyre, with its storm and story of the cannibal, Sawney Bean; the tales of Lord Lyttleton and Mr. Andrews; and one of Sir Evan Nepean (less known, but, perhaps, too well to admit of repetition), lead the way to a more detailed relation of a ghostly apparition in Derbyshire, which is so exceedingly well told, that we can only regret the impossibility of detaching any intelligible portion of it from the general mass. We can, therefore, only bid our readers to read also the Offley legend; whose only defect is a sad mangling of the Scotch dialect in its Edinburgh scenes.

With regard to "Fielding," whatever we may be tempted to do hereafter, we must for the present be contented to say, that it consists of the briefest sketches of London life and character; though never personal, often recognisable, and rather inclined to the satirical view of both. The first part is very desultory, and relates to passing people, whom a Sir G.

Etheredge points out to a young country friend in town. We select a few passages, as specimens :—

“ ‘And have you not, then,’ replied Etheredge, ‘ever heard of the struggles and strifes created by our artificial modes of life; of the consequent difficulties imposed by the laws of society; and the fetters in which most men, and all women, hold one another? It is the boast of Englishmen, that there are no privileged orders, and that the career of ambition, as well as of the law, is equally open to all. Such is our theoretical constitution. But look at our practice, and all is contradicted. Never was such a tyranny as that exercised by all classes over one another. The very equality of their legal rights makes them eager to surround themselves with a wall of ceremonies and interdictions, which cause our philosophers to laugh in their closets; but which, nevertheless, even they obey the moment they come into the world. It is the fashion to attribute this to the aristocracy alone. That is not so. There is fashion every where, and as many shades of it as divisions in the social ranks. The aristocracy being at the head, are, of course, more marked; but they have not more pride (perhaps they have less) than their inferiors. There is as much exclusiveness prevalent among tradesmen, churchmen, and lawyers (I am not so sure of the doctors), and a great deal more from great to little squires at a race-hall, as well as from both towards the citizens of a neighbouring town, as prevails among dukes and lords of the highest degree. Indeed, the difference is in favour of the latter, from their being higher bred, higher born, and further removed from rivalry. This difference prevailed a long time ago, and is not confined to England. You may remember *La Bruyère*,—‘*La ville est partagée en diverses sociétés, qui sont comme des petites républiques, qui ont leurs loix, leurs usages, leurs jargons, et leurs mots pour rire.*’ The contention is generally most fierce between the classes that most approximate to each other; as foreign potentates who are nearest neighbours are said to be the most natural enemies.”

“After dinner, we, of course, fell upon politics; and the ministry were, of course, attacked and defended. One of the assailants was particularly violent against the personal character of the premier; he was a mere fool, if not something worse; unfit to be trusted, and suspected of betraying the people whom he had used as a stepping-stone. He was reproved as too personal in his reprehension. ‘What motive can I have,’ said he, ‘but anxiety for the public good?’ Alas! poor human nature! I afterwards found that the minister’s lady had turned her back on the patriot’s wife at court. ‘But do not let that surprise you,’ said my informant, ‘for Marshal Ney met his death—that is, he deserted *Lewis XVIII.*, and was shot for it—precisely from the same cause.’ I thought all this very strange; but I found from Etheredge, when I mentioned it to him, that it was very common. ‘It is inconceivable,’ said he, ‘how much may be done or undone by a bow or curtsy, given, or omitted. I have known a man of talent sink for a twelve-month with a lady of fashion, because she did not acknowledge his salute at the Opera, though the poor offender, being much engaged, really did not see him. Another gifted person, much connected with the press, would never join the world in attacking a celebrated

countess, because she had appeared interested in his conversation at a dinner, and, on withdrawing, had dropped him a most graceful curtsy. From that time forth, while not unjustly blamed by his contemporary writers for a great deal of *hauteur*, the paper he was connected with always spoke of her as a pattern of condescension.”

A literary character, and Mr. Ward’s remarks, come too near home to a literary editor to be omitted, and we give them (except a few varieties) in conclusion for this number :—

“Tired of his gown, he thought the field of college exertion too contracted, and even that of a learned profession too confined: for he was a man of genius, an aspirer after general fame, and a candidate for possible power in the senate of the state, as well as of the university. Very brilliant examples of success in these views swam perpetually before his eyes, in the recesses of his cloister and the twilight of his library:—rhetoricians, orators, and great civilians, with place, power, name, and often with wealth; at worst, leaders of the taste of the public, with a high seat in the rank and fashion of London. All this haunted his imagination. His reputation had spread to the metropolis, and he grew disdainful of college restraints and college companions. He panted to be in another sphere; and being forced to decide for the church, or give up his fellowship, he resolved upon the latter. He did this without having taken the slight precaution of examining the resources upon which he was to count, until his fortune should be made by letters; and he arrived in town with the means of, perhaps, six months’ subsistence in his pocket. This at first did not much affect him; he had only to grasp his pen, and a mine was opened. Reviewers, and directors of literary works, got from three hundred to three thousand a-year. He would begin with the smaller first; but how to be made known to the dispensers of these graces, or, being known, how to obtain them, he had scarcely asked himself. Reputation, however, will always do something for a man at first; and his object being known, he had offers which, in his situation, he ought not to have despised. It was proposed to him to take a part in reviews; and examples of high place in the state acquired by writers who had thus begun, tempted him. But he was appalled to find that he was himself to undergo revision, before publication; and he refused. He was then offered the place of literary assistant to a great capitalist; that is, to advise him on the merits of manuscripts. But, though himself a writer of genuine taste, he knew absolutely nothing of the taste of the town, and hardly of the age. Some publishers proposed novels. But though he might know the manners of the Greeks, he knew nothing of *May Fair*; besides, he despised the name. Others offered high for a forcible political pamphlet. But though he knew *Thucydides*, he had little acquaintance with English parties, except by report, and none at all with foreign polity. He, however, so far listened to the conductor of one most influential paper, as to undertake a fair and impartial review (such was the title submitted to him) of the character and conduct of the different leaders. He did it, and with ability; but, to his consternation, he was told this was by no means what was wanted; that particular men and particular measures on one side were to be praised, and on the other abused, whatever the question, or whatever the consequence. He reasoned upon this palpable injustice with the conductor, who, however, only smiled, and told

him he had no idea that a man who had got a university prize could be so raw. To his indignation he found that he was considered in the light of a hackney writer, who was to have no opinion of his own, but to do as he was bid. Thus foiled in one of his great objects,—to be a leader of the public sentiment,—he summoned his poetical talents to his aid, and out of old stories, and college exercises, and a re-publication of his prize composition, brought out some pathetic and polished verses and essays, which gained him at once a popularity he could not have expected. He who had been almost in want of a dinner now began to be almost fêted. The higher order of his university acquaintance patronised him; nay, made him an instrument to procure fresh patronage for themselves, by introducing him as the ‘New Man of Genius,’ covered with the laurels of promise. The doors of — house were opened to him, and he was allowed to partake the elegant *recherche* of both table and boudoir in Burlington Street. In fact, he became a lion for the time; his pride, which had never abandoned him, even in his eclipse, again unfolded itself, and he looked to a further enlargement of that reception among the great and fashionable, which had so unexpectedly charmed him. But though he pursued this hope with eagerness, he was far from being thoroughly grounded in the niceties, difficulties, and fluctuations in the life of a man of letters. That equivocal nondescript, so well known and appreciated in France, is scarcely recognised, and certainly not appreciated here. The time never came, and never will in England, when a queen, finding *Alain Chartier* asleep, kissed the mouth which she said had uttered such beautiful strains. Letters appear to us all a flowery path; and, taken as relaxation from severer occupation, they are so. As a duty, and above all, as a profession, they become severe themselves. The nectar that is quaffed in moderation, and at intervals, is delicious and exhilarating; made a common beverage, and, above all, forced on us against our will, it becomes turbid, flat, and satiating. This *Dryden* experienced, when he contracted to furnish 10,000 lines for 500*l.*—a shilling a line! What must they feel whose pen is destined to provide their daily bread? Yet of those, many might have had

‘Hearts once pregnant with celestial fire,’

and might still know what it is to generate

‘Thoughts that breathe, and words that burn,’

but that the necessity of attending to the mechanism of the press, and the stern demands of the stomach, absorb all ideas but those of the printer’s devil and a dinner. All then becomes, as it has been impressively called, ‘heartless, reluctant labour,’ and their genius languishes, sickens, and dies. Yet, smothered as it is by this necessity, it sometimes peeps out, and they are thought happy in their seducing pursuit; as *Carlin*, who so delighted the Parisian world by his humour, was thought to be diverted with himself, although, at the very moment, consulting his physician on the hypochondriasis that killed him. It is evident, by what has been said, that no allusion is here made to

‘The mob of gentlemen who write with ease,’

among whom *Lackland* affected to be enrolled. But the truth could not be disguised, even from himself, who, when he aspired (and most sincerely) to a higher need, laboured by the same effort to keep himself from starving. In fact, though he had read *Theophrastus*, he had never read *La Bruyère*, or if he had, he had certainly forgotten the following passage :—‘*Souvent où le riche parle,*

\* “He says himself he could not bear the coldness of the court towards his wife, whom he found in tears every night, on account of her reception there.”

et parle de doctrine, c'est aux doctes de se taire, écouter, et applaudir, s'ils veulent du moins ne passer que pour doctes."

"If you do," said an advising friend, "still aspire to equality, or to be valued for your own personal sake, by these gods of your imagination, let no such notion of equality appear, but 'boo, and boo, and boo,' like Sir Pertinax; and write an epithalamium, which, though stuff, may tell on the strength of your works of real merit. Do this, and you may, perhaps, be tolerated. If, without this, you attempt to shine at the expense of your superiors; if, in short, you pretend to be any thing, you soon will be nothing."

Now for the varieties, to close withal.

"Chesterfield says, that 'outdoing is so near reproaching, that it will generally be thought very ill company. Any thing that shineth, says Lord H——, doth, in some measure, tarnish every thing that standeth next to it.'"

Lawyer's Bill.		£	s.	d.
"To reading your letter, asking me to dinner...	0	6	8	
Answering ditto, that I would come	0	6	8	
Taking a journey of six miles to your country seat, to propose your employing me instead of your present attorney, who could not serve you so well, which you refused.....	5	5	0

N.B.—If this is thought too much, though allowable in law, I will submit to take ten guineas."

Anecdote.—"But what has that worshipper of vellum and broad margins, Sir Elziver Page, done to you, for he told me you had left him off too? Yet he has a fine library, on which, I know he used to consult you." "Oh, I have cut him as a book man, ever since he told me he had got a bargain of an Herodotus, Gronovius edition, with *Variorum's* notes."

Axiom.—"That when service has done what was expected of it, and is no longer wanted, the servant is abandoned even to oblivion, unless he has resources of his own."

*A Summer in the Pyrenees.* By the Hon. James Erskine Murray. 2 vols. 8vo. London, 1837. Macrone.

WE have not an opportunity this week to do justice to this publication; but we cannot allow one No. of our *Literary* journal to pass without saying that we have exceedingly enjoyed its contents. Would that every tourist's summer were as well spent! How agreeable would the critic's task be!—nothing to reprehend, every thing to commend. The refectory light, yet nutritive; the gratification of being instructed, not only without fatigue, but with the pleasurable emotions of having spent your time in good company.

As it is, we can only intimate these opinions; and try, by one taste or two, to prove their correctness, until we return to the subject in our next. There is no high spicing in these volumes. Mr. Murray has visited some of the most interesting and least known parts of the Pyrenean chain; and he has described the impressions made upon him with the feeling of an artist for the beautiful and picturesque in scenery, and the talent of an able observer for circumstances and manners. A number of very clever etchings seem to shew that he is quite at home in both these characters: but we must offer our initiative notice; for it cannot be a review. Andorre is a small independent state—a very small republic (*vide*, if you can, in the maps) consisting of a few valleys among

the mountains; and we give a sample of its *status quo*. Our traveller is invited to dine with the mayor after a public and patriotic meeting; and he says:—

"From the council-hall, or barn, Etienne, myself, and the old gentleman, whose 'voice was still for war,' adjourned, with the maire, to the sanctuary of his dining-room, kitchen, or bed-room, where we found the lady mayoress, her daughters, and sons, awaiting our presence. The apartment was, certainly, superior to any which I had entered in the village; for it contained chairs instead of stools, one of which had actually arms to it. The bed recesses had pieces of drapery hanging down before them; and there was a greater abundance of dishes. But, what at once gave dignity and character to the house, and, independent of all other considerations, would have fully justified the villagers of Escaldos in their choice of a maire, was his being the owner of half a dozen pewter spoons, and a full dozen of knives and forks—steel or iron, it does not signify which—with bone handles. No wonder the mayoress was proud of them; they were the only articles of the kind in the village. Dinner was soon announced by the hissing of the soup, as it was emptied into the wooden tureen, which was placed upon the centre of the long, narrow pine-table, which was covered with a clean, but grayish white, table-cloth. There seemed to be no great ceremony as to the particular places which the guests were to occupy; so I resigned to Etienne what would, at home, have been the place of honour, and seated myself where I had most chance of making myself understood, between a couple of the maire's daughters. I did this upon principle; for I have invariably found that the females of any country, whose language I either spoke indifferently or hardly understood, were far more apt and intelligent in comprehending what I wished to say than the men. A spoon and a plate were set before each individual; and, all being seated, the maire pulled the tureen towards him, helped himself, and pushed it round: the next person did the same; and so on. Then followed a large brown loaf, from which each person cut a pound, or more, of bread. The soup was composed of vegetables and bread; and a piece of pork, which afterwards made its appearance, had been boiled in it. The soup was removed, and fowls, fish, and the piece of pork succeeded. This constituted our dinner, and only wanted the few elegancies of civilised life, to have made it worthy of the table of the lady mayoress of any country town in France or England. We drank our wine out of the odd-shaped bottles which I had first essayed the use of at Valmania; but I had now, from practice, become sufficiently expert as to be able to measure the distance from the 'cup to the lip,' and to describe the proper angle with the neck and spout of the bottle, so as to save myself from a recurrence of the mishap which followed my first attempt, and thus baulked my fair (dark, I should say) neighbours of the laugh which they would otherwise have raised at my expense, and which their compressed lips and smiling eyes plainly told me they were preparing for when I took the decanter in my hand. Having satisfied my thirst, I set it down upon the table, with an action and look explanatory of my satisfaction at having cheated some of the company of a laugh at my awkwardness. Why should not Andorrian ladies have thought me equally as vulgar and ignorant of the common usages of civilised life, by my inability to handle their decanters, as my polished friends at home would have esteemed me had they seen me cut fish

with a knife, or eat curry with any other instrument than a spoon? Lord Chesterfield himself might have been convicted of ill-breeding at the table of the maire of Escaldos. Anxious to see as much as possible of the manners and customs of the Andorrians, I made Etienne inquire as to the possibility of our assembling the villagers to a dance in the evening. The maire sanctioned the proposal; the hall of state was to be the rendezvous; and the youngsters of the party started off to spread the news through the village, more welcome in their character than would have been the 'fiery cross,' which, in the morning, they were told to be prepared for. Shortly after seven, the whole dancing population of the place were assembled in the council-hall, barn, or ball-room, dressed in their holiday suits; and I could observe that some of the ladies whose acquaintance I had formed in the morning, had evidently been lavishing their dark countenances in the stream, and justified the supposition that there was more necessity for soap and water than for 'Rowland's kalydor,' to purify their complexions. There was no scarcity of musicians, where almost every lad could jingle the strings of the guitar, or beat time with the triangle. The Andorrian dances are almost the same as the Arragonese, and other Spanish peasantry; but the women do not trip it so lightly as the Spanish women, and the men have not that ease and elegance displayed by the Spaniard in the performance of his native dances. The Andorrian dances, however, are not by any means deficient in spirit and activity, set after set succeeding each other without one moment's cessation: the instruments were only laid down by those who were going to dance, to be taken up by those who had finished; and so on it continued for several hours, both ladies and gentlemen occasionally invigorating themselves with a puff from the strange decanters; which, as patron of the ball, I took care to have well filled. About eleven, Etienne and I retired, leaving the party in full glee; the maire presiding over the remainder of the cask of wine, and encouraging the dancers with his voice, as he beat time with his fists upon the barrel. The night was exceedingly dark; and, if we had not taken the precaution of stealing one of the lamps away from the ball-room, we might have experienced more difficulty in groping our way to our hotel, through the winding lanes of Escaldos, than in crossing the mountains to Carol; at least, so said Etienne, as he tumbled over a heap of something or other, which, however soft to fall upon, did not render him a more agreeable companion. Fortunately I was carrying the light, otherwise I should have, perhaps, had a sunset also; but no further mischief befell us until we reached the door of the posada, when, in stepping over the cross-bar at the bottom, I stumbled, and let fall the light. I mentioned, that the staircase which led to the upper story was situated in one corner of this stable; but there was both difficulty and danger to be encountered before arriving at it. It was a place where in daylight it was most necessary to pick one's steps with care: of course this could not be done in the dark; and the danger to be encountered was from the mules, who, of all animals, dislike being disturbed during night by strangers. Etienne went first; but he had hardly proceeded a couple of yards within the door, when a snort from one of the mules, accompanied by a lash out with its heels, made him retreat. Mules, like other obstinate animals, of whatever genus, become better friends by bullying than coaxing; so Etienne, accustomed to their ways, did not spare the

former, and, keeping as close to the wall as possible, we reached the staircase in safety. We were in hopes that we should have been able to find another lamp in the room above; but the whole of the family had either retired to rest, or were still at the ball: the fire was out, and we were in perfect darkness. We had told the hostess that we should occupy the spare apartment; and, accordingly, we opened the door of it, with the intention of sleeping as we best could—upon the beds, if we could find them, or, failing in our attempts to do that, to lie down upon the floor. Our intentions were, however, frustrated; for, when we opened the door, such harmonious sounds proceeded from all parts of the chamber, that some dozen, at least, of intruders must have taken possession of our quarters. Alas! there was no bell to ring, no waiter to call up, and, in true John Bull style, indignantly order him to turn the sleeping gentlemen out. Here 'might was right'; and had Etienne and I tried the experiment, we would, in all probability, have been treated as intruders ourselves, and, as such, found a reception which might have proved somewhat more dangerous and fatal than the kicks from the mules below, had we received one from each of them. We thought, with the old adage, that it was best to 'let sleeping dogs lie'; so we shut the door, and, in revenge, only drew the bolt upon them. Etienne laid himself down upon one of the benches in the kitchen; but, as I did not altogether relish the atmosphere of the apartment, composed of the exhalations arising from the refuse of the frying-pan, the well-picked bones which were strewed about, the upsetting of the wine decanters, and various other potherhouse effluvia, and as it was a fine night, I carried one of the three-legged stools into the balcony at the window, and, placing it in one corner, so as to make myself as comfortable as I could, I was soon afterwards sound asleep."

To this single specimen of the manner in which this narrative is written, we must, for the present, be content to add two or three very brief touches:—

"Having gratified my curiosity at Foix, I returned to Tarascon in the diligence. I had for my fellow travellers, two Frenchmen, who had left Marseilles on account of the cholera. It has been said that fear predisposes its victims to an attack of cholera: now, I am sure, if such was really the case, that these two gentlemen, who were going to Ax, must have died that same night; for I never, in the whole course of my life, saw two individuals so imbued with fear and terror as they seemed to be. While conversing upon the subject of their disquiet, I happened to mention that I had been in the neighbourhood of Drogheda when so many of its inhabitants were carried off by the cholera; upon which they immediately supposed that I could give them some sovereign specific against its attacks, and begged me to tell them what was the best measure of precaution to adopt. I told them that there were various opinions upon the subject, and different methods by which it was supposed the disease could be warded off. One method was that which numbers of the Irish, during the prevalence of the cholera in their country, had adopted: it was never to be sober while the cholera remained in the district; so long as they were intoxicated there was no fear of them, but if they once forgot to be drunk, then the disease was sure to seize upon them. The Frenchmen did not seem to relish this precautionary method, which I offered to their notice; so I gave them another, which met

with more success. It was to refrain from eating salads to breakfast, or drinking the indifferent wines of the country, and never, by any chance, to taste the unripe fruits daily presented to them at the inns; but to give up their French habits and tastes, and live, à la John Bull, upon solids."

An official having ridiculously stopped our traveller on his way, he illustrates it humourously.

"We expostulated with the green-coated gentlemen, declared that we had left Luchon the preceding day, appealed to our guides for the truth of our story; but we could not satisfy them: 'how were they to be certain of the fact?' I could not help laughing when one of the officers made this remark; for it brought to my recollection the predicament in which a gentleman, riding out in the vicinity of Edinburgh, found himself. He had paid at one of the turnpike gates, a ticket from which enables the possessor to pass through all the other gates within a certain district, and carefully, as he imagined, deposited the little passport in his pocket. Arrived at another gate, the keeper demanded his ticket; and the gentleman, pulling up, and putting his hand in his pocket, searched it right and left, diving into every corner of it, but the inch-square piece of paper was nowhere to be found. It had flown away, or, perhaps, in using his pocket handkerchief, it had been blown away; but sure it was the thing was lost. The gentleman protested that he had paid at such and such a gate, and obtained a ticket; but no, the keeper was not satisfied. The money was of no consequence, but the gentleman was indignant that his word should be doubted: so, convinced of the decisive nature of the appeal he was about to make, he raised himself in his stirrups, and, staring in the keeper's face, said, 'Have the kindness, my friend, to look into my countenance, and tell me if you think it the physiognomy of one who, for the paltry sum of two-pence, would tell you a lie?' The keeper did as he was desired; and, stretching out his hand, answered, 'I'll thank you for two-pence.'"

We regret to leave off, but we will endeavour to do more perfect justice in our next.

#### ARTS AND SCIENCES.

GEOGRAPHICAL SOCIETY: MR. DAVIDSON.

MR. MURCHISON in the chair. — During the routine business of the meeting, a portion of a paper, entitled Notice on the Key and Arrú Islands, by G. W. Earl, Esq., was read. The chairman, in a very feeling manner, alluded to the melancholy intelligence received of the murder of Mr. Davidson; and, in respect to his memory, suggested that the business of the meeting should be confined to the reading of the letters communicating the mournful fact. The following letter and translations were then read.—Mogadore, Feb. 14, 1837. Mr. Willshire, vice-consul there, to E. W. A. Drummond Hay, Esq.—Sir, I had the melancholy duty, on the first instant, to make you acquainted with the distressing intelligence which had reached me regarding Mr. Davidson. I am grieved at heart to inform you all the accounts I have received since confirm the melancholy tidings. The most circumstantial account I have heard I derived from a Jew, named Jacob Ben Cohen, who arrived here from Draha on the 2d instant, and reported to me that Mr. Davidson had been robbed on the 29th or 30th of Shaban (thirty-two or thirty-three days after Mr. Davidson started from Wednoon), by the tribes of Idowlet and Alt Atta, in the district of Hameda, four days'

journey from Tatta, who, after receiving from Mr. Davidson eight doubloons, and a hundred dollars, and a loaded camel, allowed the party, consisting of eighteen persons, to proceed on their route towards Timbuctoo. Wold Hamedan, and Eborria of Idowlet, and Wold Henna, and Wold Aboo, of the tribe of Alt Atta, he mentioned as the names of the robbers. My informant stated, that eight or ten days after, a marauding party, of 100 horsemen, of the tribe of El Harib, who were returning from plundering a place called Bowbegah, met Mr. Davidson's party a little to the south of Egueda, whom they immediately robbed, and shot Mr. Davidson, who received eight balls; and when dead, every one discharged his musket at his body, as a meritorious act. At El Mehamdee, a town distant six days from Satta, where my informant was living, he saw in the possession of the Arabs and Jews various articles which had belonged to Mr. Davidson, which he described, and left no doubt on my mind as to his fate. Among the articles which he had seen, he named a silver watch, a pocket compass, sword, three books, a box of medicines, japan tea-caddy, beads, and cowries; all of which he must have seen, or he could not have described them so correctly as he did. My informant could not give a certain account of the fate of poor Aboo, the companion of Mr. Davidson, but understood he had gone on with the caravan, in which he is partly borne out by the letter received from Sheik Beyrook yesterday. Other accounts state that Mr. Davidson and party were travelling some distance in a parallel route, but rather behind the caravan which was first met by the party of El Harib, who were disappointed at not finding Mr. Davidson, for whom they inquired. The caravan was stopped, and afterwards Mr. Davidson came up, when he was instantly shot. Another report inclines me to believe that El Harib at first appeared friendly, and afterwards seized an opportunity, treacherously, to murder him, at a place called Sheh' Keys, twenty days' journey from Timbuctoo. I have been much disappointed that the information received by the courier I despatched to Wednoon, with letters to Sheik Beyrook, is very meagre and inconclusive, as you will perceive, on perusal of the accompanying translations of the two letters addressed to me, and his agent, Seedy Hadj Abebe. In those letters, no allusion is made to the robbery and murder of Mr. Davidson as having occurred at different places, nor is the account of Jacob Ben Cohen supported in this point by any of the reports which have come to my knowledge, except the one received by my agent from his son at Morocu, which states, that Mr. Davidson had been robbed, and afterwards allowed to proceed on his journey. I have no reason to suspect treachery on the part of Sheik Beyrook, although the reports set afloat by Wold Isheme are, that Mr. Davidson had deposited a large sum of money with the sheik, is evident. Considering there was a great probability Aboo might have been taken by the tribe of El Harib, and detained as a slave, I directed the sheiks to procure his release, and to send him to me: by the answer he returns, he appears to believe that Aboo had gone on with the caravan, in which case there is not much likelihood of the Tragacanthos overtaking it. I beg to acquaint you I have not yet determined upon what steps to take to collect further information, having only yesterday received the letters from Sheik Beyrook. It is my wish to despatch a Moor to proceed to Draha to recover of the people every thing belonging to Mr. Davidson; the great difficulty is to select a person well ac-

quainted with the country, and in whom every confidence can be placed. I attach considerable value to the notes Mr. Davidson may have made on the route from Wedmore, up to the moment he met his untimely fate. I have in view a Moorish trader, who has travelled in many parts of the desert, and if I can come to an arrangement with him, I shall despatch him to Drake with directions to proceed to the very spot; and every thing I can do towards elucidating this melancholy affair, be assured, will be done. I remain, (signed) W. WILLSHIRE.—P. S.—I have omitted to state, that by the report of Jacob Ben Cohen, Mr. Davidson met his fate on the 8th day of Ramadan, answering to the 17th or 18th of December last. Sheh Keya is near the southern confines of the district of Eguoda, sixteen days from Tatta, and ten days from Tandeney.

Translation of a letter from Sheikh Beyrook, dated Wedmore, 1st day of the month Dual Caada (answering to the 7th instant), received at Mogadore 13th February, 1837. The letter proceeds:—"To our friend, Merchant Willshire, English Vice-Consul, Salam, &c.—We received your letter by the courier, which we have read and understand. About the news of the Tibbib, John Davidson, his death is certain; the Harib met him—death is the lot of all. We had arranged with all the tribes of Arabs who are known to plunder persons and commit robberies on the road; we had ensured his safety with them. The Tibbib did not leave our house until we had previously received security from Eborria (of the tribe of Idowlet) that he might pass through the district of El Harib; we had no fear, because they are traders, and convey and pass the merchants of Taflelt and receive him. El Harib did not go that route but to kill him (the Tibbib); and we have heard, that the merchants of Taflelt had given money to El Harib to murder him. Taflelt is only distant one or two days' journey from the usual place of abode of the tribe of El Harib. As to the property of the Tibbib, nothing has found its way to this quarter; but should it, I will send it to you. His property will get to Taflelt, where it will be sold; and you had better write to the Sultan Mulai Abderrachman, to give orders to his viceroy to seek after his books, writings, and property. We inform you we have sent a friend to the Tragaacanthi, ordering a person to be despatched to Timbuctoo to bring us Aboo, who is gone there; and have given the strictest orders for every information and news how it happened, to be sent to us. As to the envy like that of Wold, Isheme, and others we have heard of, you know better than any one what money the Tibbib had. The truth of all the news will be known when the horsemen return from the Tragaacanthi: we will send it you, and point out to you the spot or place where he (the Tibbib) was met, and the day he was murdered. His death would be first known at Taflelt, from whence it would reach us, as many of the El Harib go to that city. We are far off, which is the cause of the intelligence being so long before it reached us. The station of the Tragaacanthi is twelve days' journey from this place; and it is three months that no one has come to us from thence, except this news, which came from Geist. The money which he (the Tibbib) lent to Mohammed El Abd, make yourself easy about it; the day the caravan returns we will get repaid, and remit it to you. INSHALLA SALAM."

Read also, translation of a letter from Sheikh Beyrook, dated as the preceding, and received at Mogadore the same day.

"To Sidi Hodge Abibe Salam, &c."

"As to what you write about the Tibbib John Davidson, the party of El Harib found (or met) him and killed him, plundering all his property, and that of Mohammed El Abd, which he had with him, of long-cloths and Hamburgers. On the day they killed the Tibbib they seized his companion Aboo, and swore to him, by the most solemn oath, if he did not then tell of the property belonging to the Christian, they would take his life; upon which he discovered and told them of every thing, which they took, and went away with; and the reason why I did not write to you before now, I had doubts of the truth. How comes it that you listen to the words of Wold Isheme, who writes to the Jew, his friend, and tells him the Tibbib has deposited with us the sum you mention in your letter? Why did you not answer Willshire on the point, as you saw the money he delivered over to Mohammed El Abd? God be praised, we are known not to be traitors, like Wold Isheme: however, if his companion, Aboo, comes, he will relate all the news with his own mouth. Be informed that we have written to the heads of the Tragaacanthi, Cidi Mohammed Dnamanu, Cidi Mohammed Ben Annish, and Hamed Moohud, to send persons like themselves to bring to us the companion, Aboo, from whence he can be found. At all events, if he be alive, you will see him, Inshalla; and if dead, God's will be done. The words you report, that we had arranged with El Harib to betray him (the Tibbib), such doings are not our ways; nor could we degrade ourselves to do so: every one God will reckon with for the words he utters. For four days we neither ate nor drank; and have sworn, by all that is sacred, to be revenged. Wherever El Harib are to be found, in their tents or on the road, our tribe shall plunder and murder them. As regards the property of the Tibbib, if any articles remain in the hands of the Tragaacanthi, they will reach you. God knows how much we have grieved about him; but, God be praised, we did not leave any thing undone for the safety of the Tibbib. We did not think the Harib would turn traitors to any person sent by us. This has been done by the traders of Taflelt, who had bribed El Harib to kill him. God's will be done. The fact will be known when the two horsemen return, whom we have despatched to the Tragaacanthi, and who will be sent to you. Peace." The meeting then broke up.

#### GEOLOGICAL SOCIETY.

MARCH 8. The Rev. William Whewell in the chair.—The reading of the Rev. W. B. Clarke's paper on Suffolk, commenced on a previous evening, was concluded. The formations of which that country consists are chalk, the plastic and London clays, crag, diluvium, or ancient superficial detritus, and recent lacustrine accumulations. Each of these deposits was described in considerable detail, as well as the changes now in operation in the river courses and along the sea-coast. The following conclusions were then given, as deducible from the statements in the body of the memoir:—1. The substratum of the whole of Suffolk, Norfolk, and Essex, is chalk, which appears to have been dislocated and worn into deep hollows by the action of water, previously to the commencement of the tertiary era. 2. On this abraded surface the plastic clays and sands were formed, but not over the whole area. 3. Partly on these beds, and partly on the chalk, the London clay was then deposited, but to no very great thickness. 4. Upon the London clay,

as well as the chalk, the crag was next accumulated in sand-banks produced by the tidal waters, and around projecting masses of chalk. 5. While the crag still lay beneath the sea, a violent catastrophe broke up many of the secondary strata from the chalk to the lias inclusive; and the debris thus caused, together with numerous masses of ancient rocks, was spread by a rush of water over the surface of the tertiary formations, and the chalk, in some places to a depth of 400 feet, constituting the beds of drift clay, &c. which occupy so great an area in Suffolk. 6. Previously to this diluvial action, and after it, the inland waters of the then dry land bore to the sea animal and vegetable remains, vestiges of which occur in the Norfolk coast, and elsewhere. 7. That the climate of this part of the globe was then different from the present. 8. After this period, and probably in prolongation of the first great catastrophe, a series of shocks, acting from below, shattered the surface, and gradually elevated the whole district, till the crag obtained the height of nearly 100 feet above the level of the sea; and by this movement were produced the valleys or lines of fissures through which the drainage of the county is effected. 9. No great convulsions have since taken place. 10. By the action of springs, and the constant battering of the sea, the superficial contents of the London clay and crag have been reduced several miles, vestiges of their former extent being traceable in rocks and sands, nearly always submerged. 11. By the set of the tides, vast accumulations of shingle and sand have been formed at projecting points, protecting, in some places, the cliffs from further destruction; but at Harwich they have blocked up the ancient estuary, and compelled the Stour and the Orwell to form a new outlet. 12. The average amount of annual degradation of the coast, is about two yards in breadth; and, in consequence of the conformation of the ridges of crag and London clay, the cliffs will gradually diminish into a low, sandy shore. The period estimated for effecting this destruction is calculated by Mr. Clarke to be another century.—The next paper read was by the Rev. David Williams, F.G.S., on the raised beaches of Saunton Down, and Baggy Point. These beaches were recently described by Professor Sedgwick and Mr. Murchison; \* and Mr. Williams, in this paper, fully agrees with the conclusions drawn by those authors relative to the beaches having been raised. In addition, however, to the proofs afforded by the numerous remains of existing British marine shells in these accumulations, he stated that he had found, in many places, from six to ten feet above the tidal level, and at the line of contact of the beaches with the old rocks of the district, countless *Balani* attached to the surface of the latter, but entangled in the substance of the former. In support, also, of the land having been raised, and not the sea depressed, he referred to the submarine forest in the prolongation of the same coast, and argued that their position could not be accounted for by a subsidence in the sea level, but by an unequal movement of the land.—The third communication read was from Mr. James de Carlo Sowerby, on a new genus of fossil shells, named by him *Tropæum*. The following are the characters given in the paper: "An involute chambered shell, with sinuated septa; the whorls free, sometimes very distant: siphon in the external margin." The shells which may be grouped in this genus have hitherto ranked as *Hamites*, but have no sudden bend

\* See *Literary Gazette*, Dec. 17.

which may be compared to a hook. The place of *Tropæum* is between *Hamites* and *Scaphites*. The species hitherto found have been obtained from the gault and greensand.

## ENTOMOLOGICAL SOCIETY.

MARCH 6th. The Rev. F. W. Hope in the chair.—Various donations of books were announced, and thanks ordered to be returned to the donors. Several gentlemen were elected members of the Society, and certificates in favour of A. B. Lambert, Esq.; G. B. Greenhough, Esq.; and W. Harrison, Esq., were read. The following memoirs were read. Additional note upon the trap-door spider of the West Indies, accompanied by figures, by W. Sella, Esq. On an early remedy adopted for the destruction of obnoxious domestic insects, by L. H. Petit, Esq. F.R.S. Observations in support of the opinion that the blatta cannot be considered identical with "oreh," the insect which constituted one of the plagues of Egypt, by the Rev. F. W. Hope. In this memoir, the author entered very fully into the views entertained by the different commentators relative to the insect which was employed as one of the plagues of Egypt: combating the opinion of different writers who maintained that the common cockroach, on account of its black colour, and occasionally appearing in swarms, was the insect in question; and maintaining, on the contrary, both from the text, and from communications made to him by Colonel Sykes, upon the noxious insects of India, and by Mr. Wilkinson, the Egyptian traveller, that some (probably several) species of dipterous insects, allied to the gad-flies, were the real plagues in question. This memoir led to an interesting discussion upon the habits of these different insects in various quarters of the globe.

## BOTANICAL SOCIETY.

THURSDAY. Mr. Gray, the president, in the chair.—Some members were elected, and others proposed. Donations of plants, supposed to have formed part of the *herbarium* of J. J. Rousseau, and some plants found about Mahon, Minorca, were announced, presented by Mr. G. B. Dennes. A specimen of *Cinclidium stygium*, a new British moss, was exhibited, presented by Mr. Roberts Leyland. A paper was read from the treasurer, John Reynolds, Esq., being a translation of Father Koischer's "China Illustrata;" which led to an interesting discussion: after which the meeting adjourned to the 6th of April.

LITERARY AND LEARNED.  
UNIVERSITY INTELLIGENCE.

OXFORD, March 9th.—The following degrees were conferred.

*Masters of Arts*.—H. Allen, New Inn Hall; Rev. J. Whytt, Edmund Hall; Rev. J. Dodd, Tabard, G. S. F. Smith, Queen's College; Rev. W. D. Roberts, Rev. J. R. Trye, Jesus College; Rev. H. N. Lofting, Exeter College.

*Bachelors of Arts*.—E. W. St. John, E. C. Egerton, Christ Church.

CAMBRIDGE.—The chancellor's two gold medals for the best classical scholars among the commencing Bachelors of Arts have been this year adjudged to T. Whytehead, of St. John's College, and W. G. Humphrey, of Trinity College.

March 10th.—The following degrees were conferred:—

*Bachelor in Divinity*.—Rev. J. F. Collis, Trinity College.

*Bachelors of Arts*.—W. B. Simpson, T. Spankie, R. Hopper, R. Roberts, A. Malcolm, Trinity College; E. Evans, St. John's College; E. D. Bland, Caius College; E. Bellman, Queen's College; H. Roberts, A. A. Kempe, Magdalen College.

## SOCIETY OF ANTIQUARIES.

MARCH 9. Mr. H. Gurney in the chair.—Sir Henry Ellis exhibited a drawing or plan of the town, fortifications, and harbour of Carrick-

fergus, in Ireland, in 1612.—Mr. Planché exhibited a basinet, a form of helmet in use from Edward II. to Henry V.: this appeared, from its form, &c., and by comparison with Stothard's "Monumental Effigies," to belong to the time of Edward III.—Sir Fred. Madden exhibited two matrix seals, found by some excavators in making a railway, but it did not appear where. One was the seal of the Priory of Boxgrave, in Sussex, founded in the reign of Henry I. The seal was made to impress, and in some places to perforate, two pieces of wax, which were afterwards cemented together; and the figures on the back of one piece were then seen through the architectural perforations of the other, and *vice versa*, in the same way as the beautiful seal of the Priory of Southwick, in Hampshire: but it is to be regretted that the Boxgrave matrix was too much corroded by time and damp to make a perfect impression. The other seal belonged to some monastery dedicated to St. Redignus, no account of which Sir Frederick had been able to find in Dugdale or Tanner; and he requested information on the subject from any of his brother antiquaries who could give it.—Mr. John Gough Nichols exhibited a napkin of the time of Henry VIII. of beautifully fine damask, or, as it was then called, diaper. The woven ornaments were exceedingly rich, belonging exclusively to the Tudor period; and, from the subjects, there was little doubt of its having been made for royal use. In his description of this delicate and dainty napkin, Mr. Nichols gave several extracts from the household ordinances of Henry VII. and Henry VIII. relative to the washing and preserving the napery, or cloth, for the king's use.

March 16th. Mr. Hudson Gurney in the chair.—A paper was read from Sir William Betham, on Signor Campanari's Etruscan Tombs, exhibiting at Pall Mall, and the high state of civilisation and arts which they shew to have existed in Etruria; but the subject he most referred to was the inscriptions, which, he said, had confirmed him in the opinion previously expressed, of the identity of the Phœnician Language with the Celtic—the ancient language of Ireland.—Mr. Rosser exhibited a perfect skeleton of an Egyptian mummied cat, which he had lately unwrapped, and two small statues, in bronze and porcelain, of Bubastes, the Egyptian goddess, to whom the cat was sacred, and who was usually represented with the head of a cat.—The Rev. L. Sharpe communicated a paper on the ancient dramas called "Mysteries," and the barbarous Anglo-Latin language of some of them, and the meaning of several obsolete and difficult passages found in them. The reading of the survey of the province of Connaught, in 1612, communicated by Sir Henry Ellis, was concluded, and the Society adjourned to the Thursday after Easter.

LITERARY AND SCIENTIFIC MEETINGS  
FOR THE ENSUING WEEK.

Monday.—Statistical, 8 P.M.; Russell Institution, 8 P.M. (Mr. Goodley, Second Lecture on Insect Anatomy.)

Tuesday.—Linnean, 8 P.M.; Horticultural, 3 P.M.; Civil Engineers, 8 P.M.; Lambeth Literary (Mr. Cooper on Meteorology), 8 P.M.

Wednesday.—Society of Arts, 7 P.M.; Geological, 8 P.M.; London Institution, 7 P.M.

Thursday.—Royal Society of Literature, 4 P.M.; Russell Institution, 8 P.M. (Mr. Oxenford on German Literature, Goethe); Islington Literary (Mr. T. Cromwell on the Archaeology of the British Isles; and the following Thursday, and April 13).

## FINE ARTS.

## SOCIETY OF BRITISH ARTISTS.

The Spring Gallery of the works of living British Artists is to be opened to private view

to-day, and publicly on Monday. We have been permitted to take a glance round the walls, and have great pleasure in noticing the collection as one quite equal to, if not more meritorious than any preceding exhibition.

## MUSIC.

## VOCAL SOCIETY.

THE fifth concert, on the 6th inst., was no less attractive than its predecessor had been. A manuscript cantata, by Hullah, sung by Miss Masson with exquisite feeling, was a delightful specimen of what may be achieved by music, when it is really "married to immortal verse." The young composer has most felicitously caught the tone of Shelley's truly beautiful lines, beginning,—

"Rarely, rarely comest thou,  
Spirit of delight;"

and Miss Masson embodied the ideas of both poet and composer, in such a manner as to make every heart respond to them. Mrs. Bishop sang Hummel's *offertorium*, "Alma virgo," most delightfully; and Miss Rainsforth was very successful in a sweet ballad by T. Cooke, "No joy without my love." Equal praise is due to Mr. Balfe for his spirited performance of "Non più andrai;" and Miss Woodyatt executed Haydn's canonet, "Sympathy," very pleasingly, except that her shakes were rather superabundant. Among the choruses were the coronation anthem, "My heart is inditing;" "O! the pleasures of the plains," from *Acis and Galatea*; Mozart's motet, "Praise Jehovah, our Defender;" and "Arise! arise!" from *Hercules*: all admirably selected, and the last much too good for playing the audience out with. The madrigals and glees, too, were judiciously chosen. Amongst the latter was a manuscript composition, by Mr. E. Taylor, of considerable merit. Beethoven's quartet, Op. 74, played by Messrs. Blagrove, Gattie, Dando, and Lucas, was, unfortunately, too long for even the most enthusiastic listeners; and those accomplished performers received, in consequence, much less than their due meed of applause. We advise them in future to select, on similar occasions, compositions of a more popular character. The audience were disappointed in their expectation of seeing the royal visitors, owing, as it was said, to the sudden indisposition of the Princess Victoria. Q.

## ANCIENT CONCERTS.

THE second concert was under the direction of Lord Burghersh, for the Duke of Cambridge; and it is scarcely necessary to add that the selection was very good, combining a judicious admixture of novelty with a few deservedly favourite stock-pieces. One most remarkable feature of the concert was a pianoforte concerto, by Sebastian Bach, which was played by Mr. Moscheles with such consummate skill, vigour, and intelligence, that attention was kept awake throughout, notwithstanding the dry and monotonous character of the composition. A recitative and air by Bianchi, charmingly sung by Miss Masson, was a perfect gem. It is impossible to conceive any thing more beautiful than the accompaniments to this song, especially the parts for the wind-instruments; and their effect was rendered quite enchanting by the exquisite performance of the band. Mrs. Bishop, and Messrs. Braham, Bennett, and Phillips, all gave great delight by their respective performances. Mr. Seguin, in the duet with Mrs. Bishop, "Crudel perchè," sung with much dramatic animation; but the part is a little above the range of his voice, in consequence of which he was compelled to alter a few notes

## ADVERTISEMENT,

Connected with Literature and the Arts.

## BRITISH INSTITUTION,

PALL MALL.  
The Gallery for the Exhibition and Sale of the Works of British Artists, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.  
Patrons—the King.  
WILLIAM BARNARD, Keeper.

## SOCIETY OF BRITISH ARTISTS.

The Exhibition of the Society of British Artists, Suffolk Street, Pall Mall East, will be open to the Public on Monday, from Ten o'Clock in the Morning till dusk.

Admission, 1s.  
T. C. HOPLAND, Secretary.

## ARTISTS' BENEVOLENT FUND, for the Relief of their Widows and Orphans. Instituted March 22, 1810; incorporated by Royal Charter August 2, 1837.

President—Sir John Edward Wellesbourne, Bart.  
Vice-Presidents—

The Earl of Ripon Benjamin Bond Cabbell, F.R.S.  
The Lord Farborough R. Norman Bolly, Esq. F.R.S.  
The Right Hon. Robert James Vise, Esq.  
Peel, Bart. M.P.  
Treasurer—Charles Palmer Diamond, Esq.

The Annual General Meeting of the Subscribers to the Artists' Benevolent Fund will be held at Freemasons' Tavern, on Saturday, the 25th instant, at Half-past Eight o'Clock in the Evening precisely.

JOHN MARTIN, Secretary.

## THEATRE OF ANATOMY,

57 Little Windmill Street, Haymarket.  
The Annual Course of Twelve Lectures on Anatomy, as applicable to the Arts of Design, and for the purposes of general information,

By Mr. J. GREGORY SMITH,

Member of the Royal College of Surgeons and Teacher of Anatomy, Surgery, &c.

will commence on Tuesday Evening, April 4th, at Half-past 8 o'Clock, and will be continued on each succeeding Friday and Tuesday, at the same hour.

The Lectures will be illustrated by recent Dissections and by preparations of Human and Comparative Anatomy. A practical demonstration and every facility will be afforded to those gentlemen who may be desirous of making Studies or Drawings from the recent Dissections, on the morning subsequent to each Lecture.

Prospectuses, exhibiting an outline of the Course, and Cards of Admission, at One Guinea each, may be obtained of Messrs. Dominic Colnaghi and Co. Printers to the King, Pall Mall East; of Messrs. Carpenter and Son, 14 Old Bond Street; and at the Theatre of Anatomy, 57 Little Windmill Street, Haymarket.

## ORIENTAL LANGUAGES.

Private Lessons in Persian, Arabic, and Hindoostanee. Apply to Mr. Mortimer, 2 Wigmore Street, Cavendish Square.

## HIGH SCHOOL, LIVERPOOL.

Wanted, for this Establishment, which it is proposed to open after the Midsummer Vacation, the following Masters:

1. An English Master, qualified to give instruction in the English Language, and English Literature, Education, Composition, History, Geography, Mental and Moral Philosophy, and Political Economy.

2. A Philosophical Master, qualified to give instruction in Natural Philosophy, Chemistry, Geology, and Natural History.

3. A Mathematical Master, qualified to give instruction in Arithmetic, Book-keeping, Algebra, Geometry, Trigonometry, Conic Sections, the Differential and Integral Calculus, Surveying, Astronomy, and Navigation.

4. A Classical Master, qualified to give instruction in the Languages, Literature, and Antiquities of Greece and Rome.

The Philosophical and Mathematical Masters will have to attend five hours in the week in the adjoining Lower School of the Mechanics' Institution.

The remuneration of the above-named Masters will depend upon the number of Pupils in the School. Each of them will receive 12s. per cent upon the income arising from the charge to every Pupil of One Guinea per annum, which will afford to each Master the following scale:

In the case of 300 Pupils in the School £210 per annum.  
200 ..... 215  
100 ..... 140

The first of these sums is guaranteed for two years; but the remuneration from the fees expected to be much greater than the sum guaranteed: out of the above-named Four Masters, one will be selected as Head Master, and to him will be paid, in addition to the above per centage, a fixed Salary of 100l. per annum.

Considerable emolument may also arise to the Masters from taking as Boarders youths who come from a distance.

The accommodation provided in this School, in the spacious building just erected, is amply sufficient for 500 Pupils.

A detailed Prospectus of the plan, showing the duties of the several Masters, may be seen at Messrs. Colnaghi's Coffee House, Walbrook; and Mr. Taylor, Bookseller, Upper Gower Street.

Applications, accompanied by unexceptionable testimonials as to character, abilities, attainments, and experience in tuition, must be sent in before the 1st of April, addressed to Mr. James Harvey, Junr., Catherine Street, Liverpool.

N.B. It is proposed to publish the Testimonials of the successful Candidates.

Now ready.

## ROBERTS'S SPANISH SKETCHES.

Comprising Madrid, Seville, Granada, Cordova, Burgos, Xeres, Malaga, Gibraltar, &c. &c. &c.

Price, imperial folio, tinted, half-bound, 4s. 4s.  
London: Hodgson and Graves, Printers to the King, 6 Pall Mall.

## MUSIC.

## VOCAL CONCERTS.

Under the immediate Patronage of H. R. H. the Duchess of Kent. The Last Concert of this Season is unavoidably postponed to Monday Evening, 27th, when Spohr's new Oratorio, "The Crucifixion," will be produced, for the first time in this country: the English Version by Mr. E. Taylor.

On this Occasion the Band and Chorus will be considerably enlarged.

## SALES BY AUCTION.

SOUTHGATES' ROOMS.

Fine Engravings.

By MESSRS. SOUTHGATE and SON,

AT THEIR WEEKLY SALE-ROOMS,

25 FLEET STREET,

THIS DAY, MARCH 18th,

Consisting of a valuable Collection of Engravings, Books of Prints Drawings, Gift Frames, &c.

May be viewed, and Catalogues had at the Rooms.

ON WEDNESDAY, MARCH 22, and FOLLOWING DAYS,

(Good Friday excepted),

## Valuable Collection of Books,

Including the Library of a Clergyman from the Country:

Among which are Rees's Cyclopaedia, 45 vols. half Russia, by Herring; Valpy's Delphin Classics, 164 vols.; Dibdin's Typographical Antiquities, 4 vols. 1. p.; Dibdin's Classics, 3 vols. 1. p.; Britton's Architectural Antiquities, 5 vols.; Cathedral Antiquities, 2 vols.; Nicholson's Architectural and Engineering Dictionary, 2 vols.; Bodwell's Greece, 2 vols.; Chambers's Architecture, by Gwilt, 2 vols.; Richardson's Persian Dictionary, with MS. Notes by Sir W. Jones; Dugdale's St. Paul's, by Ellis; Otley's History of Engraving, 2 vols.; Harlan's Miscellany, 10 vols.; the Works of Tilletson, Sharpe, Horsley, Atterbury, Vogan; also of Gibbon, Hume, Smollett, Robertson, Goldsmith, &c.

Money advanced upon Duplicate Portions of Booksellers' Stock, upon Libraries, and Literary Property in general.

## BOOKS IN THE PRESS.

Next week will be published, with a beautiful Portrait, and a Vignette Title, engraved by Pindar, handsomely printed in a new Type, royal 8vo. bound, price only 1s. 6d.

## BYRON'S WORKS IN ONE VOLUME,

with all the Notes contained in the Seventeen Volumes edition.

Also,

## The Pocket Byron.

To be completed in Ten Monthly Volumes, 2s. 6d. bound and gilt. Vol. III. is just published, John Murray, Albemarle Street.

In the press, and shortly will be published, in 1 vol. post 8vo.

## MARGAM ABBEY; a Historical

Romance of the Fourteenth Century,  
John Green, 121 Newgate Street.

INGLIS'S SPAIN, &amp;c.

Just ready, new edition, in 3 vols. post 8vo.

## S P A I N.

By H. D. INGLIS,

Author of "A Journey through Ireland in 1834," &c. &c. With an introductory Chapter, giving an Outline of the Proceedings in the Peninsula since the lamented author's decease.

Also, nearly ready, a new edition of

The Tyrol; with a Glance at Bavaria.

Whittaker and Co. Ave Maria Lane.

## SHARON TURNER'S SACRED HISTORY.

In the course of the present Month will be published, the third and concluding volume of the

## SACRED HISTORY OF THE WORLD,

## ROOKWOOD.

By W. HARRISON AINSWORTH, Esq.

With a Portrait by Daniel MacLise, A.R.A. and Twelve Illustrations by George Cruikshank.

"We expect much from this writer. He evidently possesses, in no common degree, the materials of success—a fresh and stirring fancy. His story is one that never flags."—*Quarterly Review*, June 1834.

John Macrone, St. James's Square.

Single Sheet, price 1s.

## CORN, CURRENCY, CONSOLS: their

FLUCTUATIONS, from 1790 to 1836.

"Exceedingly useful for reference; the engraving is clear and distinct."—*The Times*.

"The picture is very striking, and the illustration from the eye to the understanding perfect."—*Literary Gazette*.

A new edition, comprising a History of the Gold Standard or Panic System, and the Corn Law; both created by Mr. Vanutair, in 1815-16.

London: Wyld, Charing Cross; E. F. Wilson, Royal Exchange.

## ATTILA; a Romance.

In 3 vols. post 8vo.

By G. F. R. JAMES, Esq.

Author of "The Gipsies," &c.

"In this production, which displays a great advantage all the excellences of the writer, we have his research, his descriptive powers, his style, his identification of character, his poetry, his historical accuracy, and his actual presentation of remote times, mingled with all the interest of a well-conceived and finely executed story."—*Literary Gazette*.

London: Longman, Rees, Orme, and Co.

By the Rev. J. BRASSE, D.D.

Late Fellow of Trin. Coll. Camb.

It has been the object to present, in a comprehensive form, a manual, containing the interpretation, in Latin and English, of such words as occur in the principal Greek Poets; the quantity of each syllable actually or virtually marked; an authority quoted for the existence and quantity of each word in those writers; and those terms set down as synonymous which appear to bear a similitude in sense to the principal word. The works of the Greek Poets have been examined, and such epithets and phrases annexed to each principal word as are of legitimate usage, and seem best calculated to embellish Greek composition.

This Gradus will suffice for the reading of the Greek Tragedians.

"The indefatigable application required in the compilation of the Greek Gradus is manifest, and we heartily recommend the work, as supplying a desideratum in our school-books, and likely to be advantageously used to a very wide extent."—*Literary Chronicle*.

Printed and published by Valpy; and sold by all Booksellers.

Eighth edition, much improved, and in a larger type, 3s. 6d.

## ADDRESS FROM A CLERGYMAN

TO

## HIS PARISHIONERS.
